The bending capacity of trapezoidal sheets provided with intermediate stiffeners, and the support reaction capacity with oversized support lengths were determined. A model which allows use of wide supports in the dimensioning of continuous trapezoidal sheets is presented. The effect of cylindrical curvature of the planes of trapezoidal sheets on the bending capacity was examined. The stiffening capacity of the frame of the trapezoidal sheets in different failures cases is reported. The effect of increasing bending capacity of the longitudinal joint in a trapezoidal sheet slab was also tested. The interaction of local and global buckling of columns constructed of thin walled rectangular hollow sections and the bending capacity of light profiled beams with both flanges continuously braced are analyzed. STRUCTURAL DYNAMICS: MODIFIED CALCULATIONS
G. Hornung and H. Roehrle Bonn Bundesministerium der Verteidigung 1981 83 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium der Verteidigung
(BMVg-FBWT-81-1) Avail: NTIS HC A05/MF A01; DOK-ZENTBw, Bonn DM 30

Calculation methods which give natural and harmonically excited vibrations of modified structures, using the results of the original systems, are presented and tested. Most of the methods are based on a linear approximation, i.e., the individual terms of the equations of motion are subdivided into those of the original system and into corresponding difference terms whose products are subsequently neglected. Tests are carried out for simple models as well as for three-dimensionally idealized wing and aircraft structures. Concerning natural vibrations, it is difficult to estimate the achieved accuracy without knowing the exact results. The applied methods are Wielandt iteration and subspace iteration. Using the original natural modes as starting vectors leads to a considerable reduction in computation cost, even with severe modifications. Application of the linear approximation is shown for the reduction of the number of degrees of freedom, which precedes dynamic analysis. Author (ESA)

RESIDUAL STRESS AND DEFORMATION IN CIRCUMFERENTIAL PIPE-JOINT WELDS
A. A. Scaramangas 1980 96 p refs
(PB81-232464; CUED/D-STRUCT/TR-87-1980; ISSN-0309-7447) Avail: NTIS HC A05/MF A01 CSCL 13E

A simplified model for the analysis of a single-pass circumferential pipe-joint weld is presented. It is deduced that the hoop shrinkage (tendon) force has essentially the same value as that for a similar weld in flat plate. Limited experimental evidence reported by other workers is consistent with the proposition that the hoop stress in the weld region is at tensile yield although its magnitude locally is determined by the material yield surface and the bending compressive axial stresses due to radial pipe deformation. AN INTEGRAL EQUATION METHOD FOR CUTOUT PROBLEMS IN SHELLS Ph.D. Thesis
Richard Lloyd Grover 1981 114 p
Avail: Univ. Microfilms Order No. 8124512

A method is described for the determination of the state of stress in a shallow shell with a single curvilinear hole. A system of two coupled integral equations is obtained using the Green's function method. Each of these equations includes a contour integral associated with the corresponding plate solution and a surface integral which yields the correction to the plate solution. A complex variable method is presented for the derivation of the Green's functions appearing in the integral equations. These functions are the Green's functions for plane stress and plate bending which satisfy the boundary conditions on the hole which eliminate the unknown boundary values from the contour integrals. Although the method is applicable to holes of arbitrary shape, the case of a circular hole with tractions prescribed on the edge is shown as an example. The formulation yields the direct solution to plate problems by simple contour integration. Closed form solutions are obtained for three selected plate problems. Dissert. Abstr.

DYNAMIC ANALYSIS OF FLEXIBLE SPATIAL MECHANISMS AND ROBOTIC MANIPULATORS Ph.D. Thesis
Wallace Hikaru Sunada 1981 313 p
Avail: Univ. Microfilms Order No. 8122862

The distributed flexibility and mass of geometrically complex links in high speed industrial machines and manipulators is described using the 4 x 4 matrix approach and is fully compatible with existing commercially available finite element structural analysis programs such as NASTRAN STARDYNE, or SAP. These programs, while unable to analyze high speed, flexible spatial mechanisms, are effectively used as link preprocessors to a mechanism analysis program. A procedure called component mode synthesis was used to reduce the dynamic degrees of freedom to a size suitable for incorporation into a mechanism program. The SALEM computer program for the spatial analysis of linkages with plastic members combines the finite element description of the link flexibility and mass with the 4 x 4 matrix description of the mechanism kinematics. The method is applied to three representative mechanisms, a co-planar four par linkage with flexible offset coupler and output links, a spatial slider crank mechanism with a flexible, helical coil coupler link, and, finally an industrial robotic manipulator system. Dissert. Abstr.

EFFECTS OF RESTRAINED THERMAL MOVEMENT IN A CONTINUOUS, PRESTRESSED CONCRETE BRIDGE WITHOUT INTERIOR EXPANSION JOINTS Ph.D. Thesis
Ramzi Behnam Abdul-Ahad 1981 162 p
Avail: Univ. Microfilms Order No. 8123138

A theoretical method for calculating thermal stresses and movements in continuous bridge structures was developed. Experimental data obtained from strain gages and thermocouples were conducted and field data obtained with those predicted from theory were compared. The nonlinear distribution of temperature throughout the depth of superstructure was divided into two parts: a linear temperature distribution which causes deformation; and nonlinear which results in self equilibrating stresses which do not cause any deformation of the structure. It is shown that the thermal stresses are typically greater than dead load stresses, and that the movements of the deck are proportional to middeck temperature. Dissert. Abstr.

ELASTIC-PLASTIC-FRACTURE ANALYSIS OF CONCRETE STRUCTURES Ph.D. Thesis
Shyi-Shing Hsieh 1981 146 p
Avail: Univ. Microfilms Order No. 8123654

Elastic-Plastic Fracture model and solution methods for finite element analysis to study progressive failures of plain concrete structures under short term triaxial loading conditions were studied. For the material modeling, a four parameter fractural (or yielding) critèrion was proposed. Three different types of concrete fracture modes were considered. All the matrix formulations of the constitutive relationships were derived and their implementation for numerical analysis was illustrated by three sample problems using nonlinear finite element methods. To obtain nonlinear finite element solutions, some numerical schemes were introduced and validated. The solution techniques and the material model were coded in two computer programs. The program EFCP was developed for the study of crack propagation procedures, and the program EL T2D6 was developed in subroutine form to integrate with a general structural nonlinear finite element program. Dissert. Abstr.

DYNAMIC EFFECTS ON FRACTURE OF ELASTIC - PLASTIC MATERIALS Ph.D. Thesis
Victor Arkady Ounayevsky 1981 115 p
Avail: Univ. Microfilms Order No. 8124877

In terms of a steady-state formulation, mode 1 and mode 3 crack propagation were considered. For the elastic perfectly-plastic material it was found that the dynamic effects give rise to a crack-tip zone in the immediate vicinity of the rapidly propagating crack-tip. In this zone, which shrinks on the crack tip in the quasi-static limit, the fields can be described by a combination of a centered fan field and a uniform field. The transition from dynamic to quasi-static conditions for the mode 3 case was studied in the plane of crack. Because of the effect of the crack-tip zone there is a significant difference between the strain fields in the dynamic and quasi-static solutions. Asymptotic expressions (for a small range of the parameter of hardening) of stresses and strains were obtained for the strain-hardening material. The hardening effect results in the appearance of a singular factor whose power tends to zero when the parameter of hardening vanishes. In that case the solution reduces to the one for the elastic perfectly-plastic material. Dissert. Abstr.

LOAD AND RESISTANCE FACTOR DESIGN OF COLD-FORMED STEEL STRUCTURAL MEMBERS Ph.D. Thesis
Boonsong Supornsilaphachai 1981 265 p
Avail: Univ. Microfilms Order No. 8123579

Design criteria for cold-formed steel structural members was studied. This study included the selection of a probabilistic model, the evaluation of load factors, the calibration of safety indexes for the allowable stress design criteria issued by the American Iron and Steel Institute, and the determination of resistance factors. Based on the safety indexes selected for cold-formed steel structural members and connections, the load and resistance factor design criteria for cold-formed steel were developed by using the first order probabilistic theory and the statistical data on mechanical properties of materials and the test results obtained from previous research. In this method, appropriate load factors and resistance factors are applied to specified loads and nominal resistance to ensure that the limit state is not exceeded. This design method can provide a more uniform overall safety and structural reliability because uncertainties are accounted for. Dissert. Abstr.

An aerial vehicle rotating in gyroscopic fashion about one of its axes has an optical system which scans an area below the vehicle in determined relation to vehicle rotation. A sensing device is provided to sense the physical condition of the area of scan and optical means are associated to direct the physical intelligence received from the scan area to the sensing means. Means are provided to incrementally move the optical means through a series of steps to effect sequential line scan of the area being viewed keyed to the rotational rate of the vehicle.

THE OCCURRENCE AND CONTROL OF LAND SUBSIDENCE DUE TO GROUND WATER WITHDRAWAL WITH SPECIAL REFERENCE TO THE SAN JOAQUIN AND SANTA CLARA VALLEYS, CALIFORNIA Ph.D. Thesis
Joseph Fairfield Poland 1981 172 p
Avail: Univ. Microfilms Order No. 8124135

The San Joaquin Valley in California is the area of the most intensive land subsidence in the United States. Subsidence which affects 4,200 sq mi (10,875 sq km), reached 28 ft (8 m) in 1969. The total volume of subsidence to 1970 was about 15.5 million acre ft. Surface water imports to subsiding areas reduced ground water extractions and raised the artesian head, causing subsidence rates to decrease. In the Santa Clara Valley, excessive pumping of ground water between 1917 and 1967 caused as much as 180 ft (50 m) of artesian head decline and maximum and subsidence of 13 ft (4 m). A fourfold increase in surface water imports in 5 years achieved a dramatic rise of artesian head -- 70 ft (20 m) in 4 years. Subsidence rates decreased from as much as 1 ft (0.3 m) per year in 1961 to a few humdredths of a foot in 1970. If fluid pressures in the aquifers in a compacting, confined system increased sufficiently to equal or exceed pore pressures in the fine grained sediments, subsidence will stop.

REGIONAL HYDROLOGIC MODELS FOR CLIMATOLOGY: AN APPLICATION TO THREE WISCONSIN WATERSHEDS Ph.D. Thesis
Douglas Robison Clark 1981 105 p
Avail: Univ. Microfilms Order No. 8117508

Two hydrologic models were applied to three watersheds in south central Wisconsin (Black Earth Creek, Sugar River, Crawfish River) over a thirty year period (1948-1977). Model parameter values were obtained by calibration of model runoff to observed streamflow. Model storage levels were compared to water table observations in one watershed. The two storage model simulated streamflow just as well as the three-storage model. A flexible parameterization scheme enables the two-storage model to assimilate the additional runoff component generated by the three-storage model. However, the uppermost storage element in the three-storage model provides a useful regional soil moisture indicator not available in the simpler model. The parameters controlling evapotranspiration have the greatest influence on the models' ability to reproduce river runoff and the overall seasonal water balance, followed by the storage capacity parameters.

LABORATORY MEASUREMENTS OF PHYSICAL, CHEMICAL, AND OPTICAL CHARACTERISTICS OF LAKE CHICOT SEDIMENT WATERS
William G. Witte, Charles H. Whitlock, J. W. Usry, W. Douglas Morris, and E. A. Gurganus Dec. 1981 30 p refs
(NASA-TP-1941; L-14714) Avail: NTIS HC A03/MF A01 CSCL 08H

Reflectance, chromaticity, diffuse attenuation, beam attenuation, and several other physical and chemical properties were measured for various water mixtures of lake bottom sediment. Mixture concentrations range from 5 ppm to 700 ppm by weight of total suspended solids in filtered deionized tap water. Upwelled reflectance is a nonlinear function of remote sensing wave lengths. Near-infrared wavelengths are useful for monitoring highly turbid waters with sediment concentrations above 100 ppm. It is found that both visible and near infrared wavelengths, beam attenuation correlates well with total suspended solids ranging over two orders of magnitude.

INTERPOLATING FOR THE LOCATION OF REMOTE SENSOR DATA
Edward F. Puccinelli and Jack Kornfield (NSF) Jul. 1981 23 p refs
(NASA-TM-82169) Avail: NTIS HC A02/MF A01 CSCL 05B

An interpolation algorithm is presented as a practical alternative to common interpolation and approximation methods when applied to the problem of determining the location of remote sensor data. This algorithm is based upon knowledge of the geometry of the problem and is shown to be inherently more accurate than common interpolation schemes which may be applied to all types of data. A practical location problem is used to demonstrate its accuracy and computational cost.

ANALYSIS OF SOIL MOISTURE EXTRACTION ALGORITHM USING DATA FROM AIRCRAFT EXPERIMENTS Final Report
Hsiao-hua K. Burke and Jean-Hsien Ho Jun. 1981 37 p refs
(Contract NAS5-26361)
(NASA-CR-166719; P-A826) Avail: NTIS HC A03/MF A01 CSCL 08M

A soil moisture extraction algorithm is developed using a statistical parameter inversion method. Data sets from two aircraft experiments are utilized for the test. Multifrequency microwave radiometric data surface temperature, and soil moisture information are contained in the data sets. The surface and near surface (< or = 5 cm) soil moisture content can be extracted with accuracy of approximately 5% to 6% for bare fields and fields with grass cover by using L, C, and X band radiometer data.

This technique is used for handling large amounts of remote sensing data from space S.L.

ON THE BUCKLING FORCE OF FLOATING ICE PLATES
Arnold D. Kerr Jun. 1981 13 p refs
(AD-A103733; CRREL-81-9) Avail: NTIS HC A02/MF A01 CSCL 20/11

The calculation of the largest horizontal force a relatively thin floating ice plate may exert on a structure requires the knowledge of the buckling load for this floating plate. It is shown that, depending on the ratio of the rigidities of the liquid and plate, the post buckling branch may rise or drop away from the bifurcation point. It is also shown that when lift-off of plate from the liquid takes place, the actual buckling load may drop substantially. A floating compressed semi-infinite plate with a straight free edge, assuming that there is no lift-off, is analyzed. It is found that for this case there always exists a buckling load that is lower than p sub cr. It is suggested that the buckling load be determined using the post-buckling equilibrium branch of the plate, taking into consideration the possibility of lift-off of the ice cover from the liquid base. SPECTRA OVER COMPLEX TERRAIN
H. A. Panofsky, D. Larko (Research and Data Systems, Inc.), R. Lipschutz (NOAA, Boulder, Colo.), and G. Stone 1981 18 p refs Presented at the 4th U.S. Natl. Conf. on Wind Eng. Res., Seattle, 26-29 Jul. 1981 Submitted for publication
(Contract W-7405-eng-36)
(DE81-028734; LA-UR-81-2380; CONF-810742-1) Avail: NTIS HC A02/MF A01

Spectra were measured over land downwind of a water surface over hilltops escarpments, and over rolling farmland. The following hypotheses are used to explain the differences between these spectra: (1) wavelengths short compared to the fetch over the new terrain, spectral densities are in equilibrium with the new terrain. (2) wavelengths long compared to this fetch, spectral densities remain unchanged if the ground is horizontal. If the flow is over a steep hill, the low frequency structure is modified by distortion of the mean flow, with the longitudinal component losing energy relative to the lateral and vertical components. It is found that vertical velocity spectra contain relatively less low frequency energy than horizontal velocity spectra, energetic vertical velocity fluctuations tend to be in equilibrium with local terrain. DEVELOPMENT OF PEATLANDS IN NORTHERN MINNESOTA Technical Progress Report
H. E. Wright, Jr. Sep. 1981 5 p refs
(Contract DE-AC02-80EV-10414)
(DE82-000873; DOE/EV-10414/T1) Avail: NTIS HC A02/MF A01

The extensive peatlands in northern Minnesota, which are considered as an energy resource through the development of a gasification operation were studied. Problems of peat mining, draining, reclamation, economic impact, wildlife, and vegetation are discussed. The history of formation of the major peatlands in northern Minnesota, and their relationship distribution and composition, to the modern and past climate and to the various natural factors and processes prevailing in the region are investigated. The following factors are considered: the formation of vegetation patterns that seem to be unique for North American peatlands, regional differences from east to west that may reflect trends in postglacial climate and forest composition, rates of peat formation in different environmental settings, and the record of atmospheric pollution (industrial contaminations, agricultural dust) that may be contained in short cores of peat. ANALYSIS OF THE DEVELOPMENT OF SHALLOW GROUNDWATER SUPPLIES BY PUMPING FROM PONDS
Mustafa M. Aral, T. W. Sturm, and J. M. Fulford Feb. 1981 102 p refs
(OWRT Proj. A-089-GA(1))
(PB81-231904; ERC-02-81; W81-04311) Avail: NTIS HC A06/MF A01 CSCL 13B

The use of the shallow aquifer as a direct water source through development of large diameter, shallow wells or ponds was explored. Continued pumping from the principal artesian aquifer in coastal Georgia has led to a general decline of the piezometric surface. With the decline of the groundwater level saline intrudes into freshwater zones. A shallow, unconfirmed aquifer overlays the artesian aquifer and receives surface recharge. A numerical model to study the hydraulics of flow to a pond in an unconfined aquifer is employed. The groundwater hydraulics problem is solved by finite element method for two dimensional pits and axisymmetric ponds in phreatic aquifers for steady state and transient cases. GRA

(PB81-231938; ISWRRI-116; W81-04315) Avail: NTIS HC A04/MF A01 CSCL 13B

The fracture decrease of water resources in Iowa is discussed. Projected water withdrawal will rise from 3.68 billion gallons per day (1975) to 27.5 billion gallons per day (2020). A large water user is agriculture, in which Iowa is one of the leading states. Average annual precipitation varies from 34 inches in the southeast to 25 inches in the northwest, with 70% occurring during the growing season. Shallow groundwater quality and quantity have been declining, especially in the southwest and west. The largest pollutant is sediment from topsoil erosion; an estimated 50% of valuable topsoil has been lost in the last 100 years. Seven aspects of water resources are evaluated. GRA

PRELIMINARY INVESTIGATION OF A SHALLOW GROUND-WATER FLOW SYSTEM ASSOCIATED WITH CONNETQUOT BROOK, LONG ISLAND, NEW YORK Final Report
Keith R. Prince Nov. 1980 42 p refs
(PB81-228751; USGS/WRD-WRI-81-069; USGS/WRI-80-47) Avail: NTIS HC A03/MF A01 CSCL 08H

Under natural conditions, about 95 percent of the flow in Long Island streams is derived from ground-water seepage. The ground-water system that feeds the streams is a shallow subsystem that overlies the regional subsurface flow system. The Connetquot Brook basin was selected for study because it has not been appreciably affected by urbanization. Studies in the basin indicate that the shallow ground-water flow system circulates to a depth of less than 30 feet below the stream channel. Directly beneath The stream, shallow ground-water flow is upward toward the stream channel, but elsewhere in the basin it is predominantly horizontal. GRA

HIGH-PRESSURE SHROUDED WATER SPRAYS FOR DUST CONTROL
N. I. Jayaraman, F. N. Kissell, W. Cross, and J. Janosik Jun. 1981 22 p refs
(PB81-231458; BM-RI-8536) Avail: NTIS HC A02/MF A01 CSCL 08I

High pressure shrouded sprays were tested for air moving capability and dust collection efficiency. It is indicated that at 500 psi and above, the dust collection efficiency, when sampled downstream of a water eliminator, is about 99% for two types of nozzles. However, for the same water flow, the induced airflow was about three times greater in one type than in another. Model mine tests are conducted to determine the reduction in dust concentration behind the line curtain and at the operator position produced by high pressure sprays in a shroud. GRA

WATER AND ENERGY USAGE IN COAL PREPARATION Final Report
S. H. Chiang and Robert E. Douglas May 1981 575 p refs Sponsored by the Geological Survey
(PB81-238248) Avail: NTIS HC A24/MF A01 CSCL 08I

The demand for water and energy by those industries physically beneficiating Eastern American coals was analyzed and predicted. Both the method and equipment utilized in cleaning coarse and fine coals were evaluated for their respective water and energy requirements. Five typical coal cleaning facilities employing various cleaning, comminution, screening, dewatering and drying equipment were simulated with a computer. Seven characteristic eastern coals (with ash and sulfur concentrations of 19-36 percent and 0.5-8.5 percent, respectively) were systematically evaluated in the conceptual coal preparation plants. CONTROL OF METHANE BY VENTILATION OF SHAFTS DURING RAISE DRILLING

Slavoljub D. Maksimovic Jun. 1981 17 p refs

(PB81-234502; BM-IC-8847) Avail: NTIS HC A02/MF A01 CSCL 08I

Ventilation surveys at raise drill sites to assess various methods of reducing methane concentration were conducted. It is indicated that raise drill shaft cavities are ventilated by air compressors, vacuum pumps, auxiliary blower fans, and free intake air from the surface. At the bottom of the shaft cavities, ventilation is controlled by regulators and airlocks. Methane is monitored, measured, and periodically sampled on the surface, at the bottom and at different levels in the shaft cavities. It is recommended that the best way to ventilate shaft cavities is through the simultaneous use of air compressors and vacuum pumps. GRA

CREATING A SAFER ENVIRONMENT IN US COAL MINES: THE BUREAU OF MINES METHANE CONTROL PROGRAM, 1964-79

Milford L. Skow, A. G. Kim, and M. Deul May 1981 57 p refs

(PB81-233918; BM-SP-5-81) Avail: NTIS HC A04/MF A01 CSCL 08I

The principal activities and results of 15 years of research on methane control in coal mines are summarized. Fundamental factors regarding the occurrence and movement of methane in coalbeds, removal of methane prior to mining, and control of methane during mining were investigated. Publications on methane control program, a section on methane recovery and use, a look at the upcoming Bureau of Mines research program, and a brief review of methane drainage practices in other coal producing countries are included. GRA

SUPPRESSION OF COAL DUST EXPLOSION BY WATER BARRIER IN A CONVEYOR BELT ENTRY

I. Liebman and J. K. Richmond Jun. 1981 34 p refs

(PB81-233306; BM-RI-8538) Avail: NTIS HC A03/MF A01 CSCL 08I

Experiments on coal dust explosion suppression were conducted in a simulated working mine environment. It was shown that a coal dust explosion can be readily initiated in a conveyor belt entry and the explosion can spread into adjacent entries through opened crosscuts to propagate for long distances even though the adjacent entries are rock ducted. Passive water barriers are effective in suppressing explosions on a beltway; however, barrier efficiency is reduced by opened crosscuts. It is indicated that the beltway barrier should have continuous rows of water filled tubs covering long distances along the entry. GRA

DEVELOP AND TEST FUEL CELL POWERED ON-SITE INTEGRATED TOTAL ENERGY SYSTEM. PHASE 3: FULL-SCALE POWER PLANT DEVELOPMENT Quarterly Report, Feb. - Apr. 1981

A. Kaufman 24 Jun. 1981 50 p

(Contract DEN3-241)

(NASA-CR-165328; DOE/NASA/0241-1; QR-1) Avail: NTIS HC A03/MF A01 CSCL 10B

An integrated 5 kW power system based upon methanol fuel and a phosphoric acid fuel cell operating at about 473 K is described. Description includes test results of advanced fuel cell catalysts, a semiautomatic acid replenishment system and a completed 5 kW methanol/system reformer. The results of a preliminary system test on a reformer/stack/inverter combination are reported. An initial design for a 25 kW stack is presented. Experimental plans are outlined for data acquisition necessary for design of a 50 kW methanol/steam reformer. Activities related to complete mathematical modelling of the integrated power system, including wasteheat utilization, are described. E.A.K.

SPACE APPLICABLE DOE PHOTOVOLTAIC TECHNOLOGY: AN UPDATE

J. Scott-Monck, P. Stella, and P. Berman 15 Nov. 1981 25 p refs

(Contract NAS7-100)

(NASA-CR-165021; JPL-Pub-81-91) Avail: NTIS HC A02/MF A01 CSCL 10A

Photovoltaic development projects applicable to space power are identified. When appropriate, the type of NASA support that would be necessary to implement these technologies for space use is indicated. It is conducted that the relatively small market and divergent operational requirements for space power are mainly responsible for the limited transfer of terrestrial technology to space applications. Information on the factors which control the cost and type of technology is provided. Terrestrial modules using semiconductor materials are investigated. S.L.

DISTRIBUTED PHOTOVOLTAIC SYSTEMS: UTILITY INTERFACE ISSUES AND THEIR PRESENT STATUS

M. Hassan and J. Klein 15 Sep. 1981 166 p refs

(Contracts NAS7-100; DE-AI01-76ET-20356; JPL Proj. 5240-11)

(NASA-CR-165019; JPL-Pub-81-89; DOE/ET-20356/3) Avail: NTIS HC A08/MF A01 CSCL 10A

Major technical issues involving the integration of distributed photovoltaics (PV) into electric utility systems are defined and their impacts ara described quantitatively. An extensive literature search, interviews, and analysis yielded information about the work in progress and highlighted problem areas in which additional work and research are needed. The findings from the literature search were used to determine whether satisfactory solutions to the problems exist or whether satisfactory approaches to a solution are underway. It was discovered that very few standards, specifications, or guidelines currently exist that will aid industry in integrating PV into the utility system. Specific areas of concern identified are: (1) protection, (2) stability, (3) system unbalance, (4) voltage regulation and reactive power requirements, (5) harmonics, (6) utility operations, (7) safety, (8) metering, and (9) distribution system planning and design. MEASUREMENT OF SURFACE RECOMBINATION VELOC-

ITY FOR SILICON SOLAR CELLS USING A SCANNING ELECTRON MICROSCOPE WITH PULSED BEAM
Taher Daud and Li-Jen Cheng 1 Nov. 1981 36 p refs
(Contracts NAS7-100; EX-76-A-29-1012;
DE-AI01-76ET-20356; JPL Proj. 5101-176)
(JPL-Pub-81-64; DOE/JPL-1012-56) Avail: NTIS
HC A03/MF A01 CSCL 10A

The role of surface recombination velocity in the design and fabrication of silicon solar cells is discussed. A scanning electron microscope with pulsed electron beam was used to measure this parameter of silicon surfaces. It is shown that the surface recombination velocity, s, increases by an order of magnitude when an etched surface degrades, probably as a result of environmental reaction. A textured front-surface-field cell with a high-low junction near the surface shows the effect of minority carrier reflection and an apparent reduction of s, whereas a tandem-junction cell shows an increasing s value. Electric fields at junction interfaces in front-surface-field and tandem-junction cells acting as minority carrier reflectors or sinks tend to alter the value of effective surface recombination velocity for different beam penetration depths. A range of values of s was calculated for different surfaces. M.D.K.

DISH STIRLING SOLAR RECEIVER COMBUSTOR TEST PROGRAM
C. P. Bankston and L. H. Back 15 Aug. 1981 45 p refs
(Contracts NAS7-100; DE-AI01-81ET-20307; JPL Proj. 5105-76)
(NASA-CR-165017; JPL-Pub-81-23; DOE/JPL-1060-41) Avail: NTIS HC A03/MF A01 CSCL 10A

The operational and energy transfer characteristics of the Dish Stirling Solar Receiver (DSSR) combustor/heat exchanger system was evaluated. The DSSR is designed to operate with fossil fuel augmentation utilizing a swirl combustor and cross flow heat exchanger consisting of a single row of 4 closely spaced tubes that are curved into a conical shape. The performance of the combustor/heat exchanger system without a Stirling engine was studied over a range of operating conditions and output levels using water as the working fluid. Results show that the combustor may be started under cold conditions, controlled safety, and operated at a constant air/fuel ratio (10 percent excess air) over the required range of firing rates. Furthermore, nondimensional heat transfer coefficients based on total heat transfer are plotted versus Reynolds number and compared with literature data taken for single rows of closely spaced tubes perpendicular to cross flow. The data show enhanced heat transfer for the present geometry and test conditions. Analysis of the results shows that the present system meets specified thermal requirements, thus verifying the feasibility of the DSSR combustor design for final prototype fabrication. J.M.S.

LARGE AREA SHEET TASK: ADVANCED DENDRITIC WEB GROWTH DEVELOPMENT Quarterly Report, 1 Apr. - 30 Jun.
C. S. Duncan, R. G. Seidensticker, J. P. McHugh, R. H. Hopkins, D. Meier, and J. Schruben 6 Oct. 1981 39 p refs Sponsored in part by DOE Prepared for JPL, Pasadena
(Contract JPL-955843)
(NASA-CR-165013; JPL-9950-605; DOE/JPL-955843-81/3)
Avail: NTIS HC A03/MF A01 CSCL 10A

The growth of silicon dendritic web for photovoltaic applications was investigated. The application of a thermal model for calculating buckling stresses as a function of temperature profile in the web is discussed. Lid and shield concepts were evaluated to provide the data base for enhancing growth velocity. An experimental web growth machine which embodies in one unit the mechanical and electronic features developed in previous work was developed. In addition, evaluation of a melt level control system was begun, along with preliminary tests of an elongated crucibl design. The economic analysis was also updated to incorporate some minor cost changes. The initial applications of the thermal model to a specific configuration gave results consistent with experimental observation in terms of the initiation of buckling vs. width for a given crystal thickness. B.W.

(NASA-CR-165033; QTR-1; JPL-9950-609;
DOE/JPL-955986-1) Avail: NTIS HC A03/MF A01 CSCL 10A

Silicon nitride and nickel pastes are investigated in conjunction with a brush copper plating process for the purpose of identifying one or more fabrication sequences which yield at least 10 percent efficient N(+)/P(+) flat plate solar cells. The adhesion of all nickel pastes is reduced significantly when subjected to acidic and alkaline brush copper plating solutions as a result of a combination of thermally induced stress and chemical attack of the frit, which occurs at the interface with the silicon solar cell. The AgF is penetrating the 800 a of Si3N4 and ohmic contact is occurring at all fire-in tempertures. During the brush plating process, fingers and buss bars tend to spread. S.L.

Avail: NTIS HC A13/MF A01 CSCL 10A

The growth of 100 kg of silicon single crystal material, ten cm in diameter or greater, and 150 kg of silicon single crystal material 15 cm or greater utilizing one common silicon container material (one crucible) is investigated. A crystal grower that is recharged with a new supply of polysilicon material while still under vacuum and at temperatures above the melting point of silicon is developed. It accepts large polysilicon charges up to 30 kg, grows large crystal ingots (to 15 cm diameter and 25 kg in weight), and holds polysilicon material for recharging (rod or lump) while, at the same time, growing crystal ingots. Special equipment is designed to recharge polysilicon rods, recharge polysilicon lumps, and handle and store large, hot silicon crystal ingots. Many continuous crystal growth runs were performed lasting as long as 109 hours and producing as many as ten crystal ingots, 15 cm with weights progressing to 27 kg. S.L.

HIGH RESOLUTION, LOW COST SOLAR CELL CONTACT DEVELOPMENT Final Report
N. Mardesich [1981] 82 p Sponsored in part by DOE Prepared for JPL, Pasadena, Calif.
(Contract JPL-955725)
(NASA-CR-165032; JPL-9950-611; DOE/JPL-955725-81/1) Avail: NTIS HC A05/MF A01 CSCL 10A

The MIDFILM cell fabrication and encapsulation processes were demonstrated as a means of applying low-cost solar cell collector metallization. The average cell efficiency of 12.0 percent (AM1, 28 C) was achieved with fritted silver metallization with a demonstration run of 500 starting wafers. A 98 percent mechanical yield and 80 percent electrical yield were achieved through the MIDFILM process. High series resistance was responsible for over 90 percent of the electrical failures and was the major factor causing the low average cell efficiency. Environmental evaluations suggest that the MIDFILM cells do not degrade. A slight degradation in power was experienced in the MIDFILM minimodules when the AMP Solarlok connector delaminated during the environmental testing. T.M.

INVESTIGATION OF TEST METHODS, MATERIAL PROPERTIES, AND PROCESSES FOR SOLAR CELL ENCAPSULANTS Annual Report
P. B. Willis Jun. 1981 128 p refs Sponsored in part by DOE Prepared for JPL, Pasadena, Calif.
(Contract JPL-954527)
(NASA-CR-165031; JPL-9950-613; DOE/JPL-954527-81/19) Avail: NTIS HC A07/MF A01 CSCL 10A

Encapsulant materials and processes for the production of cost effective, long life solar cell modules are identified, and evaluated. Ethylene vinyl acetate lamination pottant studies are conducted with respect to the time/temperature cure requirements for successful use of this compound. The time needed to produce successful gel contents are redetermined at a variety of temperatures and are related to the peroxide half life temperature curve. Formulation of the butyl acrylate syrup casting pottant is complete. The formulation contains an ultraviolet stabilizer system and is cured with an initiator that presents no shipping or handling hazards. The catalyzed syrup is stable at room temperature and has a pot life of at least an eight hour period of time. The syrup cures to a transparent rubber in 18 minutes at a temperature of 60 C. S.L.

CATALYTIC COMBUSTION OF RESIDUAL FUELS
Daniel L. Bulzan and Robert R. Tacina 1981 20 p refs Presented at 5th Workshop on Catalytic Combustion, San Antonio, Tex., 15-16 Sep. 1981
(Contract DE-AI01-77ET-10350)
(NASA-TM-82731; E-1040) Avail: NTIS HC A02/MF A01 CSCL 21B

A noble metal catalytic reactor was tested using two grades of petroleum derived residual fuels at specified inlet air temperatures, pressures, and reference velocities. Combustion efficiencies greater than 99.5 percent were obtained. Steady state operation of the catalytic reactor required inlet air temperatures of at least 800 K. At lower inlet air temperatures, upstream burning in the premixing zone occurred which was probably caused by fuel deposition and accumulation on the premixing zone walls. Increasing the inlet air temperature prevented this occurrence. Both residual fuels contained about 0.5 percent nitrogen by weight. NO sub x emissions ranged from 50 to 110 ppm by volume at 15 percent excess O2. Conversion of fuel-bound nitrogen to NO sub x ranged from 25 to 50 percent. M.D.K.

DEVELOPMENT REPORT: AUTOMATIC SYSTEM TEST AND CALIBRATION (ASTAC) EQUIPMENT Final Report
Robert J. Thoren Jul. 1981 25 p ref
(Contracts DEN3-203; DE-AI01-76ET-20320)
(NASA-CR-165403; DOE/NASA/0203-1; PPI-3009-4) Avail: NTIS HC A02/MF A01 CSCL 10A

A microcomputer based automatic test system was developed for the daily performance monitoring of wind energy system time domain (WEST) analyzer. The test system consists of a microprocessor based controller and hybrid interface unit which are used for inputing prescribed test signals into all WEST subsystems and for monitoring WEST responses to these signals. Performance is compared to theoretically correct performance levels calculated off line on a large general purpose digital computer. Results are displayed on a cathode ray tube or are available from a line printer. Excessive drift and/or lack of repeatability of the high speed analog sections within WEST is easily detected and the malfunctioning hardware identified using this system. E.A.K.

THE ac PROPULSION SYSTEM FOR AN ELECTRIC VEHICLE, PHASE 1 Final Report
Steven Geppert Aug. 1981 307 p refs
(Contracts DEN3-125; DE-AI01-77CS-51044)
(NASA-CR-165480; DOE/NASA/0125-1; ERC-TR-8101) Avail: NTIS HC A14/MF A01 CSCL 10B

A functional prototype of an electric vehicle ac propulsion system was built consisting of a 18.65 kW rated ac induction traction motor, pulse width modulated (PWM) transistorized inverter, two speed mechanically shifted automatic transmission, and an overall drive/vehicle controller. Design developmental steps, and test results of individual components and the complex system on an instrumented test frame are described. Computer models were developed for the inverter, motor and a representative vehicle. A preliminary reliability model and failure modes effects analysis are given. E.A.K.

N82-13507*# Case Western Reserve Univ., Cleveland, Ohio.
TRANSIENT CATALYTIC COMBUSTOR MODEL Final Report
James S. Tien May 1981 87 p refs
(Grant NsG-3230; Contract DE-AI01-77CS-51040)
(NASA-CR-165324; DOE/NASA/3230-1) Avail: NTIS HC A05/MF A01 CSCL 10B

A quasi-steady gas phase and thermally thin substrate model is used to analyze the transient behavior of catalytic monolith combustors in fuel lean operation. The combustor response delay is due to the substrate thermal inertia. Fast response is favored by thin substrate, short catalytic bed length, high combustor inlet and final temperatures, and small gas channel diameters. The calculated gas and substrate temperature time history at different axial positions provides an understanding of how the catalytic combustor responds to an upstream condition change. The computed results also suggest that the gas residence times in the catalytic bed in the after bed space are correlatable with the nondimensional combustor response time. The model also performs steady state combustion calculations; and the computed steady state emission characteristics show agreement with available experimental data in the range of parameters covered.

A catalytic combustor design for automotive gas turbine engine which has reasonably fast response (< 1 second) and can satisfy the emission goals in an acceptable total combustor length is possible. S.L.

ENDURANCE TEST AND EVALUATION OF ALKALINE WATER ELECTROLYSIS CELLS Annual Report
K. A. Burke and F. H. Schubert Nov. 1981 46 p refs
(Contract NAS3-21287)
(NASA-CR-165424; TR-376-16) Avail: NTIS HC A03/MF A01 CSCL 10C

Utilization in the development of multi-kW low orbit power systems is discussed. The following technological developments of alkaline water electrolysis cells for space power application were demonstrated: (1) four 92.9 cm2 single water electrolysis cells, two using LST's advanced anodes and two using LST's super anodes; (2) four single cell endurance test stands for life testing of alkaline water electrolyte cells; (3) the solid performance of the advanced electrode and 355 K; (4) the breakthrough performance of the super electrode; (5) the four single cells for over 5,000 hours each significant cell deterioration or cell failure. It is concluded that the static feed water electrolysis concept is reliable and due to the inherent simplicity of the passive water feed mechanism coupled with the use of alkaline electrolyte has greater potential for regenerative fuel cell system applications than alternative electrolyzers. A rise in cell voltage occur after 2,000-3,000 hours which was attributed to deflection of the polysulfone end plates due to creepage of the thermoplastic. More end plate support was added, and the performance of the cells was restored to the initial performance level. E.A.K.

(Contract DE-AI01-77ET-10350)
(NASA-TM-81708; DOE/NASA/2593-24; E-737) Avail: NTIS HC A03/MF A01 CSCL 10B

A technology data base for utility gas turbine systems capable of burning coal derived fuels was developed. The following areas are investigated: combustion; materials; and system studies. A two stage test rig is designed to study the conversion of fuel bound nitrogen to NOx. The feasibility of using heavy fuels in catalytic combustors is evaluated. A statistically designed series of hot corrosion burner rig tests was conducted to measure the corrosion rates of typical gas turbine alloys with several fuel contaminants. Fuel additives and several advanced thermal barrier coatings are tested. Thermal barrier coatings used in conjunction with low critical alloys and those used in a combined cycle system in which the stack temperature was maintained above the acid corrosion temperature are also studied. E.A.K.

DEVELOPMENT OF A HIGH-TEMPERATURE DURABLE CATALYST FOR USE IN CATALYTIC COMBUSTORS FOR ADVANCED AUTOMOTIVE GAS TURBINE ENGINES Final Report
H. Tong, G. C. Snow, E. K. Chu, R. L. S. Chang, M. J. Angwin, and S. L. Pessagno Sep. 1981 169 p refs
(Contracts DEN3-83; DE-AI01-77CS-51040)
(NASA-CR-165396; DOE/NASA/0083-1) Avail: NTIS HC A08/MF A01 CSCL 10B

Durable catalytic reactors for advanced gas turbine engines were developed. Objectives were: to evaluate furnace aging as a cost effective catalytic reactor screening test, measure reactor degradation as a function of furnace aging, demonstrate 1,000 hours of combustion durability, and define a catalytic reactor system with a high probability of successful integration into an automotive gas turbine engine. Fourteen different catalytic reactor concepts were evaluated, leading to the selection of one for a durability combustion test with diesel fuel for combustion conditions. Eight additional catalytic reactors were evaluated and one of these was successfully combustion tested on propane fuel. This durability reactor used graded cell honeycombs and a combination of noble metal and metal oxide catalysts. The reactor was catalytically active and structurally sound at the end of the durability test. E.A.K.

ALTERNATE HYBRID POWER SOURCES FOR REMOTE SITE APPLICATIONS Final Report, Feb. 1980 - Feb. 1981
W. Richard Powell, Robert J. Taylor, J. L. Baron, E. E. Mengel, and J. C. Ray Feb. 1981 229 p refs
(Contracts N00024-78-C-5384; MIPR-Z-70099)
(AD-A099471; USCG-D-06-81) Avail: NTIS HC A11/MF A01 CSCL 10/2

Operation of diesel electric generators at remote Coast Guard sites are discussed. The electric power required by modules and subsystems in a modern lighthouse was investigated. The availability of wind power, solar energy, and other renewable energy sources in the local environment at remote lighthouses and other sites is discussed. A life cycle cost analysis methodology applicable to continuously variable life expectancies is developed and illustrated. Diesel generator costs, including service visit expenses, are modeled. Other factors relating to the analysis of alternate energy systems as supplements to diesel electric generators at remote sites are discussed. Author

CAMELOT: A NOVEL CONCEPT FOR A MULTITERAWATT PULSE POWER GENERATOR FOR SINGLE PULSE BURST OR REPETITION RATE OPERATION
Alexander G. Stewart Apr. 1981 19 p refs
(DA Proj. 1L1-61101-A-91-A)
(AD-A103024; HDL-SR-81-1) Avail: NTIS HC A02/MF A01 CSCL 10/2

Superpower pulse generators are fast establishing themselves internationally as candidates for employment in a wide variety of military applications including electronic warfare and jamming, high energy beam weapons, and nuclear weapons effects simulation. Unfortunately, existing multimegajoule pulse power generators such as AURORA do not satisfy many Department of Defense goals fo field-adaptable weapon systems-for example, repetition (rep) rate operation, high reliability, long life, ease of operation, and low maintenance. The Camelot concept is a multiterawatt rep ratable pulse power source, adaptable to a wide range of output parameters - both charged particles and photons. An analytical computer model has been developed to predict the power flowing through the device. A 5-year development program, culminating in a source region electromagnetic pulse simulator, is presented. Author

SILICON SOLAR CELL OPTIMIZATION Final Report, 15 Aug. 1978 - 15 Feb. 1981
Alan L. Scheinine, John H. Wohlgemuth, and Eileen Sparks Wright-Patterson AFB, Ohio AFWAL Jun. 1981 99 p refs
(Contract F33615-78-C-2039; AF Proj. 3145)
(AD-A106005; AFWAL-TR-81-2052) Avail: NTIS HC A05/MF A01 CSCL 10/2

This research program has resulted in improvements in vertical junction solar cell techniques leading to higher efficiencies and improved handleability. Vertical junction solar cells have now been fabricated with AMO conversion efficiency greater than 15% (25 C). A variety of cells have been fabricated including different groove depths, substrate thicknesses and bulk resistivities. Cell performance has been measured both before and after irradiation. Theoretical analyses has been performed to generate computer models of I-V curves for various cell geometries.

WORKSHOP PROCEEDINGS: U-BEND TUBE CRACKING IN STEAM GENERATORS

Carl E. Shoemaker, ed. Jun. 1981 343 p refs Workshop held at Denver, 20-21 Aug. 1980
(DE81-903765; EPRI-WS-80-136; CONF-8008122) Avail: NTIS HC A15/MF A01

A design to reduce the rate of tube failure in high pressure feedwater heaters, a number of failed drawn and stress relieved Monel 400 U-bend tubes removed from three high pressure feedwater heaters was examined. Steam extracted from the turbine is used to preheat the boiler feedwater in fossil fuel fired steam plants to improve thermal efficiency. This is accomplished in a series of heaters between the condenser hot well and the boiler. The heaters closest to the boiler handle water at high pressure and temperature. Because of the severe service conditions, high pressure feedwater heaters are frequently tubed with drawn and stress relieved Monel 400.

DC DIELECTRIC STRENGTHS OF FLUORINATED BENZENES AND THE STORED-ENERGY THEORY

D. H. Smith, D. W. Bouldin, and L. G. Christophorou 1981 5 p refs Presented at 7th Intern. Conf. on Conduction and Breakdown in Dielectric Liquids, Berlin, 27 Jul. 1981
(Contract W-7405-eng-26)
(DE81-026515; CONF-810734-1) Avail: NTIS HC A02/MF A01

A systematic study of the hydrofluorobenzenes to quantify the effect of liquid polarity on the dielectric strength is described. Two important relationships are introduced: dielectric strength decreased as the number of fluorines increased; and dielectric strength decreased as the dielectric constant (or capacitance) increased. The second relationship is based on a postulate that breakdown occurs at a critical value of the energy stored in the test apparatus, which is the same for all of hydrofluorobenzenes.

CRYOGENIC TESTING OF 100-M SUPERCONDUCTING POWER TRANSMISSION TEST FACILITY

R. J. Gibbs, J. E. Jensen, and R. A. Thomas 1981 8 p refs Presented at 1981 Cryogenic Engr. Conf., San Diego, 10 Aug. 1981
(Contract DE-AC02-76CH-00016)
(DE81-028331; BNL-29900; CONF-810835-2) Avail: NTIS HC A02/MF A01

The system was designed to cool the test facility for transmission cables. The system was modified to incorporate a fourth turbine placed remotely from the refrigerator at the far end of the load. In this configuration the load, consisting of the superconducting cables and their containment vessel, becomes a long counterflow heat exchanger with internal heat generation. The results of these tests are presented with discussion of the operation, equipment performance, and possible areas for improvement.

WIND POWER: RESEARCH ON NETWORK WIND POWER OVER THE PACIFIC NORTHWEST. EXECUTIVE SUMMARY Progress Report, Oct. 1979 - Sep. 1980

R. W. Baker and E. W. Hewson Oct. 1980 23 p refs
(DE81-029360; DOE/BP-58) Avail: NTIS HC A02/MF A01

The research in FY-80 is composed of six primary tasks. These tasks include data collection and analysis, wind flow studies around an operational wind turbine generator (WTG), kite anemometer calibration, wind flow analysis and prediction, the Klickitat County small wind energy conversion system (SWECS) program, and network wind power analysis. The data collection and analysis task consists of four sections, three of which deal with wind flow site surveys and the fourth with collecting and analyzing wind data from existing data stations.

GEOTHERMAL-RESOURCE VERIFICATION FOR AIR FORCE BASES

P. R. Grant, Jr. Jun. 1981 56 p refs
(Contract DE-AC04-76DP-00789)
(DE81-027482; SAND-81-7123) Avail: NTIS HC A04/MF A01

The various tupe of geothermal energy and legal uncertainties of the resource are summarized. A methodology to evaluate geothermal resources for applications to US Air Force bases is described. Estimates suggest that exploration costs will be $50,000 to $300,000 which, if favorable, would lead to drilling a $500,000 exploration well. Successful identification and development of a geothermal resource could provide all base, fixed system needs with an inexpensive, renewable energy source.

COMPUTER-AUTOMATED CONTROLS FOR SUPERCONDUCTING MAGNETIC ENERGY STORAGE

Alphonse L. Criscuolo 1981 6 p refs Presented at the Mech., Magnetic, and Underground Energy Storage Ann. Contractors' Rev., Washington, D.C., 24-26 Aug. 1981
(Contract W-7405-eng-36)
(DE81-028697; LA-UR-81-2307; CONF-810833-6) Avail: NTIS HC A02/MF A01

A computer automated control system that allows unmanned operation of the superconducting magnetic energy storage (SMES) system was designed. In addition to unmanned operation the computer offers continual monitoring and recording of all the important SMES signals, operator guidance in starting up and maintaining SMES, emergency shutdown control, and high speed data acquisition for failure diagnosis. The major components of the computer automated control system are two slave computers that perform the data acquisition and a master computer that performs the control.

ANNUAL CYCLE ENERGY SYSTEM EXPERIMENTAL PERFORMANCE AND NATIONAL APPLICABILITY

Van D. Baxter 1981 6 p refs Presented at the IECEC Conf., Atlanta, 9 Aug. 1981 Submitted for publication
(Contract W-7405-eng-26)
(DE81-028570; CONF-810812-32) Avail: NTIS
HC A02/MF A01

The energy conserving potential of the annual cycle energy system (ACES) was demonstrated. The performance of the ACES was compared with that of two different air to air heat pumps in an identical house, the control house. The ACES achieved nearly all of its theoretical performance predictions and verified its design criteria. The system delivered residential heating and cooling services while consuming only 57 percent as much electricity as the best conventional alternative tested. Computer studies show the ACES to be applicable to all US climatic zones except those with very low heating needs. DOE

THERMAL PERFORMANCE OF WINDOWS HAVING HIGH SOLAR TRANSMITTANCE

Michael Rubin and Stephen Selkowitz Jul. 1981 6 p refs Presented at the Am. Section of the Intern. Solar Energy Soc., 6th Natl. Passive Solar Conf., Portland, Oreg., 8-10 Sep. 1981
(Contract W-7405-eng-48)
(DE81-028672; LBL-12288; CONF-810925-16) Avail: NTIS
HC A02/MF A01

The optical and thermal properties of antireflected polyester films and low iron glass sheets are discussed, and the solar and thermal characteristics of windows incorporating high transmittance glazing layers are derived. The plastic films utilize coatings to reduce loses due to surface reflectance and the glass is made with low levels of impurities to reduce adsorption within the material itself. Comparisons among these and other types of windows are made for net energy use for residential buildings in winter. DOE

N82-13525# South Carolina Energy Research Inst., Columbia.

RESIDUAL-ENERGY-APPLICATIONS PROGRAM ENVIRONMENTAL ANALYSIS REPORT

Torgny J. Vigerstad and F. J. McCrosson Oct. 1980 48 p refs
(Contract DE-AC09-77ET-12866)
(DE81-027538; DOE/ET-12866/5) Avail: NTIS
HC A03/MF A01

Environmental analysis performance support of a facility to test industrial scale waste heat recovery equipment and utilization are documented. Topics covered include: legal requirements, likely sites, and operating characteristics of equipment to be tested. Environmental issues surrounding the use of the P-reactor and Par Pond as sources of heating and cooling water are addressed. The Par Pond cooling system is considered for siting of the Energy Applied Systems Tests (EAST) Facility. The Par Pond system has the potential to confine all potential environmental impacts of the construction and operation of the EAST Facility within the boundaries of the Savannah River Plant. Characteristics of the EAST Facility are described and a general description of Par Pond is given. DOE

INEXPENSIVE THERMOGRAPHIC TECHNIQUES FOR DETERMINING RELIABLE SOLAR-COLLECTOR-ARRAY PERFORMANCE

A. Eden and T. Haverty Sep. 1981 35 p refs
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE82-001151; SERI/TR-721-1161) Avail: NTIS
HC A03/MF A01

Thermographic equipment, capable of detecting flow blockages, flow imbalances, and total array shutdown in residential and commercial solar energy collector systems is investigated. The abilities of inexpensive thermographic equipment to perform solar array examinations in the field environment are described. It was found that less expensive instruments, in combinations to enhance the capabilities of each general type, can be used to examine solar collector arrays. Expert infrared equipment operators are not required to obtain some conclusions on system problems. A combination of pot radiation thermometers with either a hand-held imager or thermoprofile instrument is a viable inspection tool. Assessment of reliable flow control components, blocked collectors, unbalanced flow distribution, and reversed flow can all be observed with the combination of instruments. DOE

EVALUATION OF CREEP-FATIGUE LIFE-PREDICTION MODELS FOR THE SOLAR CENTRAL RECEIVER

J. M. Hyzak and Darcy A. Hughes Sep. 1981 55 p refs
(Contract DE-AC04-76DP-00789)
(DE82-000942; SAND-81-8220) Avail: NTIS
HC A04/MF A01

The applicability of several creep fatigue models to life prediction of boiler tubes in a solar central receiver (SCR) was evaluated. The SCR boiler tubes will experience compressive strain dwell loading with hold times up to 6 to 8 hours at temperatures where time dependent deformation will occur. The evaluation criteria include the ability of the model to account for mean stress effects and to be practical in the long life, small strain range regime. A correlation between maximum tensile stress and fatigue life is presented. Using this correlation, compressive dwell behavior is predicted based on continuous cycling data. The limits of this predictive scheme are addressed. DOE

N82-13530# Sandia Labs., Livermore, Calif.

SOLAR-CENTRAL-RECEIVER FUELS AND CHEMICALS Project Status Report, Oct. 1980 - Jun. 1981

R. W. Carling, J. D. Fish, L. G. Radosevich, and J. Vitko, Jr. Aug. 1981 22 p refs
(Contract DE-AC04-76DP-00789)
(DE82-000941; SAND-81-8232) Avail: NTIS
HC A02/MF A01

Solar central receiver fuels and chemicals processes were studied. Ethane pyrolysis and steam reforming of methane were investigated in-depth in addition to coal gasification, oil shale retorting, and biomass flash pyrolysis. The study criteria, status of ongoing work, and future activities are described. DOE

DATA REPORT FOR THE NORTHEAST RESIDENTIAL EXPERIMENT STATION, JUNE 1981
M. C. Russell, P. Raghuraman, and J. J. Farrell Aug. 1981 14 p
(Contract DE-AC02-76ET-20279)
(DE82-000068; DOE/ET-20279/154) Avail: NTIS HC A02/MF A01

Five prototype residential photovoltaic systems consisting of a roof-mounted array, sized to meet at least 50 percent of the annual electrical demand of an energy-conserving house, and an enclosed structure to house the remainder of the photovoltaic equipment, test instrumentation, and work space are being monitored to provide authoritative and accurate information concerning system performance and the typical loads which they serve. One month of physical data is presented for each system as well as an hour-by-hour tabulation for an average day of the month. A common feature of all the systems is that excess solar-generated electric energy is fed back to the utility grid, thus eliminating the need for on-site storage. A.R.H.

N82-13534# Arizona State Univ., Tempe. Coll. of Engineering and Applied Sciences.
EXPERIMENTAL AND ANALYTICAL SYSTEMS STUDIES OF A COMBINED THERMAL-PHOTOVOLTAIC RESIDENTIAL SOLAR SYSTEM Technical Status Report, 1 Jan. - 29 Feb. 1980
Byard D. Wood 1980 10 p
(Contract DE-AC03-79CS-30203)
(DE81-029539; DOE/CS-303203/T5; TSR-3) Avail: NTIS HC A02/MF A01

A combined thermal photovoltaic residential solar system was examined. The reported technical progress includes: testing of the corrosion resistance of a turbine flow meter and parametric studies using computerized simulation of a combined thermal photovoltaic concentrating collector, thermal storage tank, absorption air conditioner with auxiliary heater, and a load. Test facility work, including data processing equipment and a cooling load simulator, is reported. DOE

(Contract DE-AC06-76RL-01830)
(DE82-000705; PNL-3933) Avail: NTIS HC A04/MF A01

The biomass resource base in the Northwest were estimated. Scenarios and a preliminary analysis in the collection and use of forest residues as an energy resource are presented. Four issues that may serve to constrain the total amount of wood residues available for use as fuel are reviewed. DOE

N82-13536# Oak Ridge National Lab., Tenn. Energy Div.
BUILDING A CONSENSUS ABOUT ENERGY TECHNOLOGIES
T. J. Wilbanks Sep. 1981 12 p refs
(Contract W-7405-eng-26)
(DE82-000501; ORNL-5784) Avail: NTIS HC A02/MF A01

The making and sustaining of major energy policy decisions are considered. The major policy alternatives for making energy decision-making more effective are outlined. The focus is on relatively large decisions about energy technologies. The policy alternatives are characterized as being either focused on technology or on social action. Technology focused options include technology choices and improvements. Social action focused options include information, incentives, legitimacy, and institutional changes. But it is clear that they pose several basic philosophical questions, such as whether to base decisions on strong central leadership or on broad consensus formation. And it is clear that the options vary in being best suited for business as usual situations or emergency decision making situations. DOE

N82-13537# Minnesota Univ., Minneapolis. Dept. of Electrical Engineering.
TECHNIQUES FOR ENERGY CONSERVATION IN AC MOTOR-DRIVEN SYSTEMS Final Report
N. Mohan Sep. 1981 169 p refs Sponsored by Electric Power Research Inst.
(EPRI Proj. 1201-13)
(DE82-900356; EPRI-EM-2037) Avail: NTIS HC A08/MF A01

Techniques for energy conservation of reducing losses in ac motor driven systems were compared. The impact on electric utility system as a harmonics, power factor of operation, and Electro Magnetic Interference (EMI) is considered. The techniques evaluated are: (1) the NASA Power Factor Controller, a simple device for reducing power losses in lightly loaded ac motors; (2) wanless motor modification, a scheme of reconnecting motor windings with capacitors in series, to improve the motor efficiencies under all loading conditions; (3) conventional variable frequency solid state inverters which control the speed of ac motors by producing adjustable frequency ac voltage; and (4) frequency drives and schemes including cycloconverters, slip recovery scheme, Exxon Alternating Current Synthesizer, Venturini conversion technique, permanent magnet synchronous motors, and the Phase Liner device. DOE

BIOMETHANATION OF BIOMASS PYROLYSIS GASES Final Report
C. A. Tracy and E. Ashare Aug. 1981 130 p
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE82-000238; SERI/TR-98356-1) Avail: NTIS HC A07/MF A01

The development of the biological methanation process and conditions for maximum performane were studied. Gasification processes have the potential to produce a synthesis gas from biomass. The advantage of such processes is that all organic components of the biomass may be converted to synthesis gas. However, this low Btu value gas is of limited use as a fuel gas. To convert the synthesis gas into pipeline qulity methane, a methanation process is necessary. A more economical alternative to catalytic methanation at high temperature and pressure is the utilization of a biological system to carry out the conversion of biomass pyrolysis gases to methane. DOE

N82-13542# Arkansas Univ., Fayetteville. Dept. of Chemical Engineering.
ECONOMIC AND KINETIC STUDIES OF THE BIOLOGICAL PRODUCTION OF FARM ENERGY AND CHEMICALS FROM BIOMASS Annual Progress Report, Mar. 1979 - Aug. 1980
J. L. Gaddy Aug. 1981 119 p refs
(Contracts DE-AC02-77CH-00178; EG-77-C-01-4042)
(DE82-000044; SERI/TR-98020-1) Avail: NTIS HC A06/MF A01

The technical and economic feasibility of producing farm energy from cellulosic residues is investigated. The system has the capacity to produce 1300 CF of biogas and 180 kwh per day, using four parallel batch anaerobic digesters which are agitated mechanically and heated with waste heat from the generator. This system utilizes native grasses as the raw material. Laboratory reactors are operated to determine the proper innoculation ratio for starting batch cultures with cellulosic raw materials. Procedures for startup and operation of batch digestion systems are presented. Energy and economic analyses of the operation of the test unit are performed. The fertilizer potential of anaerobic digester sludge (from agricultural residues) is determined. The feasibility of separating the stages of anaerobic digestion, the production of acetic and propionic acids by the microorganism Propionibacterium acidi-propionici, the production of methane from acid hydrolyzates, and the kinetics of the continuous digestion of corn stover are studied. DOE

N82-13543# California Univ., Livermore. Lawrence Livermore Lab.
DESIGN AND TEST OF TWO-STEP SOLAR OIL SHALE RETORT
D. W. Gregg, R. W. Taylor, W. R. Aiman, and R. Ruiz 24 Sep. 1981 35 p refs
(Contract W-7405-eng-48)
(DE82-000964; UCID-19199) Avail: NTIS HC A03/MF A01

A design of a two step solar retort, the logic for the design, and the results from a preliminary test of the design at the White Sands Solar Furnace, New Mexico are presented. Solar retorting of oil shale is a technically feasible process where focused solar energy can displace fossil energy in the production of liquid fuels. The predicted result is a 10 to 40% improvement in the exportable fuel (oil + gas) production per ton of raw shale. Greater improvements are achieved with the lower grade shales where with nonsolar processes a larger fraction of the fuel content has to be used in the processing. DOE

COMPRESSED AIR ENERGY STORAGE: PRELIMINARY DESIGN AND SITE DEVELOPMENT PROGRAM IN AN AQUIFER. VOLUME 2: UTILITY SYSTEM PLANNING Final Report
31 Jul. 1981 112 p refs Sponsored in part by EPRI
(Contracts DE-AC02-78ET-29232; ET-78-C-01-2159; EPRI Proj. 1081-3)
(DE82-000466; DOE/ET-29232/T4-Vol-2) Avail: NTIS HC A06/MF A01

The performance of an aquifer compressed air energy storage system was studied. The benefits derived from the integration of a compressed air energy storage facility with a hypothetical electrical network are analyzed. Scenarios of 100 percent coal, 50 percent coal and 50 percent nuclear, and 100 percent nuclear base load capacity additions were examined. Favorable economics are indicated when compressed air energy storage is installed as an alternative to combustion turbine peaking capacity on a system with a significant amount of oil fired generation. MICROEMULSIONS, EMULSIONS AND RELATED SYSTEMS: ENERGY APPLICATIONS [MICROEMULSIONS, EMULSIONS ET SYSTEMES CONNEXES: APPLICATIONS ENERGETIQUES]
1980 29 p refs In FRENCH Presented at Journee d'Etudes on Emulsions, Microemulsions et Systemes Connexes, Agents de Recuperation, de Stockage et de Transformation d'Energie, Pau, France, 25 Jan. 1980
Avail: NTIS HC A03/MF A01

Summaries of 16 lectures are presented. Topics include: oil recovery, thermodynamics of surface-active agents and microemulsions, interpretation of properties particular to alcohols in water-alcohol-oil ternary systems, phase diagrams and interfacial properties of the system water-dodecane-pentanol-sodium octlybenzene sulfonate, and modeling structural inversion in microemulsions. Other subjects are: numerical study of diphasic one and two dimensional flow in a porous medium, storage and transport of low temperature thermal energy as latent heat in dispersed systems, and the dynamics of nonNewtonian solutions. DEVELOPMENT AND OPTIMIZATION OF HYDROGEN STORAGE MATERIALS USING SURFACE ANALYTICAL TECHNIQUES [ENTWICKLUNG UND OPTIMIERUNG VON HYRIDSPEICHER-MATERIALIEN UNTER EINSATZ GRENZFLAECHENPHYSIKALISCHER ANALYSEVERFAHREN]
E. Hamer, W. Gerhard, C. Plog, and H. W. Schroeder Bonn Bundesministerium der Verteidigung 1980 96 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium

der Verteidigung
(BMVg-FBWT-80-6) Avail: NTIS HC A05/MF A01; DOKZENTBw, Bonn DM 30

The role of surface characteristics and properties in the hydrogen storage capability of various materials is studied and optimization proposals are formulated. The hydration properties of FeTi, LaNi5 and Mg/Ni-alloys are correlated with surface data from secondary ion mass spectroscopy and Auger electron spectroscopy as well as with a complementary volume characterization. The hydrogen dissociation catalysis at the surface provoked by oxygen-induced segregation is confirmed. The uptake of CO by the surface is investigated and the expected poisoning influence of contamination is discussed. Among the optimization proposals, the influence of palladium coating and selection through correlation between hydration properties and magnetic properties of the different materials were experimentally assessed. A CENTRAL MICROPROCESSOR CONTROLLED ELECTRICAL STORAGE HEATING SYSTEM Final Report
Hendrik Horstmann Bonn Bundesministerium fuer Forschung und Technologie Dec. 1980 26 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-80-182; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 5.50

The use of a microprocessor to control the reloading of electrical storage heaters not only during the night, but whenever the electrical grid is cycled down, was tested. The test setup, used to control a total of about 10 MW installed storage heating in 96 dwellings, is described. It is demonstrated that additional consumers can be connected to the system without demand for more power stations. Author (ESA)

AGING AND CORROSION PROBLEMS WITH FLAT SOLAR ENERGY ABSORBERS. STUDY BASED UPON LITERATURE AND EXPERIMENT EXCHANGES [AALDRINGS-OCH KORROSIONS-PROBLEM HOS PLANA TERMISKA SOLFAANGARE. EN STUDIE BASERAD PAA LITTERATUR OCH ERFARENHETSUTBYTE]
Hans Wennerholm and Knut-Olof Lagerkvist 1979 72 p refs In SWEDISH
(SP-RAPP-1979/4) Avail: NTIS HC A04/MF A01

The construction and the causes of damage to solar energy absorbers are reviewed. Aging is due to ultraviolet radiation, temperature, humidity, oxygen, impurities in the air and other effects. A literature review is given about the constituent parts. The coverplate may be of glass, several types of plastics, fluoro-compounds, fiberglass, or silicones. For the absorbing surface, sintered chromium oxide, black nickel, black iron, copper oxide, manganese oxides, or selective coated alumimium are used. The insulation is often made of mineral wool or polyurethane resins. Inspection data are reported for nine solar flat-shaped energy absorbers. Most of them are used for the production of warm water and have been in use between three months and three years. Nearly all coverplates bore important deposits caused by condensation. Some of the nine aborbers show corrosion on the aborbing surface and/or on insulation. Author (ESA)

PASSIVE/HYBRID SOLAR COMPONENTS: AN APPROACH TO STANDARD THERMAL TEST METHODS
M. E. McCabe, W. Ducas, M. J. Orloski, and K. N. Decorte Jul. 1981 87 p refs Sponsored in part by DOE
(PB81-227888; NBSIR-81-2300) Avail: NTIS HC A05/MF A01 CSCL 14B

A survey of passive solar products currently available or under development enabled the development of an interim classification system consisting of ten component classifications for purposes of thermal testing. A survey of currently available thermal test procedures was performed to assess the applicability of these test methods for passive/hybrid solar components. Existing test procedures that are useful for the direct gain fenestration system classification are identified, and recommendations are made for evaluation of these laboratory-based procedures by comparison with field-based testing of components under controlled interior conditions. Recommendations are also made for the development of new test procedures for passive/hybrid components classifications for which existing test methods are not applicable. GRA

ELECTRICAL EFFECTS OF SLAG IN A DIFFUSE MODE MAGNETOHYDRODYNAMIC GENERATOR Ph.D. Thesis
Ron Michael Nelson 1981 181 p
Avail: Univ. Microfilms Order No. 8124118

A high temperature (1900 K) platinum-rhodium capped magnesia electrode was developed and successfully tested in a slagging MHD generator. Diffuse mode (non-arcing) operation of high temperature anodes was achieved at current densities up to 3 amps sq cm2. The problem of cathode shorting caused by the ionic nature of slag electrical conductivity (with iron as the major mobile species) was not substantially alleviated by high temperature operation. A computer code was developed which solves the governing electrical equations along with slag energy and thickness equations for a two dimensional, periodic electrode pair in a slagging MHD generator. The numerical results compare favorably with the experimental results including cases with shorted cathode walls. The computer model was used to assess the effects of slag and other operating parameters on generator performance. Dissert. Abstr.

DESIGN PROCEDURES FOR A COMMERCIAL SCALE THERMAL EVAPORATION SYSTEM TO DEPOSIT CdS FOR SOLAR CELL MANUFACTURE Ph.D. Thesis
Richard Edward Rocheleau 1981 422 p
Avail: Univ. Microfilms Order No. 8123800

The detailed process and equipment design of a pilot scale system for continuous deposition of photovoltaic quality cadmium sulfide on a flexible moving substrate was carried out. The unit was built to the design specifications, and operated to demonstrate the feasibility of continuously depositing the semiconductor layer for solar cell manufacture. Model equations and constitutive flow equations describing the effusion of CdS from a source used for solar cell fabrication were verified by experiment. Dissert. Abstr.

N82-13552 Delaware Univ., Newark.
ELECTRON BEAM-INDUCED CURRENT (EBIC) MEASUREMENTS OF HEAT TREATED POLYCRYSTALLINE CUPROUS SULFIDE/CADIMUM SULFIDE SOLAR CELLS Ph.D. Thesis
Stephen Patrick Shea 1981 121 p
Avail: Univ. Microfilms Order No. 8123801

The EBIC response was measured after the samples were heat treated in hydrogen at 170 C for times between zero and 225 hours. The magnitude of the EBIC varied greatly, in some cases by as much as three orders of magnitude, across the active surface of the heat treated samples. Also, the EBIC was not a linear function of the electron beam power, as predicted by a simple theory of the experiment. These observations are explained by a model which accounts for the effects of copper diffusion from the CU2 sub s into the CdS during heat treatment. The rate of diffusion is found to be different in different areas of each sample, possibly because of a variation in the diffusion constant in grains with different crystallographic orientations. Models of both the EBIC and the dark, zero-bias capacitance of these devices are presented which support this interpretation of the data. Dissert. Abstr.

ECOLOGY AND DISTRIBUTION OF THE BENTHIC COMMUNITY ON THE MONTEREY BREAKWATER, MONTEREY, CALIFORNIA M.S. Thesis
Steven J. Busch Mar. 1981 130 p refs
(AD-A102047) Avail: NTIS HC A07/MF A01 CSCL 06/6

The Monterey breakwater was studied to determine an ecological baseline. The plants and animals occupying meter square quadrats along a cross sectional transect covering the breakwater and the adjacent mud bottom out to depths of 13 meters was surveyed qualitatively and quantitatively. It is found that the differences between the populations of the inner and outer parts of the breakwater is minor and those differences are in the relative abundance of only a few species. Author

CONCENTRATION OF ORGANIC COMPOUNDS IN WATER: A LITERATURE SURVEY
R. L. Jolley 1980 23 p refs Presented at the Workshop on Protocol Develop.: Criteria and Standards for Potable Reuse and Feasible Alternatives, Warrenton, Va., 29-31 Jul. 1980
(Contracts EPA-IAG-D7-01027; W-7405-eng-26)
(DE81-026517; CONF-8007111-1) Avail: NTIS HC A02/MF A01

Because of the large variety of chemical compounds present either naturally or as industrial contaminants is water samples, no single concentration method currently available is adequate for concentrating all organics in the water sample. Consequently, in an attempt to concentrate or isolate as much of the organic matter as possible, most researches have combined several methods that may become quite complex and technically difficult to achieve. Most of the current practical methods are summarized in a table and the utility of each method along with major advantage and disadvantages are presented. T.M.

RESPONSE OF THE OCEANS TO INCREASING ATMOSPHERIC CARBON DIOXIDE
C. F. Baes, Jr. Aug. 1981 72 p refs
(Contract DE-AC05-76OR-00033)
(DE81-028178; ORAU/IEA-81-6(M)) Avail: NTIS HC A04/MF A01

The relevant physical and chemical features of the ocean, the observational evidence of its response to increasing atmospheric carbon dioxide, and the uncertainties involved in modeling this response are considered. The deep oceans are near saturation with calcite. The pressure dependence of this solubility and ocean circulation produces calcite supersaturation of the upper ocean. This condition is maintained by photosynthesis and the biogenically controlled precipitation of calcium carbonate. After correcting the effects of biological processes on the composition of seawater, it is evident that the increasing carbon dioxide content of the atmosphere affects the distribution of carbon in the upper ocean. DOE

CONTROL OF HYDROCARBONS AND CARBON MONOXIDE VIA CATALYTIC INCINERATION
C. H. Brown, Jr. and J. A. Klein Sep. 1981 113 p refs
(Contract W-7405-eng-26)
(DE82-000508; ORNL/TM-7787) Avail: NTIS HC A06/MF A01

Eight commercially available incineration catalysts are evaluated experimentally to assess their application to control hydrocarbon and carbon monoxide emissions in the tail gases from a Lurgi substitute natural gas plant, which is simulated using bottled gas mixtures. Catalysts are evaluated with respect to the effects of temperature, space velocity, and the presence of hydrogen sulfide and carbonyl sulfide on hydrocarbon and carbon monoxide conversion. The most effective catalysts are a precious metal based catalyst on a monolithic substrate and a nonprecious metal oxide deposited on a solid substrate formed into 3.2 mm diameter spheres. DOE

(DE81-030949; DOE/EV-02161/T1) Avail: NTIS HC A02/MF A01

The dynamics of sulfate and sulfide water chemistry are compared. Approximately 50 percent of the reduced endogenous carbon (i.e. algal biomass) is mineralized via sulfate reduction and 50 percent via methanogenesis. Radioactive tracer studies with (S-35)O4(=) establish that most of the endogenous carbon mineralized via sulfate reduction occur in the surface sediments (1-4 cm). The quantitative importance of SO4(=) reduction in carbon mineralization (i.e., 50 percent of endogenous carbon is mineralized anaerobically via sulfate reduction) is confirmed. Sulfate reduction is not limited by in situ sulfate concentration (i.e., 1 mM) in suface sediments. S.L.

TABLES OF STATISTICAL SUMMARIES FOR THE SURE AIRCRAFT MEASUREMENTS Final Report
D. L. Blumenthal, W. S. Keifer, and J. A. McDonald Sep. 1981 213 p Sponsored by Electric Power Research Inst.
(EPRI Proj. 862)
(DE82-900317; EPRI-EA-1911) Avail: NTIS HC A10/MF A01

During the sulfate regional experiment (SURE), two aircraft simultaneously measured the vertical distribution of air pollutants and meteorological parameters for a total of six two-week periods in the vicinity of various SURE air monitoring stations in the notheast US. During all periods, the aircraft were based at least 200 km apart. In general, flights consisted of a set of three spirals between the surface (or minimum legal flight altitude) and 3000 m msl. For each vertical spiral, statistics were calculated separately for those data above and below 1500 m msl. For each pollutant parameter and spiral segment, the mean value (anti x), the standard deviation (S), and the coefficient of variation (S/anti x) have been calculated. DOE

TREATMENT OF BIOMASS GASIFICATION WASTEWATERS USING REVERSE OSMOSIS
S. E. Petty, S. D. Eliason, and M. M. Laegreid Sep. 1981 44 p refs
(Contract DE-AC06-76RL-01830)
(DE82-000698; PNL-4018) Avail: NTIS HC A03/MF A01

Reverse osmosis (RO) as a treatment technology for the removal of organics from biomass gasification wastewaters (BGW) generated from an experimental biomass gasifier was evaluated. Since RO is normally considered a complementary treatment technology, wastewaters were pretreated by biological or wet air oxidation (WAO) processes. This membrane is similar to the NS-100, a membrane which is effective in the separation of organics from solution. Separation of organics from solution was determined by COD removal. Membrane degradation was observed when using full strength and WAO pretreated feeds, but not when using feeds that had undergone biological pretreatment. Color removal was computed for the majority of experiments completed. DOE

N82-13567# Pacific Northwest Lab., Richland, Wash.
TREATMENT OF BIOMASS-GASIFICATION WASTEWATERS BY WET-AIR OXIDATION
C. J. English Sep. 1981 30 p refs
(Contract DE-AC06-76RL-01830)
(DE82-000935; PNL-4013) Avail: NTIS HC A03/MF A01

Production of synthetic natural gas from gasification of biomass results in the generation of a high strength wastewater that is difficult to treat by conventional means. The use of wet air oxidation (WAO) as a treatment method for wastewaters was studied. It is suggested that oxidation of biomass gasification wastewaters (BGW) organics by WAO occurs in a stepwise fashion with large organic molecules first beng hydrolyzed and then partially oxidized to low molecular weight intermediates. Complete oxidation of these intermediates is more difficult and most easily accomplished at high reaction temperatures. The best application of WAO to treatment of BGW appears to be as a pretreatment to biological treatment. DOE

Avail: NTIS HC A05/MF A01 CSCL 13B

Cloud condensation nuclei (CCN) were formed in the plume of a power plant and CCN concentrations were found to increase with increasing distance of up to 60 km from the power plant. Condensation nuclei (CN) were also formed. The greatest concentrations of CN were found at distances of less than 40 km downwind, although the total CN population was greater at the greater distances. The size distribution measurements show a gradually increasing modal radius and increasing concentrations of the accumulation mode with increasing distances. Most particles are sulfates, and most larger particles are fly ash. It is suggested that there is a relationship between concentration of surface deposited sulfate and inverse particle diameter and that sulfur is adsorbed and oxidized on refractory fly ash in the high temperature zone of the boiler. (Contract EPA-IAG-D5-E693)
(PB81-234114; NOAA-TM-ERL-OWRM-3; NOAA-81062609)
Avail: NTIS HC A04/MF A01 CSCL 13B

Aerosol samples from the plume of a power plant were analyzed for the presence of sulfates and nitrates with the transmission electron microscope using the BaCl2 and Nitron tests. Plume profile were measured for width and thickness. Tracking of the plume of the Colstrip power plant plume with the aircraft provided plume trajectories that were influenced by the underlying terrain by being diverted by as much as 20 from the wind direction at plume altitude, or by being ducted along a valley. It is indicated that there is no difference in ice nucleus concentrations between plume and ambient atmosphere, and the latter shows an increase of an order of magnitude. GRA

ENVIRONMENTAL HAZARD RANKINGS OF POLLUTANTS GENERATED IN COAL GASIFICATION PROCESSES Final Report, Feb. - Apr. 1980
J. G. Cleland Jun. 1981 400 p refs
(Contract EPA-68-02-3170)
(PB81-231698; EPA-600/7-81-101) Avail: NTIS HC A17/MF A01 CSCL 13B

An evaluation and ranking of environmental hazards associated with coal gasification is reported. Applied chemical analytical data were provided by: (1) research with an experimental gasifier; and (2) sampling of four commercial gasification processes. Gas, liquid, tar, and solid streams were analyzed for 300 substances. Hazard potential was measured. Coals tested range from lignite to anthracite. Approximately 50 representative pollutants are emphasized and ranked according to relative environmental hazard potential. GRA

AIRCRAFT MEASUREMENTS AND MATHEMATICAL MODELING OF THE REMOVAL OF GASEOUS AIR POLLUTANTS AT NATURAL AIR-LAND AND AIR-WATER INTERFACES Ph.D. Thesis
Anthony Joseph DeCaria 1981 444 p
Avail: Univ. Microfilms Order No. 8120415

Natural removal mechanisms play an important role in determining the ultimate fate of gaseous air pollutants emitted into the Earth's atmosphere. One of the more important natural removal mechanisms is absorption at the Earth's surface. Absorption at the Earth's surface was investigated by field measurements, theoretical developments, and comparative interpretation of the measurements and mathematical models. The field program consisted of aircraft measurements of the concentration profiles of SO2 in a plume from a coal-fired power plant on the southern shore at Lake Erie. The measurements were restricted to 20 kilometers from the source. These measurements were conducted in an attempt to differentiate removal at air-land and air-water interfaces. There were no apparent differences in measured concentration profiles obtained over land when compared with profiles obtained over water.

PYROLYTIC CHARACTERIZATION OF THE ORGANIC MATTER IN SELECTED COALS AND IN THE DEVONIAN SHALES OF SOUTHERN WEST VIRGINIA Ph.D. Thesis

Peter Alexander Kelley 1980 275 p

Avail: Univ. Microfilms Order No. 8123953

Selected whole coal samples from the coal sequence in West Virginia and shale samples of the Devonian black shales collected throughout southern West Virginia were subjected to pyrolytic analysis. Pyrograms characteristically showed two main groups of peaks, the first group of peaks representing the volume of hydrocarbons already present in the samples which are volatilized during the heating interval 40 C to 405 C while the second group of peaks represents the hydrocarbons and related compounds generated during the 405 C to 700 C interval. All coal pyrograms gave a maximum in the pyrolysis curve which occurred in 400 C to 600 C temperature range. The degree of maturation of the organics in the Devonian shale samples was evaluated using the temperature of the maximum hydrocarbon generation during pyrolysis from 405 C to 700 C and the transformation ratio. The peak area units and relative values were used to evaluate the organic richness genetic potential, and hydrocarbon proportions in the Devonian shale samples.

THE TRACE METAL STRATIGRAPHY AND RECENT SEDIMENTARY HISTORY OF ANTHROGENOUS PARTICULATES ON THE SAN PEDRO SHELF, CALIFORNIA Ph.D. Thesis

Kenneth Norman Kettenring, Jr. 1981 173 p

Avail: Univ. Microfilms Order No. 8122820

The County of Los Angeles operates a sewage outfall on the western San Pedro Shelf, with the discharge at 60 meters depth and approximately 2.5 kilometers off White's Point. The outfall provides a point source of metal rich organic debris that is deposited on the shelf in an elongate field running northwest and southeast from the discharger. There are two conflicting hypotheses concerning the fate of outfall particulates and associated elements. The first hypothesis is that more than 60% of the particulates remain on the shelf, but that some of the metals are remobilized after deposition. The second hypothesis is that only a small fraction (less than 1% of the organic carbon) of the particulates is retained on the shelf, and that there is no remobilization. The present study strongly supports the first hypothesis. Sediment samples were collected along the 60 meter contour northwest of the outfall using a box-corer with 29.8 x 20.8 x 61 cm. boxes. Each box was subcored, and the subcores were frozen, cut into 1 cm. segments, and freeze-dried. Concentrations of carbon, copper, cadmium, chromium, nickel, zinc, and lead were measured.

A DEPOSITIONAL MODEL FOR MAJOR COAL SEAMS IN THE ROCK SPRINGS FORMATION, UPPER CRETACEOUS, SOUTHWEST WYOMING Ph.D. Thesis

Raymond Allen Levey 1981 585 p

Avail: Univ. Microfilms Order No. 8123428

Data from coal exploration drill holes, measured sections, and deep mine maps, in conjunction with cursory examination of oil and gas logs and seismic sections, were used to reconstruct the depositional settings of the Rock Springs Formation in southwestern Wyoming. Depositional regression represented by extensive sheet sandstones are inferred to be delta-front deposits which reflect the cuspate to arcuate geometry of wave-dominated delta deposits. Coal seam discontinuities, represented by areas of reduced coal thickness or by wedges of sediment producing multiple benches or rider coals, are caused by sediment influx from distributary channels, fluvial channels, and splays. Correlation of several members of the Rock Springs Formation is extended along the outcrop and into the subsurface on the west flank, north rim, and northeast flank of the Rock Springs uplift. Analysis of the geometries and spatial distributions of coal seams was used to develop a detailed geologic model.

RECURRENCE INTERVALS AND RECENCY OF FAULTING ALONG THE SAN GREGORIO FAULT ZONE, SAN MATEO COUNTY, CALIFORNIA Ph.D. Thesis

Gerald Eric Weber 1980 277 p

Avail: Univ. Microfilms Order No. 8123250

The San Gregorio fault branches off of the San Andreas fault zone at Bolinas Lagoon, north of the Golden Gate extending in a south-southeasterly direction to the vicinity of Point Sur where it may possibly connect with the Sur-Nacimiento fault that in turn connects with the San Simeon, and Hosgri faults forming a 450 km long coastal boundary fault. Near Point Ano Nuevo in San Mateo County the numerous faults form a zone greater than 3 km in width. Analysis of the Pleistocene faulting near Point Ano Nuevo indicates that the San Gregorio fault zone consists of two primary fault strands, the Frijoles fault and Coastways fault, and numerous small secondary and branch faults. It is suggested tht 240-280 moderate to large faulting events have occurred along the San Gregorio during the past 105,000 years. The recurrence interval for 7.0-7.5 magnitude earthquakes is, therefore, between 325-440 years, a recurrence interval tht compares favorably with the recurrence interval determined from the long term slip rate.

THERMAL CONTRACTION AND FLEXURE OF INTRACRATONIC BASINS: A THREE DIMENSIONAL STUDY OF THE MICHIGAN BASIN Ph.D. Thesis

Jeffrey Allen Nunn 1981 363 p

Avail: Univ. Microfilms Order No. 8124965

Surface cooling of heated continental crust imposes a load on the lithosphere which subsides as the basement rocks contract. Accumulation of sediments in the resulting depression forms a sedimentary basin. Studies of the geometry of sedimentary basins with horizontal dimensions of a few hundred kilometers suggests the lithosphere responds to loads by regional flexure of a strong elastic or viscoelastic upper lithosphere. Two and three dimensional models for flexure of the lithosphere due to thermal contraction were applied to the Michigan basin. Lithostratigraphic data were used to quantitatively determine the contribution of the weight of sediment overburden to the subsidence. Thermal contraction load was calculated from the load necessary to produce the observed deflection of the lithosphere minus sediment load. Gravity effects of the models were computed and compared to the observed free air gravity anomalies.

THE CRUSTAL STRUCTURE OF KILAUEA AND MAUNA LOA VOLCANOES, HAWAII, FROM SEISMIC REFRACTION AND GRAVITY DATA Ph.D. Thesis

John Justin Zucca 1981 136 p

Avail: Univ. Microfilms Order No. 8124182

Two 100-km-long, on-shore/off-shore seismic refraction profiles were established for Hawaii's two most active volcanoes, Mauna Loa and Kilauea. Combined analysis of these profiles along with the gravity data and teleseismic P-wave residuals for the profiles suggest a complicated crustal and upper mantle structure for the island. The total vertical displacement of the Moho is about 6 km beneath a point near the summit of Mauna Loa. The unreversed Pn velocity is 7.9 km/sec beneath the Kau-Puna coast and 8.2 km/sec beneath the Kona coast. Analysis of the profiles suggests that the volcanic rift zones of Mauna Loa and Kilauea are cored with high velocity, high density rocks (Vp about 6.9 km/sec, density about 2.9 g/cc), which reach to within a few kilometers of the surface of the island. The rift zones widen with depth and coalesce such that a large part of the volcanic pile is composed of high velocity and high density rift zone rock. Dissert. Abstr.

SURFACE WAVES IN STRONG GROUND MOTION WITH APPLICATION TO OFFSHORE ENVIRONMENTS Ph.D. Thesis
Henry Jay Swanger 1981 155 p
Avail: Univ. Microfilms Order No. 8124164

Synthetic seismogram techniques are used to determine the characteristics of one to ten second period strong ground motion due to seismic surface waves. Of particlar interest is the response of offshore geologies, for which little or no strong ground motion data exist. Theoretical responses were computed for a continental shelf-like crustal model and an onshore crustal model and compared. The synthetic offshore motions have larger peak velocities, longer durations and larger spectral response. Over much of the period range of interest, the large response is independent of the site soil characteristics and due to the velocity gradients of the rock structure. This suggests that the use of average onshore response characteristics adjusted only for local soil conditions may not be adequate for specifying design characteristics offshore. Site specific studies accounting for both the local rock and soil properties are probably necessary. Dissert. Abstr.

IONOSPHERIC SCINTILLATION Ph.D. Thesis
David Ming-Whei Wu 1981 223 p
Avail: Univ. Microfilms Order No. 8118903

A renomalization technique, employed in the spirit of the formal theory of scattering, is applied to the problem of ionospheric scintillation. The forward scattering approximation for wave propagation and a Markov approximation for ionospheric fluctuations are used to derive renomalized moment equations descriptive of the wave statistics. The scintillaton index for the case of a plane wave propagating thru the ionosphere is studied for the case of an arbitrary power spectrum of ionospheric fluctuations. An experimental power spectrum, corresponding to relative density fluctuations of about 20% as obtained from in situ measurements by the Atmospheric Explorer-E satellite, is used to calculate the corresponding index for night time equatorial scintillations. For an ionospheric slab model with a thickness of 200 Km and an altitude of 300 Km numerical calculations yield an almost saturated scintillation index of about 1.1. Dissert. Abstr.

PLASTIC FLOW AND UNSTABLE DEFORMATION OF GEOLOGICAL MATERIALS Ph.D. Thesis
James Frank Dorris 1981 125 p
Avai: Univ. Microfilms Order No. 8124875

A plasticity theory to describe the flow of granular materials was developed. The theory accounts for true stress triaxiality, pressure sensitivity, and dilatancy. The unstable deformation of a layer on a half space under the action of compressive forces parallel to the free surface are considered. The material properties considered for the layer and the half space are various combinations of elasticity an plasticity. Both the flow and the total deformation plasticity models are used. It is concluded that results are relevant to the folding of geological formations and crustal buckling under tectonic stresses. Dissert. Abstr.

THEORY AND APPLICATION OF EXPERIMENTAL MODEL ANALYSIS IN EARTHQUAKE ENGINEERING Ph.D. Thesis
Piotr Daniel Moncarz 1981 279 p
Avail: Univ. Microfilms Order No. 8124110

The feasibility and limitations of small-scale model studies in earthquake engineering research and practice is considered with emphasis on dynamic modeling theory, a study of the mechanical properties of model materials, the development of suitable model construction techniques and an evaluation of the accuracy of prototype response prediction through model case studies on components and simple steel and reinforced concrete structures. It is demonstrated that model analysis can be used in many cases to obtain quantitative information on the seismic behavior of complex structures which cannot be analyzed confidently by conventional techniques. Methodologies for model testing and response evaluation are developed in the project and applications of model analysis in seismic response studies on various types of civil engineering structures (buildings, bridges, dams, etc.) are evaluated. THE INTERNAL STRUCTURE OF THE MAGNETOPAUSE Ph.D. Thesis - Univ. Libre de Bruxelles [LA STRUCTURE INTERNE DE LA MAGNETOPAUSE]
M. Roth 1980 345 p refs In FRENCH; ENGLISH summary
(Aeronomica-Acta-A-221-1980) Avail: Issuing Activity

A kinetic model which describes the internal structure of the magnetopause is developed. Among other factors, the model takes into account the interplanetary magnetic field and the thermal motion of the particles. The structure of a tangential discontinuity in a multicomponent collisionless plasma is described. From consideration of the two-stream instabilities, a minimum magnetopause thickness is deduced. In a hydrogen plasma, this structure corresponds to an ionic layer in which the electric current is only the result of a displacement of ions. The tangential discontinuities observed at the magnetopause are likened to regions where magnetosheath and magnetospheric plasmas are interpenetrated. Quantitative results show that the variations of the different physical factors are analogous to those of satellite observations. More generally, the parameters characterizing this model make it appropriate to describe many types of tangential discontinuities which are likely to appear in other cosmic collisionless plasmas. THREE-DIMENSIONAL MAPPING OF THE AURORA FROM DIGITIZED ALL-SKY PICTURES
Kari U. Kaila Apr. 1981 42 p refs
(Rept-550.388.8; TR-25; ISBN-95-697-148-22; ISSN-0355-1733) Avail: NTIS HC A03/MF A01

A mathematical method of calculating the altitudes and geographical positions of discrete auroral forms is presented. It is based on pairs of simultaneous all-sky frames taken at two stations and requires knowledge of the positions, orientation errors and scale functions of the all-sky cameras. The corresponding points of the aurora need not be known. After the corrections, any point in the sky can be determined with an accuracy of about 0.2 deg. The accuracy that can be reached is of the order of 1 km in altitude and 2 km in position. Author

SAM 2 MEASUREMENTS OF THE POLAR STRATOSPHERIC AEROSOL, VOLUME 1: OCTOBER TO APRIL 1979

M. Patrick McCormick Dec. 1981 78 p refs
(NASA-RP-1081) Avail: NTIS HC A05/MF A01 CSCL 04A

Weekly averages of Antarctic and Arctic stratospheric aerosol data as well as corresponding temperature profiles for the time and place of each stratospheric aerosol measurement (SAM) II measurement during the first 6 months of satellite flight are presented. From the aerosol extinction profile data, contours of aerosol extinction as a function of altitude and longitude or time are plotted. Aerosol optical depths are calculated for each week. Polar stratospheric clouds at altitudes of about 22 km were observed during the Arctic winter at various times and locations. A representative sample of the first 6 months of data to be used in atmospheric and climatic studies is outlined. E.A.K.

MAGNETIC CLOUDS BETWEEN 2-4 AU: VOYAGER OBSERVATIONS
L. F. Burlaga and Kenneth W. Behannon Oct. 1981 26 p refs Submitted for publication
(NASA-TM-83849) Avail: NTIS HC A03/MF A01 CSCL 04A

Magnetic clouds were observed in the solar wind between 2-4 AU. It was shown that they are stable enough to persist without major changes out to such distances. It is estimated that the clouds expand at a speed of the order of 45 km/s. The average Alfven speed at the front and rear boundaries is 104 km/s, the expansion speed is estimated to be nearly half of the Alfven speed, which is consistent with an earlier estimate of the expansion speed of clouds between the Sun and 1 AU. The magnetic field configuration is highly ordered and consistent with the passage of some kind of loop. E.A.K.

LARGE-SCALE VARIATIONS OF THE INTERPLANETARY MAGNETIC FIELD: VOYAGER 1 AND 2 OBSERVATIONS BETWEEN 1-5 AU
L. F. Burlaga, R. P. Lepping, K. W. Behannon, L. W. Klein (Computer Sciences Corp., Silver Spring, Md.), and F. M. Neubauer (Technische Univ., Brunswick) Oct. 1981 36 p refs Submitted for publication
(NASA-TM-83850) Avail: NTIS HC A03/MF A01 CSCL 04A

Observations by the Voyager 1 and 2 spacecraft of the interplanetary magnetic field between 1 and 5 AU were used to investigate the large scale structure of the IMF in a period of increasing solar activity. The Voyager spacecraft found notable deviations from the Parker axial model. These deviations are attributed both to temporal variations associated with increasing solar activity, and to the effects of fluctuations of the field in the radial direction. The amplitude of the latter fluctuations were found to be large relative to the magnitude of the radial field component itself beyond approximately 3 AU. Both Voyager 1 and Voyager 2 observed decreases with increasing heliocentric distance in the amplitude of transverse fluctuations in the averaged field strength (B) which are consistent with the presence of predominantly undamped Alfven waves in the solar wind, although and necessarily implying the presence of them. Fluctuations in the strength of B (relative to mean field strength) were found to be small in amplitude, with a RMS which is approximately one third of that for the transverse fluctuations and they are essentially independent of distance from the Sun. 1981 35 p refs
(Contract F04701-80-C-0081)
(AD-A099453; TR-0081(6960-05)-8; SD-TR-81-25) Avail: NTIS HC A03/MF A01 CSCL 04/1

Measurements of heavy ions in the low altitude outer zone are discussed. Data were acquired with a heavy ion sensor aboard the S3-2 satellite. Equatorial measurements gave a large He/CNO ratio; clearly magnetospheric processes strongly discriminate against populating the low altitude regions with ions of increasing mass in the energy range of hundreds of keV. It is indicated that the low altitude CNO/He ratio is strongly time dependent. Author

The drift shells of protons in a model magnetic field were calculated. The radial gradient of the protons is combined with calculated drift shells to predict the flux levels at several local times for different pitch angles and energies. The field model is a three term Mead model, which is fit to the observed B-values at synchronous orbit. The predicted local time dependent fluxes match the observed fluxes, and correctly predict the pitch angle dependencies. Author

ATMOSPHERIC 222RN MEASUREMENTS AT SAN NICOLAS ISLAND DURING 1980 Interim Report

R. E. Larson and R. K. Jeck 13 Oct. 1981 10 p refs
(AD-A104802; NRL-MR-4649) Avail: NTIS HC A02/MF A01 CSCL 04/1

Radon concentration in the near surface air at San Nicolas Island, California, was measured. Unreported results for January and July 1980 are emphasized. For six of eight days during the January session the measured radon concentration was greater than 40 picocuries/cubic m corresponding to a continential air mass. Only the first day involved a maritime air mass with radon concentration less than about 6 picocuries/cubic m. In contrast to all the previous sessions, maritimes, air dominated the ten day session in July 1980, with radon concentrations generally less than about 5 picocuries/cubic m. Author

TEMPERATURE AND DENSITY OF GEOCORONAL HELIUM DERIVED FROM A ROCKET-BORNE He RESONANCE CELL EXPERIMENT Final Report

Peter B. Seidl Bundesministerium fuer Forschung und Technologie Dec. 1980 99 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-80-015; ISSN-0170-1339) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 20.80

The helium resonance radiation intensity of 58.4 nm was observed with a helium resonance cell photometer aboard a Black Brant 4b rocket during a daytime flight up to a height of 720 km. The height dependence of the optically thin part of resonance emission permits the deduction of the geocoronal helium temperature and density. A procedure is explained which allows the optically thin from the optically thick contribution to be distinguished and analyzes them separately. At 700 km the temperature found attains 1130 K and the density 1.35 X 10 to the 5/cucm. Whereas the temperature obtained is in reasonable agreement with current model values, the density is considerably lower than theoretically predicted. Author (ESA)

ENVIRONMENTAL ASSESSMENT OF THE ALASKAN CONTINENTAL SHELF: ANNUAL REPORTS OF PRINCIPAL INVESTIGATORS FOR THE YEAR ENDING MARCH 1980. VOLUME 5: HAZARDS Annual Report

Feb. 1981 665 p refs Sponsored in part by the Bureau of Land Management
(PB81-225732; NOAA-81052107) Avail: NTIS HC A99/MF A01 CSCL 08G

Hazards caused by the environmental conditions are reported. Environmental pollution resulting from the development of oil and gas resources in Alaskan waters was investigated. T.M.

N82-13608 Northwestern Univ., Evanston, Ill.

THE EFFECTS OF ATMOSPHERIC TURBULENCE ON THE ATMOSPHERIC TRANSMITTANCE AT OPTICAL FREQUENCIES Ph.D. Thesis

Chii-Feng Ouyang 1981 162 p
Avail: Univ. Microfilms Order No. 8124972

A detailed treatment of optical wave propagation in the atmosphere using the extended Huygens-Fresnel principle and the theory of atmospheric turbulence is presented. The average intensity and deviation of intensity for ocean waves due to the turbulence effect was calculated. Spatially partially coherent sources were used. The effects of a finite aperture receiver are included. Starting with the time independent stochastic wave equation (the slow time dependence of the field fluctuations is suppressed by using Taylor's frozen in hypothesis), the second moment and fourth moment nutual coherence equation were derived using the Kolmogorov spectrum of turbulence. Intensity distribution and scintillation index was then found. Dissert. Abstr.

N82-13609 California Univ., Riverside.

COLLOIDAL PROPERTIES OF COAGULATED CALCIUM-MONTMORILLONITE SUSPENSIONS Ph.D. Thesis

Nancy Beatrice Ball 1981 145 p

Avail: Univ. Microfilms Order No. 8122834

Changes in clay particle shape, size and structure were studied as the concentration of calcium electrolyte in clay suspensions increased to 1 M and as the complexing capability of the anion increased. The viscosity turbidity and sedimentation rate of Ca montmorillonite suspensions containing CaCl2, (NO3)2 or Ca(ClO4)2 were measured. Chloride and nitrate anions were assumed to form the species, CaCl(+) and CaNO3(+) whereas the perchlorate anion was assumed to form calcium complex. The viscosities of the suspensions, measured using a capillary viscometer, were regressed on both clay and salt concentrations. The limiting viscosity number, or intrinsic viscosity, calculated from the regression equations is shown to be related to the axial ratio of the clay particles and the amount of occluded solution within the particles. Dissert. Abstr.

N82-13610 California Univ., Santa Cruz.

PETROLOGY AND GEOCHEMISTRY OF OPHIOLITE FRAGMENTS IN A TECTONIC MELANGE, KODIAK ISLANDS, ALASKA Ph.D. Thesis

Betsy Jo Beyer 1980 231 p

Avail: Univ. Microfilms Order No. 8123245

The results of a study of five small ultramafic and bodies in the Kodiak Islands, part of a belt of such rocks tectonically included within the Crestaceous Uyak Complex and correlative rocks of southern Alaska are presented. A pivotal aspect of this project was to determine whether these isolated fragments of a presumed ophiolite sequence might be shown to be related to each other in the absence of such definitive field evidence as is commonly found in continuous ophiolite sequences. Based on the strong similarities of their constituent rock types, the blocks of the Kodiak dismembered ophiolite were probably formed in the same or similar environments. Four of the five bodies contain nearly identical layered clinopyroxenites and dunites; two of these bodies also contain identical layered gabbronorites. Ferrogabbro, quartz gabbro, tonalite, and basaltic dikes are the major constituents of only one ophiolite fragment, but minor feldspathic wehrites occur in both this fragment and one other.

Dissert. Abstr.

THE NITROGEN CYCLE AND HEAT BUDGET OF A SUBTROPICAL LAGOON, DEVILS HOLE, HARRINGTON SOUND, BERMUDA: IMPLICATIONS FOR NITROUS OXIDE PRODUCTION AND CONSUMPTION IN MARINE ENVIRONMENTS Ph.D. Thesis

Irving Foster Brown 1981 338 p

Avail: Univ. Microfilms Order No. 8124858

From May to September, 1978, the vertical and temporal patterns of ammonium, nitrite, nitrate, nitrous oxide, and oxygen concentrations were investigation during development of thermal stratification in the subtropical oligotrophic lagoon of oceanic salinity, Devil's Hole (32.33 deg N,64.70W). The objective of the study was to resolve the time-dependent response of processes governing the inorganic components of the marine nitrogen cycle to thermocline development and declining oxygen concentrations in a subthermocline region. During this period differential absorption of solar irradiance with depth together with wind-induced vertical mixing resulted in the partitioning of the water column into three regions: surface mixed layer (0m. 12 m depth), thermocline region (12 m - 20m), and subthermocline region (29 m- 24.5m). Dissert. Abstr.

N82-13612 Ohio State Univ., Columbus.

SIMULATION STUDIES ON THE COMPUTATION OF THE GRAVITY VECTOR IN SPACE FROM SURFACE DATA CONSIDERING THE TOPOGRAPHY OF THE EARTH Ph.D. Thesis

Kostas Evangelos Katsambalos 1981 146 p

Avail: Univ. Microfilms Order No. 8121810

Three approaches for the computation of the components of the gravity vector in space considering the topography of the Earth were investigated: (1) a numerical integration based on the appliction of Green's third identity; (2) the discrete dirac; and (3) the least-squares collocation. Under a spherical approximation, the surface of the Earth is assumed to be known through the elevations of its points above a reference sphere. The first technique requires as data gravity disturbances and disturbing potentials on the Earth's surface, while the other two techniques require as data surface gravity anomalies. The agreement between the rigorously computed vectors and those from the three techniques, is analyzed. It is indicated that in comparing the techniques with the classical approach (the Direct Integration Method), the consideration of the topography improves signficantly the accuracy of the computations. Dissert. Abstr.

N82-13613 Missouri Univ. -Rolla.

AN INVESTIGATION OF THE NICKEL-COBALT OCCURRENCE IN THE SOUTHEAST MISSOURI MINING DISTRICT Ph.D. Thesis

David Ray Jessey 1981 230 p

Avail: Univ. Microfilms Order No. 8123585

A study of the occurrence of nickel and cobalt in the Southeast Missouri Mining District revealed several significant geochemical trends and mineralogical relationships. Regional geochemical studies indicate that the greatest concentration of nickel and cobalt occurs in the Fredericktown area. Mines in the Viburnum Trend also have significant concentrations of these metals. Studies of the Viburnum Trend have established that both nickel and cobalt decrease in concentration southward from the Magmont mine to the Brushy Creek mine, increase at the Fletcher mine, and decrease again at the Sweetwater mine. A detailed geochemical study of the Buick mine shows that this same decrease southward is more pronounced at the mine level and that copper trends very closely mimic those of nickel and cobalt. The north-south zoning is also substantiated by an observed decrease in silicification from north to south within the Magmont and Buick mines. Studies of the individual ore bodies reveal differences in metal zoning which indicate that they may not be contemporaneous. Nickel/cobalt ratios also show significant patterns. Dissert. Abstr.

N82-13614# South Carolina Univ., Columbia.

STRUCTURAL AND STRATIGRAPHIC ANALYSIS OF THE PALEOZOIC MURZUK AND GHADAMES BASINS, WESTERN LIBYA Ph.D. Thesis

Richard Mark Karasek 1981 164 p

Avail: Univ. Microfilms Order No. 8123422

The intracratonic basins in western Libya are characterized by extensional basement controlled faulting along northwest and northeast trends. The northwest southeast trending Tripoli-Soda, Ben Ghenma and Hasi Atshan subsurface arches were uplifted from Cambian through Devonian time. The anomalous west-southwest trending Gargaf Arch acted as a hinge line from Silurian through Devonian time, with consequent paleoslopes to the northwest (Ghadames Basin) and southeast (Murzuk Basin). Paleozoic detrital sediments are up to 1500 m thick in the Murzuk Basin and 2500 m thick in the Ghadames Basin. Five depositional sequences comprise transgressive-regressive cycles of deposition from parallic (coarse grained) to marine (fine-grained). Detailed environmental interpretation of the sequences is based on outcrop models for the Middle Devonian-Lower Carboniferous Aouinet Ouenine and Shatti Formations. Dissert. Abstr.

N82-13615 Emory Univ., Atlanta, Ga.

RATES AND MECHANISMS OF CHEMICAL WEATHERING IN AN ORGANIC ENVIRONMENT AT PANOLO MOUNTAIN, GEORGIA Ph.D. Thesis

Roy Arthur Nixon, III 1981 182 p

Avail: Univ. Microfilms Order No. 8110018

Chemical weathering consists of alteration of micas and feldspars to halloysite through intermediate gibbsite and allophane. Gibbsite is the first mineral produced from chemical weathering.

Allophane results from the reaction of gibbsite with dissolved silica. Analyses of more than 600 published water analyses were used to calculate a free energy of formation for allophane of -896.79 kcal/mole based on the kaolin formula and disregarding the effects of structural water. A trend surface plot of the data using least squares gave a surface which represents equilibrium, and has a minimum solubility of aluminum at pH 6.7. The Gibbs free energy of formation for the ion Al(OH)2(+) is calculated to be -216.8 kcal/mole. Dissert. Abstr.

N82-13616 Stanford Univ., Calif.
STUDIES OF NATURAL FRACTURES, FAULT ZONE PERMEABILITY, AND A PORE SPACE-PERMEABILITY MODEL Ph.D. Thesis
Donald Alan Seeburger 1981 243 p
Avail: Univ. Microfilms Order No. 8124147

The natural fracture distribution encountered in boreholes is presented. The distribution an orientation of fractures in these wells were determined using an ultrasonic borehole televiewer. The number of fractures observed was relatively independent of depth. The characteristics of fluid flow around fault zones are described. Faults are often described as conduits or barriers to fluid flow. In cases for which faults appear to act as both barriers and conduits, the required permeability is highly anisotropic. A network model of pore space from which permeability and bulk modulus can be calculated as a function of confining pressure is presented. Pores are modeled as straight conduits of circular, elliptic, or tapered section. Flow through each conduit is modeled using Poiseuille flow. Dissert. Abstr.

N82-13617 Stanford Univ., Calif.
TWO DETAILED SEISMIC STUDIES IN CENTRAL CALIFORNIA. PART 1: EARTHQUAKE CLUSTERING AND CRUSTAL STRUCTURE STUDIES OF THE SAN ANDREA FAULT NEAR SAN JUAN BAUTISTA. PART 2: SEISMIC VELOCITY STRUCTURE ALONG THE SIERRA FOOTHILLS NEAR OROVILLE, CALIFORNIA Ph.D. Thesis
Mary Ann Spieth 1981 174 p
Avail: Univ. Microfilms Order No. 8124157

A study was made of the spatial and temporal patterns of seismicity and the mechanics of faulting during a two-and-one-half year period along a 15 km segment of the San Andreas fault. Analysis of waveforms filtered from 0.5-5.0 Hz and precise relative locations from phase arrival times show that there are discrete patches on the fault which rupture repeatedly. First-motion focal mechanisms display a consistent pattern of right-lateral strike-slip motion. Analysis of traveltimes from a reversed active seismic refraction experiment in the western foothills of the Sierra Nevada reveals a localized layer of high velocity material within 10 km of the surface. This layer, a remnant of buried oceanic crust, has a five-fold increse in dip approximately 25 km south of the epicenter of the 1 August 1975 magnitude 5.7 earthquake near Oroville, California. Dissert. Abstr.

AN EXPERIMENTAL STUDY OF TURBULENCE IN AN URBAN ENVIRONMENT Ph.D. Thesis
John Francis Clarke 1981 163 p
Avail: Univ. Microfilms Order No. 8121716

The structure of turbulence in the urban surface boundary layer is discussed. Wind and temperature fluctuations were measured with fast response sensors at a height of 31 m in four areas of varied land use in the St. Louis environs (a rural and three urban sites). The second moments of the fluctuations were computed for one hour time series and analyzed within the framework of Monin-Obukhov similarity theory (i.e., normalized by appropriate velocity and temperature scales). The results are discussed relative to observed land use features and calculated surface roughness lengths for each of the sites. Dissert. Abstr.

N82-13619 Northwestern Univ., Evanston, Ill.
APPLICATION OF BAYESIAN ANALYSIS FOR WIND ENERGY SITE EVALUATION Ph.D. Thesis
Harish Govinda Rao 1981 142 p
Avail: Univ. Microfilms Order No. 8124987

Extensive research had indicated that the wind speed is well modelled by the single-parameter Rayleigh distribution. The site mean wind speed is given a prior distribution obtained from historical National Weather Service data of sites in the region. The prior distribution is updated to a posterior each time observed data become available. The posterior distribution is combined with the Rayleigh distribution to obtain the Bayesian distribution of wind speed. This distribution can be used in conjunction with the turbine power characteristics of different machines to make rational decisions, based on the expected maximum utility criterion, for selecting the best turbine for a given site or the best site for a given turbine. Dissert. Abstr.

N82-13620*# National Aeronautics and Space Administration. Langley Research Center, Hampton, Va.
COMPARISON OF DATA INVERSION TECHNIQUES FOR REMOTELY SENSED WIDE-ANGLE OBSERVATIONS OF EARTH EMITTED RADIATION
Richard N. Green Dec. 1981 46 p refs
(NASA-TP-1924; L-14591) Avail: NTIS HC A03/MF A01 CSCL 04B

The shape factor, parameter estimation, and deconvolution data analysis techniques were applied to the same set of Earth emitted radiation measurements to determine the effects of different techniques on the estimated radiation field. All three techniques are defined and their assumptions, advantages, and disadvantages are discussed. Their results are compared globally, zonally, regionally, and on a spatial spectrum basis. The standard deviations of the regional differences in the derived radiant exitance varied from 7.4 W-m/2 to 13.5 W-m/2. A.R.H.

FEASIBILITY STUDY OF A PROCEDURE TO DETECT AND WARN OF LOW LEVEL WIND SHEAR Final Report
Barry S. Turkel, Philip A. Kessel, and Walter Frost Washington NASA Nov. 1981 82 p refs
(Contract NAS8-33458)
(NASA-CR-3480; M-365) Avail: NTIS HC A05/MF A01 CSCL 04B

A Doppler radar system which provides an aircraft with advanced warning of longitudinal wind shear is described. This system uses a Doppler radar beamed along the glide slope linked with an on line microprocessor containing a two dimensional, three degree of freedom model of the motion of an aircraft including pilot/autopilot control. The Doppler measured longitudinal glide slope winds are entered into the aircraft motion model, and a simulated controlled aircraft trajectory is calculated. Several flight path deterioration parameters are calculated from the computed aircraft trajectory information. The aircraft trajectory program, pilot control models, and the flight path deterioration parameters are discussed. The performance of the computer model and a test pilot in a flight simulator through longitudinal and vertical wind fields characteristic of a thunderstorm wind field are compared. E.A.K.

COMPENSATION FOR USE OF MONTHLY-AVERAGED WINDS IN NUMERICAL MODELING
Claire L. Parkinson Nov. 1981 95 p refs
(NASA-TM-83855) Avail: NTIS HC A05/MF A01 CSCL 04B

Ratios R of the monthly averaged wind speeds to the magnitudes of the monthly averaged wind vectors are presented over a 41 x 41 grid covering the southern Ocean and the Antarctic continent. The ratio is found to vary from 1 to over 1000, with an average value of 1.86. These ratios R are relevant for converting from sensible and latent heats calculated with mean monthly data to those calculated with 12 hourly data. The corresponding ratios alpha for wind stress, along with the angle deviations involved, are also presented over the same 41 x 41 grid. The values of alpha generally exceed those for R and average 2.66. Regions in zones of variable wind-directions have larger R and alpha ratios, over the ice-covered portions of the southern Ocean averaging 2.74 and 4.35 for R and alpha respectively. Thus adjustments to compensate for the use of mean monthly wind velocities should be stronger for wind stress than for turbulent heats and stronger over ice covered regions than over regions with more persistent wind directions, e.g., those in the belt of mid-latitude westerlies. S.L.

FIELD TESTS OF A SURFACE ICE ACCRETION MEASUREMENT SYSTEM Final Scientific Report
Paul Tattelman 23 Dec. 1980 23 p
(AF Proj. 6670)
(AD-A100282; AFGL-TR-81-0007; AFSG-435) Avail: NTIS HC A02/MF A01 CSCL 04/2

Rosemount ice detectors were installed at four New England locations to collect information on their response to icing near the Earth's surface. Data included, for each icing event, the recorded output of the ice detectors, the mass, thickness and physica properties of the ice on a control cylinder, and meteorological conditions pertinent to the field tests. Results indicated that the detector is excellent for objectively estimating icing amounts on a cylinder for in cloud icing on mountaintops. A method for making standardized observations of the mass and thickness of ice cylinders with varying diameters is presented Author

FORECASTING SKILL
Kenneth E. German Jan. 1981 51 p refs
(AD-A099778; AD-E850057) Avail: NTIS HC A04/MF A01 CSCL 04/2

The accuracy of centrally produced prognoses improved throughout the past 20 years; however, several studies show negligible improvement in weather forecasting. Available data in more than 100 journal articles were reviewed to independently evaluate weather forecasting improvement. Overall forecasting skill improved for most weather elements; however, improvement was not obtained by all. A 'review' of other factors (education, experience, interest, and procedures) that might be important in determining forecasting skill shows that basic education and experience were achieved (2-3 months), the main factor contributing to forecasting skill is forecaster motivation. The AWS emphasis on accurate weather forecasting apparently is effective, and should be continued. Author

Evans (Trawler Bountiful, Port of Avila, Calif.), Larry Breaker (National Earth Satellite Service, Redwood City, Calif.), Robert C. Wrigley, and William W. Broenkow (Moss Landing Marine Labs. Moss Landing, Calif.) Nov. 1981 19 p refs
(NASA-TM-81332; A-8745) Avail: NTIS HC A02/MF A01 CSCL 08A

An upwelling episode in the Point Sal region of the central California coast is examined by using data obtained by a data buoy. The episodes was interrupted by the abrupt abatement of the strong wind which promotes coastal upwelling. The mean hourly upwelling index is calculated to be higher than the 20 year mean monthly value. During 3 days of light wind commercial bottom trawl operations were possible. Shipboard estimates of chlorophyll content in surface waters during trawling show the high concentrations that are indicative of a rich biomass of phytoplankton, a result of the upwelling episode. Satellite imagery shows the extent of the upwelling water to be of the order of 100 km offshore; the result of many upwelling episodes. Shipboard echo sounder data show the presence of various delmersal species and of zooplakton; the latter graze on the phytoplankton in the upper euphotic layers. The fish catch data are recorded according to species for 2 days of trawling, and the catch per trawl hour is recorded. S.L.

ACOUSTICAL PROPERTIES OF SEDIMENTS Annual Report, 1 Jan. - 31 Dec. 1980
Donald J. Shirley 11 May 1981 159 p refs
(Contract N00014-76-C-0117)
(AD-A103726; ARL-TR-81-20) Avail: NTIS HC A08/MF A01 CSCL 08/10

The in situ acoustic measuring system was configured to enable concurrent measurement of compressional wave velocity and attenuation, shear wave velocity and attenuation acoustic impedance, static shear strength, and corer acceleration. The recording instrument and transducers were successfully tested in the laboratory and were prepared for field testing. A laboratory experiment was concluded to test predictions of the analytical model. Viscosity of the pore fluid in an artificial sediment of spherical glass beads was varied by mixing various concentrations of glycerin with water. Results of the experiment indicate that predictions of the model do not match measured data. The updated electronic circuits and the software required for the microprocessor playback unit are provided. Author

(AD-A103279; SACLANTCEN-SR-47) Avail: NTIS HC A03/MF A01 CSCL 20/4

Available one dimensional mixed layer models are reviewed. A number of specific models, developed from a common set of basic equations, are discussed and compared. It is pointed out that no particular mechanism has emerged to fully explain observations of 'slab like' (vertically uniform) flow in the mixed layer and so, despite the use of slab flow in simplifying bulk model equations, its cause has not been properly recognized. The results of the differential models do not predict slab-like flow unless the wind subsides. Author

ICAPS OCEANOGRAPHIC DATA FOR THE INDIAN OCEAN Final Report

Dec. 1980 93 p refs

(AD-A103173; NOO-RP-32C) Avail: NTIS HC A05/MF A01 CSCL 08/10

The integrated command ASW prediction system (ICAPS) oceanographic data files for the Indian Ocean are presented. Graphic displays provide an illustration of the historical data stored within the ICAPS data base. Depth, temperature and salinity values are shown on a split-depth scale providing a depiction of the near surface strucutre and a less detailed picture of the slowly varying deeper structure. The corresponding oceanograhic data for the Atlantic Ocean and Mediterranean Sea and Pacific Ocean are presented in companion publications. Author

SURFACE SIGNS OF INTERNAL OCEAN DYNAMICS

Erik Mollo-Christensen 1980 8 p refs

(Contract N00014-80-C-0273)

(AD-A101380) Avail: NTIS HC A02/MF A01 CSCL 08/3

There are various processes internal to the ocean that can interact with the surface. The resulting interaction causes changes in the surface wave structure that may well be recognizable by remote sensing systems. Vertical motion occurs when a wind driven surface Ekman layer is set up. Such 'pumping' can also take place in deeper Ekman layers especially over sloping bottom surfaces. Internal waves, topographic waves, and current shear can also cause changes in the surface wave field. A combination of ship, buoy, and remote sensors like those aboard LANDSAT and Seasat, coupled with the output of modeling analyses, can immeasurably improve our knowledge of ocean dynamics. Author

ON THE INADEQUACY OF ONE DIMENSIONAL OCEAN MODELS FOR THE GLOBAL CARBON CYCLE

Anders Bjoerkstroem 18 Feb. 1981 29 p refs

(CM-51) Avail: NTIS HC A03/MF A01

An attempt is made to estimate the free parameters in a model of the oceanic carbon cycle, using GEOSECS data. It turns out to be impossible to set the parameters in a way that is compatible with the observed distributions of carbon and oxygen simultaneously. The result indicates that it may not be possible for any horizontally homogeneous ocean model to depict the carbon cycle in a satisfactory way. A model where Antarctic water is treated separately is required. Author (ESA)

ARTIFICIAL REEFS: PROCEEDINGS OF A CONFERENCE

Donald Y. Aska, ed. Feb. 1981 240 p Conf. held at Daytona Beach, Fla., 13-15 Sep. 1979

(PB81-227779; FSG-R-41; NOAA-81052001; Rept-41) Avail: NTIS HC A11/MF A01 CSCL 08A

The conference dealt with a variety of perspectives on artificial reefs as an improvement on the natural habitat of fish, in various coastal areas. Subjects considered were: site selection, construction materials, economical and social aspects as well as planning and management for multiple use of such resources. Procedures for obtaining construction and use permits and relevant regulations are also given consideration. GRA

THE PROPAGATION OF INERTIAL-INTERNAL WAVES IN COASTAL UPWELLING REGIONS Ph.D. Thesis

Walter Robertson Johnson 1981 311 p

Avail: Univ. Microfilms Order No. 8123817

It is hypothesized that near-inertial waves are responsible for propagation of significant amount of energy from the ocean surface mixed layer into the interior in coastal upwelling regions. It is suggested that these waves may impart some or all of their energy to other forms of oceanic motions, especially: mean flow at or near so-called critical surfaces, turbulent flow produced when the wave shear reduces the gradient Richardson number to less than a critical value, or turbulent flow produced through frictional dissipation at the shelf bottom. To investigate these effects, inertial-internal wave propagation was examined with ray calculations. The frequency and horizontal wave numbers were specified in the calculations, with the remainder of the propagation parameters, including vertical wave number, phase and group velocities calculated. ANALYTICAL DETECTION OF ORGANIC SPECIES BY MEANS OF LASER-INDUCED MULTIPHOTON IONIZATION Ph.D. Thesis

Richard Kenneth Simon, Jr. 1980 189 p

Avail: Univ. Microfilms Order No. 8122036

Multiphoton ionization (MP) is spectrometric technique which was developed for the the analysis of trace amounts of both atomic and molecules species. The methods is based on two or more photons being absorbed by the the analyte which results in the analyte being ionized. The intense photoexcitation of the analysis is achieved by focussing the output of a pulsed tunable dye laser in an ionization chamber. The ionization chamber serves as the analyte reservoir and allows detection of the resulting MP1 current pulse. The non-optical nature of the signal detection makes MP1 a novelspectroscopic technique: no optical collection, dispersion, and/or detection is required; scattered and stray light are irrelevant; vacuum ultraviolet spectroscopy in air possible without special optics. Dissert. Abstr.

MITIGATION OF BIOFOULING USING COATINGS Quarterly Progress Report

A. E. Meyer and R. W. King 22 Jun. 1981 13 p refs

(Contract DE-AC02-80ER-10766)

(DE81-027900; DOE/ER-10766/3; QPR-3) Avail: NTIS HC A02/MF A01

Progress is reported in a project in which the objectives are to evaluate benefits associated with control of the surface energetic properties of materials used in heat exchangers, and to identify preferred ranges of these surface conditions that minimize deposits of biological fouling known to deteriorate heat exchange efficiencis in seawater, brackish water and freshwater systems. The technical approach employed uses special diagnostic plates in novel flow cells where fluid flow conditions can be well-controlled, modifying the surface chemistry and surface energy of the plates with very thin coatings and examining the earliest events of biofouling caused by macromolecules and microbial organisms. Information is included on exposure experiments and results and heat exchange experiments. DOE

SUPERCONDUCTING MAGNETOMETRY FOR CARDIOVASCULAR STUDIES AND AN APPLICATION OF ADAPTIVE FILTERING Ph.D. Thesis

Mark Curtis Leifer 1981 174 p

Avail: Univ. Microfilms Order No. 8124101

Sensitive magnetic detectors utilizing Superconducting

Quantum Interference Devices, studying the cardiovascular system were developed. The theory of magnetic detection of cardiac currents is discussed, and experimental data supporting the validity of the theory is presented. Measurements on both humans and dogs, in both healthy and diseased states, are presented using the technique, which is termed vector magnetocardiography. Performance of the actual device displays significantly improved sensitivity in this frequency range, and the ability to measure currents in intact, in vivo biological fibers. The theoretical operation of a digital self-optimizing filter is reviewed and a four-channel software implementation of the system is presented. The application of the adaptive filter to enhancement of geomagnetic signals for earthquake forecasting is discussed, and the adaptive filter is shown to outperform existing techniques in suppressing noise from geomagnetic records. Dissert. Abstr.

NEUROTRANSMITTER FUNCTION IN THE BASAL GANGLIA AFTER ACUTE AND CHRONIC ETHANOL TREATMENT

Walter A. Hunt Jul. 1981 10 p refs
(AD-A103744; AFRRI-SR81-19) Avail: NTIS HC A02/MF A01 CSCL 06/15

Acute and chronic administration of ethanol has multiple effects on several neurotransmitters in the basal ganglia. Dopamine is the transmitter predominantly affected. Acceleration of dopaminergic activity is observed at low doses of ethanol. However, at high doses the reverse is observed. During the ethanol withdrawal syndrome that develops after chronic treatment, dopaminergic responses are reduced, whether from presynaptic or postsynaptic origins. Ethanol induces a variety of alterations in neurotransmitter function as a result of its disruption of membrane structure and associated electrical properties. GRA

DETERMINATION OF EFFICIENT METHODS OF LIFT BY COMPARING TRAINED AND UNTRAINED MALE AND FEMALE LIFTERS Final Report

Richard H. Shannon 3 Dec. 1980 141 p refs
(AD-A100349; NBDL-M004) Avail: NTIS HC A07/MF A01 CSCL 06/14

The effects of sex and training variables during nonrepetitive, short duration lifts in the sagittal plane were analyzed. One half of each sex subsample was part of a lifting training program, while the other half was used as a control group. The effects of body movements by these subjects in the height ranges from the floor to the knuckle and the knuckle to the shoulder were ascertained with 10, 25, 40 pound weight loads. Muscular strain, stroboscopic photography to calculate differences in displacement time vectors, and the force platform to specify force changes at the feet were determined. The various statistical techniques applied were: factor analysis, regression analysis, analysis of variance, t-test and nonparametric statistics. The results are a five factor biomechanical model, regression equations predicting inertial forces at the hands, and significant differences between the untrained and trained conditions, and males and females. It is concluded that manual handling training programs are necessary in the work environment if women are expected to lift loads of approximately 40 pounds. Author

INFLUENCE OF SINE, AND RANDOM, WHOLE-BODY VIBRATION ON VISUAL ACUITY [EINFLUSS SINUSFOERMIGER UND REGELLOSER GANZKOERPERSCHWINGUNGEN AUF DIE VISUELLE INFORMATIONSAUFNAHME]

Norbert May Bonn Bundesministerium der Verteidigung 1979 101 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium der Verteidigung
(BMVg-FBWT-79-17) Avail: NTIS HC A06/MF A01; DOKZENTBw, Bonn DM 30

The far, visual acuity of people subjected to vertical whole-body vibration (different vibration types and loads) was tested. A total of 110 subjects of both sexes, either exposed to sine vibration in the range from 2 to 18 cycles/sec or to random vibrations in the same frequency range, participated. The rms accelerations on the heads of subjects were 0.17, 0.3 and 0.43 m/sec squared. The subjects sat erect on an uncushioned seat, mounted on a hydromechanical vibration apparatus. Results show that relative visual acuity diminishes with sine vibrations while increasing frequency and/or accelerations (from 6% minimum to 37.5 % maximum of visual acuity under static conditions). With random vibrations there is also an acuity decrease although smaller, while increasing the vibration frequency as well as with increasing acceleration load. Author (ESA)

THE MEASUREMENTS OF FLUID SHIFTS AND OF THE TISSUE COMPLIANCE ALONG BODY AXIS IN MAN Final Report

Karl Kirsch Bonn Bundesministerium fuer Forschung und Technologie Sep. 1980 41 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-80-011; ISSN-0170-1339) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 8,60

Tissue volume changes on different parts of the body were simultaneously measured by ultrasonic techniques in order to monitor the shift of fluid volumes along the body axis. Once fully established, the method could be used for measuring the shift of blood and interstitial fluid from the lower to the cephalic part of the body, occurring under zero-gravity conditions. Proof of principle tests were carried out under orthostatis, immersion and heat exposure conditions were confirmed by post mortem comparisons. By mounting the measuring probe in an airtight chamber, the tissue compliance $C = dV/dP$ was also determined. The results found are consistent with previous investigations and with clinical tests. Application in space and as a circulation diagnostic method is advocated. Author (ESA)

LINGUISTIC AND HUMAN PERFORMANCE CONSIDERATIONS IN THE DESIGN OF AN ANTICIPATORY COMMUNICATION AID Ph.D. Thesis

Clinton David Gibler 1981 365 p
Avail: Univ. Microfilms Order No. 8124891

A communication aid is a device that assists a disabled person with the generation of messages. A scanning aid presents language elements (e.g., letters, words) in a sequential fashion to accommodate those whose disability does not permit the direct selection of language elements. Anticipatory methods utilize statistical characteristics of language to shorten the average sequential access time to each language element. The study is restricted to those aids having the capacity for English text generation. The research yielded two developments: a small, general purpose dictionary that accounts for a high percentage of a person's vocabulary; and a human performance model that accurately predicts communication rates for the transcription task, given basic human performance data about the user.
Dissert. Abstr.

N82-13658 Stanford Univ., Calif.

A SYSTEMS ANALYSIS OF THE MATURATION OF SLEEP USING A SEMI-MARKOV MODEL Ph.D. Thesis

Thomas Raymond Bowe 1981 122 p
Avail: Univ. Microfilms Order No. 8124040

An approach to analyze the sleep process in human infants is presented. In particular it formulates phase varying semi-Markov models for infants at 2, 4, 8, 20, 24, 36, and 52 weeks of age. The Bayesian estimation procedure employed allows the uncertainty in the estimated parameters to be quantitized. The parameters of the models represent the basic building blocks of the sleep process and can be used to predict any statistic of interest. The models were used to investigate the rhythmic nature of the sleep process. The concept that sleep develops a periodic tendency was mathematically investigated and defined.
Dissert. Abstr.

DEPOSITION OF AEROSOL PARTICLES IN THE HUMAN RESPIRATORY TRACT Ph.D. Thesis

Shii-Pyng Shiah 1981 192 p
Avail: Univ. Microfilms Order No. 8123939

The dispersion and deposition of aerosol particles in human lungs are investigated. The development of a three dimensional airway model, the dispersion of half micrometer particles in the respiratory tract, and deposition of aerosol particles in the respiratory tract are studied. A model of the upper tracheobronchial tree is constructed to account for the three dimensional nature of the airway system. A mathematical model is developed for predicting the percentage of inhaled hygrocopic particles which deposit in each generation of the repeatedly bifurcating tubes in an airway tree. A theoretical model of aerosol dispersion in the human lungs is extended to the alveolated regions by considering the expansion and contraction of the alveoli. The percentage of inhaled paticles which deposit in each generation of tubes is calculated for all generations reached by the inhaled aerosols.
Dissert. Abstr.

N82-13660 Northwestern Univ., Evanston, Ill.

DYNAMIC MEASUREMENT OF HUMAN VERTICAL FUSIONAL RESPONSE Ph.D. Thesis

Arye Lipa Perlmutter 1981 88 p
Avail: Univ. Microfilms Order No. 8124975

The response was studied in order to explore the relationship between its sensory and motor components. Two SRI Double Purkinje Image Eyetrackers were used for binocular recordings of eye movements in response to the presentations of vertical disparities. The binocular coordination of vertical fusional responses were studied through the presentations of asymmetrical disparities as well as predictable and unpredictable symmetrical sinusoidal disparities. The motor response to asymmetrical disparity presentation is found to be incomplete, thus allowing for the existence of a significant sensory component. When ramp disparities were presented only the eye whose monocular image moved followed the stimulus closely while the other eye did not move or moved by a small amount.

N82-13661 Stanford Univ., Calif.

ALGORITHMS FOR IMAGING MYOCARDIAL BLOOD FLOW USING X-RAY COMPUTED TOMOGRAPHY Ph.D. Thesis

Menahem Nassi-F 1981 136 p
Avail: Univ. Microfilms Order No. 8124117

Algorithms are proposed to remove degradation of contrast and spatial resolution produced by the motion of the heart in X-ray computed tomography. A mathematical model is derived for regional myocardial blood flow (RMBF) estimation which uses a classical, deterministic formulation to describe tracer dynamics in the myocardium. Based upon the perfect mixing assumption, this theory removes the requirement for intra-arterial bolus injection of tracer (diatrizoate radiographic contrast). Regional partition coefficients are estimated, which render absolute RMBF estimates [ml/(min x gr)]. The requirement for curve extrapolation (zeroth and first moment computation) in the presence of recirculation, and the considerable measurement noise which is unaccounted for, are both removed by the proposed alternative stochastic formulation.

VISUAL/MOTION CUE MISMATCH IN A COORDINATED ROLL MANEUVER
Douglas K. Shirachi and Richard S. Shirley May 1981 51 p
(Contract NAS2-9741)
(NASA-CR-166259; CSCR-9) Avail: NTIS HC A04/MF A01 CSCL 05H

The effects of bandwidth differences between visual and motion cueing systems on pilot performance for a coordinated roll task were investigated. Visual and motion cue configurations which were acceptable and the effects of reduced motion cue scaling on pilot performance were studied to determine the scale reduction threshold for which pilot performance was significantly different from full scale pilot performance. It is concluded that: (1) the presence or absence of high frequency error information in the visual and/or motion display systems significantly affects pilot performance; and (2) the attenuation of motion scaling while maintaining other display dynamic characteristics constant, affects pilot performance. PUPILLOMETRIC MEASUREMENT OF OPERATOR WORKLOAD
Jackson Beatty *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 1-6 refs (For primary document see N82-13665 04-54)
(Contract N00014-76-C-0616)
Avail: NTIS HC A99/MF A01 CSCL 05/4

Pupillometry as a method of measuring workload is described. Pupillometric measures provide an indication of momentary fluctuations in central nervous system excitability that occur as cognitive operations are performed; the magnitude of these changes may serve as a sensitive indicator of the workload imposed by cognitive tasks. J.D.H.

N82-13667*# Illinois Univ., Champaign. Dept. of Psychology.
THE COGNITIVE DEMANDS OF SECOND ORDER MANUAL CONTROL: APPLICATIONS OF THE EVENT RELATED BRAIN POTENTIAL
Christopher Wickens, Richard Gill, Arthur Kramer, William Ross, and Emanuel Donchin *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 7-16 refs (For primary document see N82-13665 04-54)
(Contract F49620-79-C-0233)
Avail: NTIS HC A99/MF A01 CSCL 05H

Three experiments are described in which tracking difficulty is varied in the presence of a covert tone discrimination task. Event related brain potentials (ERPs) elicited by the tones are employed as an index of the resource demands of tracking. The ERP measure reflected the control order variation, and this variable was thereby assumed to compete for perceptual/central processing resources. A fine-grained analysis of the results suggested that the primary demands of second order tracking involve the central processing operations of maintaining a more complex internal model of the dynamic system, rather than the perceptual demands of higher derivative perception. Experiment 3 varied tracking bandwidth in random input tracking, and the ERP was unaffected. Bandwidth was then inferred to compete for response-related processing resources that are independent of the ERP. J.D.H.

N82-13668*# Aerospace Medical Research Labs., Wright-Patterson AFB, Ohio.
A STUDY ON TASK DIFFICULTY AND ACCELERATION STRESS
D. W. Repperger and D. B. Rogers *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 17-31 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

The results of two experiments which relate to task difficulty and the effects of environmental stress on tracking performance are discussed and compared to subjective evaluations. The first experiment involved five different sum of sine tracking tasks which humans tracked both in a static condition and under a 5 Gz acceleration stress condition. The second experiment involved similar environmental stress conditions but in this case the tasks were constructed from deterministic functions with specially designed velocity and acceleration profiles. Phase Plane performance analysis was conducted to study potential measures of workload or tracking difficulty. J.D.H.

SUBJECTIVE RATING SCALES AS A WORKLOAD
Kathleen L. Bird (Virginia Polytechnic Inst. and State Univ.) *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 33-39 refs (For primary document see N82-13665 04-54)
(Contract NAG1-217)
Avail: NTIS HC A99/MF A01 CSCL 05H

A multidimensional bipolar-adjective rating scale is employed as a subjective measure of operator workload in the performance of a one-axis tracking task. The rating scale addressed several dimensions of workload, including cognitive, physical, and perceptual task loading as well as fatigue and stress effects. Eight subjects performed a one-axis tracking task (with six levels of difficulty) and rated these tasks on several workload dimensions. Performance measures were tracking error RMS (root-mean square) and the standard deviation of control stick output. Significant relationships were observed between these performance measures and skill required, task complexity, attention level, task difficulty, task demands, and stress level. Author

PHYSIOLOGICAL ASSESSMENT OF OPERATOR WORKLOAD DURING MANUAL TRACKING. 1: PUPILLARY RESPONSES
Quiyan Jiang, Raja Parasuraman, and Jackson Beatty *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 41-46 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

The feasibility of pupillometry as an indicator for assessing operator workload during manual tracking was studied. The mean and maximum pupillary responses of 12 subjects performing tracking tasks with three levels of difficulty (bandwidth of the forcing function were 0.15, 0.30 and 0.50 Hz respectively) were analysed. The results showed that pupillary dilation increased significantly as a function of the tracking difficulty which was reflected by the significant increase of tracking error (RMS). The present study supplies additional evidence that pupillary response is a sensitive and reliable index which may serve as an indicator for assessing operator workload in man-machine systems. HORIZONTAL CONFLICT RESOLUTION MANEUVERS WITH A COCKPIT DISPLAY OF TRAFFIC INFORMATION

Evertt Palmer, Sharon Jago, and Myrna DuBord *In* JPL Proc. of the 17th Ann. Conf. on Manual control 15 Oct. 1981 p 51-62 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

Pilot resolution of potential conflicts in the horizontal plane when the only information available on the other aircraft was presented on a Cockpit Display of Traffic Information (CDTI) is investigated. The pilot's task was to assess the situation and if necessary maneuver so as to avoid the other aircraft. No instructions were given on evasive strategy or on what was considered to be an acceptable minimum separation. The results indicate that pilots had a strong bias of turning toward the intruder aircraft in order to pass behind it. In more than 50% of the encounters with a 90 degree crossing angle in which the intruder aircraft was programmed to pass behind the aircraft, the pilots maneuvered so as to pass behind the intruder. This bias was not as strong with the display which showed a prediction of the intruder's relative velocity. The average miss distance for all encounters was about 4500 feet. J.D.H.

SOME EFFECTS OF FIELD OF VIEW (FOV) AND TARGET SIZE ON LATERAL TRACKING AT HOVER

Harry T. Breul *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 63-75 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

An exploratory flight-simulator experiment examined the gross effects of several factors potentially important to the design of a visual display system for aiding VTOL pilots in the difficult task of landing on a small sea-control ship. Field of view (FOV) and target size were the primary variables examined for a lateral tracking task in a full motion 5 degree-of-freedom hover simulation. The mean absolute value of tracking error was used to measure tracking performance, and cross spectral transfer function analysis was performed to determine the pilot's ability to generate good open-loop transfer function characteristics as a function of the experimental variables. It was found that FOV and target size can have a large effect on the pilot's ability to generate open-loop gain, and on his tracking performance. J.D.H.

VIDEO FRAMERATE, RESOLUTION AND GRAYSCALE TRADEOFFS FOR UNDERSEA TELEMANIPULATOR

Vivek Ranadive and Thomas B. Sheridan *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 77-88 refs Prepared in cooperation with MIT, Cambridge (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

The product of Frame Rate (F) in frames per second, Resolution (R) in total pixels and grayscale in bits (G) equals the transmission band rate in bits per second. Thus for a fixed channel capacity there are tradeoffs between F, R and G in the actual sampling of the picture for a particular manual control task in the present case remote undersea manipulation. A manipulator was used in the MASTER/SLAVE mode to study these tradeoffs. Images were systematically degraded from 28 frames per second, 128 x 128 pixels and 16 levels (4 bits) grayscale, with various FRG combinations constructed from a real-time digitized (charge-injection) video camera. It was found that frame rate, resolution and grayscale could be independently reduced without preventing the operator from accomplishing his/her task. Threshold points were found beyond which degradation would prevent any successful performance. A general conclusion is that a well trained operator can perform familiar remote manipulator tasks with a considerably degrade picture, down to 50 K bits/ sec. J.D.H.

PREDICTOR SYMBOLOGY IN COMPUTER-GENERATED PERSPECTIVE DISPLAYS

Arthur J. Grunwald *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 89-94 ref (For primary document see N82-13665 04-54)
(Contract NASw-3302)
Avail: NTIS HC A99/MF A01 CSCL 05H

An advanced diplay format for the four dimensional commercial aircraft approach-to-landing is evaluated. The desired curved and descending approach path is presented by displaying the perspective image of a tunnel. Attention is focussed on the predictor symbology, superimposed on the tunnel image. A perspective three dimensional predictor symbol, providing future position, as well as future attitude information, is compared with a flat two dimensional version, which only provides the future position. In addition to this, the predictor displays the actual airspeed as well as the desired airspeed, prescribed by the four dimensional path. Results show that the three dimensional predictor symbol outperforms the two dimensional predictor in following the trajectory in a moderate-to-heavy turbulent environment, which is manifested in accurate manual true airspeed control was obtained without affecting the main task performance significantly. SUPERVISORY CONTROL OF REMOTE MANIPULATION: A PRELIMINARY EVALUATION

Gregory P. Starr *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 95-107 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

A system for supervisory control is described, and preliminary results are presented. Supervisory control, where control is traded between man and computer, offers benefits in the control of a remote manipulator. The system has the potential to accomplish sophisticated tasks. It is indicated that supervisory control yields lower task completion times and is preferred over manual control. E.A.K.

RESEARCH ISSUES IN IMPLEMENTING REMOTE PRESENCE IN TELEOPERATOR CONTROL

Kevin Corker, Andrew H. Mishkin, and John Lyman *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 109-126 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

The concept of remote presence in telemanipulation is presented. A conceptual design of a prototype teleoperator system incorporating remote presence is described. The design is presented in functional terms, sensor, display, and control subsystem. An intermediate environment, in which the human operator is made to feel present, is explicated. The intermediate environment differs from the task environment due to the quantity and type of information presented to an operator and due to scaling factors protecting the operator from the hazards of the task environment. Potential benefits of remote presence systems, both for manipulation and for the study of human cognition and preception are discussed. E.A.K.

THE PERSISTENCE OF A VISUAL DOMINANCE EFFECT IN A TELEMANIPULATOR TASK: A COMPARISON BETWEEN VISUAL AND ELECTROTACTILE FEEDBACK

J. P. Gaillard *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 127-138 refs Sponsored in part by Direction de la Recherche des Equipements Techniques (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

The possibility to use an electrotactile stimulation in teleoperation and to observe the interpretation of such information as a feedback to the operator was investigated. It is proposed that visual feedback is more informative than an electrotactile one; and that complex electrotactile feedback slows down both the motor decision and motor response processes, is processed as an all or nothing signal, and bypasses the receptive structure and accesses directly in a working memory where information is sequentially processed and where memory is limited in treatment capacity. The electrotactile stimulation is used as an alerting signal. It is suggested that the visual dominance effect is the result of the advantage of both a transfer function and a sensory memory register where information is pretreated and memorized for a short time. It is found that dividing attention has an effect on the acquisition of the information but not on the subsequent decision processes. E.A.K.

SIMPLE GEOMETRIC ALGORITHMS TO AID IN CLEARANCE MANAGEMENT FOR ROBOTIC MECHANISMS

E. L. Copeland, L. D. Ray, and J. D. Peticolas *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 149-155 (For primary document see N82-13665 04-54)

Avail: NTIS HC A99/MF A01 CSCL 05H

Global geometric shapes such as lines, planes, circles, spheres, cylinders, and the associated computational algorithms which provide relatively inexpensive estimates of minimum spatial clearance for safe operations were selected. The Space Shuttle, remote manipulator system, and the Power Extension Package are used as an example. Robotic mechanisms operate in quarters limited by external structures and the problem of clearance is often of considerable interest. Safe clearance management is simple and suited to real time calculation, whereas contact prediction requires more precision, sophistication, and computational overhead. E.A.K.

THE INFLUENCE OF MOTION CUES ON DRIVER-VEHICLE PERFORMANCE IN A SIMULATOR

Brian S. Repa, Philip M. Leucht, and Walter W. Wierwille (Virginia Polytechnic Inst. and State Univ.) *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 157-169 refs (For primary document see N82-13665 04-54)

Avail: NTIS HC A99/MF A01 CSCL 05H

Four different motion base configurations were studied on driving simulator. Differently responding vehicles were simulated on each motion configurations and the effects of the vehicle characteristics on driver vehicle system performance, driver control activity, and driver opinion ratings of vehicle performance during driving are compared for different motion configurations. Data show that: (1)) the effects of changes in vehicle characteristics on the different objective and subjective measures of driver vehicle performance are not disguised by the lack of physical motion; (2) fixed base simulator can be used to draw inferences despite the lack of motion; (3) the presence of motion tends to reduce path keeping errors and driver control activity; (4) roll and yaw motions are recommended because of their marked influence on driver vehicle performance (5) the importance of motion increases as the driving maneuvers become more extreme. E.A.K.

MULTIPLE MAN-MACHINE INTERFACES

Lillian Stanton and Creighton W. Cook *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 171-186 refs (For primary document see N82-13665 04-54)

Avail: NTIS HC A99/MF A01 CSCL 05H

The multiple man machine interfaces inherent in military pilot training, their social implications, and the issue of possible negative feedback were explored. Modern technology has produced machines which can see, hear, and touch with greater accuracy and precision than human beings. Consequently, the military pilot is more a systems manager, often doing battle against a target he never sees. It is concluded that unquantifiable human activity requires motivation that is not intrinsic in a machine. E.A.K.

DECISION AIDS FOR AIRBORNE INTERCEPT OPERATIONS IN ADVANCED AIRCRAFTS

Azad Madni and Amos Freedy *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 187-209 refs (For primary document see N82-13665 04-54)

(Contract N62269-79-C-0496)

Avail: NTIS HC A99/MF A01 CSCL 05H

A tactical decision aid (TDA) for the F-14 aircrew, i.e., the naval flight officer and pilot, in conducting a multitarget attack during the performance of a Combat Air Patrol (CAP) role is presented. The TDA employs hierarchical multiattribute utility models for characterizing mission objectives in operationally measurable terms, rule based AI-models for tactical posture selection, and fast time simulation for maneuver consequence prediction. The TDA makes aspect maneuver recommendations, selects and displays the optimum mission posture, evaluates attackable and potentially attackable subsets, and recommends the 'best' attackable subset along with the required course perturbation. E.A.K.

USING REWARDS AND PENALTIES TO OBTAIN DESIRED SUBJECT PERFORMANCE

Marcia Cook, Henry R. Jex, Anthony C. Stein, and R. Wade Allen *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Dec. 1981 p 211-222 refs (For primary document see N82-13665 04-54)

Avail: NTIS HC A99/MF A01 CSCL 05H

Operant conditioning procedures, specifically the use of negative reinforcement, in achieving stable learning behavior is described. The critical tracking test (CTT) a method of detecting human operator impairment was tested. A pass level is set for each subject, based on that subject's asymptotic skill level while sober. It is critical that complete training take place before the individualized pass level is set in order that the impairment can be detected. The results provide a more general basis for the application of reward/penalty structures in manual control research. E.A.K.

A COMPARISON OF LANDING MANEUVER PILOTING TECHNIQUE BASED ON MEASUREMENTS MADE IN AN AIRLINE TRAINING SIMULATOR AND IN ACTUAL FLIGHT

Robert K. Heffley and Ted M. Schulman *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 223-234 refs (For primary document see N82-13665 04-54)

Avail: NTIS HC A99/MF A01 CSCL 05H

An emphasis is placed on developing a mathematical model in order to identify useful metrics, quantify piloting technique, and define simulator fidelity. On the basis of DC-10 flight measurements recorded for 32 pilots, 13 flight-trained and the remainder simulator trained, a revised model of the landing flare is hypothesized which accounts for reduction of sink rate and perference for touchdown point along the runway. The flare maneuver and touchdown point adjustment can be described by a pitch attitude command pilot guidance law consisting of altitude and vertical velocity feedbacks. In flight pilots exhibit a significant vertical velocity feedback which is essential for well controlled sink rate reduction at the desired level of response (bandwidth). In the simulator, however, the vertical velocity feedback appears ineffectual and leads to substantially inferior landing performance. T.M.

IDENTIFICATION OF MULTILOOP PILOT DESCRIBING FUNCTIONS OBTAINED FROM SIMULATED APPROACHES TO AN AIRCRAFT CARRIER

Wayne F. Jewell *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 239-244 refs (For primary document see N82-13665 04-54)

Avail: NTIS HC A99/MF A01 CSCL 05H

Predicted results of a simulation of the pilot's approach control strategy in the presence of pilot remnant are presented. The aircraft dynamics and the turbulence environment are representative of a trainer-type aircraft. The non-intrusive pilot identification program (NIPIP) was used to identify the pilot's control strategy required by this highly-coupled, multiloop control task. The results are presented in terms of frequency responses of the individual elements of the pilot's control strategy and indicate that NIPIP can identify the pilot's describing functions even in the presence of significant amounts of pilot remnant. T.M.

FURTHER TESTS OF A MODEL-BASED SCHEME FOR PREDICTING PILOT OPINION RATINGS FOR LARGE COMMERCIAL TRANSPORTS

W. W. Rickard and W. H. Levison (Bolt, Beranek and Newman, Inc., Cambridge, Mass.) *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 245-254 refs (For primary document see N82-13665 04-54)

Avail: NTIS HC A99/MF A01 CSCL 05H

A methodology was demonstrated for assessing longitudinal-axis handling qualities of transport aircraft on the basis of closed-loop criteria. Six longitudinal-axis approach configurations were studied covering a range of handling quality problems that included the presence of flexible aircraft modes. Using closed-loop performance requirements derived from task analyses and pilot interviews, predictions of performance/workload tradeoffs were obtained using an analytical pilot/vehicle model. A subsequent manned simulation study yielded objective performance measures and Cooper-Harper pilot ratings that were largely consistent with each other and with analytic predictions. T.M.

AN ANALYTICAL APPROACH FOR PREDICTING PILOT INDUCED OSCILLATIONS

Ronald A. Hess *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 235-269 refs (For primary document see N82-13665 04-54)

Avail: NTIS HC A99/MF A01 CSCL 05H

The optimal control model (OCM) of the human pilot is applied to the study of aircraft handling qualities. Attention is focused primarily on longitudinal tasks. The modeling technique differs from previous applications of the OCM in that considerable effort is expended in simplifying the pilot/vehicle analysis. After briefly reviewing the OCM, a technique for modeling the pilot controlling higher order systems is introduced. Following this, a simple criterion or determining the susceptability of an aircraft to pilot induced oscillations (PIO) is formulated. Finally, a model-based metric for pilot rating prediction is discussed. The resulting modeling procedure provides a relatively simple, yet unified approach to the study of a variety of handling qualities problems. T.M.

N82-13689*# Operations Research, Inc., Bethesda, Md.

A MODEL FOR THE SUBMARINE DEPTHKEEPING TEAM

John R. Ware, John F. Best, Pamela J. Bozzi, and David W. Kleinman (Connecticut Univ., Storrs) *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 271-282 refs (For primary document see N82-13665 04-54)

Avail: NTIS HC A99/MF A01 CSCL 05H

The most difficult task the depthkeeping team must face occurs during periscope-depth operations during which they may be required to maintain a submarine several hundred feet long within a foot of ordered depth and within one-half degree of ordered pitch. The difficulty is compounded by the facts that wave generated forces are extremely high, depth and pitch signals are very noisy and submarine speed is such that overall dynamics are slow. A mathematical simulation of the depthkeeping team based on the optimal control models is described. A solution of the optimal team control problem with an output control restriction (limited display to each controller) is presented. T.M.

N82-13690*# Analytical Mechanics Associates, Inc., Mountain View, Calif.

MODELING OF THE AIRCRAFT IN-TRAIL-FOLLOWING TASK DURING PROFILE DESCENT

T. Goka, J. A. Sorensen, and A. V. Phatak *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 283-294 refs (For primary document see N82-13665 04-54)

(Contract NAS1-16135)

Avail: NTIS HC A99/MF A01 CSCL 05H

The cockpit display of traffic information (CDTI) system concepts enable the pilot to observe the surrounding air traffic pattern. The impact of such a system is far reaching in terms of improved safety, pilot and controller workload, and aircraft fuel efficiency. One direct payoff is the ability to distribute the ATC workload to the pilot in such tasks as merging and spacing. The CDTI application of spacing approach aircraft in the terminal area is addressed. In-trail-following/CDTI experiments were performed using realistic cockpit simulators and profile descent approach scenarios. Based on collected experimental simulator data, pilot models were developed which include state estimation, decision making and flight control aspects. These models were coupled with models of aircraft and CDTI equipment to study the dynamic phenomena and stability of strings of aircraft along various approach patterns. T.M.

COMPARISON OF CLOSED LOOP MODEL WITH FLIGHT TEST RESULTS

Frank L. George *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 295-300 refs (For primary document see N82-13665 04-54)

Avail: NTIS HC A99/MF A01 CSCL 05H

An analytic technique capable of predicting the landing characteristics of proposed aircraft configurations in the early stages of design was developed. In this analysis, a linear pilot-aircraft closed loop model was evaluated using experimental data generated with the NT-33 variable stability in-flight simulator. The pilot dynamics are modeled as inner and outer servo loop closures around aircraft pitch attitude, and altitude rate-of-change respectively. The landing flare maneuver is of particular interest as recent experience with military and other highly augmented vehicles shows this task to be relatively demanding, and potentially a critical design point. A unique feature of the pilot model is the incorporation of an internal model of the pilot's desired flight path for the flare maneuver. T.M.

INFORMATION AND DISPLAY REQUIREMENTS FOR AIRCRAFT TERRAIN FOLLOWING
D. L. Kleinman and J. Korn (ALPHATECH, Inc., Burlington, Mass.) *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 329-331 refs (For primary document see N82-13665 04-54)
(Contract F33615-80-C-0528)
Avail: NTIS HC A99/MF A01 CSCL 05H

The display design procedure for manned vehicle systems, is applied and validated, for a particular scenario. The scenario chosen is that of zero visibility high speed terrain following (V = 466 ft/sec, H = 200 ft) with an A-10 aircraft. The longitudal (linearized) dynamics are considered. The variations in (command path over) terrain pi(t) are modeled as a third order random process. The display design methodology is based on the optimal control model of pilot response, and employs this model in various ways in different phases of the design process. The overall methodology indicates that the design process is intended as a precursor to manned simulation. It provides a rank ordering of candidate displays through a three level process. S.L.

A DATA COLLECTION SCHEME FOR IDENTIFICATION OF PARAMETERS IN A DRIVER MODEL
B. W. Mooring, M. McDermott, and Je-Mang Su *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 333-343 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

A high gain steering controller to compensate for limitations in a handicapped driver's range of motion is employed when adapting vehicle to his use. A driver/vehicle system can become unstable as vehicle speed is increased, therefore it is desirable to use a computer simulation of the driver/vehicle combination as a design tool to investigate the system response prior to construction of a controller and road testing. Unknown driver parameters must be identified prior to use of the model for system analysis. A means to collect the data necessary for identification of these driver model parameters without extensive instrumentation of a vehicle to measure and record vehicle states is addressed. Initial tests of the procedure identified all of the driver parameters with errors of 6% or less. S.L.

THEORETICAL LINEAR APPROACH TO THE COMBINED MAN-MANIPULATOR SYSTEM IN MANUAL CONTROL OF AN AIRCRAFT

Klaus Brauser *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 407-418 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

An approach to the calculation of the dynamic characteristics of the combined man manipulator system in manual aircraft control was derived from a model of the neuromuscular system. This model combines the neuromuscular properties of man with the physical properties of the manipulator system which is introduced as pilot manipulator model into the manual aircraft control. The assumption of man as a quasilinear and time invariant control operator adapted to operating states, depending on the flight phases, of the control system gives rise to interesting solutions of the frequency domain transfer functions of both the man manipulator system and the closed loop pilot aircraft control system. It is shown that it is necessary to introduce the complete precision pilot manipulator model into the closed loop pilot aircraft transfer function in order to understand the well known handling quality criteria, and to derive these criteria directly from human operator properties. THE INFLUENCE OF SHIP MOTION OF MANUAL CONTROL SKILLS

Peter McLeod, Christopher Poulton, Howard DuRoss (RAE, Farnborough, Engl.), and Wynn Lewis (WSL, Stevenage, Engl.) *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 419-430 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

The effects of ship motion on a range of typical manual control skills were examined on the Warren Spring ship motion simulator driven in heave, pitch, and roll by signals taken from the frigate HMS Avenger at 13 m/s (25 knots) into a force 4 wind. The motion produced a vertical r.m.s. acceleration of 0.024g, mostly between 0.1 and 0.3 Hz, with comparatively little pitch or roll. A task involving unsupported arm movements was seriously affected by the motion; a pursuit tracking task showed a reliable decrement although it was still performed reasonably well (pressure and free moving tracking controls were affected equally by the motion); a digit keying task requiring ballistic hand movements was unaffected. There was no evidence that these effects were caused by sea sickness. The differing response to motion of the different tasks, from virtual destruction to no effect, suggests that a major benefit could come from an attempt to design the man/control interface onboard ship around motion resistant tasks. THE ROLE OF MANIPULATOR CHARACTERISTICS IN SELECTING THE IDEAL EFFECTIVE VEHICLE

Ronald A. Hess *In* JPL Proc. of the 17th Ann. Conf. Manual Control 15 Oct. 1981 p 431-448 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

A structural model of the human pilot is introduced and discussed. The model is used to provide a rationale for certain nonlinear pilot control behavior such as stick pulsing and serves as a framework for studying aspects of motor skill development. In light of the theoretical background provided by the model, some past empirical pilot response phenomena are analyzed and shown to be attributable to manipulator or control stick characteristics. In particular, some recent problems associated with pilot/vehicle performance in glideslope tracking in short takeoff and landing (STOL) aircraft are analyzed. The apparent contribution of the cockpit manipulator (throttle) characteristics to these problems are outlined and a solution proposed and evaluated in both simulation and flight test. J.M.S.

COMPUTER AIDED MANUAL TRACKING

Yung-Koh Yin and Russell F. Berg *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 449-454 ref (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

A scheme was developed to assist the human operator by augmenting an optic sight manual tracking loop with target rate estimates from a computer control algorithm which can either be a Kalman Filter or an alpha, beta, gamma filter. The idea is for the computer to provide rate tracking while the human operator is responsible for nullifying the tracking error. A simple schematic is shown to illustrate the implementation of this concept. A hybrid real-time man-in-loop simulation was used to compare the tracking performance of the same flight trajectory with or without this form of computer-aided track. Preliminary results show the advantage of computer-aided track against high speed aircraft at close range. However, good tracking before target state estimator maturity becomes more critical for aided track than without. Results are presented for a constant velocity flight trajectory. J.M.S.

DESIGN AND DEVELOPMENT OF A SIX DEGREE OF FREEDOM HAND CONTROLLER

M. L. King, G. M. McKinnon, and A. Lippay *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 455-463 (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

The design objectives of a six degree of freedom manual controller are discussed with emphasis on a space environment. Details covered include problems associated with a zero-g environment, the need to accommodate both 'shirt sleeve' and space suited astronauts, the combination of both manipulator operation and spacecraft flight control in a single device, and to accommodate restraints in space. A variable configuration device designed as a development tool in which rotational axes can be moved relative to one another, is described and its limitations discussed. Two additional devices were developed for concept testing. Each device combines the need for good quality with its ability achieve a wide range of adjustments. J.M.S.

EXPERIMENTAL RESULTS WITH A SIX-DEGREE-OF-FREEDOM FORCE-REFLECTING HAND CONTROLLER

A. K. Bejczy and M. Handlykken (Technical Univ. of Norway, Trondheim) *In its* Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 465-477 refs (For primary document see N82-13665 04-54)
(Contract NAS7-100)
Avail: NTIS HC A99/MF A01 CSCL 05H

Control experiments performed using an isotonic joystick connected to a six degree-of-freedom manipulator equipped with a six dimensional force-torque sensor at the base of the manipulator end effector are described. The preliminary control experiments were aimed at the investigation of the human operators' ability to command and control forces in different directions by varying the information conditions and the values of the feedforward and feedback command gains in the bilateral control loop. The main conclusions are: (1) a quantified graphic display of force-torque information can considerably enhance the operator's ability to perform a quantitatively sharp force-torque control, and (2) there seems to be a task dependent optimal combination of the feedforward and feedback command gain values which provide a dynamically smooth and stable bilateral control performance. LOAD COMPENSATING REACTIONS TO PERTURBATIONS AT WRIST JOINT IN NORMAL MAN

R. J. Jaeger, G. C. Agarwell, and G. L. Gottlieb *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 479-501 refs Prepared jointly with Rush Medical Coll. (For primary document see N82-13665 04-54)
(Grants NSF ENG-76-08754; NIH-NS-00196; NIH-NS-12877)
Avail: NTIS HC A99/MF A01 CSCL 05H

The electromyographic responses to step torque loads were studied in flexors and extensors at the human wrist. Based on temporal bursting patterns and functional behavior, the response was divided into four temporal components. Two early components, the myotatic (30-60 ms) late myotatic (60-120 ms) appears to be reflex response. The third postmyotatic component (120-200 ms) appear to be a triggered reaction, preceeding the fourth, stabilizing component (200-400 ms). A comparison of response at the wrist with similar data at the ankle provides the basis for a generalized classification of the response in various muscles to torque step perturbations. Author

PILOT SCANNING PATTERNS WHILE VIEWING COCKPIT DISPLAYS OF TRAFFIC INFORMATION

Stephen R. Ellis and Lawrence Stark *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 517-524 refs Prepared jointly with California Univ., Berkeley (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

Scanning eye movements of airline pilots were recorded while they judged air traffic situations displayed on cockpit displays of traffic information (CDTI). The observed 1st order transition patterns between points of interest on the display showed reliable deviation from those patterns predicted by the assumption of statistical independence. However, both patterns of transitions correlated quite well with each other. Accordingly, the assumption of independence provided a surprisingly good model of the results. Nevertheless, the deviation between the observed patterns of transition and that based on the assumption of independence was for all subjects in the direction of increased determinism. Thus, the results provide objective evidence consistent with the existence of 'scanpaths' in the data. Author

MODEL SIMULATION STUDIES TO CLARIFY THE EFFECT ON SACCADIC EYE MOVEMENTS OF INITIAL CONDITION VELOCITIES SET BY THE VESTIBULAR OCULAR REFLEX (VOR)

Moon-Hyon Nam, Jack M. Winters, and Lawrence Stark *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 537-548 refs Sponsored by the Korean Ministry of Education (For primary document see N82-13665 04-54)
(Contract NCC2-86)
Avail: NTIS HC A99/MF A01 CSCL 05H

Voluntary active head rotations produced vestibulo-ocular reflex eye movements (VOR) with the subject viewing a fixation target. When this target jumped, the size of the refixation saccades were a function of the ongoing initial velocity of the eye. Saccades made against the VOR were larger in magnitude. Simulation of a reciprocally innervated model eye movement provided results comparable to the experimental data. Most of the experimental effect appeared to be due to linear summation for saccades of 5 and 10 degree magnitude. For small saccades of 2.5 degrees, peripheral nonlinear interaction of state variables in the neuromuscular plant also played a role as proven by comparable behavior in the simulated model with known controller signals. Author

BENEFITS OF DETAILED MODELS OF MUSCLE ACTIVATION AND MECHANICS

Steven L. Lehman and Lawrence Stark *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 546-556 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

Recent biophysical and physiological studies identified some of the detailed mechanisms involved in excitation-contraction coupling, muscle contraction, and deactivation. Mathematical models incorporating these mechanisms allow independent estimates of key parameters, direct interplay between basic muscle research and the study of motor control, and realistic model behaviors, some of which are not accessible to previous, simpler, models. The existence of previously unmodeled behaviors has important implications for strategies of motor control and identification of neural signals. New developments in the analysis of differential equations make the more detailed models feasible for simulation in realistic experimental situations. Author

A MODEL OF THE HUMAN OBSERVER AND DECISION MAKER

P. H. Wewerinke *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 557-570 refs (For primary document see N82-13665 04-54)
Copyright. Avail: NTIS HC A99/MF A01 CSCL 05H

The decision process is described in terms of classical sequential decision theory by considering the hypothesis that an abnormal condition has occurred by means of a generalized likelihood ratio test. For this, a sufficient statistic is provided by the innovation sequence which is the result of the perception an information processing submodel of the human observer. On the basis of only two model parameters, the model predicts the decision speed/accuracy trade-off and various attentional characteristics. A preliminary test of the model for single variable failure detection tasks resulted in a very good fit of the experimental data. In a formal validation program, a variety of multivariable failure detection tasks was investigated and the predictive capability of the model was demonstrated. A.R.H.

HUMAN SUPERVISION AND MICROPROCESSOR CONTROL OF AN OPTICAL TRACKING SYSTEM

William J. Bigley and John D. Vandenberg *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 571-582 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

Gunners using small calibre anti-aircraft systems have not been able to track high-speed air targets effectively. Substantial improvement in the accuracy of surface fire against attacking aircraft has been realized through the design of a director-type weapon control system. This system concept frees the gunner to exercise a supervisory/monitoring role while the computer takes over continuous target tracking. This change capitalizes on a key consideration of human factors engineering while increasing system accuracy. The advanced system design, which uses distributed microprocessor control, is discussed at the block diagram level and is contrasted with the previous implementation. Author

A THEORY OF HUMAN ERROR
Duane T. McRuer, Warren F. Clement, and R. Wade Allen *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 583-594 refs (For primary document see N82-13665 04-54)
(Contract NAS2-10400)
Avail: NTIS HC A99/MF A01 CSCL 05H

Human errors tend to be treated in terms of clinical and anecdotal descriptions, from which remedial measures are difficult to derive. Correction of the sources of human error requires an attempt to reconstruct underlying and contributing causes of error from the circumstantial causes cited in official investigative reports. A comprehensive analytical theory of the cause-effect relationships governing propagation of human error is indispensable to a reconstruction of the underlying and contributing causes. A validated analytical theory of the input-output behavior of human operators involving manual control, communication, supervisory, and monitoring tasks which are relevant to aviation, maritime, automotive, and process control operations is highlighted. This theory of behavior, both appropriate and inappropriate, provides an insightful basis for investigating, classifying, and quantifying the needed cause-effect relationships governing propagation of human error. A.R.H.

STABILITY ANALYSIS OF AUTOMOBILE DRIVER STEERING CONTROL
R. Wade Allen *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 597-609 refs Sponsored in part by the Ford Motor Co. (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

In steering an automobile, the driver must basically control the direction of the car's trajectory (heading angle) and the lateral deviation of the car relative to a delineated pathway. A previously published linear control model of driver steering behavior which is analyzed from a stability point of view is considered. A simple approximate expression for a stability parameter, phase margin, is derived in terms of various driver and vehicle control parameters, and boundaries for stability are discussed. A field test study is reviewed that includes the measurement of driver steering control parameters. Phase margins derived for a range of vehicle characteristics are found to be generally consistent with known adaptive properties of the human operator. The implications of these results are discussed in terms of driver adaptive behavior. Author

DETECTING HUMAN OPERATOR IMPAIRMENT WITH A PSYCHOMOTOR TASK
R. Wade Allen, Anthony C. Stein, and Henry R. Jex *In* JPL Proc. of the 17th Ann. Conf on Manual Control 15 Oct. 1981 p 611-625 refs (For primary document see N82-13665 04-54)
(Contract DOT-HS-8-02052)
Avail: NTIS HC A99/MF A01 CSCL 05H

Psychomotor tasks have long been used as instruments for measuring human operator behavior and have often been proposed as selection and training devices. The application of the 'Critical-instability Tracking Test' (CTT) in the detection of alcohol impaired human operators is discussed. The detection problem wherein statistical decision theory is used to optimize the test's ability to discriminate impaired operators in the face of inherent variability in human performance is considered. Testing strategy is examined including setting performance criteria levels and determining the number of attempts permitted in order to pass the test. Also, the task's ability to detect operator impairment is compared to performance measures obtained in a driving simulator. A.R.H.

VOICE CONTROL OF THE SPACE SHUTTLE VIDEO SYSTEM
A. K. Bejczy, R. S. Dotson, J. W. Brown, and J. L. Lewis *In its* Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 627-640 Prepared in cooperation with NASA, Johnson Space Center (For primary document see N82-13665 04-54)
(Contract NAS7-100)
Avail: NTIS HC A99/MF A01 CSCL 05H

A pilot voice control system developed at the Jet Propulsion Laboratory (JPL) to test and evaluate the feasibility of controlling the shuttle TV cameras and monitors by voice commands utilizes a commercially available discrete word speech recognizer which can be trained to the individual utterances of each operator. Successful ground tests were conducted using a simulated full-scale space shuttle manipulator. The test configuration involved the berthing, maneuvering and deploying a simulated science payload in the shuttle bay. The handling task typically required 15 to 20 minutes and 60 to 80 commands to 4 TV cameras and 2 TV monitors. The best test runs show 96 to 100 percent voice recognition accuracy. A.R.H.

A COMPARISON OF HEAD AND MANUAL CONTROL FOR A POSITION-CONTROL PURSUIT TRACKING TASK
William H. Levison, Greg L. Zacharias, James L. Porterfield, Donald Monk, and Christopher Arbak *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 641-652 refs Prepared jointly with Aerospace Medical Div., Aerospace Medical Research Labs. (6570th) (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

Head control was compared with manual control in a pursuit tracking task involving proportional controlled-element dynamics. An integrated control/display system was used to explore tracking effectiveness in horizontal and vertical axes tracked singly and concurrently. Compared with manual tracking, head tracking resulted in a 50 percent greater rms error score, lower pilot gain, greater high-frequency phase lag and greater low-frequency remnant. These differences were statistically significant, but differences between horizontal- and vertical-axis tracking and between 1- and 2-axis tracking were generally small and not highly significant. Manual tracking results were matched with the optimal control model using pilot-related parameters typical of those found in previous manual control studies. Head tracking performance was predicted with good accuracy using the manual tracking model plus a model for head/neck response dynamics obtained from the literature. Author

INTERRUPTION AS A TEST OF THE USER-COMPUTER INTERFACE
John G. Kreifeldt and Mary E. McCarthy *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 655-667 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

In order to study the effects different logic systems might have on interrupted operation, an algebraic calculator and a reverse polish notation calculator were compared when trained users were interrupted during problem entry. The RPN calculator showed markedly superior resistance to interruption effects compared to the AN calculator although no significant differences were found when the users were not interrupted. Causes and possible remedies for interruption effects are speculated. It is proposed that because interruption is such a common occurrence, it be incorporated into comparative evaluation tests of different logic system and control/display system and that interruption resistance be adopted as a specific design criteria for such design. A.R.H.

A MODEL FOR THE CONTROL MODE MAN-COMPUTER

INTERFACE DIALOGUE
Roy L. Chafin *In its* Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 669-682 refs (For primary document see N82-13665 04-54)
Avail: NTIS HC A99/MF A01 CSCL 05H

A four stage model is presented for the control mode man-computer interface dialogue. It consists of context development, semantic development syntactic development, and command execution. Each stage is discussed in terms of the operator skill levels (naive, novice, competent, and expert) and pertinent human factors issues. These issues are human problem solving, human memory, and schemata. The execution stage is discussed in terms of the operators typing skills. This model provides an understanding of the human process in command mode activity for computer systems and a foundation for relating system characteristics to operator characteristics. Author

STRUCTURE OF THE KNOWLEDGE BASE FOR AN EXPERT LABELING SYSTEM
N. S. Rajaram *In* JPL Proc. of the 17th Ann. Conf. on Manual Control 15 Oct. 1981 p 683-688 refs (For primary document see N82-13665 04-54)
(Contract NAS9-15800)
Avail: NTIS HC A99/MF A01 CSCL 05H

One of the principal objectives of the NASA AgRISTARS program is the inventory of global crop resources using remotely sensed data gathered by Land Satellites (LANDSAT). A central problem in any such crop inventory procedure is the interpretation of LANDSAT images and identification of parts of each image which are covered by a particular crop of interest. This task of labeling is largely a manual one done by trained human analysts and consequently presents obstacles to the development of totally automated crop inventory systems. However, development in knowledge engineering as well as widespread availability of inexpensive hardware and software for artificial intelligence work offers possibilities for developing expert systems for labeling of crops. Such a knowledge based approach to labeling is presented. Author

AN ANALYTICAL STUDY OF MULTIPROCESSOR SYSTEM RELIABILITY Ph.D. Thesis
Tian-Pong Chang 1981 200 p
Avail: Univ. Microfilms Order No. 8123620

The reliability performance of multiprocessor architectures is studied. A formal probabilistic graph is proposed to model multiprocessor systems. The Multi-partite graph is used to model multiprocessor architectures. Three categories of multiprocessor systems are considered according to their interconnection structures, (i.e., configurations with crossbar switch, time shared busses, and multiport memories). The multiprocessing performance level is defined by the resources demanding threshold. Combinatorial enumeration techniques are used to find the reliability expressions. Closed formulations are obtained to evaluate the system reliability/availability of all three multiprocessor architectures at different performance levels. The reliability sensitivity of various multiprocessor systems are studied to determine the most critical components in a given system. Two optimization techniques were developed to maximize the system reliability under a given cost constraint. Dissert. Abstr.

SYSTEM DESIGN OF THE DISTRIBUTED LOOP DATA BASE SYSTEM (DLDBS) Ph.D. Thesis
Chuen-Pu J. Chou 1981 313 p
Avail: Univ. Microfilms Order No. 8121774

The distributed double loop computer network (DDLCN) is designed as a fault tolerant distributed processing system that interconnects midi, mini, and micro computers using a double loop structure. It serves as a means of investigating fundamental problems in distributed processing and local networking. One of the major distributed services provided by DDLCN is a distributed data base system. In the distributed data base system, the user has logically integrated access to a collection of data which is managed on a network of geographically dispersed computers. Users' requests to the data base can be satisfied independently of the physical location of the data base, data base definitions, and the data base management system (DBMS). A method for designing such a distributed data base system for distributed processing systems in general and for DDLCN in particular is presented. Dissert. Abstr.

AN INTEGRATED APPROACH FOR THE SPECIFICATION AND THE DESIGN OF THE CONCEPTUAL LEVEL IN DATABASE SYSTEMS Ph.D. Thesis
Sabah Saleh Al-Fedaghi 1981 257 p
Avail: Univ. Microfilms Order No. 8124838

A unifying conceptual model called the (k) model and a systematic design methodology called the intersection methodology are described. The (k) model is built on a type of recursive graph called the high order graph. The basic characteristics of the (k) graph are studied and their potential use for the modelling of large scale systems is presented. The (k) model is proposed as an integrated 'knowledge' repository of the enterprise, and at the same time, as a mapping tool for associating conceptual elements with those at the internal level. The (k) graph, the definitional formulae, the conceptual mappings and the intersection methodology are utilized to build a canonical representation of the conceptual level of database systems. Each element in the (k) graph is considered as a module (i.e. declarative/ procedural unit). A nucleus of a language for the specification of these modules is presented. Dissert. Abstr.

AN APPROACH FOR NUMERICAL DATABASE MANAGEMENT Ph.D. Thesis
Ola-Olu Adeniyi Daini 1981 205 p
Avail: Univ. Microfilms Order No. 8124870

An approach for a numerical database manaagement system (NDBMS) that would promote physical data independence by relieving users from the need for knowledge of the physical data organization on the secondary devices is described. The approach is to describe each of the storage techniques by a physical scheme, which encompasses the corresponding access path, the encoding to storage structures, and the file access method. The numerical physical schemes are classified into three encoding groups which are discriminated according to the access path into direct, indirect and linked schemes. A generalized facility for describing any kink of numerical database and its mapping to storage is provided via nonprocedural Stored Data Description and Mapping Languages (SDDL and SDML). A Data Manipulator Language (DML) provides an interface between the application users and the NDBMS via a set of higher level commands embedded in FORTRAN. The feasibility of the generalized approach is shown by a prototype implementation of a translation program. Dissert. Abstr.

INFORMATION STORAGE IN A DECENTRALIZED COMPUTER SYSTEM Ph.D. Thesis
David Kenneth Gifford 1981 143 p
Avail: Univ. Microfilms Order No. 8124072

An architecture for shared information storage in a decentralized computer system is described. Naming of files and other objects (naming), reliable storage of data (stable storage), coordinated access to shared storage (transactional storage), location of objects (location), use of multiple copies to increase performance, reliability and availability (replication), dynamic modification of object representations (reconfiguration), and storage security and authentication (protection) are addressed. A complete model of the architecture is presented, which describes the interface to the facilities provided, and the mechanisms for implementing them. Dissert. Abstr.

AN INFORMATION PROCESSING MODEL FOR PREDICTING ERROR DETECTION AND CORRECTION: AN ANALYSIS OF OPERATOR PERFORMANCE Final Report, Jun. 1979 - May 1981
Robert A. Goldbeck and Felice M. Ferrante Jul. 1981 73 p refs
(Contract F47620-79-C-0147)
(AD-A105079; ESD-SCFO-TR-6210; AFOSR-81-0681TR) Avail: NTIS HC A04/MF A01 CSCL 05/9

The overall objective of this research was to develop the capability to predict operator performance at a system console. To be useful in industry, this prediction should be available prior to production of a prototype or simulator. The value of such predictions is the opportunity for an analyst to select a design that meets system performance requirements while optimizing human performance, and to be able to make this selection before hardware and software design and development activities commence. For this study, three models were examined to determine how each could contribute to the formulation of an integrated model for predicting human performance. GRA

INTRODUCTION TO THE CONFIGURABLE HIGHLY PARALLEL COMPUTER, REVISION Interim Technical Report

Lawrence Snyder 18 May 1981 35 p refs
(Contracts N00014-80-K-0816; N00014-81-K-0360)
(AD-A099776; CSD-TR-351) Avail: NTIS HC A03/MF A01 CSCL 09/2

The Configurable highly parallel (CHip) computer family was introduced. Architectures are built around a lattice of programmable switches and data paths that permit processing elements to be connected in arbitrary patterns. The approach preserves locality. The parameters that determine various family members and switch configuration storage capacity, switch and processor element degrees and corridor width are discussed. An efficient embedding of a complete binary tree in presented to illustrate interconnection pattern programming. An algorithm for solving a system of linear equations is given. Author

BEYOND MERE AUTOMATION Interim Technical Report

Christie G. Enke 1 Sep. 1981 15 p refs
(Contract N00014-76-C-1092)
(AD-A103838; TR-6) Avail: NTIS HC A02/MF A01 CSCL 09/2

The impact of the microprocessor on intelligent chemical instrumentation is addressed. Fundamentals of microprocessor control systems are ellucidated. The software problem is included. Examples of laboratory equipment are discussed, including the intelligent management of a linear diode array detector, a multiple microprocessor system for simultaneous execution of related tasks in a triple quadrupole mass spectrometer, a hierarchical system of minicomputers, and single and multiple microcomputers. Microprocessor capabilities are presented, including multiple variable processing, adaptation to a large variety of transducers, control of high speed operations, and complex data interpretation. The effect of microprocessor technology on chemical instrumentation is forecast, not only in automation and intelligent control, but also in design concepts and enhanced measuring capabilities. Some likely directions for future development are explored. Author

DIGITAL DATA COMPRESSION ALGORITHM PERFORMANCE COMPARISIONS: PROPOSED NATO STANDARD ALGORITHM PROVIDES BETTER FACSIMILE IN A NOISY COMMUNICATIONS ENVIRONMENT THAN PRESENT TACTICAL DIGITAL FACSIMILE ALGORITHM

C. E. Winterbauer 30 Apr. 1981 68 p
(AD-A103159; NOSC/TR-686) Avail: NTIS HC A04/MF A01 CSCL 09/2

Performance of the NATO data compression algorithm in a noisy communication channel is superior to that of the present TDF data compression algorithm provided that the noise channel is not too harsh. Text is legible in a noise channel that has a bite error probability on the order 1 x 1/10 cubed (single bit errors). Multiple (burst) error are not a problem provided the burst length does not exceed ten bits. Where actual burst length greatly exceeds ten-bit (maximum) average expected in tactical situation noise, data compression algorithm performance may be poor, as with most data compression algorithm without a poweful noise protection algorthm. The NATO algorithm has enough compression to meet current TDF performance specification, but its compression efficiency is lower than that of the TDF. The two algorithms have about the same complexity. Author

DYNAMIC DECISION-MAKING IN MULTI-TASK ENVIRONMENTS: THEORY AND EXPERIMENTAL RESULTS Final Scientific Report, 1 Oct. 1978 - 15 Jan. 1981

Krishna R. Pattipati and David L. Kleinman 15 Mar. 1981 129 p refs
(Grant AF-AFOSR-3733-78)
(AD-A102055; AFOSR-81-0586TR; EECS-TR-81-9) Avail: NTIS HC A07/MF A01 CSCL 09/2

Human monitoring, information processing, and task selection procedures in dynamic multitask environments, as a preliminary step towards analyzing and evaluating the human component of a supervisory control system is studied. A computer representation of the supervisory decision situation is developed. The human is presented with a dynamic situation wherein tasks of different value, time requirement and deadline compete for his attention. The effects of various task related variables on the human decision processes are studied. A normative dynamic decision model (DDM) of human task sequencing performance is developed. The analytic framework of the DDM is based on modern control, estimation and semi-Markov decision process theories, which provide a general methodology for analyzing dynamic decision making under uncertainty. Several time, history, and scalar measures of performance are proposed in order to validate the model. Excellent model data agreement is obtained for all the experimental conditions studied. GRA

CAPACITY AND CODING FOR COMPUTER MEMORY WITH DEFECTS Ph.D. Thesis
Chris Douglas Heegard 1981 101 p
Avail: Univ. Microfilms Order No. 8124080

The problem of reliable message storage in an imperfect computer memory is investigated. The information that describes the state of the defects can be used to aid the encoding or decoding of messages. First, a probablistic model for computer memory with defects and noise is introduced. Algorithms are presented that can be used to compute the capacity of these memories. Next, computer memory with stuck-at defects and additive errors are examined from an algebraic viewpoint. A class of modified linear block codes is introduced to correct defects and errors when the location and nature of tho stuck-at cells is given to the encoder. Two theorems are stated that are used to prove that the class of modified linear block codes achieve capacity for these memories. Finally, the class of modified cyclic block codes is introduced. Parameters of binary codes for several block lengths are tabulated. Dissert. Abstr.

CONCURRENT TESTING AND CHECKING IN COMPUTER SYSTEMS Ph.D. Thesis
David Jun Lu 1981 168 p
Avail: Univ. Microfilms Order No. 8124103

Improved techniques for designing concurrent testing and checking in computer systems are given. At the logic circuit level the design of self-checking circuits by introducing quantitative measures and figures of merit for self-checking is studied. At the computer system level, the use of watchdog processors for error-detection performed during the executive of computer programs is studied. The quantitative measures testing input fraction and secure input fraction, are defined to provide comparison of self-checking circuit designs. Figures of self-checking merit are defined to summarize data from evaluation of these measures. Three designs for self-checking implementations of linear feedback shift registers used as cyclic redundancy code encoders are evaluated. The applications of watchdog processors in concurrent testing at the system level is studied. Structural integrity checking (SIC), an error-detection technique that recognizes high level control flow structures in programs, is introduced. Dissert. Abstr.

N82-13752 Stanford Univ., Calif.
AUTOMATED PARTITIONING OF HIERARCHICALLY SPECIFIED DIGITAL SYSTEMS Ph.D. Thesis
Thomas Stephen Payne 1981 144 p
Avail: Univ. Microfilms Order No. 8124130

A methodology for automating the partitioning of the logic into physical blocks is based on information available in a hierarchically specified design. This methodology uses sets of identical logic, identified in a hierarchical design, to produce multiple used parts. Functional group information is used to increase testability and to make the physical realization more understandable. The compact nature of the hierarchical design is utilized to increase the efficiency of the partitioning process. A model of the partitioning process is presented, including a quality function for evaluating the quality of the physical design produced. Several existing algorithms are described and evaluated. The hierarchical partitioning algorithm is heuristic and uses a constructive approach which produces results significantly better than results produced by existing algorithms. Physical designs, containing significant repeated usage of part types were produced. Dissert. Abstr.

DIRECT EXECUTION STRING PROCESSOR Ph.D. Thesis
Daniel Joseph Pease 1981 249 p refs
Avail: Univ. Microfilms Order No. 8123932

A modular, data driven, reorganizable multiprocessor which is configured by a high order string processing language was developed. Its design is based on an applicative model of string processing. This gives rise to a non-Von Neumann model providing primitives for parsing, searching, manipulating, and modification of strings. In addition operators are defined for creating new functions from the base set. From the model on high order string processing language is developed. An architecture, which becomes the basis for the implementation is designed from the model and language. The Direct Execution String Processing (DESP) system which implements the architecture is developed. It has two basic processing modules, one for parsing/searching and one for manipulation and modification. A search/parsing memory is developed which is a linear pattern recognition structure capable of detecting variable length partially specified queries that can be overtapped. A queue memory is also developed which is a multiport memory structure supporting simultaneous read and write to variable sized partitions of the manipulation and modification modules. Dissert. Abstr.

N82-13754 Kansas State Univ., Manhattan.
DESCRIPTIVE TECHNIQUES FOR DIGITAL SYSTEM CONTAINING COMPLEX HARDWARE COMPONENTS Ph.D. Thesis
Anil Kumar Singh 1981 210 p
Avail: Univ. Microfilms Order No. 8122038

Descriptive Technique for Modules and Systems (DTMS) is a Hardware Description Language that was developed for the description of modern digital modules and systems consisting of interconnected modules. Descriptions can represent behavior or they can represent hardware parallelism. Descriptions organized in a procedural framework include one or more concurrently executing processes. The language can be used for the description of systems with synchronous, asynchronous or mixed timing modes. The Hardware Description Net (HD Net) is a model that can be used for alternative graphical representation of the processes in DTMS module descriptions. Hardware Specification Net (HS Net) was developed for graphical representation of conceptual design. A procedure was developed for the realization of control hardware for synchronous systems from HS Net specifications. Dissert. Abstr.

MULTI-SENSOR IMAGE REGISTRATION Ph.D. Thesis
Yair Barniv 1981 249 p refs
Avail: Univ. Microfilms Order No. 8118425

Registration of multi-sensor imagery (MSI) is considered. This scene matching problem is dominated by intensity disparity and contrast reversal differences in parts of the image. A new MSI model is advanced in which the intensity transmittances of all objectst are independent random variables and the edges in the scene are modeled as a low density Poisson process. A communcation analogy is used to arrive at the general MSI processor with several processing operators and a correlator output stages. The correlation coefficient of the data is used to determine the need for linear and nonlinear MSI preprocessing operators. Magnitude gradient, historgram shaping, spectrum whitening, and threshold selection are considered. Experimental simulations on six data bases are used to verify the MSI processing theory for different classes of MSI data. Dissert. Abstr.

N82-13756 Rochester Univ., N. Y.
A SPECIFICATION AND PROOF TECHNIQUE FOR MESSAGE-BASED SYSTEMS AND ITS APPLICATION TO DISTRIBUTED DATABASE ALGORITHMS Ph.D. Thesis
Anil Nigam 1981 279 p
Avail: Univ. Microfilms Order No. 8123996

Distributed computing with widely separated machines is an area of growing theoretical and practical interest. A distributed algorithm is abstracted as a collection of processes that communicate exclusively through message passing. Each participating process is specific as an abstract state-transition table. Various kinds of failures, relevant to distributed algorithms are discussed. An incremental design approech is demonstrated or extending tables to encode failure and recovery components. Proofs for these extended tables are also developed; some axioms characterizing process failure and recovery are proposed and validated. The specification technique is applied to several variations of the population Two-Phase Commit Protocol for atomic updates in a distributed database. Proofs are developed for the relevant properties, and failure and recovery aspects are also addressed. Finally some directions are provided about the applicability of the specification technique to database algorithms. Dissert. Abstr.

N82-13757 Rochester Univ., N. Y.
LANGUAGE, COMPUTATION, AND REALITY Ph.D. Thesis
Donald Richard Perlis 1981 202 p
Avail: Univ. Microfilms Order No. 8123998

The interplay of assertion and meaning, or quotation and unquotation, in reasoning entities is considered. The notion of possibility is analyzed in several contexts, most specifically in

relation to resource-limited computational models of belief and inference, and in the philosophy of science. A first-order treatment of quotation and unquotation is given that allows broad and paradox-free expression of syntax and semantics. It is argued that this makes unnecessary the usual hierarchical constructions for notions such as default reasoning, theory subsumption, concepts, beliefs, and self-reference. This is then applied to a model of belief and inference in which focus of attention is a key element. Effort is made to isolate certain automatic inferences apparently part of the very meaning of propositional beliefs, and then base more sophisticated thinking on these. The relationship of resource-limited computation to the notion of possibility in the foundations of physics and modal logic is discussed.
Dissert. Abstr.

N82-13758 Northwestern Univ., Evanston, Ill.
PROBABILISTIC ERROR ANALYSIS OF FLOATING POINT AND CRD ARITHMETICS Ph.D. Thesis
Jesse Louis Barlow 1981 116 p
Avail: Univ. Microfilms Order No. 8124850

The longstanding, unsolved problem of the probability distribution of roundoff errors in computer arithmetics is discussed. Probabilistic models of floating point and logarithmic arithmetic were constructed using assumptions with both theoretical and empirical justification. A probabilistic roundoff error model for fixed point arithmetic was developed. The models for floating point and logarithmic arithmetic were applied to the error from sums, extended products, polynomials in one variable, inner products, matrix computations, linear equation solving procedures both direct and iterative, and linear multistep methods for the solution of ordinary differential equations. A comparison was made of the error analysis properties of floating point and logarithmic computers. It is concluded that the logarithmic computers have smaller error confidence intervals for roundoff errors than a floating point computer with the same computer word size and approximately the same number range in any numerical computation.
Dissert. Abstr.

COMPILER GENERATION FROM LAMBDA CALCULUS DEFINITIONS OF PROGRAMMING LANGUAGES Ph.D. Thesis
David Arlen Schmidt 1981 134 p
Avail: Univ. Microfilms Order No. 8122033

The foundations of automated compiler construction based upon lambda calculus definitions of programming languages are studied. A Scott-Strachey denotational definition written in SLAMBDA, a variant of Scott's LAMBDA notation, is utilized by an algorithm to produce a translation scheme from a source to a predefined target language. The produce translator accepts as input a correctly parsed source program (an abstract syntax tree) and produces code in the target language; the target language used in the exposition is a flowchart language extension called STM (state transition machines). Correctness of the translation scheme is facilitated by defining a semantic model for SLAMBDA: a Scott-model retract of the universal domain Pw, and a quotient model based upon a relation describing operational equivalence with respect to the term rewriting rules of the SLAMBDA system are given. The simplification of existing techniques for showing the proof of correctness of the intermediate to target translator is discussed.

COMPLEXITY OF COMMUNICATION AMONG ASYNCHRONOUS PARALLEL PROCESSES Ph.D. Thesis
James Edward Burns 1981 137 p
Avail: Univ. Microfilms Order No. 8124283

Certain problems of synchronization for systems of processes which execute asynchronously were investigated. In a system of asynchronous parallel processes, the speed of execution of each process is independent of that of all the other processes in the system and may vary as the process executes. Communication through shared variables and communication by passing messages are considered. Results using the shared variable model developed in the investigation are discussed.
Dissert. Abstr.

N82-13761 Stanford Univ., Calif.
SYMBOLIC REASONING AMONG 3-D MODELS AND 2-D IMAGES Ph.D. Thesis
Rodney Allen Brooks 1981 181 p
Avail: Univ. Microfilms Order No. 8124043

An implemented and operational model-based vision system is described. Examples are given of its interpretation of images, including extraction of three dimensional parameters from monocular images. Advances are presented in representation for geometric modeling of objects and objects classes, in techniques for manipulating nonlinear symbolic algebraic constraints, in geometric reasoning incompletely specified situations, and in constructing algebraic constraints from image measurements. Both generic object classes and specific objects are represented by volume models which are independent of viewpoint. Complex real word object classes are modeled. Variations in size, structure and spatial relations within object classes can be modeled. Spatial reasoning techniques are described which are useful both for prediction within a vision system, and for planning within a manipulation system. Approaches to prediction and interpretation are introduced, based on the propagation of symbolic constraint.
Dissert. Abstr.

N82-13762 Stanford Univ., Calif.
QUERY OPTIMIZATION BY SEMANTIC REASONING Ph.D. Thesis
Jonathan Jay King 1981 117 p
Avail: Univ. Microfilms Order No. 8124097

Semantic query optimization is a method which produces a semantically equivalent query that is less expensive to process than the original query. It transforms the original query into a new one by means of a process of inference. The transformations are limited to those that yield a semantically equivalent query, that is guaranteed to produce the same answer as the original query in any permitted state of the data base. A problem reformulation step for problem solving programs is investigated. Equivalent statements of the original problem are sought, one of which may have a better solution than the original problem. Semantic query optimization applies knowledge of problem domain and of the capabilities and limitations of the data base to pose the most effective and easily processed queries to solve a user's problem.

ALGORITHMS FOR THE GEOMETRY OF SEMI-ALGEBRAIC SETS Ph.D. Thesis
Dennis Soule Arnon 1981 197 p
Avail: Univ. Microfilms Order No. 8120294

Let A be a set of polynomials in r variables with integer coefficients. An A-invariant cylindrical algebraic decomposition (cad) of r-dimensional Euclidean space is a certain cellular decomposition of r-space, such that each cell is a semi-algebraic set, the polynomials of A are sign-invariant on each cell, and the cells are arranged into cylinders. The cad algorithm given by Collins provides, among other applications, the fastest known decision procedure for real closed fields, a cellular decomposition algorithm for semialgebraic sets, and a method of solving nonlinear (polynomial) optimization problems exactly. A new version of the cad algorithm is presented for r less than 3, in which one works with maximal connected A-invariant collections of cells, in such a way as to often avoid the most time-consuming algebraic number calculations. Essential to this new cad algorithm is an algorithm presented for determination of adjacenies among the cells of a cad. Computer programs for the cad and adjacency algorithms have been written.

SEPAC SOFTWARE CONFIGURATION CONTROL PLAN AND PROCEDURES, REVISION 1
15 May 1981 40 p
(Contract NAS8-33806)
(NASA-CR-161915; IR-634-1) Avail: NTIS HC A03/MF A01 CSCL 09B

SEPAC Software Configuration Control Plan and Procedures are presented. The objective of the software configuration control is to establish the process for maintaining configuration control of the SEPAC software beginning with the baselining of SEPAC Flight Software Version 1 and encompass the integration and verification tests through Spacelab Level IV Integration. They are designed to provide a simplified but complete configuration control process. The intent is to require a minimum amount of paperwork but provide total traceability of SEPAC software. L.F.M.

The field of computer vision is surveyed and assessed, key research issues are identified, and possibilities for a future vision system are discussed. The problems of descriptions of two and three dimensional worlds are discussed. The representation of such features as texture, edges, curves, and corners are detailed. Recognition methods are described in which cross correlation coefficients are maximized or numerical values for a set of features are measured. Object tracking is discussed in terms of the robust matching algorithms that must be devised. Stereo vision, camera control and calibration, and the hardware and systems architecture are discussed. PROBLEMS WITH THE MULTITASKING FACILITIES IN THE ADA PROGRAMMING LANGUAGE
Susan Lane Zuckerman 11 May 1981 23 p refs
(AD-A105229; DCEC-TN-16-81) Avail: NTIS HC A02/MF A01 CSCL 09/2

The ADA language was designed for military embedded computer applications, and therefore its multitasking facilities will be heavily utilized in DoD software. However, ADA's multitasking facilities do not provide capabilities equivalent to current multitasking facilities in existing languages. ADA's unconventional multitasking facilities raise serious questions. Problem areas are identified and discussed, and solutions are proposed. Because ADA's multitasking facilities are only a small part of the total language, changes and improvements can be made without impacting the remainder of the language. Author (GRA)

The object of our research is the codification of programming knowledge and the creation of computer systems that incorporate this knowledge that assist in the various activities of programming. We have designed and implemented the CHI knowledge-based programming system, including the 'V' wide-spectrum language for expressing both programming knowledge and program specifications. CHI has been used to synthesize several programs including parts of itself. We are extending the uses of the knowledge base to provide intelligent tools for environment to support not only program synthesis but program acquisition, modification, debugging and maintenance. Another aspect of our research is called Algorithm Design. This project emphasizes tools to assist in the more creative aspects of the creation of new algorithms. We have formalized a set of methods, primarily focused upon the incorporation of operations into generators, that seem to be a very powerful set of tools in deriving good and difficult algorithms. We have implemented some of these methods in CHI and include a discussion of the derivations in this report. GRA

ASSESSMENT OF THE COMPUTER CODE COBRA/CFTL
C. B. Baxi and C. J. Burhop Jul. 1981 238 p refs
(Contract W-7405-eng-26)
(DE81-027933; ORNL/Sub-81-92304/1; GA-A-16359) Avail: NTIS HC A11/MF A01

The COBRA/CFTL code was developed for thermal-hydraulic analysis of simulated gas-cooled fast breeder reactor (GCFR) core assemblies to be tested in the core flow test loop (CFTL). The COBRA/CFTL code was obtained by modifying the general atomic code COBRA/GCFR. These modifications are discussed. The two code results for three cases which represent conditions from fully rough turbulent flow to laminar flow are compared. Case 1 represented fully rough turbulent flow in the bundle. Cases 2 and 3 represented laminar and transition flow regimes. The required input for the COBRA/CFTL code, a sample problem input/output, and the code listing are included. DOE

USER'S MANUALS FOR DYNA3D AND DYNAP: NONLINEAR DYNAMIC ANALYSIS OF SOLIDS IN THREE DIMENSIONS
J. O. Hallquist Jul. 1981 96 p refs
(Contract W-7405-eng-48)
(DE81-028360; UCID-19156) Avail: NTIS HC A05/MF A01

A user's manual for DYNA3D, an explicit three-dimensional finite element code for analyzing the large deformation dynamic response of inelastic solids, is given. A contact-impact algorithm permits gaps and sliding along material interfaces. By a specialization of thmis algorithm, such interfaces can be rigidly tied to admit variable zoning without the need of transition regions. Spatial discretization is achieved by the use of 8-node solid elements, and the equations of motion are integrated by the central difference method. Post-processors for DYNA3D include GRAPE for plotting deformed shapes and stress contours and DYNAP for plotting time histories. A user's manual for DYNAP is also provided. DOE

SOLUTION OF SINGLE LINEAR TRIDIAGONAL SYSTEMS AND VECTORIZATION OF THE ICCG ALGORITHM ON THE CRAY 1
David S. Kershaw 25 Jun. 1981 31 p refs
(Contract W-7405-eng-48)
(DE81-025461; UCID-19085) Avail: NTIS HC A03/MF A01

The numerical algorithms used to solve the physics equation in codes which model laser fusion are examined. It is found that a large number of subroutines require the solution of tridiagonal linear systems of equations. The standard algorithm used in the past on CDC 7600's does not vectorize and so cannot take advantage of the large speed increases possible on the Cray-1 through vectorization. There is however, an alternate algorithm for solving tridiagonal systems, called cyclic reduction, which allows for vectorization, and which is optimal for the Cray-1. An alternative ICCG algorithm for the Cray-1 was developed which utilizes a block form of a cyclic reduction algorithm. This algorithm allows full vectorization and runs as much as five times faster than the old algorithm on the Cray-1. It is used in Cray LASNEX to solve the two dimensional diffusion equation in all the physics subroutines. DOE

ADAPTIVE EQUALIZATION ALGORITHMS FOR A DISPERSIVE CHANNEL Ph.D. Thesis [ALGORITHMS D'EGALISATION ADAPTATIVE D'UN CANAL DISPERSIF]
Hikmet Sari Oct. 1980 134 p refs In FRENCH
(ENST-E-80012) Avail: NTIS HC A07/MF A01

The equalization of a numerical transmission channel is studied, centering on algorithms which control adaptation of the equalizer to an unknown channel that may be slowly time variable. Two problems, i.e., tracking a nonstationary channel, and identification of a stationary channel, are considered. Two equalizers are compared: a linear nonrecursive one, and a recursive one with a decision loop. Algorithms are described and simulation results show their performance. An auto-orthogonalizing algorithm is treated in greater detail. Two alternative algorithms are then proposed. The first gives rapid convergence and is not sensitive to dispersion of the values of the received signal correlation matrix. It is obtained by replacing the Toeplitz matrix for the gain of the auto-orthogonalizing algorithm by a circulation matrix that is asymptotically equivalent to it. The algorithm is suitable for both equalizers discussed. The second algorithm proposed is noniterative; it is only well-adapted to the linear nonrecursive equalizer. Author (ESA)

INCREASE IN THE PROFITABILITY OF DESIGN AND PROCESS PLANNING BY INTEGRATED AND GRAPHIC DATA PROCESSING, PHASE 1 Final Report
Rolf Feddersen, Ulrich Grupe (Vereinigte Flugtechnische Werke GmbH, Bremen, West Germany), and Juergen Nagel (Dornier-Werke GmbH, Friedrichshafen, West Germany) Bonn Bundesministerium fuer Forschung und Technologie Jan. 1981 275 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-005; ISSN-0170-1339) Avail: NTIS HC A12/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 43,90

The basic concepts of computer aided design systems are reviewed and generalized for application throughout the entire production process. Examples from aerospace technology are illustrated. The principles and operation modes of the selected computer-graphics interactive data-processing and programming system are exposed and its utilization assessed in the fields of lofting, structure analysis, tool design, numerical control programming, process planning and order processing. It is found that a favorable basis is thus created for the development of machine independent programs and interactive methods. Author (ESA)

MESH GENERATING AND PLOTTING FACILITIES OF THE LAMCAL PROGRAM
L. G. Lamain 1980 47 p Submitted for publication
(EUR-7099-EN) Avail: NTIS HC A03/MF A01

The complete LAMCAL program consists of three parts: mesh generation; the elastoplastic finite element part; and the plotting part. The three parts are connected by means of an overlay structure using peripheral units as interfaces, which allows them to be used together, separately, or in combination with other computer programs. The mesh generation and the plotting part of the LAMCAL program are described and the input formats are given. Output formats available for mesh generation are Bersafe, Eurdyne and Semiloof. With varying degrees of effort, all kinds of two-dimensional meshes and some three-dimensional meshes (plate and solid element) may be generated. Special attention is given to meshes for crack problems. The input file for the plotting part can contain any number, and in any order, data for mesh, isofunction, and deformation plots. An existing mesh can also be plotted. Messages about available and required core are given in the program. Author (ESA)

DESIGN OF A REAL TIME, INTERACTIVE, PARALLEL SIMULATION COMPUTER Ph.D. Thesis
Yukoh Kobayashi 1981 169 p
Avail: Univ. Microfilms Order No. 8121814

A parallel computer organization for interactive, real time simulations which deal with models represented in a set of ordinary differential equations is proposed. The concept of a simulation computer, having a highly parallel processing organization involving from tens to thousands of peripheral processing is introduced. The proposed computer organization is supported by an efficient method of process synchronization and data transfer among peripheral processors. While process synchronization and data transfer are traditionally carried out through (or by) processors or by a switching network, the proposed method employs specially organized memory modules which consist of a global and a local region. A simulation of the PHYSBE model, which represents the blood circulation of the human body and involves seven first order differential equations, is demonstrated using the fourth order Runge-Kutta integration method for the proposed computer. For this particular simulation model the porposed computer is estimated to be 15 times faster than the conventional digital computer, and 2.6 times faster than the analog computer. Figures of a comparison of absolute error vs. the number of integration steps per cycle and a comparison of absolute error vs. frequency are shown for various orders of the Runge-Kutta integration method. Dissert. Abstr.

SOME EXPERIMENTAL DESIGN TECHNIQUES IN IMAGE PROCESSING PROBLEMS Ph.D. Thesis
Edward S. H. Chang 1981 199 p
Avail: Univ. Microfilms Order No. 8118864

The classification, detection and enhancement of images contaminated by Gaussian and/or non-Gaussian noise are presented in the framework of the general linear model, using the techniques of experimental design with or without replications. A set of robust procedures which utilize recursive and non-recursive estimators and classifiers is presented and used to analyze and represent image data in terms of F- and t- statistics. Decision rules for estimation and classification are based on threshold values associated with various confidence levels. An object detection classifier is developed by combining the supervised learning model, hypothesis testing techniques and the robust F-statistic in conjunction with the ANOVA process. In addition, a class of robustized recursive noise detectors based on the Hartley's or Cochran's F-max statistics are developed. Dissert. Abstr.

N82-13783 Syracuse Univ., N. Y.
METHODS OF VERIFICATION OF DIGITAL LOGIC Ph.D. Thesis
Vijayaraghavan Pitchumani 1981 202 p
Avail: Univ. Microfilms Order No. 8123933

Proof techniques are presented for use at both low and high levels of hardware verification. To help in the design of provable logic, a structured register transfer language is defined and an axiomatic definition of its semantics is given. Formal rules for the translation of a description into hardware are discussed. Two techniques, static and dynamic analyses for proof of an implementation are contrasted in terms of their capabilities. At a higher level, techniques are given for the proof of correctness of both serial and parallel control sequences using an assertions approach. These techniques are compared with those used in software. Finally the mechanizability of all the techniques given are discussed. Dissert. Abstr.

N82-13784 Stanford Univ., Calif.
TRELLIS DATA COMPRESSION Ph.D. Thesis
Lawrence Colm Stewart 1981 137 p
Avail: Univ. Microfilms Order No. 8124158

Tree and trellis data compression systems, using a tree or trellis search algorithm to improve the performance of traditional coding systems, are discussed. The possibility of designing tree and trellis codes which are well matched to particular sources using vector quantization was investigated. The main design procedure iterates on a long training sequence to improve the performance of an initial trellis decoder. An additional procedure given a trellis decoder can produce a decoder of longer constraint length which performs at least as well. Combined, these algorithms provide a complete design procedure for trellis encoding data compression systems. For random sources, many existing data compression systems can be readily improved and performance close to the rate-distortion bound can be obtained. In the applications area of speech compression, tree and trellis codes designed with these algorithms permit the construction of low rate speech waveform coders, low rate residual excited linear predictive coders, and a kind of hybrid tree coder. Dissert. Abstr.

COMPUTER IMPLEMENTATION OF OPTIMAL MULTIVARIABLE CONTROLLER DESIGN IN THE FREQUENCY DOMAIN Ph.D. Thesis
John Edward Perrault, Jr. 1981 129 p
Avail: Univ. Microfilms Order No. 8123850

The numerical computation of optimal controllers using frequency domain synthesis theory are investigated. A synthesis theory is identified and a generalized computation method for obtained necessary transfer function matrices directly from block diagrams is developed. The logical structure of a computer program for optimal controller design is presented. The use of exact arithmetic based on both p-ary and finite field p-adic number systems as well as the use of a symbolic polynomial manipulation program are investigated. The problems associated with the use of finite precision, floating point arithmetic are identified and solutions for the problems are outlined. The many individual algorithms required by the controller design program are identified and analyzed. Dissert. Abstr.

A CONTROL CANONICAL FORM FOR A CLASS OF LINEAR HYPERBOLIC SYSTEMS Ph.D. Thesis
Russell George Teglas 1981 174 p
Avail: Univ. Microfilms Order No. 8120337

Reduction of the eigenvalue placement problem for a class of linear autonomous systems of the form dot x = Ax + bu to the corresponding problem for a scalar neutral functional equation. The reduction relies heavily upon the basic properties of the sequence of eigenfunctions associated with A as well as various properties of non-harmonic Fourier series it is shown. A criterion for the eigenfunctions to form a uniform or Riesz basis is provided and then how a certain class of linear symmetric hyperbolic systems in one space variable may be cast into this abstract framework. Harmonic analysis of the above scaler equation then yields eigenvalue placement results for feedback laws of the form u(t) = (f, x(t)). An application to a problem involving the propagation of electrical signals along a transmission line is included. Dissert. Abstr.

N82-13787 California Univ., Riverside.
THE LEAST FIXED POINT PROPERTY FOR OMEGA CHAIN CONTINUOUS FUNCTIONS Ph.D. Thesis
Joe Don Mashburn 1981 44 p
Avail: Univ. Microfilms Order No. 8122916

The basic definitions are given, including those for omega chain continuity, omega chain completeness, and the least fixed point property for omega chain continuous functions. Some of the relations between completeness and fixed point properties in partially ordered sets are stated. Two examples are given showing that a partially ordered set need not be omega chain complete to have the least fixed point property for omega chain continuous functions. Retracts are discussed where it is seen that they are not sufficiently to characterize those partially ordered sets having the least fixed point property for omega chain continuous functions. The relation between finite width and the least fixed point property for omega chain continuous functions is explored. Finally, the notion of a layered partially ordered set and some of its problems are discussed. It is concluded that a partially ordered set in which every antichain is finite and every chain contains a countable cofinal subchain is omega chain complete if and only if it has the least fixed point property for omega chain continuous functions. Dissert. Abstr.

N82-13788 Syracuse Univ., N. Y.
ZEROS OF SUCCESSIVE DERIVATIVES OF SOME ENTIRE FUNCTIONS OF INFINITE ORDER Ph.D. Thesis
Tsegay Moges 1981 68 p
Avail: Univ. Microfilms Order No. 8123925

Some aspects of a general problem concerning the zeros of successive derivatives of some real, entire functions of infinite order are considered. Functions of the form g(z) = q(z)exp(-e sub z) are studied where the position of the zeros of the real entire function q(z) satisfy some mild restrictions and the growth of the absolute value of q(z) is negligible compared to exp(-e sub z). The work requires an asymptotic evaluation based on the method of steepest descent. A saddle point must be deterined with great accuracy. The effect of the factor q(z) on the number of zeros is investigated. Dissert. Abstr.

N82-13789 Purdue Univ., Lafayette, Ind.
A MIXED VARIATIONAL PRINCIPLE FOR FINITE ELEMENT ANALYSIS Ph.D. Thesis
Michael Lee Day 1981 126 p
Avail: Univ. Microfilms Order No. 8123633

A mixed variational principle is developed and utilized in a finite element formulation. The procedure is mixed in the sense that it is based upon a combinational of the potential and complementary energy principles. The principle evolves from alleviating two drawbacks associated with more traditional approaches. Theses include the problems with interelement continuity and the favoring of displacements over stresses, or vice versa. In order to achieve the desired effect of relaxing the troublesome continuity requirements and to put the displacements and stresses on a more equal footing, it was necessary to modify the potential and complementary principles with Lagrange multipliers. Then both modified principles are simultaneously employed so as not to bias either the compatibility or equilibrium conditions. This gives birth to a finite element formulation which abandons the nodal concept and instead has generalized parameters as it degrees of freedom. Dissert. Abstr.

GENERATION OF ORTHOGONAL AND NEARLY ORTHOGONAL BOUNDARY-FITTED COORDINATES WITH DIRECT CONTROL OF GRID SPACING
M. Visbal and Doyle D. Knight Jul. 1981 36 p refs Backup document for AIAA Synoptic, 'Generation of Orthogonal and Nearly Orthogonal Coordinates with Grid Control near Boundaries', scheduled for publication in AIAA Journal in Feb. 1982
(LOG-J12610) Avail: NTIS HC A03/MF A01

A numerical procedure is presented for the generation of boundary-fitted curvilinear coordinates with controllable mesh spacing and orthogonality. The technique is based on a straightforward two-step procedure involving the solution of Poisson's equation. The method is capable of generating orthogonal grids with partial control of the mesh spacing, or nearly-orthogonal grids with strict direct control of mesh spacing. The inhomogeneous terms in the Poisson equations are automatically adjusted during the grid generation. The technique is applicable to two-dimensional simple-connected regions typical of airfoils, cascades, diffusers, inlets, and nozzles. Author

A NONLINEAR CONSERVATION LAW WITH MEMORY
J. A. Nohel Aug. 1981 40 p refs
(Contract DAAG29-80-C-0041)
(AD-A103882; MRC-TSR-2251) Avail: NTIS HC A03/MF A01 CSCL 12/1

A history boundary value problem for a nonlinear conservation with fading memory in one space dimension is examined in relation to the motion of a nonlinear, one dimensional viscoelastic body. Using a variant of an energy method applied to the viscoelastic problem it is shown that under physically reasonable assumptions the nonlinear conservation law has a unique, classical solution (global in time), provided the data are sufficiently smooth and small in a suitable norm, moreover, the solution and its first order derivatives decay to zero as t approaches infinity. The proof illustrates the versatility of the energy method combined with frequency domain techniques for Volterra operators. A preliminary analysis is presented concerning the development of singularities in smooth solutions of the conservation law (in finite time) for sufficiently large smooth data; under special assumptions it is shown that such singularities necessarily develop. M.G.

THE RELATIONSHIP BETWEEN THE NUMBER OF FACTORS AND SIZE OF AN EXPERIMENT
D. V. Lindley Jul. 1981 28 p ref
(Contract DAAG29-80-C-0041)
(AD-A103877; MRC-TSR-2246) Avail: NTIS HC A03/MF A01 CSCL 12/1

A medical diagnostic problem is used to examine the relationship between the number of factors and size of an experiment. It is shown that in this and similar cases the size of the experiment must increase to achieve a satisfactory analysis - in fact, the increase is exponentially fast. The basic, mathematical tool is the Kullback-Leibler number which measures the discrimination between the possibilities. Calculation of these members uses interactions, forming a basis for all the effects that might occur. M.G.

ERROR BOUNDS FOR RECONSTRUCTION OF A FUNCTION f FROM A FINITE SEQUENCE (SGN(ft SUB i) + x SUB i))

Alan F. Karr and Robert J. Serfling May 1981 20 p refs
(Contract N00014-79-C-0801)
(AD-A104477; TR-341; ONR-TR-81-4) Avail: NTIS HC A02/MF A01 CSCL 12/1

Consider reconstructing a function f(t), 0 < or equal to t < or equal to 1, from knowledge only of (t) sub i, (s) sub i, 1 < or equal to i < or equal to n), where s sub i = sgn(f(t)sub i) + (x)sub 1), 1 < or equal to i < or equal to n, and the x sub i are additive corruptions. Without the components x sub i, f could not be reconstructed. However, for f continuous and for random uniform noise x, Masry and Cambanis (1980, 1981) show that f can be consistently estimated almost surely and in mean square as n goes to infinity and establish rates of uniform convergence. Through a somewhat different treatment, in which the approximation of f(t)sub i is identified as a numerical integration problem rather than a statistical problem, simple exact bounds are obtained on the error of estimation, the noise x is allowed to be arbitrary (random or deterministic), and the case of f having discontinuities is addressed. The bounds yield substantially improved rates of convergence when the noise values x sub i are from a quasi-random instead of random sequence. M.D.K.

SOLVING MULTIACTIVITY MULTIFACILITY CAPACITY-CONSTRAINED 0-1 ASSIGNMENT PROBLEMS

Krishan Lal Chhabra 12 May 1981 121 p refs
(Contract N00014-80-C-0169; NR Proj. 347-059)
(AD-A102583; T-441) Avail: NTIS HC A06/MF A01 CSCL 12/1

A branch-and-bound solution algorithm and a computer program implementing this algorithm are developd to sole multiactivity multifacility capacity-constrained 0-1 assignment problems. Such 0-1 integer programming problems have the objective of minimizing the sum of variable costs due to the assignment of the activities to designs and fixed costs due to the inclusion of the facilities chosen. The constraints ensure that each activity is assigned to a single design and that the capacities of the facilities chosen are not exceeded. Each design involves the use of one or more facilities, and the same design may be used for several activities. The formation of the problem, the mathematical deveopment of the branch-and-bound solution algorithm, a detailed test example, and computational test results using the computer program are included. Areas of application are identified, and consideration for further improvement of the branch-and-bound solution are also included. GRA

PRELIMINARY ANALYSIS OF A BREADTH-FIRST PARSING ALGORITHM: THEORETICAL AND EXPERIMENTAL RESULTS

William A. Martin, Kenneth W. Church, and Ramesh S. Patil Jun. 1981 86 p refs
(Contracts N00014-75-C-0661; PHS-1-P11-LM-03374-02)
(AD-A101852; MIT/LCS/TR-261) Avail: NTIS HC A05/MF A01 CSCL 12/1

Earley's context-free parsing algorithm was adapted to the parsing of difficult sentences. A sentence level parser which finds all parsers of a sentence was implemented in a compiled rather than an interpreted form, permitting the grammar to be written directly as programs rather than as a data structure to be interpreted by a seperate parsing program. Speed increases of at least an order of magnitude over interpreted implementation were achieved. Special case processing algorithms were added. GRA

A SHARPER ESTIMATE OF THE RENEWAL FUNCTION

Hasse Carlsson 1980 11 p refs
(CTH-Math-1980-18) Avail: NTIS HC A02/MF A01

Remainder term estimates of the renewal function of a strongly non-lattice measure with finite moments of order alpha < or equal to 2 are considered. The estimates are obtained by Fourier methods and improve on previous results. As steps in deriving the estimates, an expression for U(x) equal to o(x exp(-alpha)), as mod x approaches infinity, alpha < or equal to 2, is proved, and an expression for alpha < or equal to 3 is derived. These two lemmas are used to prove and simplify the estimates in the cases of alpha < or equal to 2 and alpha < or equal to 3. Author (ESA)

PROVING TOTAL CORRECTNESS OF NONDETERMINISTIC PROGRAMS IN INFINITARY LOGIC

R. J. R. Back Oct. 1980 32 p refs Submitted for publication
(MC-IW-150/80) Avail: NTIS HC A03/MF A01; Stichting Mathematisch Centrum, Amsterdam FL 4

The formalization in infinitary logic of the weakest precondition approach to prove total correctness of nondeterministic programs was shown. The technique is extended to hierarchically structured programs by adding a primitive statement for operational abstraction, the nondeterministic assignment statement, to the guarded commands of Dijkstra. The infinitary logic is strong enough to express the weakest preconditions for Dijkstra's guarded commands, but too weak for the extended guarded commands. Two possible solutions are considered: (1) going to an essentially stronger infinitary logic, and (2) restricting the power of the nondeterministic assignment statement such that the nondeterministic choice is always made from a finite set of alternatives. STEENROD OPERATIONS IN SPECTRAL COHOMOLOGY THEORIES Ph.D. Thesis - Illinois Univ.

Thomas Weibull 1981 95 p refs
(CTH-Math-1981-06) Avail: NTIS HC A05/MF A01

Certain properties of Eilenberg-Maclane spectra that allow definition of Steenrod operations are abstracted, and the notion of a Gamma (a)-spectrum is arrived at. This is a ring spectrum E, whose characteristics are given. An expression defining

operations is derived which gives cohomology operations if E is an Omega-spectrum. The process for achieving stability and definability for non Omega-spectra is shown. Internal operations using slant product with sequences of defined elements are given and the case for considering finite coefficients presented. Examples of Gamma (a)-spectra are formulated. The dependence of stable internal slant product operations on the E-cohomological structure of the group is discussed. As a comment on the relationship between the slant product and the Kuenneth formula approach to internal operations, a natural homomorphism from the Ext to the Tor Kuenneth formula in ordinary cohomology is offered.

AN ALGEBRAIC MODEL OF FAULT MASKING LOGIC Ph.D. Thesis
Thomas Frank Schwab 1981 148 p
Avail: Univ. Microfilms Order No. 8125007

The model allows the error-propagating and error-correcting characteristics of FML to be accurately defined by a vectorized form of Boolean algebra in terms of a syndrome-like function. Under the assumption of bitwise logical operations, the model yields the necessary and sufficient conditions for FML to exist in arbitrarily complx logic structures. FML is a hardwired form of fault tolerance using massive hardware redundancy techniques to implicitly correct hardware faults. The massive hardware redundancy requirements of FML are not considered critical because of the emerging expectations of extremely high-levels of integrated circuit technology. Since traditional maintenance and error-recovery procedures arenot necessarily required, FML can potentially simplify the hardware and software recovery design of high availability systems. Dissert. Abstr.

ON THE DEPENDENCE OF THE GROWTH OF AN ENTIRE FUNCTION OF THE DISTRIBUTION OF THE ZEROS OF ITS DERIVATIVES AND A CONJECTURE OF G. POLYA Ph.D. Thesis
Li-Chien Shen 1981 87 p
Avail: Univ. Microfilms Order No. 8117535

The dependence of the growth of an entire function on the distribution of the zeros of its derivatives and the classification of the entire functions which together with all their derivatives have only real zeros are investigated. A theorem which states that 'if f(z) is a real entire function (i.e., real on the real axis) with only real zeros and the zeros of f(z) form an A-set, then $\ln\ln M(r,f) = O(r\ln r)$ is generalized. It is shown that the condition of reality on f may be dropped. One may also drop the condition of reality on the zeros of f and replace it by the weaker requirement that the zeros of f form an A-set. The problem of classifying the entire functions which together with all their derivatives have only real zeros is explored. The classification is completed in all cases and it is shown that it is sufficient to consider the function and its first two derivatives. Dissert. Abstr.

THE MISSING BOUNDARY PROBLEM FOR SMOOTH MANIFOLDS OF DIMENSION GREATER THAN OR EQUAL TO SIX Ph.D. Thesis
Gary Francis OBrien 1981 47 p
Avail: Univ. Microfilms Order No. 8124472

Let M be a non-compact differentiable manifold of dimension > 6. Suppose both M and the differential of M are 1-ended spaces. Necessary and sufficient conditions for M to be diffeomorphic to the complement of a compact subset of the boundary of a compact manifold are given. There are four conditions: two geometric conditions and two algebraic obstructions. Examples to show that these obstructions are not always trivial are given. An exmple of a manifold which does not have a completion but where any tubular neighborhood of codimension > 3 has a completion is constructed. We also classify the different ways to complete a given manifold. Dissert. Abstr.

N82-13807 Georgia Inst. of Tech., Atlanta.
SOLUTION OF INITIAL-VALUE PROBLEMS FOR SOME INFINITE EVENTUALLY PERIODIC CHAINS OF HARMONIC OSCILLATORS Ph.D. Thesis
Samuel Ray Glidewell 1981 177 p
Avail: Univ. Microfilms Order No. 8124502

Initial-value problems for some chains of harmonic oscillators when the physical parameters of the chain are eventually periodic and the initial conditions are of slow growth are investigated. The eventually periodic physical parameters and initial conditions of slow growth for fully infinite and half-infinite chains are defined. A procedure is described for solving the equations of motion of the half-infinite, frictionless, eventually periodic chain of harmonic oscillators when an arbitrary initial displacement and velocity are prescribed for one mass only, the remaining masses being initially stationary in their equilibrium positions. A method is described for solving the equtions of motion of the fully infinite, frictionless, eventually periodic chain of harmonic oscillators when arbitrary nonzero initial displacements and velocities are prescribed for any finite number of masses. A finite spring-mass system arranged in a closed loop is described, and the initial-value problem associated with this finite system is formulated. The equations of motion of the half-infinite uniform chain of harmonic oscillators are solved when the initial conditions are of slow growth.

THE EXISTENCE OF NONZERO MAPS FROM INJECTIVES TO PROJECTIVES Ph.D. Thesis
Jeffrey Warren Neslen 1981 40 p
Avail: Univ. Microfilms Order No. 8123995

Let R be a ring. The existence of nonzero maps from injective to projective R-modules is studied. The conditions on R which will insure the existence of such maps are determined. After establishing several equivalent formulations of the problem, examples are considered. Commutative Artinian and Noetherian rings are investigated. In the Artinian case, it is established that any nonzero R-module, injective or not, admits a nonzero mop into R. The case where R is commutative Noetherian is studied.

A CONTRIBUTION TO ROBUST DETECTION AND ESTIMATION Ph.D. Thesis
Chee Tsai 1981 268 p
Avail: Univ. Microfilms Order No. 8118902

Generation of detection and estimation procedures which are robust with respect to such statistical assumption as nominal distribution, independence and identically distributed samples are presented. In the first part two philosophies in the approach to robust detection based on the partition detector and Huber's min-max theory are integrated to yield a class of adaptive robust detectors. In the second part, a robust, nonparametric, recursive and rapidly converging least-integral-square-error density estimators is constructed and then applied to improve the asymptotic efficiencies of stochastic approximation algorithms yielding recursive estimators which behave asymptotically like parametric maximum likelihood estimators. In the next part, equivalence between Huber's m-estimators and stochastic approximation algorithms is given, leading naturally to a robust, recursive, computationally attractive RMSA type estimators based on the m-internal polynomial approximation (MIPA) concept. In the fourth part, the MIPA approach is then applied to Kalman filters. In the last part, the MIPA method is extended naturally to the problem of robust identification. Dissert. Abstr.

A STOCHASTIC EXTENSION OF THE STRUCTURAL PROPERTIES OF COMPARTMENT MODELS VIA A KRONECKER ALGEBRA Ph.D. Thesis
Richard Jay Weidner 1981 112 p
Avail: Univ. Microfilms Order No. 8123474

The deterministic theory of compartment models is extended through the addition of stochastic properties. The concept of identification and Monte Carlo analysis is used to examine structural properties. A Monte Carlo experiment was performed indicating definite sample period bounds for identification. The measure of error was the variance of the compartmental states. It was suggested that structural properties for the mean have influence on the dynamic variance. A Kronecker algebra was proposed and examined at some depth for a simplification transformation for the matrix Lyapunov derivative equation. As a result of the Kronecker transformation, it was illustrated that indeed the proprties, boundedness, monotonicity, etc., of the mean are preserved in the variance. Guidelines were set forth for modifying the basic relaxation identification experiment to take advantage of these new properties for the state variance. Dissert. Abstr.

SOME SMALL SAMPLE NON-PARAMETRIC SPACE-TIME CLUSTERING TESTS Ph.D. Thesis
Angela Ko Quinn 1981 238 p
Avail: Univ. Microfilms Order No. 8124984

The problem of a special class of space-time clustering tests for detecting possible contagion among cases of disease of rare occurrence and unknown etiology is considered. Nine tests available for the analysis of clustering in small data sets are examined, appropriate ones are suggested, and guidelines for choosing among them are provided. The statistical distribution of Knox's X, cell occupancy score K, and the empiric cluster ber m sub 1 are compared. Simulated data of known distribution is used to test the ability of all the tests to detect different degrees of clustering. A structure for random location of events with a much stronger definition of randomness is defined. Three tests are considered under this structure. Since a precise structure for the alternate hypothesis would be equally desirable, a structure modelled on simple one-step Markov dependence is presented. Dissert. Abstr.

N82-13812 Stanford Univ., Calif.
SEQUENTIAL STOCHASTIC CONSTRUCTION OF RANDOM POLYGONS Ph.D. Thesis
Edward Ian George 1981 140 p
Avail: Univ. Microfilms Order No. 8124071

A sequential stochastic process is developed from which an independent and identically distributed sample of polygons is extracted with a stopping time. The distribution of polygons so obtained is identical to the distribution of polygons in the Poisson field. The stochastic process is developed in full generality and applied to anisotropic cases as well as isotropic case. Useful families of anistropic distributions for this problem are defined. The sequential stochastic process is used to derive general analytical expressions for polygon distributions for the investigation of the unknown distributions of N, S and A. The basis for very fast computer simulation is provided. A Monte Carlo study of the distributions of N, S, and A in various cases is presented. In particular, a sample of 2,500,000 polygons in the isotropic case provides the most precise results to data. Dissert. Abstr.

PREDICTION OF AERODYNAMIC LOADS ON AIRCRAFTS WITH EXTERNAL STORES AT TRANSONIC SPEEDS Ph.D. Thesis
Chandrasekaran Balasubramanyan 1981 204 p
Avail: Univ. Microfilms Order No. 8123139

The integral equation method was applied to calculate the pressure distribution over an arbitrary, three dimensional lifting wing and a three dimensional wing with an external store, kept beneath the wing. A method to calculate the interference effects imposed by an external store on the wing and vice-versa is given. The wing along transonic solution is analyzed and compared with the experimental results and as well as a wing with an external store. A theory for the flow field nonlinear velocity prediction is developed, programmed, and applied to a wing with an external store configuration and the flow field velocities are compared with the experimental results. The numerical methods for solving the triple and double integrals with limits to infinity are studied and the application of one such method to the flow field prediction problem is briefly indicated. Further extension of this work is indicated with the limitations and advantages. Dissert. Abstr.

N82-13814# Army Materiel Systems Analysis Activity, Aberdeen Proving Ground, Md.
CONFIDENCE INTERVALS FOR THE RELIABILITY OF A FUTURE SYSTEM CONFIGURATION
Grady W. Miller Sep. 1981 15 p refs
(AD-A105031; AMSAA-TR-343) Avail: NTIS HC A02/MF A01 CSCL 12/1

An inferential procedure is presented which provides confidence intervals for a future reliability parameter when reliability growth testing is only partially completed. Hypothesis tests based on this method are uniformly most powerful unbiased. These results are applicable if (1) the system failure rate can be modeled as the intensity function of a Weibull process; and (2) efforts to improve reliability are assumed to continue at a steady rate throughout the intervening period of testing. The usefulness of this methodology is illustrated by evaluating the risk of not reaching some future reliability milestone. If such risk is unacceptably high, program management may have time to identify problem areas and take corrective action before testing has ended. As a consequence, a more reliable system may be developed without incurring overruns in the scheduling or cost of the development program. Author (GRA)

ASSESSING PROBABILITY ASSESSORS: CALIBRATION AND REFINEMENT
Morris H. Degroot and Stephen E. Fienberg Jul. 1981 29 p refs
(Contract N00014-80-C-0637; Grant NSF SES-79-06386)
(AD-A104174; TR-205) Avail: NTIS HC A03/MF A01 CSCL 12/1

A probabilistic framework for weather forecasters into which to set the problems of assessing probability assessors was developed. The probability distribution of conditional probabilities and the link between the refinement concept and sufficience in the comparison are demonstrated. Scoring rules for sample situations and indications of how they relate to the probabilistic concepts of calibration and refinement are reviewed. It is shown that the loss of orientation leads to the inability to recalibrate a forecaster's assessment. Extensions of calibration and refinement structure to forecasting problems are also discussed. E.A.K.

A BAYESIAN APPROACH TO THE SYMMETRIC MULTIPLE COMPARISONS PROBLEM IN THE TWO-WAY BALANCED DESIGN Ph.D. Thesis

Liwen Alice Sun 1981 171 p
Avail: Univ. Microfilms Order No. 8123713

A class of Bayes rules is constructed for the comparison of all pairs of means resulting from combinations of treatment levels in a balanced two-factor design. Each Bayes rule for the overall multiple comparisons problem is shown to result from the simultaneous applications of the corresponding Bayes rules for all component pairwise comparison problems. A computer program for simultaneously implementing the component Bayes rules is constructed. An important feature of this program is the use of bounds on the posterior Bayes risk function which in many cases enable the action with minimum posterior risk to be chosen without having to explicity calculate these posterior risks, reducing computer time. Nevertheless, the exact Bayes rules are expensive in terms of computer time. For this reason, a large-sample aproxmation to the Bayes rule is proposed which is much easier (and cheaper) to apply, and which performs similarly to the exact Bayes rule on a diversity of examples of data of moderate sample size (error d.f. = 15,30) taken from standard statistical textbooks. Dissert. Abstr.

TRANSFORMING CONTINGENCY TABLES

Michael M. Meyer Aug. 1981 39 p refs
(Contract N00014-80-C-0636)
(AD-A104182; TR-214) Avail: NTIS HC A03/MF A01 CSCL 12/2

There are many numerical procedures for calculating the maximum likelihood estimates for loglinear models of frequency data. The most popular methods are the Iterative Proportional Fitting Procedure (IPFP) and variants of Newton's method. For problems involving a large number of parameters, Newton's method is often impractical. As the basic IPFP is a well understood, robust, and widely available algorithm it would often be desirable to cajole a given problem into a form where the IPFP can be applied. A general theorem on transforming contingency tables is presented. Several applications of this transformation technique allowed us to take advantage of the IPFP and resulted in simple and useful procedures. A further advantage of this technique is that it is sometimes possible to recognize closed-form estimates in the transformed problem while they would be overlooked in the original setting. Author

QUANTUM FRAMES OF REFERENCE Ph.D. Thesis

Tirza Kaufherr 1981 99 p
Avail: Univ. Microfilms Order No. 8123423

The idea that only relative variables have physical meaning is carried over to quantum theory. Finite mass, macroscopic reference frames, relative to which all physical quantities are measured, are considered. During the process of measurement, a finite mass observer receives a kickback, and this reaction of the measuring device is not negligible in quantum theory because of the quantization of the action. Hence, the observer himself has to be included in the system that is being considered. A number of thought experiments involving finite mass observers which have quantum uncertainties in their time or in their position are discussed. The question of the covariance of the theory is analyzed for the case of more than one observer. Finally the electron paramagnetic resonance paradox is examined. Dissert. Abstr.

N82-13823 Northwestern Univ., Evanston, Ill.

ON THE RELATIONSHIP BETWEEN ANALYTICAL REGULARIZATION AND REGULARIZATION BY SURGERY Ph.D. Thesis

Kuang-Fu Tien 1981 57 p
Avail: Univ. Microfilms Order No. 8125024

The relationship between classical regularization and another topological method introduced by Easton called the regularization by surgery is examined. Analytical regularization is defined broadly enough to include all existing classical regularization and strengthen the concept of regularization by surgery. Naturally, we investigate first the relation of solution curves in M sub 2 and the solution curves in M sub 1. Then we obtain two theorems specifying conditions that an analytical regularization will imply regularization by surgery. The first theorem says that if the submanifolds in M sub 2 which are mapped to a single integral curve in M sub 1, form a smooth foliation of M sub 2, or a sufficiently large set in M sub 2 then the singularity in M sub 1 is regularizable by surgery. The second theorem expands the first theorem to allow a more complicated analytic regularization which still ensures regularization by surgery in M sub 1. These theorems are applied to the two body problem and restricted three body problem by using their classical analytical regularization respectively. Dissert. Abstr.

CURVATURE SINGULARITIES IN CERTAIN SPACE-TIMES Ph.D. Thesis

William J. DeAngelis 1981 106 p
Avail: Univ. Microfilms Order No. 8123973

Curvature singularities in certain space-times, in particular the notion of a strong curvature singularity, are discussed. Briefly,

an incomplete, inextendible timelike geodesic terminates in a strong curvature singularity if the volume elements for all synchronous coordinate systems along the geodesic have limiting values of zero as the singularity is approached. An infinitesimal test body in free fall would be crushed to zero volume as it approached a strong curvature singularity. It is shown that every timelike geodesic, which terminates at the Schwarzschild singularity, terminates in a strong curvature singularity. Further, certain timelike geodesics, which terminates at the Kerr singularity, terminate in a strong curvature singularity. Finally, it is shown that a null geodesic, whose tangent vector field represents a repeated principal null direction, can not terminate in a strong curvature singularity as defined by Tipler. Space-times containing such null geodesics, which in addition terminate at irremovable singularities, include the Schwarzschild, the Kerr, the Reissner-Nordstrom and the Kerr-Newman empty space solutions.

ACOUSTICAL SPECKLE INTERFEROMETRY AND APPLICATIONS IN EXPERIMENTAL MECHANICS Ph.D. Thesis
Mostafa Abbas Hamed 1981 114 p
Avail: Univ. Microfilms Order No. 8123417

When a continuous or pulsed wave of ultrasound is scanned over an object an echo emanating from the object may be detected. If the echo has an irregular variation in amplitude versus position of the sound source, the resulting variation is referred to as acoustical speckle. A theory of acoustical speckle interferometry is presented which parallels the data analysis in pointwise filtering in laser speckle interferometry. Displacement measurements were made utilizing the correlation of reference and displaced ultrasonic signals. Effects of strains and rotations on the minimum of the cross-correlation function are discussed by the illustration of theoretical and experimental examples. Dissert. Abstr.

DETERMINATION OF TWO-STROKE ENGINE EXHAUST NOISE BY THE METHOD OF CHARACTERISTICS
A. D. Jones (Hills Industries, Clarence Gardens, South Australia) and G. L. Brown (California, Inst. of Technology, Pasadena) Jun. 1981 48 p refs Prepared in cooperation with Adelaide Univ., Australia
(NASA-TM-84061) Avail: NTIS HC A03/MF A01 CSCL 20A

A computational technique was developed for the method of characteristics solution of a one-dimensional flow in a duct as applied to the wave action in an engine exhaust system. By using the method, it was possible to compute the unsteady flow in both straight pipe and tuned expansion chamber exhaust systems as matched to the flow from the cylinder of a small two-stroke engine. The radiated exhaust noise was then determined by assuming monopole radiation from the tailpipe outlet. Very good agreement with experiment on an operation engine was achieved in the calculation of both the third octave radiated noise and the associated pressure cycles at several locations in the different exhaust systems. Of particular interest is the significance of nonlinear behavior which results in wave steepening and shock wave formation. The method computes the precise paths on the x-t plane of a finite number of C(sub +), C(sub -) and P characteristics, thereby obtaining high accuracy in determining the tailpipe outlet velocity and the radiated noise. The large temperature gradient in each section of the resonance tube resulting from the liquid nitrogen coolant necessitated a design modification to the cooling system. A timer and four solenoid valves were installed so that the coolant flow can be reversed periodically. The hardware and software for controlling the analog to digital converter and conversion rate were completed, and the system is operational. A duty cycle control circit was implemented so that on the sixteenth conversion a relay shuts off the vibration exciter used to generate the sound wave. Thus the starting point of each decay curve is exactly known. This information is necessary for evaluating the g digital decay information. The data acquisition and digital decay evaluation programs are described. A.R.H.

DETECTION OF INFRASOUND GENERATED BY CLEAR AIR TURBULENCE (CAT)
Roger Meredith, Francis Badavi, and Jacob Becher *In* Old Dominion Univ. Propagation of Sound Through the Earth's Atmosphere Aug. 1981 p 3-10 refs (For primary document see N82-13828 04-71)
Avail: NTIS HC A02/MF A01 CSCL 20A

A unified data acquisiton system which is an AM carrier system consisting of a converter signal, conditioning electronics, and peripheral equipment was checked and calibrated and installed in a mobile van. A microphone array in the shape of a 244-m equilateral triangle was connected to the data acquisition system using 457-m long cables. Development of techniques for signal processing for interpreting the infrasonic signature (differentiating between CAT and other sources of infrasound) is summerized. Once patches of CAT are located in the atmosphere, corroboration can be achieved through test flights of aircraft into the suspected region. A.R.H.

LABORATORY STUDY OF SOUND PROPAGATION INTO A FAST BOTTOM MEDIUM M.S. Thesis
James Arthur Bradshaw Jun. 1981 61 p refs
(AD-A104596) Avail: NTIS HC A04/MF A01 CSCL 20/1

The feasibility of a laboratory experiment to test an existing theoretical model describing sound propagation into a fast bottom underlying a wedge shaped medium was investigated. Sand under fresh water was found to satisfy the constraints of the theoretical model and to simulate the continental shelf. In a laboratory, accuracy of density, sound speeds, and attenuation was shown to be sufficient to allow quantitative comparison to the prediction of the beam angle. Author

ACOUSTIC BOUNDARY WAVE GENERATION AND SHADOWING AT A SEAMOUNT M.S. Thesis
Edgar Alvin Jordan Jun. 1981 97 p refs
(AD-A104594) Avail: NTIS HC A05/MF A01 CSCL 20/1

The interaction of a sound field and a seamount was studied by physically modeling the ocean surface over 2 dimensional and 3 dimensional models of Dickens Seamount. By using a smooth ocean surface, and one with a surface of scaled Rayleigh roughness to model a 35 knot wind, the relative contributions are determined for off-axis scattering elements, multiple reflection from the ocean surface, and diffraction over the crest of the seamount. Boundary wave generation over a randomly rough plane surface is studied experimentally. The ratio of boundary wave amplitude to volume wave amplitude is found to be proportional to (frequency) to the 3/2 power and (range) to the 1/2 power and the ratio of the empirical scattering parameters to the rms height of the roughness elements is found to be approximately 0.3. The spatial correlation length of the randomly rough surface takes the place of the center-to-center separation of the hemispherical bosses used in Tolstoy's theoretical treatment. Author

THEORETICAL ANALYSIS OF THE EFFECTS OF TURBULENCE ON A MOBILE PARAMETRIC RECEIVER
C. Robert Culbertson 1 Apr. 1981 84 p refs
(Contract N00024-77-C-6200)
(AD-A101418; ARL-TR-81-19) Avail: NTIS HC A05/MF A01 CSCL 20/1

Development of analytical expressions that describe some effects of turbulence on the performance of a mobile parametric receiver are presented. Three general topics are covered: (1) summaries of literature pertaining to parametric reception, turbulence, and wave propagation in inhomogeneous media; (2) theoretical analysis; and (3) theoretical estimates of the effects of turbulence on parametric reception. It is concluded that turbulence can produce significant amplitude and phase fluctuations in the acoustic signal detected by the parametric receiver, but the experiments are required to determine the level of fluctuations that might be expected in a practical application. MIXED LAYER DEPTH DISTRIBUTIONS FROM SVSTD DATA Technical Report, 24 Jun. - 22 Sep. 1980
Eugene Molinelli, John Donelson, and Linda Lilly Apr. 1981 114 p refs
(Contract N68463-80-C-0035)
(AD-A105669; SAI-81-260-WA; NOO-TR-271) Avail: NTIS HC A06/MF A01 CSCL 20/1

Mixed layer depths defined in terms of each of four parameters (temperature, sound speed, density and stability) are determined for an area in the northern North Atlantic. The distributions of the mixed layer depth are broken down by season (spring, summer and fall) and by area (Rockall Trough, Iceland Flank, Iceland-Faeroe Front). It is found that seasonal fluctuations in values of mixed layer depth are in excess of 40 meters (fall deeper than summer). Variation in the values of mixed layer depth by area are only about 10 m but are also significant. The Iceland Flank mixed layers are deeper than the Rockall Trough or the Iceland Faeroe Frontal Zone mixed layers. The stability definition is found to be faulty in its present form and an increase in the significant peak criteria from 2 to 3 cycles per hour is suggested. The Iceland-Faeroe Frontal Zone has greater deviation in MLDs which effect the different definitions of MLD in a complex manner. Author (GRA)

INVESTIGATION OF ACOUSTIC INTERACTIONS IN JET THRUST AUGMENTING EJECTORS Final Report, 1 Jan. 1979 - 30 Sep. 1980
J. R. Campbell, K. D. Korkan (Ohio State Univ., Columbus), and H. Viets (Wright State Univ.) 5 Mar. 1981 244 p refs
(Contract N00019-79-C-0225)
(AD-A106083; NR80H-50) Avail: NTIS HC A11/MF A01 CSCL 20/1

The performance of a constant area rectangular ejector with varying mixing length was investigated to determine the aeroacoustic interaction effects. The rectangular ejector investigation was conducted in two phases. The phase one investigation involved the testing of three different aspect ratio rectangular convergent nozzles at pressures between 15-45 psig to determine the acoustic and jet spreading characteristics. From these data a rectangular ejector incorporating endwall and ejector flap blowing was fabricated and investigated at pressure ratios between 2.0 and 5.0. These investigations were conducted at ejector flap length (L) to ejector throat widths (W), L/W of 11.0, 9.5, 8.0, 6.5, 5.0, 3.5, 2.0, and 0.9 to determine the ejector performance. The data for the rectangular ejector configuration investigated showed an aeroacoustic interaction in the present ratio range of 3.3 - 3.8. However, the resulting performance was not improved to the degree experienced with axisymmetric ejectors. Author (GRA)

THE INFLUENCE OF PRESSURE WAVES ON MEASUREMENTS OF HIGH SPEED TRAIN NOISE
Dietrich Bechert Jul. 1980 94 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(DFVLR-FB-81-06) Avail: NTIS HC A05/MF A01; DFVLR, Cologne DM 15,60

Pressure waves are studied experimentally and theoretically; their attenuation by high pass filters is calculated. Relative to an observer at rest, strong pressure fluctuations (pressure waves) are generated by high speed trains. Intensities are typically two orders of magnitude higher than those of radiated noise. Although this can cause problems when measuring noise close to the track, pressure waves can usually be filtered out as their major components are infrasonic. The analysis also includes effects due to vehicle shape and air compressibility. Examples are calculated and approximation formulas are given. Author (ESA)

TRANSMISSION OF SOUND ACROSS A VORTEX LAYER ENCLOSING A CYLINDRICAL COLUMN OF JET Ph.D. Thesis
Raymond Ching Chung Luh 1981 141 p
Avail: Univ. Microfilms Order No. 812410

The transmitted sound field from an impulsive ring source inside an infinitely extending circular jet was investigated for both subsonic and supersonic jet speeds. The interface between the jet and the ambient medium at rest was idealized by a cylindrical vortex layer. Through the application of Fourier transform method, an approximate solution which includes the effects due to curvature was obtained for short waves. From the stability analysis, it is shown that instability is no longer confined to $M < 2$ square root of 2, as predicted in the case of a plane vortex sheet, but may occur at all Mach numbers. However, the instability waves are wavelength dependent and cease to exist for long waves. A resonance wave present for $M > 2$ independent of wavelengths is shown to lead a sound field which will modify the specularly transmitted field in the region of its propagation. Dissert. Abstr.

72 ATOMIC AND MOLECULAR PHYSICS

Includes atomic structure and molecular spectra.

OUTER-SHELL EXCITATION IN SPUTTERED ATOMS Ph.D. Thesis
Nihad A. Yusuf 1981 148 p
Avail: Univ. Microfilms Order No. 8120475

In order to gain some understanding of the excitation and ionization processes in sputtering, measurements of the absolute photon yield and the velocity distribution of the excited atoms were performed. Experimental results show that the photon yield is lower than the secondary ion yield. They also show that the velocities and threshold energies for excited particles are much higher than those of ground state particles. In addition, the population of upper levels was measured for various atomic transitions and results suggest the nonexistence of a local thermodynamic equilibrium inside a solid undergoing sputtering. Moreover, the high energies of the sputter excited atoms and the wide spread of these energies provide evidence against the existence of a local thermodynamic equilibrium. Based on these and other experimental observations such as the enhancement of both photon and secondary ion yields with oxygen, a unified model for excitation and ionization is proposed. This model is based on the level crossing concept in atomic collisions and it explains qualitatively the similarities and differences between photon and secondary ion emissions. Dissert. Abstr.

N82-13840 Purdue Univ., Lafayette, Ind.
TRANSITION RADIATION AS AN X-RAY SOURCE Ph.D. Thesis
Adam Ning Chu 1981 131 p
Avail: Univ. Microfilms Order No. 8124048

The design of a transition radiation X-ray source is described. Theoretical and physical optimizations to maximize the photon production in a given frequency bandwidth are presented. An optimization analysis accounting for material properties, multiple scattering, photon absorption, and statistical random errors in foil thicknesses is used to design an X-ray emitter. Three major experiments were performed to verify the derived design equations and a comparison is made to existing synchrotron, Bremsstrahlung, and electron bombardment X-ray sources. A comparison between a transition radiation X-ray source with synchrotron, Bremmstrahlung, and electron bombardment X-ray sources shows it to be highly competitive with unique advantages. Transition radiation can be generated by low energy linear accelerators, unlike synchrotron sources which need high energies and extremely high vacuum. Transition radiation is on par with synchrotron sources in brightness, but can also be designed for the very hard X-ray where no synchrotron source exists. Transition radiation is tunable, polarized and highly directional, unlike electron bombardment X-ray sources. Dissert. Abstr.

INTERATOMIC POTENTIAL ENERGY HYPERSURFACES FOR MOLECULES Ph.D. Thesis
Robert Lee Vance 1981 158 p
Avail: Univ. Microfilms Order No. 8124525

Recent theoretical advances have placed the description of diatomic potential states (ground and excited) by highly accurate non-orthogonal multiconfiguration valence bond (MCVB) wave functions within reach. Techniques for efficiently handling double-zeta and polarization type basis functions for use in the MCVB wave functions are described. Specifically, an extensive ab initio MCVB calculation for the ground state of hydrogen fluoride is discussed. An efficient method for the modification of atomic orbital basis functions to describe the process of molecule formation is reported. Also, various configuration selection schemes for the MCVB wave function are discussed. Dissert. Abstr.

THE HADRONIC DECAY RATE OF THE HIGGS BOSON: AN APPLICATION OF THE RUNNING MASS Ph.D. Thesis
Eric Alan Braaten 1981 59 p
Avail: Univ. Microfilms Order No. 8117505

The decay rate of a heavy Higgs boson into a quark-antiquark pair is, in lowest order, proportional to the square of the quark mass. However, there are large quantum chromodynamic corrections to the decay rate in the form of logarithms of the Higgs-quark mass ratio. These logarithms can be absorbed into the quark mass, yielding the running mass evaluated at the scale of the Higgs mass. The size of the residual quantum chromodynamic corrections depends on the prescription for quark mass renormalization. The corrections are small if the running mass is defined so that, at the quark-antiquark threshold, it coincides with the pole in the quark propagator. Dissert. Abstr.

N82-13843 State Univ. of New York, Stony Brook.
ULTRAVIOLET STRUCTURE OF SUPERSYMMETRIC NON-LINEAR SIGMA-MODELS Ph.D. Thesis
Gaume Luis Alvarez 1981 192 p
Avail: Univ. Microfilms Order No. 8118956

The applications of differential geometry to the general supersymmetric nonlinear sigma-meson model on two space-time dimensions are considered. An adequate perturbation theory for these models is constructed. This is obtained using the background field expansion combined with the normal coordinate expansion. The characterization and classification of all possible Fermi-Bose symmetries which appear in two space-time dimensions are discussed in the framework of nonlinear sigma-meson models. It is proved that fermionic symmetries require necessarily the existence of complex structures on the manifold where the theory is defined. The proof is based on the theory of complex manifolds and holonomy groups. As a consequence of the characterization theorem and the background field methods, general criteria are given which determine what kind of counterterms will cancel the ultraviolet divergences of the S-matrix. Dissert. Abstr.

SCHWINGER'S VARIATIONAL PRINCIPLE FOR ELECTRON-ION SCATTERING Ph.D. Thesis
Nasser Maleki 1981 239 p
Avail: Univ. Microfilms Order No. 8124517

The principle is formulated for electronion (atom) collision using the coulomb (free particle) Green's function. The theory was applied to a screened coulomb potential as well as e(-) He(+) and e(-)H to obtain analytic distorted waves, phase shifts, and quantum defects for energies near the ionization threshold. A numerical technique of calculating the phase shifts and wave functions is also outlined. Dissert. Abstr.

N82-13845 State Univ. of New York at Albany.
RELATIVISTIC MANY-BODY PERTURBATION THEORY OF PARITY-VIOLATION IN ATOMS Ph.D. Thesis
Bhanu Pratap Das 1981 108 p
Avail: Univ. Microfilms Order No. 8122253

The Weinberg-Salam model is the simplest of all the gauge models that attempt to unity electromagnetic and weak interactions. This model predicts the existence of a parity-violating neutral weak interaction between the particles, electrons, protons and neutrons which make up an atom. Experiments based on optical rotation and circular dichroism were carried out on bismuth, thallium and caesium to detect parity violation in these atoms. The relativistic many-body perturbation theory was employed to study circular dichroism for the 6s sub 1/2 yields 7s sub 1/2 transition in atomic caesium and 6p sub 1/2 yields 7p sub 1/2 transition in atomic thallium. Dissert. Abstr.

N82-13846 Northwestern Univ., Evanston, Ill.
PHYSICAL ADSORPTION OF QUANTUM ATOMIC AND MOLECULAR SYSTEMS Ph.D. Thesis

Sujane Chang Wang 1981 102 p
Avail: Univ. Microfilms Order No. 8125034

Using the variational method proposed by Lowy and Woo, the ground-state energies of the 1/3- and 1/4-coverage superlattices of He sub 4 physisorbed on graphite are calculated. Properly symmetrized single-particle factors in the trial wave function are constructed from expansions in an orthogonal basis set hose elements are the eigenfunctions of a Hamiltonian with a laterally averaged substrate potential. Calculation of the energy of the He sub 4 monolayer in the liquid phase is then carried out in a manner consistent with the superlattice calculation. The 1/3-coverage superlattice is found to be stable, while the 1/4-coverage monolayer chooses to remain in the liquid phase. The physisorption of hydrogen molecules is then investigated in search for quantum liquid crystals. 'Quantum liquid crystals' are quantum liquids which exhibit macroscopic orientational order but no (or partial) spatial order. Ortho-hydrogen molecules are light enough so that even at very low temperatures the zero-point motion of the molcules keeps the system in the liquid state. The molecules are anisotropic and the interaction orientation dependent, so it is not impossible for macroscopic orientational order to arise under appropriate conditions. Dissert. Abstr.

N82-13847 North Carolina State Univ. at Raleigh.

DOUBLE DIFFERENTIAL CONTINUUM NEUTRON SCATTERING CROSS SECTIONS IN IRON AND NICKEL FOR INCIDENT ENERGIES OF 7.5, 10 AND 12 MeV Ph.D Thesis

Albert George Beyerle, Jr. 1981 147 p
Avail: Univ. Microfilms Order No. 8121710

Double differential neutron inelastic scattering cross sections exciting high-lying levels in iron and nickel for incident neutron energies of 7.5, 10, and 12 MeV were measured. Outgoing neutron energy distributions or neutron energies above 0.5 MeV up to about 2 MeV below the incident neutron energy, and scattered neutron angular distributions at up to 5 scattering angles between 45 and 145 deg were measured. These measurement were made using time-of-flight techniques on the neutron scattering facility that has been developed at TUNL. Further attempts to isolate the effects of the scattering cross section are made computationally by a large Monte Carlo type simulation of the experiment. The computed corrections include finite geometry, attenuation, non-monoenergetic source, multiple scattering, and other effects which cannot effectively be removed experimentally. Dissert. Abstr.

N82-13848 Northwestern Univ., Evanston, Ill.

INCLUSIVE CHARGED PARTICLE SPECTRUM FROM THE INTERACTION OF NUCLEI WITH INTERMEDIATE ENERGY PROTON Ph.D. Thesis

Tsewei Chen 1981 251 p
Avail: Univ. Microfilms Order No. 8124865

The nuclear interactions were investigated systematically at the intermediate bombarding energies between 80 Mev and 164 Mev using targets that span the periodic table. Both charged particles and gamma-ray spectra were studied in order to examine the two quite different mechanisms of the interaction, namely, intranuclear cascade and evaporation interactions. It is observed that while fast cascade charged particles are strongly forward peaking the evaporation particles are near isotropic for proton, deutron and alphas. Fast spectrum of the same particle are similar for all the targets studied which indicates the same fast interaction mechanism can apply to all targets. Mass and charge distributions from gamma-ray spectra showed that only one or two of particles are emitted in the cascade stage and most of the incident energy is taken away by the fast nucleons. Finally, two theoretical models, namely cascade and exciton models, were discussed. Comparison between experimental data and model calculation were made. While they both well reproduced the observed data some serious disadvantages exist for both of the models. Dissert. Abstr.

N82-13849 Georgia Inst. of Tech., Atlanta.

ANALYSIS OF COUPLED TRANSLATIONAL AND ROTATIONAL DIFFUSION USING OPERATOR CALCULUS Ph.D. Thesis

Ulrich Robert Steiger 1981 157 p
Avail: Univ. Microfilms Order No. 8124501

The equations for coupled translational and rotational diffusion of asymmetric molecules immersed in a fluid are obtained. The method used begins with the Kramers-Liouville equation and leads to the generalized Smoluchowski equation for diffuion in the presence of potentials. Both external potentials and intermolecular potentials are considered. The contractiction of the description from the Kramers-Liouville equation to the Smoluchowski equation is achieved by using a combination of operator calculus and cumulants. Explicit solutions of these equations are obtained in the two-dimensional case. The formalism also allows the calculation of corrections be be generalzied Smoluchowski equation. Smoluchowski's result is precisely the second cumulant, in the cumulant expansion. Dissert. Abstr.

N82-13850# Toronto Univ., Downsview (Ontario). Inst. for Aerospace Studies.

GAS TARGET NEUTRON GENERATOR STUDIES

Vijay Chatoorgoon Oct. 1981 152 p refs
(UTIAS-251; CN-ISSN-0082-5255) Avail: NTIS HC A08/MF A01

Heat deposition in a subsonic flow can cause the formation of gas density gradients which constitute useful gas targets. The variation of beam voltage, gas density, gas pressure, gas temperature, etc., within a subsonic channel were calculated as a function of the system parameters: beam voltage, beam current, channel diameter, stagnation tank temperature and pressure. The analysis is presented as applicable to any combination of beam particle and target gas. It was found that the subsonic gas target (SGT) is stable against all small perturbations and against certain types of large perturbations. The closely-related transonic gas target (TGT) appears to be unstable to all perturbations. Comparison of hypersonic, transonic, and subsonic gas targets shows that the SGT is the most advantageous type and operates at a lower mass flow and at less severe stagnation tank conditions than the TGT or HGT. The problem of a deuterium spill into the tritium port of a straight hypersonic target was also investigated. A.R.H.

ADAPTATION OF THE TH EPSILON MU FORMALISM FOR THE ANALYSIS OF THE EQUIVALENCE PRINCIPLE IN THE PRESENCE OF THE WEAK AND ELECTROWEAK INTERACTION

A. J. Fennelly (Western Kentucky Univ.) Oct. 1981 40 p refs
(NASA-TM-82450) Avail: NTIS HC A03/MF A01 CSCL 20H

The TH epsilon mu formalism, used in analyzing equivalence principle experiments of metric and nonmetric gravity theories, is adapted to the description of the electroweak interaction using the Weinberg-Salam unified SU(2) x U(1) model. The use of the TH epsilon mu formalism is thereby extended to the weak interactions, showing how the gravitational field affects W sub mu (+ or -1) and Z sub mu (0) boson propagation and the rates of interactions mediated by them. The possibility of a similar extension to the strong interactions via SU(5) grand unified theories is briefly discussed. Also, using the effects of the potentials on the baryon and lepton wave functions, the effects of gravity on transition mediated in high-A atoms which are electromagnetically forbidden. Three possible experiments to test the equivalence principle in the presence of the weak interactions, which are technologically feasible, are then briefly outline: (1) K-capture by the FE nucleus (counting the emitted X-ray); (2) forbidden absorption transitions in high-A atoms' vapor; and (3) counting the relative Beta-decay rates in a suitable alpha-beta decay chain, assuming the strong interactions obey the equivalence principle. STABILITY CONSIDERATIONS FOR LIGHT-ION BEAM TRANSPORT IN Z DISCHARGE CHANNELS Interim Report

P. F. Ottinger, D. Mosher, and Shyke A. Goldstein 8 Jul. 1981 25 p refs Prepared in cooperation with JAYCOR, Alexandria, Va.
(Contract DE-AI08-79DP-40092)
(AD-A101426; NRL-MR-4548) Avail: NTIS

HC A02/MF A01 CSCL 20/8

Light ion beams, appropriate for use as inertial confinement fusion drivers, are transported in z discharge channels over distance of several meters. Stability considerations for light ion beam transport in such channels are reviewed. The important velocity space instabilities are considered and the resulting conditions for good transport are discussed. The results are presented in a general form so that they may be applied to beams of various species (e.g., H(+), D(+), and C(+4) propagating in channel plasmas of different composition (e.g., hydrogen, argon, air, etc.).

MOLECULAR DYNAMICS CALCULATIONS FOR SODIUM USING PSEUDOPOTENTIAL THEORY

R. E. Swanson Jun. 1981 185 p refs
(Contract W-7405-eng-36)
(DE81-029022; LA-8877-T) Avail: NTIS HC A09/MF A01

The equation of state of sodium is studied using the molecular dynamics technique whereby the classical motion of a system of ions is solved with the aid of computers. The interaction potential between pairs of sodium ions consists of Coulomb and Born-Mayer repulsion terms and an effective ion-ion interaction derived from pseudopotential theory. This theory includes the effects of electron gas screening, exchange, and correlation. A model pseudopotential with parameters fit to experimental low-temperature data is used. By using this technique, an atomic description of a simple metal proceeds to the calculation of macroscopic thermodynamic properties. DOE

POSITRON LIFETIME AND DOPPLER BROADENING TECHNIQUES APPLIED TO IRRADIATION DAMAGED SILVER

R. H. Howell 27 Jul. 1981 12 p refs Presented at Am. Inst. of Metallurgical Engr. Meeting, Las Vegas, Nev., Feb. 1980
(Contract W-7405-eng-48)
(DE81-028688; UCRL-83050; CONF-800205-16) Avail: NTIS HC A02/MF A01

Positron lifetime and Doppler broadening measurements was used to study defect production resulting from room temperature irradiation of pure silver by D-T fusion neutrons or energetic protons. Use of the positron annihilation analysis established that the surviving defects from both irradiations have the same dose dependence and that defect concentration can be quantitatively measured and compared to damage models. The relative merit of the lifetime and Doppler broadening measurements in arriving at these conclusions is discussed along with some practical aspect of the measurements. In the proton damaged samples the trapping rate approaches saturation, a circumstance which could be misinterpreted if a less extensive data set containing only Doppler broadening data were available. Some remarks about the analysis of positron data and general conclusion about the defect structure are given. DOE

BACKGROUND FITTING FOR ELECTRON ENERGY-LOSS SPECTRA

J. Bentley, G. L. Lehman, and P. S. Sklad 1981 8 p refs Presented at the 3rd Anal. Electron Microscopy Workshop, Vail, Colo., 13 Jul. 1981
(Contract W-7405-eng-26)
(DE81-027117; CONF-810740-1) Avail: NTIS HC A02/MF A01

Background subtraction methods for microanalysis using electron energy loss spectroscopy are examined. In order to assess true edge profiles and obtain integrated intensities of the inner shell ionization edge of interest, it is first necessary to substract the background. Usually a simple inverse power law is used, but for some spectra this form does not fit well. An alternative form which results in superior fits is described. DOE

MECHANISTIC STUDIES OF ELECTRON EXCHANGE KINETICS USING AB INITIO

Marshall D. Newton 1981 25 p refs Presented at the Conf. on Inorganic Reaction Mech., Detroit, 10 Jun. 1981 Submitted for publication
(Contract DE-AC02-76CH-00016)
(DE81-026096; BNL-29896; CONF-8106139-2) Avail: NTIS HC A02/MF A01

The rate constant for the aqueous Fe2(+)-Fe3(+) electron exchange reaction is calculated. The effective contact distance (r sub min) is taken as 5.5 A, the value at which the staggered face-to-face configuration of the orthohedral complexes achieves van der waals contact. The electronic coupling information implicit K sub el(r) is obtained from large scale ab initio molecular orbital calculations carried out for the diabatic states of the reactive ion pair. The calculated rate constant K sub ex, and associated activation parameters are in good agreement with experimental data extrapolated to zero ionic strength and correspond to a mechanism dominated by direct Fe-Fe overlap and characterized by a modest degree of nuclear tunneling and non-adiabatic character. ROLE OF MOLECULAR DYNAMICS ON DESCRIPTIONS OF SHOCK FRONT PROCESSES

Arnold M. Karo 22 Jul. 1981 17 p refs Presented at the Workshop on the Chem. of Shock Compression, Palo Alto, Calif., 22 Jun. 1981
(Contract W-7405-eng-48)
(DE81-028687; UCRL-86489; CONF-810684-45) Avail: NTIS HC A02/MF A01

A computational approach, based on classical molecular dynamics, is used to form a realistic picture of shock induced processes occurring at the shock front and resulting from the detailed, violent motion associated with shock motion on an atomic scale. Prototype studies of phase transitions are discussed. The interaction of the shock front with defects, surfaces, voids, and inclusions, and across grain boundaries are summarized. The critical question of how mechanical energy imparted to a condensed material by shock loading is converted to the activation energy required to overcome some initial energy barrier in an initiation process, is addressed. DOE

TWO-PHOTON PHYSICS AS A PROBE OF HADRON DYNAMICS

Stanley J. Brodsky May 1981 21 p refs Presented at the 4th Intern. Colloq. on Photo-Photon Interactions, Paris, 6-9 Aug. 1981
(Contract DE-AC03-76SF-00515)
(DE81-028757; SLAC-PUB-2747; CONF-810496-2) Avail: NTIS HC A02/MF A01

Two-photon collisions are used to test many features of quantum chromodynamics, especially the interplay between the vector-meson-dominated and point-like hadronic interactions of the photon. A number of QCD applications are discussed, including: jet and single-particle production at large transverse momentum; the photon structure function and its relationship to the gama yields q anti q wave function; and the possible role of gluonium states in the gamma gamma yields rho rho channel. Evidence that even low momentum transfer photon-hadron interactions are sensitive to the point-like gamma yields q anti q coupling is discussed. DOE

ENERGY LOSSES AND MEAN FREE PATHS OF ELECTRONS

IN SILICON DIOXIDE
J. C. Ashley and V. E. Anderson 1981 21 p refs Presented at the IEEE Conf. on Nucl. Sci. and Space Radiation, Seattle, 21 Jul. 1981
(Contract W-7405-eng-26)
(DE81-026353; CONF-810707-6) Avail: NTIS HC A02/MF A01

Theoretical models and calculations are combined with experimental optical data to determine a model energy-loss function for SiO2. Sumrule checks and comparisons with experimental information are made to insure overall consistency of the model. The model energy-loss function is employed to calculate electron inelastic mean free paths and stopping powers for electrons with energies < or = 10 keV in SiO2. DOE

ENHANCED ENERGY DEPOSITION SYMMETRY BY HOT ELECTRON TRANSPORT
D. Wilson, J. Mack, E. Stover, D. VanHulsteyn, G. McCall, and A. Hauer 1981 16 p ref Presented at the Symmetry Aspects of Inertial Fusion Implosions Topical Conf., Washington, D.C., 27 May 1981
(Contract W-7405-eng-36)
(DE81-028774; LA-UR-81-2141; CONF-810576-2) Avail: NTIS HC A02/MF A01

High energy electrons produced by resonance absorption carry the CO2 laser energy absorbed in a laser fusion pellet. The symmetrization that can be achieved by lateral transport of the hot electrons as they deposit their energy is discussed. A K sub alpha experiment shows a surprising symmetrization of energy deposition achieved by adding a thin layer of plastic to a copper sphere. Efforts to numerically model this effect are described. DOE

BEAM PROPAGATION IN THE FREQUENCY-CONVERTED SUBSYSTEMS OF NOVA AND NOVETTE
J. Hunt, W. Simmon, R. Speck, W. Warren, and D. Eimerl 7 Jul. 1981 36 p
(Contract W-7405-eng-48)
(DE81-028253; UCID-19086) Avail: NTIS HC A03/MF A01

It is shown that the nonlinear growth of beam modulation produced by self-focusing is proportional 1/2 exp B where B is the intensity dependent phase retardation (measured in radians) accumulated by the beam. This exponential growth of beam modulation in the baseline frequency conversion/focusing optical train limits the system performance for short pulse (tau less 2 ns), one third micron operation. One micron and one-half micron performance are limited more by the one micron drive available to frequency conversion KDP array than self-focusing. DOE

N82-13863# Oak Ridge National Lab., Tenn.
SPECIFIC GAMMA-RAY DOSE CONSTANTS FOR NUCLIDES IMPORTANT TO DOSIMETRY AND RADIOLOGICAL ASSESSMENT
Laurie M. Unger and D. K. Trubey Sep. 1981 76 p refs
(Contract W-7405-eng-26)
(DE81-031980; ORNL/RSIC-45) Avail: NTIS HC A05/MF A01

Tables of specific gamma-ray dose constants (the unshielded gamma-ray dose equivalent rate at 1 m from a point source) were computed for approximately 500 nuclides important to dosimetry and radiological assessment. The half life, the mean attenuation coefficient, and thickness for a lead shield providing 95 percent dose equivalent attenuation are also listed. DOE

N82-13864# Joint Research Centre of the European Communities, Ispra (Italy).
GAMMA RAY BUILDUP FACTORS IN LEAD-IRON AND IRON-LEAD SHIELDS
H. Penkuhn 1980 22 p refs Submitted for publication
(EUR-7066-EN) Avail: NTIS HC A02/MF A01

Using the gamma transport code PIPE, buildup factors are evaluated in shields consisting of: iron layers of up to 40 cm thickness followed by thick lead layers; and lead layers of up to 10 cm thickness followed by thick iron layers. The source is assumed plane isotropic and four source energies were used, ranging from 0.66 MeV (caesium source) to 6 MeV. The differences between the buildup factors for exposure and equivalent dose rates are outlined. A comparison of the buildup factors in the iron-lead sequence and the lead-iron sequence shows the latter configuration to present fewer problems. Author (ESA)

ON THE VIBRATIONAL ENERGY TRANSFER PROCESSES OF POLYATOMIC MOLECULES IN THE GAS AND SOLID PHASES Ph.D. Thesis
Vartkess Ara Apkarian 1981 292 p
Avail: Univ. Microfilms Order No. 8124844

Vibrational energy transfer has been studied experimentally, both in the gas and solid phases, with the aim of obtaining a description of the equilibration pathways in multimodes systems and obtaining specific state-to-state rate constants. The experimental results are compared with theoretical models in an attempt to understand the dynamics underlying the exchange of energy among the different degrees of freedom of two interacting systems. The experimental method used in these studies is that of laser induced fluorescence. It is shown that a detailed kinetic treatment is essential for extracting state-to-state rate constants from the experimental observables. Thus the general kinetic problem of vibrational equilibration of a multimode system is considered in some detail. Some mathematical and experimental techniques are intoduced for the reduction of experimental data. Dissert. Abstr.

THEORY AND CALCULATION OF RAMAN LINE SHAPES AND EXCITATION PROFILES NEAR A ONE PHOTON RESONANCE Ph.D. Thesis
Don Alan Berkowitz 1981 212 p
Avail: Univ. Microfilms Order No. 8123034

The dependence of the crossing angle between two beams of coherent radiation in a coherent anti-stokes Raman Spectroscopy (CARS) experiment on the frequency difference between the beams was determined through consideration of the geometry involved and the dependence of index of refrction on frequency. Closed-form expressions were developed for overlap integrals essential to the calculation of spectral intensities in absorbance, fluorescence, Raman, and CARS spectra. Overlap integrals were calculated for harmonic oscillator wavefunctions, in which the ground and excited state potential functions were not necessarily equal in frequency. Closed-form expressions of overlap integrals were derived for the treatment of Morse potential functions in the ground and excited state. A least squares fitting routine was developed to determine values of moleclar parameters from analysis of spectra and excitation profiles. Dissert. Abstr.

MOLECULAR BEAM ELECTRIC RESONANCE STUDIES OF WEAKLY BOUND COMPLEXES Ph.D. Thesis
Robert L. DeLeon 1981 135 p
Avail: Univ. Microfilms Order No. 8123974

Van der Waals molecules composed of an argon atom weakly bound to variety of small molecules are studied. Seeded supersonic nozzle beam expansions were employed in a molecular beam electric resonance spectrometer to study electric dipol transitions both in the presence and absence of an external electric field. Rotational spectra were used to derive rotational constants and structural parameters, including R and theta on all species. R is defined as the distance between the monomer center of mass and the argon and theta is the angle between R and the monomer symmetry axis. Where possible hyperfine parameters, dipole moments, centrifugal distortion constants, force constants, vibrational frequencies, inversion splittings and inversion barriers were obtained. Weakly bound complexes of sulfur dioxide with a large number of molecular species were formed in nozzle expansions and studied mass spectroscopically. The electrostatic deflection of some of these species was observed.Dissert. Abstr.

A COMPARATIVE STUDY OF CLASSICAL AND QUANTAL APPROACHES TO THERMAL AND DIFFUSIVE TRANSPORT IN A DILUTE ATOM-DIATOM BINARY MIXTURE Ph.D. Thesis

David Russell Evans 1981 334 p
Avail: Univ. Microfilms Order No. 8123123

A parallel derivation of the Boltzmann equation in both classical and quantum mechanics is given. In particular, a quantal form which closely resembles the classical form is obtained. The kinetic theory appropriate to the thermal conductivity, thermal diffusion, and diffusion coefficients is given in both classical and quantum mechanics for an atom and diamagnetic diatom (more generally, a linear molecule) mixture in an applied magnetic field. Explicit expressions for energy dependent, and thermally averaged cross sections are obtained. A study of the effect of chattering collisions on various thermally averaged cross sections is given for a rigid potential. It is found that some cross sections are more strongly effected than others. In particular, those cross sections which are related by energy conservation are most strongly affected. The applicability of a rigid interaction as a control variate in a Monte Carlo study of a realistic interaction is discussed in light of these results. Dissert. Abstr.

N82-13869 Florida Univ., Gainesville.
A CORRELATED TREATMENT OF BOUND-CONTINUUM TRANSITIONS WITHIN THE ELECTRON PROPAGATOR FORMALISM Ph.D. Thesis
Manoj Kumar Mishra 1981 93 p
Avail: Univ. Microfilms Order No. 8124445

A super-operator formulation for decoupling the symmetry blocks of the full 2p-h TDA electron propagator matrix is presented. The accuracy of this decoupling was explored by using the full 2p-h TDA overlap amplitudes to calculate relative ionization intensities for N2 and H2O. The effect of excluding orbitals on the calculated ionization potentials and relative ionization cross-sections is reported. The use of intensities obtained from successively larger subsets for labeling the photo-electron spectrum is suggested. Expressions were formulated for the correlated treatment of photoionization cross-sections using Feynman-Dyson amplitudes of the electron propagator to describe the ionization processes and an orthogonalized plane wave description for the photoelectron. Explicit equations were derived for the theoretical treatment of experimental cross-sections using either spherical grid deflection type spectrometers or those using a particular collection angle. Dissert. Abstr.

TRANSPORT PROPERTIES OF GASEOUS IONS Ph.D. Thesis
Michael Gordon Thackston 1981 171 p
Avail: Univ. Microfilms Order No. 8124298

The mobilities and longitudinal diffusion coefficients of positive alkali and negative halogen ions in a variety of gases were measured as functions of the ratio of the electric field strength to the neutral gas number density. Thirty-one ion-gas combinations were studied using a drift tube mass spectrometer of ultra-high vacuum construction. Bursts of ions were repetitively gated into the drift region which contained the neutral gas at a constant, predetermined pressure. After drifting a known distance, the ions were mass selected and then detected. The arrival times of the ions were recorded with the aid of a 256-channel time of flight analyzer, and the resulting arrival time histograms were used to determine the mobilities and longitudinal diffusion coefficients of the ions in the neutral gas. A rigorous kinetic theory of ion mobility was discussed. Dissert. Abstr.

PATTERN OF NEUTRINO MIXING IN GRAND UNIFIED THEORIES
K. Milton and K. Tanaka 1981 9 p refs
(Contracts DE-AC02-76ER-01545; EY-76-C-02-1545)
(DE81-029034; DOE/ER-01545/309) Avail: NTIS HC A02/MF A01

It was found previously in SO(10) grand unified theories that if the neutrinos have a Dirac mass and a right-handed Majorana mass (approximately 10 to the 15th power GeV) but no left-handed Majorana mass, there is small electron neutrino/sub e/ mixing but muon neutrinos - neutrino sub tau mixing can be substantial. This problem is reexamined on the basis of a formalism that assumes that the up, down, lepton, and neutrino mass matrices arise from a single complex 10 and a single 126 Higgs boson. This formalism determines the Majorana mass matrix in terms of quark mass matrices. Adopting three different sets of quark mass matrices that produce acceptable fermion ass ratios and Cabbibo mixing produces results consistent with the above, however, in the optimum case electron neutrino - muon neutrino mixing can be of the order of the Cabbibo angle. INELASTIC SCATTERING OF HIGH ENERGY MUONS FROM NUCLEAR TARGETS
Martin Thomas Miller 1981 148 p
Avail: Univ. Microfilms Order No. 8123992

The inelastic cross section of high energy muons from nuclear targets were measured. It was performed using a 10.5 GeV muon beam and a system of multiwire proportional chambers. The range of 0.2<Q(2)<2.4(GeV/c)(2) and 1<NU<9 GeV was explored and it was found that in most cases muons scatter incoherently from the individual nucleons in the nucleus. However, for a small fraction of the events the nucleons shadow one another resulting in a cross section sigma sub T is approximately sigma sub NA rho where A is the atomic number of the nuclear target and 0.9<RHO<1.0. This 'shadowing' effect is attributed to the strongly interacting component of the exchanged virtual photon and its magnitude was found to be in excess of the predictions of current theoretical models. B.W.

PHASE MEASUREMENTS IN THE REGION OF AN ABERRATED LENS Ph.D. Thesis
Joel Leo Seligson 1981 245 p
Avail: Univ. Microfilms Order No. 8124003

The intensity and phase distributons in the focal region of an aberrated lens were studied both theoretically and experimentally. For computing the intensity and phase distributions, three methods the Nijboer-Zernike method, the asymptotic method and the discrete Fourier transform were compared. The discrete Fourier transform was found to be the most useful method for treating a wide range of aberrated lenses. The intensity and phase distributions were computed for a variety of theoretical lenses. It was observed that in some cases the phase distribution is a much more sensitive indicator of the presence of aberrations than the intensity distribution. It is found that phase measurements provide a very accurate method for locating the zero points of the intensity due to the multivaluedness exhibited by phase around these points. Dissert. Abstr.

(AD-A105059; AFOSR-81-0615TR) Avail: NTIS HC A02/MF A01 CSCL 20/6

Under this contract a study was carried out of the optical properties of selected optical materials through data compilation, critical data evaluation and generation of recommended values based on available data from worldwide literature. The selected optical materials include alkali halides, alkaline earth halides, silicon and germanium, and III-V compounds. A major contribution of this work has been the exhaustive compilation of absorption coefficient and the formulation of an Urbach type equation for the multiphonon region near the infrared absorption edge of alkali halides and alkaline earth fluorides. This equation is used to calculate the intrinsic absorption coefficient as a function of both wavelength and temperature in the temperature region of practical interest with the calculated result in concordance with the best contemporary experimental measurements for the pure samples. Optical constants of silicon and germanium were studied in a similar manner as for the above mentioned materials. Refractive index data for silicon and germanium were exhaustively compiled and analyzed. Recommended valurs of refractive index for the transparent wavelength region wure generated in the range 1.2 to 14 microns and 100-750 K for silicon, and 1.9 to 16 microns and 100-550 K for germanium. DETECTION OF TRACE GASES USING HIGH RESOLUTION

SPECTROSCOPY
A. S. Zachor (Atmospheric Radiation Consultants, Inc.), B. Bartchi, and M. Ahmadjian (Air Force Geophysics Lab., Hanscom AFB) 1981 8 p ref Reprinted from Proceedings of SPIE: The International Soc. for Optical Engr. Atmospheric Transmission, Apr. 1981, Washington, D.C.
(Contract F19628-77-C-0203; AF Proj. 7670)
(AD-A104841; AFGL-TR-81-0273) Avail: NTIS HC A02/MF A01 CSCL 07/4

The capability of a spectrometer system to remotely detect and characterize trace gases in localized cloud; e.g., a stationary source effluent is discussed. The detection method utilizes all of the information contained in the observed spectral radiance contrast between cloud and background. The degree to which this spectrum is correlated with a computed (FASCOD1) reference spectrum is determined. Trace gases are reliably detected even when spectrum features are well below the noise level. The minimum detectable quantities (MDQ's) for various trace gases at one atmosphere total pressure are given. The HDQ's determine the combinations of gas column thickness and gas background temperature difference that correspond to 95 percent detection probability and one percent false detection probability for a given system noise equivalent spectral radiance. The capability of the method to remotely infer the gas column thickness and temperature are also discussed. GRA

OPTICAL SCANNER SYSTEM FOR INTERNAL INSPECTION OF STEAM-GENERATOR TUBES Final Report
G. D. Hall, E. A. Macklstroth, and V. J. Orphan Jul. 1981 127 p Sponsored by EPRI
(EPRI Proj. S103-2)
(EPRI-NP-1944) Avail: NTIS HC A07/MF A01

Both an improved low resolution scanner and a high resolution scanner and data acquisition system were designed. A low resolution scanner system was assembled, based on the design of the prototype scanner, with improvements in the mechanical and optical design, as well as the addition of a data acquisition and display system for accurate and realistic presentation of the image. Improving on the design of the low resolution system, a high resolution (720 element detector array) scanner was then designed and fabricated. The data acquisition and display system was also upgraded. The resultant system will image a circumferential band on the inside surface of a 0.670 in (17mm) tube to a precision of 480 picture elements. The performance evaluation of the two scanners included resolution tests and observation of simulated and actual defects in steam generator tubes. These test results are compared with similar evaluations of the prototype scanner. DOE

ELECTROOPTIC SHUTTER DEVICES UTILIZING PLZT CERAMIC WAFERS
Allen L. Thornton 1981 7 p refs Presented a the SPIE Intern. Symp., San Diego, Calif., 24 Aug. 1981
(Contract DE-AC04-76DP-00789)
(DE81-025470; SAND-81-0728C; CONF-810810-13) Avail: NTIS HC A02/MF A01

Optical transparency was achieved in lead zirconate-titanate ferroelectric ceramics by substituting moderate amounts of the element lanthanum (8 to 12 percent) for lead. These compositions exhibit the quadratic (Kerr) electrooptic effect. The excellent optical qualities of these materials (designated PLZT) has permitted the practical utilization of their electrooptic properties in a number of devices. Shutter devices developed and those in continuing development are described with respect to operational characteristics and physical configuration. Major efforts have centered on shutter development for the protection of aircrew from eye-damaging weapon effects. Other devices are also described which: provide eye protection for welders, protect vidicon tubes, function as page composers for holographic memories serve as large aperture photographic shutters, provide stereoscopic three dimensional TV displays, and serve as data links in a fiber optic transmission path. DOE

INFRARED VIBRATIONAL PREDISSOCIATION SPECTROSCOPY OF SMALL MOLECULAR CLUSTERS
James M. Lisy, Matthew F. Vernon, Andrzej Tramer, Hoi-Sing Kwok, Douglas J. Krajnovich, Y. R. Shen, and Y. T. Lee Jul. 1981 9 p refs Presented at the Intern. Conf. on Laser Spectroscopy, Alberta, Canada, 29 Jun. 1981
(Contract W-7405-eng-48)
(DE81-028648; LBL-12981; CONF-8106100-4) Avail: NTIS HC A02/MF A01

The structure and interaction of small molecular clusters were studied. Molecular beam electric resonance spectroscopy, Fourier-transform microwave spectroscopy and pressure induced infrared absorption spectra have provided information concerning the ground state structure and the intermolecular potential energy surface for a large number of binary systems. Vibrational predissociation experiments using molecular beam techniques and tunable infrared lasers measured the infrared absorption spectra and dynamical properties of many van der Waals and hydrogen bonded clusters. MINIMUM/CONSTANT VOLTAGE PLZT ELECTROOPTIC SHUTTERS
J. O. Harris, Jr., Jack D. Cyrus, and George R. Laguna 1981 7 p refs Presented at the SPIE Intern. Symp., San Diego, Calif., 24 Aug. 1981 Sponsored in part by the Air Force Life Support Systems Program Office, Wright-Patterson AFB, Ohio
(Contract DE-AC04-76DP-00789)
(DE81-028646; SAND-81-0727C; CONF-810810-19) Avail: NTIS HC A02/MF A01

Lead lanthanum zirconate titanate (PLZT) shutters were developed and proposed for several military and industrial applications. To achieve electronic simplification in the control circuitry, it is desirable to lower the voltage operating level to less than 600 volts, and to minimize logistic problems relating to spare lens inventories, it is desirable to produce shutters with a relatively constant operating voltage. Experimental data are presented for a number of electrode gap/PLZT wafer thickness ratios which indicate that this 600 volt maximum can be attained. A procedure is then described whereby manufactured shutters or lens assemblies can be electroded to operate over a narrow voltage range. DOE

TIME DEPENDENT RECORDING OF IMAGES TRANSMITTED OVER OPTICAL FIBERS
R. D. Lear 24 Aug. 1981 14 p refs Presented at the SPIE Intern. Symp., San Diego, Calif., 24 Aug. 1981
(Contract W-7405-eng-48)
(DE81-026599; UCRL-85609; CONF-810810-11) Avail: NTIS HC A02/MF A01

A system is being developed to record temporally and spatially resolved data after transmission through 1 km of optical fiber. Wavelength multiplexing techniques are used to transmit many spatial points over each 62/sub mu/m fiber. Light from the output end of each fiber is demultiplexed back into a spatial line. Four lines of data are focused sequentially across the input face of an RCA streak tube. System sensitivity is increased by coupling a microchannel plate image intensifier to the streak camera output. The image intensifier output is recorded on film. The streak camera gives 200 spatial points at a 25% CTF over a dynamic range of 20 db. The total usable streak length is 120 ns with a resolution of 600 ps. DOE

FIBER OPTIC QUALITY ASSURANCE AT THE NEVADA TEST SITE
J. Manning, S. Baumgart, R. Malone, and D. Thayer 1981 5 p ref Presented at the 25th Tech. Symp. SPIE Tech. Programs Comm., San Diego, Calif., 24-28 Aug. 1981
(Contract W-7405-eng-36)
(DE81-028740; LA-UR-81-2137; CONF-810810-15) Avail: NTIS HC A02/MF A01

A large number of fiber optic cables were used in support of a neutron imaging experiment at the Nevada Test Site. The quality control testing of fiber components used on this experiment is described. The principal reason for quality control testing was to ensure reliable, high transmission fibers, a secondary reason was to gain data on a large sample of fiber cables in the field. The instrumentation developed for carrying out these field measurements is discussed. DOE

FAR INFRARED SOURCE CLASSIFICATION SYSTEM Ph.D. Thesis [SYSTEME DE CLASSIFICATION DES SOURCES INFRAROUGE LOINTAIN]
Mohamed Youssry Mahmoud Apr. 1980 333 p refs
(ENST-E-80005) Avail: NTIS HC A15/MF A01

A hardware solution to the problem of classification of isolated IR sources is proposed. The impact of IR technology on the design of a special purpose nonimage forming IR system is discussed. Simulation of the system elements and their effect on IR image acquisition, feature extraction, and classification is analyzed. The algorithms of feature extraction by on-line routines or special purpose hardware are explained. A high density IR mosaic detector is presented which allows for efficient extraction. Although the proposed mosaic geometry is intended for nonimaging applications, its possible extension to IR imaging is pointed out. Author (ESA)

EXPERIMENTAL STUDY OF HETERODYNE PHOTODETECTION. PERSPECTIVES FOR APPLICATIONS TO OPTICAL TRANSMISSION Ph.D. Thesis [ETUDE EXPERIMENTALE DE LA PHOTODETECTION HETERODYNE. PERSPECTIVES D'APPLICATIONS AUX TRANSMISSIONS OPTIQUES]
Mondher Attia Dec. 1980 247 p refs In FRENCH; ENGLISH summary
(ENST-E-80013) Avail: NTIS HC A11/MF A01

Heterodyne photodetection in the visible and near infrared spectral ranges was studied. The physical principles underlying the operation of the different components used to establish optical links are recalled. Performance and limitations of incoherent photodetection are then reviewed. A classical electromagnetic representation of heterodyne detection is presented, illustrating advantages and difficulties of application. After a justification of component choices, the experimental setup is described, and results are discussed. The outlook for utilization of heterodyne photodetection in a monomode fiber transmission system is indicated. Author (ESA)

FIBER OPTIC TIME DOMAIN REFLECTOMETERS: APPROACHES TO PERFORMANCE IMPROVEMENT Ph.D. Thesis
Young Dae Kim 1981 222 p
Avail: Univ. Microfilms Order No. 8124095

The faults and loss profile of an optical fiber cable are conveniently measured by an optical time domain reflectometer (OTDR). The measured results are, however, severely contaminated by various types of noise due to incoherent optical detection, frequently requiring further signal processing. The conventional approach is straightforward signal averaging, which does not take advantage of the unique signal statistics related to low level optical detection. The measurement system was studied from a systems point of view emphasizing performance optimization through signal processing and signal selection. Low level detection requires nonlinear processing, such as threshold detection (photon-counting) or the noise power method. Dissert. Abstr.

A VACUUM ULTRAVIOLET RADIATION SOURCE USING CERENKOV RADIATION Ph.D. Thesis
John Charles Sheppard 1981 173 p
Avail: Univ. Microfilms Order No. 8124151

An apparatus was designed, fabricated, and installed in a drift section near the end of the Stanford Linear Accelerator Center (SLAC) three kilometer accelerator. When the apparatus is filled with helium, the SLAC primary beam characterized by its high energy, high current, and small emittance, generates a Cerenkov spectrum which is continuous from the infrared through the visible to 584A. Like a synchrotron source, the Cerenkov source generates a well collimated, spectrally that continum extending through the VUV which is free from absorption and emission lines. The flux of synchrotron radiation from SPEAR in the VUV is approximately one hundred billion photons/s per 10% bandwidth per mrad of arc in the orbital plane per mA of beam current, assuming 10% collection efficiency. The observed Cerenkov source flux is about one hundred billion photons/s per 10% bandwidth per mrad divergence per mA of beam current, @ 1000A including mirror and bandwidth limiting iris losses and impurity absorption. Dissert. Abstr.

FUNDAMENTAL STUDIES OF DIRECT CURRENT PLASMAS Ph.D. Thesis
Ronald Ralph Williams 1981 173 p
Avail: Univ. Microfilms Order No. 8123110

Emission profiles of the group IIA elements in both the two and three-electrode direct current plasmas (DCP) are presented. In both cases the optimum emission zone of calcium occurs lower in the plasma than any other element studied. Since calcium most closely approaches argon in atomic mass, a collision mechanism involving some form of argon is implicated in the excitation mechanism. However no present theory accurately accounts for the observed emission profiles of the group IIA elements. Enhancements of analyte emisson caused by the presence of easily ionized elements were studied using emission profiles for calcium and a water-cooled electrical probe. The observed changes in the calcium profile can be qualitatively explained by the change in thermal conductivity of the region below the plasma body induced by the ionization of the concomitant. Dissert. Abstr.

ION CYCLOTRON RESONANCE HEATING AND ITS EFFECT ON CONFINEMENT IN TOKAMAKS Ph.D. Thesis
Ki Woong Whang 1981 151 p
Avail: Univ. Microfims Order No. 8122885

Ion cyclotron resonance heating (CRH) and its effect on plasma confinement in Tokamaks is considered. The analysis is based on the single particle equations of motion in the 'quasi-adiabatic approximation', i.e., taking advantage that in the absence of collisions, the ion guiding center variables are conserved over most of a particle's trajectory. Nonadiabatic changes in these variables occur only when an ion passes through the localized cyclotron resonance. The effect of RF on electron motion is neglected. The collison less heating is treated both analytically and numerically using a set of finite mapping equations. The stochastic nature of ICRH in the absence of collisions is investigated and the threshold RF electric field amplitude for the transition from the superadiabatic to the stochstic regime is found. The characteristic regimes of two presently operating tokamaks, Macrotor and PTL, are used as a guide in choosing parameter values. The effect of heating on confinement is examined by studying the changes in single particle orbits produced by the RF and the resultant time is compared with the neoclassical confinement time and the charge exchange time. Dissert. Abstr.

PULSE PROPAGATION IN DISPERSIVE MEDIA WITH APPLICATIONS TO PLASMAS Ph.D. Thesis
Robert Joseph Vidmar 1981 372 p
Avail: Univ. Microfilms Order No. 8124167

The wave properties deduced from wave-packets demonstrate that periodic and transient sources excite amplifying and decaying waves, which have identical frequencies but different signal velocities, phase velocities, and growth rates. The analysis for the amplifying waves in a beam-plasma system exemplifies these source-dependent properties. These results also apply to decaying-wave phenomena such as ray tracing in a absorptive medium and radar pulses in a lossy media. Wave-packets propagating parallel and perpendicular to the Earth's magnetic field in the F-layer of the ionosphere are examples of dispersive wage propagation excited by transient sources. These waveforms suggest a diagnostic method to deduce plasma parameters and the orientation and distance to the transient source from its wave-packet. Dissert. Abstr.

THE REVERSE-FIELD RIGID ROTOR MODEL, CALCULATION AND SIMULATION Ph.D. Thesis
Michael Leo Blake 1981 129 p
Avail: Univ. Microfilms Order No. 8124037

An example of an equilibrium reverse-field plasma configuration the rigid rotor model is based on counter-rotating Maxwellian velocity distributions of electrons and ions. The drift velocity on the Maxwellian distributions corresponds to rigid rotation and represents the most probable distribution of charged particles in axi-symmetric magnetic fields. Due to the circulating (theta) currents, the confining axial (z) magnetic field changes direction within the plasma. The known analytic solution for the one dimensional (r dependent) case is discussed in terms of the magnetohydrodynamic force equation and numerical solutions of the two dimensional (r and z dependent) case are presented. Numerical solutions showing a density peak beneath the confining coils are presented along with the expected solutions with the density peak between the coils. A two-and-one-half dimensonal particle simulation is used to examine the stability of these reverse-field equilibria in the plane perpendicular to the applied magnetic field. Dissert. Abstr.

ENERGY AND MOMENTUM DEPOSITION TO PLASMAS DUE TO THE LOWER HYBRID WAVE BY A FINITE SOURCE
Noriyoshi Nakajima, Hirotada Abe, and Ryohei Itatani Oct. 1981 68 p refs
(IPPJ-546) Avail: NTIS HC A04/MF A01

Heating and current generation due to the lower hybrid wave are studied using particle simulation. A propagation cone consisting of Fourier expanded modes is emphasized. The trajectory of the propagation cone is well described up to the lower hybrid resonance layer using both cold plasma approximation and the Wentzel-Kramer-Brillouin method. An ion cross field drift due to the ponderomotive force is observed. The modes in the higher side of the spectrum of the antenna play a key role for creation of the ion high energy tail. This process is called the cascade process judging from the time variation of the damping of each mode. The particle model is significantly improved using the elongated grid and the quadric spatial interpolation. R.J.F.

OXYGEN TRANSPORT AND LINE EMISSIONS IN A TOKAMAK PLASMA
Takako Kato, Masashi Kako, Tsuneo Amano, Yasuyuki Nomura, and Satio Hayakawa Sep. 1981 34 p refs
(IPPJ-544) Avail: NTIS HC A03/MF A01

Two models which describe the behavior of impurity in Tokamaks are investigated: one is the drift model and the other the diffusion model. The drift model is a simplified one in which impurity ions drift only inward, while the diffusion of impurities is taken into account in the diffusion model. The results of the two models are compared. Spectroscopic data on oxygen impurities in JIPP T-2 Tokamaks are employed for comparison with the theoretical results in which metastable populations were considered to calculate the line intensities. Oxygen transport is well interpreted with the neutral influx of energy 10 to 50 eV and anomalous diffusion of magnetic 5000 (n sub max/n sub e(r)) sq cm/sec. Author

SOFT AND HARD MAJOR DISRUPTIONS IN THE PROFILE CONTROL EXPERIMENT OF THE JIPP T-2 TOKAMAK
K. Toi, K. Sakurai, S. Tanahashi, and S. Yasue Sep. 1981 43 p refs
(IPPJ-547) Avail: NTIS HC A03/MF A01

The nonlinear saturation theory of tearing modes is applied to the Tokamak plasmas produced by an appropriate combination of gas puffing and plasma current-rise in JIPP T-2. The calculated relative amplitude of poloidal field fluctuations has good correlation with the experimental data. The radial extent of the island widths of m/n = 2/1 and 3/2 modes which are derived in the calculation suggests that the 'soft' major disruption, where a plasma current suffers only slight change, can be triggered by either the overlapping of 2/1 island with 3/2 one or the contact of 2/1 island with a limiter. Moreover, it is consistent with the experimental data the hard major disruption, which brings about the abrupt and significant reduction of the plasma curent, results from the combined process of two above-mentioned causes of the soft major disruption. NUMERICAL STUDY ON THE INTERACTION BETWEEN A MODULATED ELECTRON BEAM AND A PLASMA
Osamu Fukumasa and Ryohei Itatani Sep. 1981 48 p refs
(IPPJ-543) Avail: NTIS HC A03/MF A01

Interaction of a modulated electron beam with a plasma is calculated for unbounded and bounded electron beam-plasma systems, using the method of partial simulation. In the case of the unbounded system, deformation of the beam distribution function is occurred in relation to suppression of one wave by the other wave. While, in the case of the bounded system, occurrence of deformation depends on whether feedback effects of reflected beams are present or not. The findings are qualitatively in agreement with experimental results. Author

DATA ON THE BACKSCATTERING COEFFICIENTS OF LIGHT IONS FROM SOLIDS
Tatsuo Tabata (Osaka Prefecture), Rinsuke Ito (Osaka Prefecture), Yukikazu Itikawa, Noriaki Itoh, and Kenji Morita Oct. 1981 118 p refs Submitted for publication
(IPPJ-AM-18) Avail: NTIS HC A06/MF A01

Data on the backscattering of H, D and He ions from solids were collected. The following parameters are considered: number backscattering coefficient energy backscattering coefficient, and the mean fractional energy of backscattered particles. Most of the data range in the region of incident energy from 1 to 50 keV. The empirical formulas, obtained from the Monte Carlo results for energies below 1 keV are plotted for energies from 10 eV to 100 keV. The rms deviations of the data from the empirical formulas are between 6 and 30 percent. E.A.K.

EFFECT OF VACUUM EXHAUST PRESSURE ON THE PERFORMANCE OF MHD DUCTS AT HIGH D-FIELD
J. Marlin Smith, J. L. Morgan, and Shih-Ying Wang 1982 13 p refs Presented at the 20th Aerospace Sci. Meeting, Orlando, Fla., 11-14 Jan. 1982; sponsored by AIAA
(Contract DE-AI01-77ET-10769)
(NASA-TM-82750; DOE/NASA/10769-23; F-1069) Avail: NTIS HC A02/MF A01 CSCL 20I

The effect of area ratio variation on the performance of a supersonic Hall MHD duct is investigated. Results indicate that for a given combustion pressure there exists an area ratio below which the power generating region of the duct is shock free and the power output increases linearly with the square of the magnetic field. For area ratios greater than this, a shock forms in the power generating region which moves upstream with increasing magnetic field strength resulting in a less rapid raise in the power output. The shock can be moved downstream by either increasing the combustion pressure of decreasing the exhaust pressure. The influence of these effects upon duct performance is presented. B.W.

REVIEW OF RECENT EBT COUPLED RING-CORE STABILITY THEORY
D. A. Spong *In its* EBT Stability Theory 1981 p 33-62 refs (For primary document see N82-13909 04-75)
(Contract W-7405-eng-26)
Avail: NTIS HC A14/MF A01

During the past several years Elmo Bumpy Torus (EBT) stability calculations evolved with respect to treatment of ring-core plasma coupling effects. This evolution began with recognition of the important role of ring compressibility and paramagnetic effects on core beta limits. Models continued to increase in sophistication, including ring-core frequency coupling, velocity space and hot electron distribution function effects, and radically dependent models. Some of these features resulted in wide variations in predicted plasma performance limitations. A number of the models were reviewed and assumptions to which they are particularly sensitive are discussed. T.M.

EIGENMODE STABILITY ANALYSIS FOR A BUMPY TORUS

J. W. VanDam, H. L. Berk, M. N. Rowenbluth (ORNL), and D. A. Spong *In* ORNL EBT Stability Theory 1981 p 97-114 refs (For primary document see N82-13909 04-75)
Avail: NTIS HC A14/MF A01

The analysis of eigenmodes in a bumpy torus yielded several stability boundaries that indicate the existence of a parameter regime for generally stable operation consistent with current experiments. A relatively narrow band of parameters where instability persists was obtained and these parameters are discussed. T.M.

N82-13916# Oak Ridge National Lab., Tenn.

NUMERICAL SOLUTIONS OF THE EBT RADIAL EIGENMODE PROBLEM

D. A. Spong, J. W. VanDam, H. L. Berk, and M. M. Rosenbluth *In its* EBT Stability Theory 1981 p 115-140 refs Prepared in cooperation with Texas Univ., Austin (For primary document see N82-13909 04-75)
Avail: NTIS HC A14/MF A01

The radial structure of eigenmodes in EBT is of interest since both modes which are localized within the annulus and moles which extend into the core plasma were predicted to be unstable within appropriate parameter regimes. Radially resolved calculations were done for a z-pinch model which corresponds to a bumpiless, azimuthally symmetric version of EBT. A shooting method was employed which solves two-point boundary value problems on the inside and outside of the ring and which matches derivatives at the center. Comparison of these results with those of a localized dispersion relation are discussed. T.M.

STABILITY OF HOT ELECTRON PLASMA IN THE ELMO BUMPY TORUS

K. T. Tsang and C. Z. Cheng (Princeton Univ.) *In its* EBT Stability Theory 1981 p 141-160 refs (For primary document see N82-13909 04-75)
Avail: NTIS HC A14/MF A01

The stability of a hot electron plasma in the ELMO Bumpy Torus was investigated using two different models. In the first model, where the hot electron distribution function is assumed to be a delta function in the perpendicular velocity, a stability boundary in addition to those discussed by Nelson and by Van Dam and Lee is found. In the second model, where the hot electron distribution function is assumed to be a Maxwellian in the perpendicular velocity, stability boundaries significantly different from those of the first model are found. Coupling of the Nelson-Van Dam-Lee mode to the compressional Alfven mode is now possible. This leads to a higher permissible core plasma beta value for stable operation. T.M.

ANALYTICAL THEORY OF INTERCHANGE AND COMPRESSIONAL ALFVEN INSTABILITIES IN EBT

C. Z. Cheng and K. T. Tsang (ORNL) *In* ORNL EBT Stability Theory 1981 p 161-178 refs (For primary document see N82-13909 04-75)
Avail: NTIS HC A14/MF A01

The local stability of the EBT plasma is analyzed for the long wavelength perturbations in the frequency regime, omega approximately less than the ion cyclotron frequency sub i. In addition to the low frequency interchange instability, the plasma can be unstable to the compressional Alfven wave. Contrary to the previously obtained quadratic dispersion relation in omega for the interchange mode, the relations for both types of instabilities are cubic in omega. New stability boundaries are found, for the ho electron interchange mode, to relate to the enhanced compressibility of the core plasma in the presence of hot electrons. The compressional Alfven instability is driven due to the coupling of hot electron magnetic drifts and diamagnetic drift with the compressional Alfven wave. The stability conditions of these two types of instabilities are opposite to each other. T.M.

N82-13919# JAYCOR, San Diego, Calif.

MICROSTABILITY OF THE EBT BOUNDARY

N. T. Gladd, N. A. Krall, S. Hamasaki, and J. L. Sperling *In* ORNL EBT Stability Theory 1981 181-210 refs (For primary document see N82-13909 04-75)
Avail: NTIS HC A14/MF A01

An analysis of the microstability properties using local theory to focus on the effects the relativistic electrons have on low and high frequency drift waves, is presented. The ring electrons are found to have a stabilizing effect, primarily through their contribution to strong magnetic field gradients. A more detailed nonlocal theory was used to analyze the effects of the diamagnetic well on the lower-hybrid-drift instability, a particularly virulent high frequency drift instability. It is found that the presence of the diamagnetic well reduces this instability's rate of growth but that unstable eigenmodes persist for reasonable values of beta sub ring and span a significant portion of the boundary layer. The relative importance of the residual anomalous resistivity when compared to classical resistivity and classical viscosity is discussed. T.M.

ELECTRON-CYCLOTRON RESONANT HEATED ELECTRON DISTRIBUTION FUNCTIONS

Y. Matsuda, W. M. Nevins, and R. H. Cohen *In* ORNL EBT Stability Theory 1981 p 211-226 refs (For primary document see N82-13909 04-75)
(Contract W-7405-eng-48)
Avail: NTIS HC A14/MF A01

Studies with a bounce-averaged Fokker-Planck code indicate that the energetic electron tail formed by electron-cyclotron resonant heating (ECRH) at the second harmonic is not Maxwellian. The results of a bounce-averaged Fokker-Planck code are presented along with some simple analytic models of hot-electron distribution functions. T.M.

KINETIC STABILITY ANALYSES IN A BUMPY CYLINDER

R. R. Dominguez and H. L. Berk (Texas Univ. at Austin) *In* ORNL EBT Stability Theory 1981 p 249-264 refs (For primary document see N82-13909 04-75)
(Contract DE-AT03-76ET-51011)
Avail: NTIS HC A14/MF A01

A fully kinetic formalism for performing nonlocal stability analyses in a bumpy cylinder was developed. The Vlasov-Maxwell integral equations (with one ignorable coordinate) are shown to be self adjoint and hence amenable to analysis using numerical techniques developed for self adjoint systems of equations. The representation obtained for the kernel of the Vlasov-Maxwell equations is a differential operator of arbitrarily high order. This form leads to a manifestly self adjoint system of differential equations for long wavelength modes. T.M.

EFFECT OF BETA LIMITS ON REACTOR PERFORMANCE IN EBT

N. A. Uckan, D. A. Spong, and D. B. Nelson (DOE, Washington, D.C.) *In its* EBT Stability Theory 1981 p 281-295 refs (For primary document see N82-13909 04-75)
Avail: NTIS HC A14/MF A01

Sensitivity studies that can be carried out to determine the boundaries of the operating regime and to demonstrate the effects of various modes, assumptions, and models on reactor performance (Q value) are described. First the modes believed to limit the core beta and ring plasma performance are discussed, and the simplifications and/or assumptions involved in deriving these limits are highlighted. Then, the implicatios of these limits for a reactor are given. T.M.

FIBER OPTIC ANALOG AND TIMING MONITORING SYSTEM FOR THE ANTARES LASER FUSION PROGRAM
J. L. Longmire and M. E. Thuot 1981 5 p Presented at the SPIE Intern. Symp., San Diego, Calif., 24 Aug. 1981
(Contract W-7405-eng-36)
(DE81-028799; LA-UR-81-2193; CONF-810810-12) Avail: NTIS HC A02/MF A01

The development and use of two optical fiber systems for the Antares 40 KJ CO2 laser is described. In the Antares power amplifier, electron guns produce a discharge-sustaining 8 KA beam of 500 kV electrons. Eight 300 kJ, 3 microns Marx pulsers provide a direct electrical pumping discharge through the laser gas. The electro-optic systems developed allow the measurement of pulsed analog waveforms and trigger timing information within the laser and power systems by a computer based control and data acquisition network. TESTING AND EVALUATION OF MHD MATERIALS AND SUBSTRUCTURES Final Technical Report, Apr. 1976 - Jun. 1981
Jun. 1981 204 p refs
(Contract DE-AC01-76ET-10785)
(DE81-024331; DOE/ET-10785/T1) Avail: NTIS HC A10/MF A01

Stand that can simulate the environment in any of the various substructures of a coal fired baseline MHD power plant. After construction was completed, shakedown tests were performed, and the Test Stand was used in a series of tests to simulate the gas stream composition and temperature conditions in the baseline plant's radiant boiler. The tests were conducted in order to study the effect of stoichiometry and staged combustion on the generation of nitrogen oxide. A computer based monitoring and control system was developed that provides safe Test Stand operation, controls the critical parameters, and accurately measures, displays, and logs the necessary physical data. Several computer programs were developed to determine the thermal performance of the Test Stand, and several models were developed to predict the thermal performance of the Test Stand with bare walls and with slag coated walls, and to determine the gas stream properties as a function of temperature and pressure. ON HIGH BETA EQUILIBRIA OF PLASMAS IN THE QUASI-UNIFORM CURRENT MODEL: INFLUENCE OF SHAPING THE PLASMA CROSS SECTION AND OF THE SECOND ORDER IN THE INVERSE ASPECT RATIO
W. Schuurman and C. Bobeldijk Apr. 1981 32 p refs Sponsored by Euratom and Nederlandse Organisatie voor Zuiver-Wetenschappelijk Onderzoek (ZWO)
(Rept-81-131) Avail: NTIS HC A03/MF A01

Analytical calculations of toroidal plasma equilibria in the high beta ordering were performed in the quasi-uniform current model, varying the shape of the poloidal plasma crossection. The effect of the second order in an expansion in the inverse aspect ratio was determined for a plasma with elliptic crossection. Analytical representation of curves with a shape deviating from an ellipse (e.g., racetrack, triangle, rectangle) enabled the treatment of high beta equilibria of plasmas having these curves as poloidal crossection. A smooth current profile or a flat plasma crossection allow higher values of beta p than a skin current or a vertically pointed crossection. Also, D-shaping improves the equilibrium beta p especially at higher values of the ellipticity. The method of crossection shaping allows, in principle, the extension to higher mode harmonic contributions. Author (ESA)

CURRENT TRANSIENT SPECTROSCOPY OF DEEP LEVELS IN SILICON Ph.D. Thesis
Judith Aviva Borsuk 1981 120 p
Avail: Univ. Microfilms Order No. 8124039

A high sensitivity deep level transient spectrometer was built, which detects diode current transients induced by pulsing the reverse bias, and correlates them with an internally generated exponential waveform. The technique is designated current transient spectroscopy (CTS). Theoretical calculations of system performance under various circumstances are presented, along with example spectra of defects in silicon p(+)n diodes. A spectrum of unintentional defects is shown to closely match computer calculations of the expected peak shape. A theoretical analysis of noise and signal to noise ratio was performed, yielding results consistent with the measured output noise and sensitivity. Spectra of diodes heat treated in quartz and SiC furnace tubes are presented which demonstrate the utility of CTS in detecting processing induced contamination in concentrations as low as 10 to the 9th power. Dissert. Abstr.

CHARGE TRAPPING IN INTERFACE DOPED MNOS STRUCTURES Ph.D. Thesis
William Gardner Sutton 1981 195 p
Avail: Univ. Microfilms Order No. 8123464

Parameters of evaporated tungsten interface dopant induced traps, naturally occurring oxide-nitride interface traps and nitride bulk traps in conventional and interface doped MNOS structures were examined using charge centroid and thermally stimulated current techniques. Charge centroid measurements showed charge trapping in interface doped MNOS structures occurred at the oxide-nitride interface for injected charge levels below a trap saturation level. The saturation level depended more on the oxide thickness than on the dopant density decreasing as oxide thickness increased. Above the saturation level considerable charge trapping in the nitride occurred, causing the charge centroid to approach the mid point of the nitride. conventional MNOS structures exhibited charge centroid values equal to the nitride mid point. Dissert. Abstr.

COEXISTENCE OF NON-REGISTERED MONOLAYER AND BILAYER SOLID FILMS Ph.D. Thesis
Mein Sieng Wei 1981 84 p
Avail: Univ. Microfilms Order No. 8117547

Statistical thermodynamic theories are formulated for monolayer and bilayer solid films of inert gases in physical adsorption. At low temperatures, the quasiharmonic approximation is used to evaluate the Helmholtz free energies of the adsorbed phases. At higher temperatures, the free energies are evaluated using the single occupancy cell theory including part of the correlation energy. With realistic models for adatom interactions and substrate holding potentials, the theories are applied to three physical systems: Xe/Ag(111), Ar/Gr and Kr/Ag(111). Phase diagrams and thermodynamic functions along the phase boundaries are calculated. The calculated difference between the latent heats of adsorption of the monolayer and the bilayer is in good agreement with experimental data for Xe/Ag(111) and Ar/Gr, but it is significantly smaller than the experimental difference for Kr/Ag(111). Dissert. Abstr.

SUPERCONDUCTIVITY OF THE A15 COMPOUND NIOBIUM ALUMINUM Ph.D. Thesis

Jueinai Raynien Kwo 1981 214 p
Avail: Univ. Microfilms Order No. 8124099

The microscopic superconducting properties of the metastable high transition temperature A15 compound niobium aluminum were investigated in this work to further understand the origins of the high transition temperature in the A15 superconductors as a whole class. Material synthesis on A15 thin films was carried out using electron-beam coevaporation to determine the A15 phase equilibrium and to establish the conditions of preparing homogeneous materials. Superconducting tunneling into high-quality, Nb-Al junctions was used to diagnose the material properties of the A15 Niobium Aluminum and shows that it is strongly electron-phonon coupled only when the composition approaches the A15 phase boundary. Tunneling spectroscopy analysis gives striking evidence of mode-sofening mechanism responsible for the stronger coupling and the higher transition temperature. Dissert. Abstr.

THE STRUCTURAL AND VIBRATIONAL PROPERTIES OF AMORPHOUS AND CRYSTALLINE GROUP V ELEMENTS Ph.D. Thesis

Benjamin Victor Shanabrook 1981 134 p
Avail: Univ. Microfilms Order No. 8112834

First and second order Raman scattering measurements of orthorhombic (o-)P and o-As were performed. A scaling relation between the k = O phonon frequencies of o-As and o-P as well as a Born model calculation indicate that the near-neighbor force constants are larger in o-P. The excellent agreement between the second order Raman spectrum and a theoretical calculation of o-As suggests the dominance of overtone scattering. Furthermore, the second order Raman spectra suggest that greater phonon dispersion exists in o-As relative to o-P. A larger contribution of covalent bonding exists in o-P. Similarities between the Raman spectra of o-P and a-P were observed. In contrast to earlier suggestions, the structural studies of a-P samples indicate that highly variable intermediate range structural correlations may exist in an amorphous network. These correlations appear related to displacement induced polarizability correlations probed by Raman scattering. Dissert. Abstr.

RAMAN PROBE OF EQUILIBRIUM AND LASER MODULATED POPULATIONS OF ELECTRONS AND PHONONS IN GaAs Ph.D. Thesis

Dennis Alan Abramsohn 1981 260 p
Avail: Univ. Microfilms Order No. 8123607

The Raman spectrum was used as a probe of the free electron solid state plasma and of the phonons in GaAs. In an effort to elevidate single particle scattering (essentially Compton scattering from a Maxwellian distribution of electrons), manifested as a Gaussian wing around the laser line (the Rayleigh wing). A high intensity pulsed YAG laser photoexcited carriers from deep traps. The same laser pulse also probed the new carrier distribution. A computer controlled Raman scattering system was developed which made gated, high intensity measurements during Q-switched laser excitation and obtained excellent low intensity spectra. From the high intensity measurements, light scattering from excess carriers photoexcited from deep traps in GaAs was observed and the possibility of studying non-equilibrium populations of electrons by pulsed laser techniques was demonstrated. The analysis of the Rayleigh wing lineshape at low intensity led to several new and interesting results which are discussed. Dissert. Abstr.

N82-13935 Ohio State Univ., Cleveland.

AN INVESTIGATION OF SOME MAGNETIC PROPERTIES OF CALCIUM SUBSTITUTED YTTRIUM IRON GARNET FILMS Ph.D. Thesis

Liang-Choo Hsia 1981 193 p
Avail: Univ. Microfilms Order No. 8121804

The properties of Calcium substituted Yttrium Iron Garnet were investigated using ferromagnetic resonance techniques. The samples used were grown by liquid phase epitaxy on [111] oriented Gd3Ga5O12 substrates. The exchange stiffness constant was studied as a function of temperature for both the virgin and reduced states, and the results are consistent with the double exchange mechanism. The exchange stiffness constant has also been studied as a function of oxygen vacancy concentration and the results indicate a definite correlation between the two. It was found that the reduction process induces an easy plane uniaxial anisotropy energy and the measured values are in reasonable agreement with those calculated from the crystal field theory. It is believed that oxygen vacancy ordering is responsible for the induced uniaxial anisotropy energy. Magnetostatic modes were observed on reduced films with a thickness 16 microns. Dissert. Abstr.

LOCAL DENSITY STUDIES OF ELECTRONIC STRUCTURE AND BONDING IN TRANSITION METAL COMPOUNDS Ph.D. Thesis

Cyrus Jehangir Umrigar 1981 181 p
Avail: Univ. Microfilms Order No. 8125027

Self consistent calculations with local exchange correlation potentials were performed on the transition metal compounds NbO2 and TiS2. NbO2 was treated by the molecular cluster method, in which the wavefunctions of a finite cluster of atoms extracted from the solid are explicity calculated and effects of the rest of the solid are taken into account by embedding the cluster in a crystal field. NbO6 and Nb3O6 clusters were treated and the electronic energy levels were compared with experimental data and with non self-consistent band structure results. TiS2 crystallizes in a layered structure that consists of S-Ti-S sandwiches, that are internally strongly bonded, but have weak intersandwich interaction. The band structure and density of states (DOS) of a single sandwich, double sandwich and the bulk were calculated by the linearized augmented plane wave method and compared with each other. Dissert. Abstr.

N82-13937 Northwestern Univ., Evanston, Ill.

NONLINEAR OPTICAL EFFECTS IN LIQUID CRYSTALS Ph.D. Thesis

Santosh Kumar Saha 1981 111 p
Avail: Univ. Microfilms Order No. 8124999

Direct current field induced optical second harmonic generation in nematic and cholesteric liquid crystals is investigated. In addition, flexoelectric induced second harmonic generation in nematic MBBA is studied. The experiments involve the detection of optical radiation at second harmonic frequency when aligned thin film liquid crystals samples are irradiated with laser beam at the fundamental frequency. The laser used is a Q switched Nd YAG laser. Sample alignment is achieved either with rubbing technique or by coating glass spacers with 100 A thick of SiO2. Experiments on nematic liquid crystals show that the temperature dependence of nematic order parameters is obtained from the measurement of dc induced second harmonic generation. Flexoelectric effect gives rise to second harmonic generation in nematic liquid crystal and the birefringence of nematic crystal is used to achieve phase matching. Dissert. Abstr.

N82-13938 Northwestern Univ., Evanston, Ill.

PHASE SEPARATION OF A TWO COMPONENT ELECTRON-HOLE LIQUID IN (111) STRESSED Ge Ph.D. Thesis

Jagmohan Bajaj 1981 123 p
Avail: Univ. Microfilms Order No. 8124849

The possibility of phase separation of an electron-hole drop (EHD) containing both hot and cold electrons in < 111 > stressed

Ge was investigated. It is predicted theoretically that in Ge under appropriate < 111 > uniform stress and at low temperatures, hot and cold electrons are uniformly distributed inside EHD only if the ratio x of the total number of hot electrons to that of cold electrons is larger than a certain critical ratio x sub c. However, for x less than x sub c the system should phase separate into two coexisting phases with quite different x ratio. Time resolved luminescence spectroscopy was used to probe this phase seperation. Dissert. Abstr.

N82-13939 Missouri Univ. -Rolla.
BORON IMPLANTED STRONTIUM TITANATE Ph.D. Thesis
Connie Jeanne McDonald Cooper 1981 120 p
Avail: Univ. Microfilms Order No. 8123581

Single crystals of strontium titanate implanted with boron were found to have highly conductive surface layers. The effects of varying dose from 10 to the 16th power to 10 to the 17th power ions/sq cm, implantation voltage from 50 to 175 keV and annealing conditions on the room temperature surface resistance and Hall mobility are presented. Variation of the implantation voltage did not have a major effect on the sheet resistances obtained by boron implantation of strontium titanate, while dose and annealing conditions have major effects. Doses of 5 x 10 to the 16th power ions/sq cm required annealing on the order of one hour at 500 K for maximum reduction of the room temperature resistance in the implanted layer. Samples implanted with a dose of 1 x 10 to the 17th power ions/sq cm required slightly higher temperatures (approximately 575 K) to obtain a minimum resistance at room temperature. Long term (several weeks) room temperature annealing was found to occur in high dose samples. After one to two months at room temperature followed by an anneal to 575 K, the surface resistances were found to be lower than those produced by the annealing of a freshly implanted sample to 575 K.

Dissert. Abstr.

N82-13940 Temple Univ., Philadelphia, Pa.
FLUORESCENT GUEST-HOST EFFECT IN SCATTERING LIQUID CRYSTALS AND NEW PHYSICAL PHENOMENA IN THIN LIQUID CRYSTAL FILMS Ph.D. Thesis
Aharon Hochbaum 1980 190 p
Avail: Univ. Microfilms Order No. 8124545

Fluorescence emission of guest molecules in cholestric liquid crystal hosts was modulated by an electric-field-induced cholesteric-nematic transition. The contrast ratio between the emissions from the two states is affected primarily by the scattering properties of the phase and the order parameter of the guest. Data are presented on the dependence of the contrast ratio the cell parameters and the structure of both guest and host. A simple model is presented accounting for the observed behavior. The feasibility of growing thin liquid crystal films, via thermal evaporation, was demonstrated. In sub-micron films a departure from bulk behavior was observed; the orientation of smectic layers was found to depend on temperature and thickness; nematic films show a two-domain pattern which we interpreted as two opposite spontaneous twists; phase transition temperatures showed large, thickness dependent depressions; deep supercooling effects in thin films reveal new phases (most likely smectic) that are absent from the bulk phase diagram. Dissert. Abstr.

N82-13941 Stanford Univ., Calif.
LONG-RANGE INTERACTIONS IN LATTICE FIELD THEORY Ph.D. Thesis
Jeffrey Mark Rabin 1981 139 p
Avail: Univ. Microfilms Order No. 8124137

Lattice quantum field theories containing fermions can be formulated in a chirally invariant way provided long-range interactions are introduced. In weak coupling perturbation theory such a lattice theory is renormalized when the corresponding continuum theory is recovered in the perturbative continuum limit. In the strong-coupling limit of these theories, an effective Hamiltonian describing a Heisenberg antiferromagnet with long-range interactions is studied. A critical rate of falloff of the interactions, approximately as inverse distance squared, which separates a nearest-neighbor-antiferromagnetic phase from a phase displaying identifiable long-range effects is found. A duality-type symmetry which is present in some block-spin calculations is pointed out. Dissert. Abstr.

N82-13942 Stanford Univ., Calif.
UPPER CRITICAL FIELDS AND SPAN STATES IN A-15 SUPERCONDUCTORS, PART 1. VORTICES IN TWO-DIMENSIONAL SUPERCONDUCTORS, PART 2 Ph.D. Thesis
Terry Philip Orlando 1981 195 p
Avail: Univ. Microfilms Order No. 8124125

The upper critical fields of niobium-tin and vanadium-silicon were measured and analyzed within the Ginzburg-Landau-Abrikosov-Gor'kov theory of type 2 superconductivity. The importance of many-body effects on the spin states of the superconductor is stressed, especially the renormalization of the Pauli paramagnetic limiting process. For niobium-tin failure to include renormalizations from the electronphonon interaction leads to too high spin-orbit scattering rates. For a similar A15 compounds vanadium-gallium failure to include renormalizations from the electron-electron interaction (spin-fluctuations and the related Stoner factor) leads to a measured upper critical field a zero temperature which is lower than theoretically allowed. The phase transition of Kosterlitz and Thouless, in which bound pairs of positive and negative vortices dissociate at a characteristic temperature, is shown to be possible for thin superconducting films. The resistance in the superconductor caused by this dissociation is compared to that caused by thermally activated vortices and by current-induced phase slips. Dissert. Abstr.

N82-13943 Stanford Univ., Calif.
CW LASER ANNEALING AND CW LASER ASSISTED DIFFUSION IN GALLIUM ARSENIDE Ph.D. Thesis
Yves Isaac Nissim 1981 167 p
Avail: Univ. Microfilms Order No. 8124120

It is demonstrated that lasers or electron beams are very attractive tools to process semiconductors. They provide a rapid localized heating of the surface of the semiconductor to precisely control its temperature. As a result it is possible to completely anneal ion implanted silicon and to induce various reactions. Gallium arsenide is a promising potential candidate for laser processing since conventional thermal treatments are not yet fully satisfactory. The annealing of ion implanted gallium arsenide using laser techniques was investigated and some mechanisms that enhance the recovery of the lattice and the activation of the dopants were identified. Then as a substitute to ion implantation, CW laser irradiation was used to diffuse dopants in gallium arsenide from surface sources to create thin n+ layers. These diffused layers were optimized to form nonalloyed ohmic contacts that were successfully utilized in the fabrication of different GaAs metal semiconductor field effect transistor structures. Dissert. Abstr.

N82-13944 Stanford Univ., Calif.
ELECTRON BEAM EVAPORATION OF SUPERCONDUCTING, A15 NIOBIUM-SILICON Ph.D. Thesis
Robert David Feldman 1981 180 p
Avail: Univ. Microfilms Order No. 8124063

Niobium-silicon compounds with the A15 crystal structure have been of interest for the possibility that they would have superior superconducting properties. The maximum superconducting transition temperature is expected to occur for a well-ordered A15 phase containing 25 atomic percent silicon. The A15 phase does not appear in the niobium-silicon equilibrium phase diagrams, so the structure must be synthesized by nonequilibrium means. Electron beam evaporation has been used to synthesize A15 niobium-silicon films. The addition of oxygen during evaporation stabilizes the A15 structure, and permits the formation of a homogeneous, well-ordered, single-phase film for compositions up to approximately 18.5 atomic percent silicon. The maximum transition temperature is 8.3 K. In order to understand the role played by oxygen, metastable phase diagrams were prepared, and the initial growth to films was studied as a function of substrate temperature and oxygen pressure.

COMPOSITION DEPENDENCE OF NEODYMIUM OPTICAL HOMOGENEOUS LINEWIDTHS IN GLASSES Ph.D. Thesis

John Michael Pellegrino 1981 133 p
Avail: Univ. Microfilms Order No. 8117528

Various host media were surveyed in order to ascertain the dependence of the optical homogeneous linewidth upon host velocity of sound and system temperature. Measurements are made for Nd(+3) in oxide and fluoride based glasses for host composition ranging from simple binary to multicomponent glasses. Line broadening processes active in crystalline systems to lay the groundwork for the glass investigations are reviewed. A LiF:F2+ color center laser provided excitation for the observation of fluorescence. Homogeneous linewidths at 300 K exhibit a broad range of values, varying by approximately a factor of four. The ratio of homogeneous to inhomogeneous linewidth also varies over a broad range, from 0.16 for a sodium barium borate glass to 1.86 for a rubidium phosphate glass. The homogeneous linewidth is inversely dependent to the 2.6 power of the velocity of sound from host to host. Results strongly suggest that the Raman process is responsible for a major portion of the glass linewidth in the high temperature regime.

STATISTICAL ANALYSIS OF ACCELERATED TEMPERATURE AGING OF SEMICONDUCTOR DEVICES Interim Report

Walter A. Johnson and Michael F. Milles 15 May 1981 51 p refs
(Contract F04701-80-C-0081)
(AD-A099439; TR-0081(6930-02)-1; SD-TR-81-37) Avail: NTIS HC A04/MF A01 CSCL 20/12

A number of semiconductor devices taken from a distribution were operated at several elevated temperatures to induce failure in all devices within a reasonable time. Assuming general characteristics of the device failure probability density function (pdf) and its temperature dependence, the expected cumulative failure function (cff) for devices in normal operation were estimated based on statistical inference, taking the average probability of a random device (from the same distribution but operated at a normal temperature) failing as a function of time. A review of the mathematical formalism employed in semiconductor reliability discussions is included. Three failure pdf's at particular usefulness to this analysis--exponential, normal, and lognormal - are discussed. The cff, at times orders of magnitude loss then, at times comparable to the desired system useful, life (*10 to the 4th power to 10 to the 5th power hr) is considered. A review of accelerated temperature aging is presented, and the assumption concerning the general characteristics of the failure pdf, which are fundamental to this analysis, are emphasized. Author

HgCdTe FABRICATION USING DIRECTED ENERGY TECHNIQUES Final Report

Anton C. Greenwald and John Miles Aug. 1981 97 p refs
Prepared in cooperation with New England Research Center, Inc.
(Contract MDA903-79-C-0434; DARPA Order 3800)
(AD-A105626; FR-81-10071) Avail: NTIS HC A05/MF A01 CSCL 20/7

The goal of this research is to produce large-area, thin-film, single crystal mercury cadmium telluride material for infrared detectors. The successful approach is to (1) evaporate cadmium telluride in an enclosed furnace on insulating crystalline substrates (hot wall epitaxy), (2) melt a thin surficial layer by pulsed electron beam irradiation to improve morphology, and (3) convert to mercury cadmium telluride by evaporation and diffusion at constant temperature. The final result is a single crystal film of Hg (sub 1-x) Cd sub x Te, 30 microns thick and 0.5 inch square, with a compositional variation of x less than + or - 0.0007. Films of up to 20 microns thick, 1 inch o.d., single crystal (but twinned) CdTe were produced by the first process. These faceted films were smoothed without change of surface stoichiometry or structure by the second process. Evaporation of HgTe at less 0.5 atm Hg overpressure onto the CdTe film produced the final result on mica or quartz substrates. Electron mobility at 77 K was as high as 1.5 x 10 to the 5th power sq cm/V-s in the final samples. GRA

SHOCK ANOMALY AND S-D TRANSITION IN HIGH-PRESSURE LANTHANUM

A. K. McMahan, H. L. Skriver (Research Establishment, Roskilde, Denmark), and B. Johansson (Aarhus Univ.) 23 Jul. 1981 7 p refs Presented at the Intern. Symp. on the Phys. of Solids Under High Pressure, Bad Honnef, West Germany, 10-14 Aug. 1981
(Contract W-7405-eng-48)
(DE81-027659; UCRL-86484; CONF-810828-2) Avail: NTIS HC A02/MF A01

Linear muffin-tin orbital calculations of the band structure and pressure volume isotherms for fcc La, both at zero and finite temperatures are presented. The calculated bulk modulus shows a rapid stiffening in the range from 40 to 50 percent compression, due to termination of the 6s to 5d electronic transition. When combined with a simple Slater model analysis, these results yield a temperature dependent peak in the lattice Gruneisen parameter. Experimental confirmation of this peak is found in an anomalous stiffening seen in the shock compression data for La, and it may also have some bearing on the observed saturation of the superconducting transition temperature in La around 200 kbar. OBSERVATION OF HIGH FIELD DHVA EFFECT AND INDUCED MAGNETISM IN SINGLE CRYSTAL TiBe SUB 2

A. P. J. vanDeursen, J. M. VanRuitenbeek, W. A. Verhoef, A. R. deVroomen, J. L. Smith, R. A. Groot, D. D. Koelling, and F. M. Muller 1981 3 p refs Presented at the 26th Intern. Conf. on Low Temp. Phys. LT-16, Los Angeles, 19-25 Aug. 1981 Submitted for publication
(Contract W-7405-eng-36)
(DE81-025292; LA-UR-81-1664; CONF-810809-12) Avail: NTIS HC A02/MF A01

Recently much interest has been given to itinerant magnetism in cubic Laves phase or C15 materials. Primarily this stems from the discussion of the relationship of p state pairing and ferromagnetism in ZrZn2 by Enz and Matthias, and the possibility of triplet superconductivity. The most recent work in this field has focused on the isoelectronic, isostructural material TiBe sub 2 and the possibility that this material is metamagnetic. That TiBe sub 2 is close to some form of magnetic instability can be inferred indirectly from the peaked nature of its density of states near the fermi level, but also from the observation of ferromagnetism in TiBe/sub 2-x/Cu/sub x/, when x is greater than about 0.15. In this paper a single crystal of pure TiBe sub 2 is considered in fields larger than 15 Tesla (T) and at a temperature of 1.3 K. DOE

HELIUM DIFFUSION IN IRRADIATED BORON CARBIDE

G. W. Hollenberg Mar. 1981 18 p refs Presented at the 83rd Symp. on Nucleation and Crystallization in Glasses, Washington, D.C., 3-6 May 1981; sponsored by the American Ceramic Society
(Contract DE-AC14-76FF-02170)
(DE81-027848; HEDL-SA-2236-FP; CONF-810528-10) Avail: NTIS HC A02/MF A01

Instrumented irradiation experiments in EBR 2 providing continuous helium release data on boron carbide at a variety of operating temperatures are described. Although some microstructural and compositional variations were examined in these experiments most of the boron carbide was prototypic of that used in the Fast Flux Test Facility. The density of the boron carbide pellets was approximately 92% of theoretical. The boron carbide pellets were approximately 1.0 cm in diameter and possessed average grain sizes that varied from 8 to 30 microns. Pellet centerline temperatures were continually measured during the irradiation experiments. DOE

ROLE OF ELECTRON SWARM STUDIES IN THE DEVELOPMENT OF GASEOUS DIELECTRICS

L. G. Christophorou 1981 17 p refs Presented at the 2nd Intern. Swarm Seminar, Oak Ridge, Tenn., 22 Jul. 1981
(Contract W-7405-eng-26)
(DE81-026349; CONF-810720-2) Avail: NTIS HC A02/MF A01

Recent knowledge provided by swarm studies allowing control of the number densities and energies of free electrons in electrically stressed gases is highlighted. This knowledge aided the discovery of new gas dielectrics and the tailoring of gas dielectric mixtures. The role of electron attachment in the choice of unitary gas dielectrics or electronegative components in dielectric gas mixtures, and the role of electron scattering at low energies in the choice of buffer gases for mixtures is outlined. DOE

EFFECTS OF PRESSURE ON THE MIXED VALENT PROPERTIES OF Ce AND ITS INTERMETALLIC COMPOUNDS

S. H. Liu Jul. 1981 9 p refs Presented at Conf. on High Pressure Phys., Bad Honnef, West Germany, Aug. 1981
(Contract W-7405-eng-26)
(DE81-026572; CONF-810828-5) Avail: NTIS HC A02/MF A01

A systematic high pressure study of intermetallic compounds of Ce is proposed to elucidate the phenomenon of valence fluctuations. For these materials, the single parameter which is most sensitive to the pressure is the position of the Ce 4f level relative to the conduction bands. Therefore, it should be possible to monitor the valence with pressure and follow the evolvement of the system from a local moment state to a nonmagnetic state. The latter may be a spin compensated Kondo lattice state of a lattice of virtual bound states. The experimental evidence of exotic states is reviewed, and experiments to investigate their physical properties are suggested. DOE

FUNDAMENTAL STUDIES OF GRAIN-BOUNDARY PASSIVATION IN POLYCRYSTALLINE SILICON WITH APPLICATION TO IMPROVED PHOTOVOLTAIC DEVICES

C. H. Seager and D. S. Ginley Aug. 1981 80 p refs
(Contract DE-AC04-76DP-00789)
(DE82-000825; SAND-81-1950) Avail: NTIS HC A05/MF A01

Barrier heights and recombination velocities for silicon grain boundaries were calculated and are shown to be in good agreement with transpot measurements on uniformly illuminated silicon bicrystals. Improved calculations of the Hall effect in polycrystalline solids are also presented along with assessments of the ability of effective circuit models to account for the anomalously low carrier concentrations measured in small grain polycrystalline silicon. Preliminary optimization of some new methods for hydrogen passivation was completed. Almost complete removal of EBIC grain boundary losses can now be achieved in times as short as twenty minutes. Progress was made in the identification and characterization of infrared vibrational modes associated with grain boundary-bonded hydrogen. The effects of fluorine and oxygen treatments on silicon grain boundaries were determined. These agents appear to increase grain boundary potential barrier heights in n-type silicon in marked contrast to the effect of hydrogen. DOE

MULTIFUNCTIONS - LIQUID CRYSTAL DISPLAYS Final Report

Martin Bechteler Bonn Bundesministerium fuer Forschung und Technologie Dec. 1980 68 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-80-181; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 13.90

Large area liquid crystal displays up to 400 cm square were developed capable of displaying a large quantity of analog and digital information, such as required for car dashboards, communication systems, and data processing, while fulfilling the attendant requirements on view tilt angle and operating temperature range. Items incorporated were: low resistance conductive layers deposited by means of a sputtermachine, preshaped glasses and broken glassfibers, assuring perfect parallelism between glass plates, rubbed plastic layers for excellent electrooptical properties, and fluorescent plates for display illumination in bright sunlight as well as in dim light conditions. Prototypes are described for clock and automotive applications. Author (ESA)

COMPUTER PROGRAMS FOR LINE SHAPE ANALYSIS OF X-RAY DIFFRACTION PEAKS

T. M. Smith and C. R. Houska Dec. 1980 100 p refs Prepared in cooperation with Tektronix, Inc., Beaverton, Oreg.
(Grant NSF DMR-75-17201)
(PB81-227787; VPI-E-81-19) Avail: NTIS HC A05/MF A01 CSCL 20B

Modifications of the Warren-Averbach line shape analysis and necessary computer programs written in Fortran 4, which perform the analysis, are preentered. Very accurate instrumental broadening parameters are determined by one program. Another program fits the theoretical intensity expression to the experimental data to yield particle size and two strain parameters. Also included are programs which combine the two strain components found in thin films to yield the total mean square microstrain. Sample inputs and outputs for the analysis of a one micrometer thick Mo film sputter deposited onto a (111)-oriented Si single crystal substrate are given. Descriptions of the programs as well as detailed procedures for their use are included. GRA

DEFECT STRUCTURE AND PROPERTIES OF INTERMETALLIC COMPOUND BETA-LiAl Ph.D. Thesis

Kohji Kishio 1981 162 p
Avail: Univ. Microfilms Order No. 8124926

The defect structure of the NaTl-type intermetallic compound beta-LiAl and its doped alloys was studied through X-ray lattice parameter, bulk density as well as NMR spin-lattice relaxation rate measurements. The lattice parameter of slowly cooled LiAl alloys was found to vary almost linearly within the composition range of the beta-phase. A defect model which consists of the coexistence of two types of point defects was proposed and their concentrations were determined as a function of composition. The observations suggested a model in which the concentration of vacancies on the Li sublattice decreased while that of the Li antistructure atoms on the Al sublattice increased with Li composition. The average number valance electrons per lattice site was calculated and it was found it would not exceed 2.0 even at Li poor side of the composite due to the formation of a defect lattice. This behavior has been interpreted in the light band structure, and a correlation of the defect structure with the electronic structure in NaTl-type compounds was hypothesized. Dissert. Abstr.

PUSH-PULL FATIGUE OF LiF AND MgO SINGLE CRYSTALS Ph.D. Thesis

Bhaskar Sinha Majumdar 1980 250 p
Avail: Univ. Microfilms Order No. 8123990

The mechanical and microstructural response of LiF and MgO, subjected to push-pull cyclic deformation was studied as a function of strain amplitude, strain rate and temperature. Comparisons are made with the fatigue behavior of f.c.c., b.c.c. and h.c.p. metals. At room temperature the fatigue hardening of LiF is rapid and almost linear per cycle. The flow stress rises to as much as ten times the original yield stress. Based on a concept of cumulative strain, excellent agreement was obtained between the hardening rates in fatigue and in monotonic deformation. The fatigue analysis, which separates long and short range stresses, explains why LiF in fatigue can withstand larger applied stresses before fracture when compared to unidirectional tensile deformation. Dissert. Abstr.

N82-13961 Florida Univ., Gainesville.

ELECTRIC FIELD-ENHANCED DIFFUSION AND ELECTRON STIMULATED DESORPTION OF ALKALI ELEMENTS FROM GLASS SURFACES DURING ELECTRON BOMBARDMENT AND AUGER ELECTRON ANALYSIS Ph.D. Thesis

Fumio Ohuchi 1981 153 p
Avail: Univ. Microfilms Order No. 8124448

Among a number of modern surface sensitive analytical techniques, Auger electron spectroscopy (AES) is extensively applied for glass surface research because of its superior characteristics. AES is generally considered as a nondestructive technique; however, a number of reports have shown that the incident electron beam can alter the surface composition of the solid being analyzed. Compositional changes in glass is particularly severe in glasses containing alkali ions and it is manifested by the time dependent alkali Auger signal loss during electron bombardment. The fundamental mechanisms of alkali Auger signal loss from glass surfaces during electron bombardment are described. It is shown that this is the result of electric field enhanced diffusion and electron stimulated description. Dissert. Abstr.

N82-13962 Pennsylvania Univ., Philadelphia.

THE STRUCTURE AND PROPERTIES OF GRAIN BOUNDARIES Ph.D. Thesis

Adrian Peter Sutton 1981 405 p
Avail: Univ. Microfilms Order No. 8117861

Long period symmetrical and asymmetrical tilt boundaries in aluminum and copper were studied. Two classes of grain boundaries were found favoured which consist of a contiguous sequence of primary dislocations whose long range elastic fields cancel and nonfavoured which exist in the misorientation ranges between favoured boundaries and are composed of units of the neighboring favoured boundaries. A crystallographic analysis of tilt boundaries reveals the relationship between them through faceting or dislocation formation. This analysis is readily applied to atomistic calculations of long period asymmetrical tilt boundaries. Three previous atomistic studies of tilt boundary structure are reinterpreted and several fundamental difference between intrinsic and extrinsic grain boundary dislocations are described. A preliminary atomistic study of grain boundaries containing impurities was made using silver and bismuth atoms which were introduced subsitutionally into favoured and nonfavoured boundaries in copper. A strong tendency for segregation of bismuth to both boundaries is found while only a small tendency (sometimes none) is found for silver. Dissert. Abstr.

TRANSPORT NOISE ARISING FROM DIFFUSION AND BULK OR SURFACE GENERATION RECOMBINATION IN SEMICONDUCTORS Ph.D. Thesis

Harshad Mehta 1981 141 p
Avail: Univ. Microfilms Order No. 8124442

The type of noise spectra in solids or solid state devices, which can arise from noise due to a combination of causes, such as diffusion of carriers, generation and recombination (g-r) processes of carriers in the bulk and at the surface was studied using techniques to be described apply equally well to the problem of heat diffusion, with heat transfer or reflection at the boundaries of the system, we have, however, mainly the carrier noise problem in mind. The physical noise sources, the diffusion source, g-r source and surface source, Clarke and Voss' P source are discussed as well as transport noise in symmetrical embedded bodies, in nonsymmetrical embedded bodies, in symmetrical nonembedded bodies and in nonsymmetrical nonembedded bodies. Results indicate that volume g-r and diffusion processes give rather smooth spectra, but, without a 1/f range. The high frequency asymptote is always w-3/2 (embedded case) or omega to the minus 2 power (nonembedded case). Dissert. Abstr.

THE PHYSICAL AND ELECTRICAL PROPERTIES OF POLYCRYSTALLINE-SILICON Ph.D. Thesis

Mohammed Mahmoud Mandurah 1981 161 p
Avail: Univ. Microfilms Order No. 8124106

The detailed characterization of the physical and electrical properties of polycrystalline-silicon is essential to ensure the proper design and reliable performance of the devices in which this material is used. Modeling of electrical conduction is critical for predicting the effects of the processing cycles on their electrical properties. The physical and electrical properties of low-pressure chemically-vapor-deposited silicon films are characterized and are then related to each other to develop a new model for electrical conduction. The structure of the LPCVD films strongly depends on deposition conditions. Below the critical deposition temperature of 580 C, the deposited films are amorphous, highly unstable, and recrystallize easily after high-temperature annealing. Enhanced grain growth is detected as a result of heavy doping and/or annealing at elevated temperatures. The electrical properties of these films strongly depend on dopant concentration and species and processing. Carrier reflection at the grain boundaries (neglected in models) is demonstrated to be an important mechanism that, combined with carrier trapping and dopant segregation, controls electrical conduction in polycrystalline-silicon. Dissert. Abstr.

N82-13965 Nebraska Univ. - Lincoln.

THE GROWTH AND CARRIER TRANSPORT PROPERTIES OF SPUTTER DEPOSITED GaAs THIN FILMS DOPED WITH SILICON AND MAGNESIUM Ph.D. Thesis

Dan Michael Mosher 1981 153 p
Avail: Univ. Microfilms Order No. 8124519

Thin films of GaAs were deposited with a triode sputtering system onto single crystal GaAs semiinslating substrates. Most of the films were doped by the cosputtering of Si for n type or Mg for p type films. The electrical resistivity and Hall Effect were measured by the van der Pauw technique to obtain the carrier concentration and mobility as a function of temperature. Analysis of these data determined that the dopant energy levels had created a band which merged with the production band. The characteristics of this merged band structure controlled the free carrier concentration. It was determined that the dopant density was controlled by the duty cycle of the bias voltage on the dopant target. The resistivity of the n type films at room temperature ranged from 0.036 Ohm cm to 20.8k Ohm cm. The most important mobility limitations were found to be ionized impurity scattering from the high doping densities and grain boundary scattering from the film disorder. The average grain size was determined from grain boundary scattering analysis to be about 50 to 100 A.

A STOCHASTIC LANGEVIN DYNAMICS STUDY OF CORRELATED IONIC MOTION IN ONE-DIMENSONAL FRAMEWORK SOLID ELECTROLYTES Ph.D. Thesis

Solomon Howard Jacobson 1981 227 p

Avail: Univ. Microfilms Order No. 8124913

The microscopic motion of charge carriers in one-dimensional framework ionic conductors is described by stochastic Langevin dynamics. The interactions of the charge carriers with the framework lattice are approximated by a sum of periodic and random forces, representing the static and dynamic effects of the framework lattice. Ionion interactions are represented by realistic Coulomb and short range forces. Mechanisms for fast ion transport, based on the calculated transport properties in systems where the various constituent factors (forces in the Langevin equation) have been systematically varied, are presented. Independent particle models are examined first. The stochastic Langevin dynamics technique is shown to contain the correct low frequency and high frequency behavior. Comparison of stochastic Langevin dynamics with the Smoluchowski equation is presented. Results at several different values of the damping constant define the criteria for which the Smoluchowski approximation is valid.

EXPERIMENTAL AND THEORECTICAL STUDIES OF EXCITED STATE TRANSPORT Ph.D. Thesis

Craig Robert Gochanour 1981 177 p

Avail: Univ. Microfilms Order No. 8124074

The spatial transport of electronic excited state energy was examined. The first problem considered is the transport of singlet excited state energy among a set of randomly distributed solute molecules in a host solvent. The effects of the random distribution of spatial positions were studied in a theoretical analysis of the Green function. From the master equation a diagrammatic expansion of the Green function was derived. The second topic considered is the basic nature of the excited states of a pure molecule crystal. The nature of the excited state is an important factor needed to understand transport as a delocalized excited state will lead to coherent, wavelike transport while a localized excited state leads to incoherent, hopping transport. An experimental study of the temperature dependence of the absorption lineshape of the s sub o yields t sub 1 transition in 1,2,4,5-tetrachlorobenzene is presented.

COMPTON SCATTERING IN A UNIFORM, CONSTANT MAGNETIC FIELD Ph.D. Thesis

Evelyn Smith Kinzel 1981 143 p

Avail: Univ. Microfilms Order No. 8123666

A general expression for the Compton cross section for a uniform, constant magnetic field was derived based on the Dirac equation and second order perturbation theory, the electrons were represented by single particle wave functions and the photons by plane waves. The solution was programmed for numerical solution by computer; the results were displayed graphically. The solution possesses the usual energy conservation for the system of the electron plus the photon; in addition, the component along the magnetic field of the linear momentum of the system is conserved in the magnetic Compton effect. There is no general conservation of momentum. The numberical portion reveals a resonance in the total cross section when the frequency of the incoming photon is near the electron's Larmor frequency. At the Peak, one photon polarization mode exhibits a severe dip for outgoing photons moving perpendicular to the magnetic field.

SPECTRAL FUNCTIONS IN QUANTUM CHROMODYNAMICS AND APPLICATIONS Ph.D. Thesis

Minh Dinh Tran 1981 180 p

Avail: Univ. Microfilms Order No. 8122870

The longitudinal and transverse spectral functions for arbitrary conserved and non-conserved vector and axial vector currents of massive quarks are calculated to first order in alpha sub s and exact analytical expressions are given. As an intermediate step the form factors to the same order in alpha sub s are determined. A remarkably simple result is derived for the combination of the spectral functions corresponding to the Weinberg's first sum rule. It behaves asymptotically like alpha sub s/sq s thus ensuring the convergence of the sum rule. The Weinberg's second sum rule is shown to fail to hold, a new sum rule is then proposed to replace the original one. The current algebra calculation of the pion electromagnetic mass difference is reexamined in the light of quantum chromodynamics. The current couplings of five low lying mesons, decay properties of intermediate vector bosons and gluonic corrections to hadronic decay modes are calculated. Implications of the results for decay widths, branching ratios are examined.

Dissert. Abstr.

N82-13970 California Univ., Los Angeles.

PROBLEMS IN QUANTUM MECHANICS AND GRAVITATION Ph.D. Thesis

Gregg Darryl Wilensky 1981 117 p

Avail: Univ. Microfilms Order No. 8122087

The rate of spontaneous particle production in the presence of a collapsed star, described by the static Schwarzschild solution to the gravitational field equations was explicity calculated. The calculation of the vacuum persistence probability is based on a semiclassical approximation to the Green's function of a spin 0, massless particle in this gravitational field. The singularity in the differential equations at r = 2GM is avoided by giving M, the mass of the star, an infinitesimal imaginary part (motivated by quantum corrections to the gravitational field) whose sign is uniquely determined by the requirement that the vacuum persistence probability should not exceed unity. In contrast to a previous result, particle production is found to occur for this static situation. The value for this rate can not be determined using the semiclassical methods, however, as it is sensitive to the behavior of the Green's function near the classical turning point.

NUCLEAR SLAB COLLISION IN A RELATIVISTIC QUANTUM FIELD THEORY

K. H. Mueller Jun. 1981 10 p refs Presented at the 5th High Energy Heavy Ion Study, Berkeley, Calif. 18-22 May 1981
(Contract W-7405-eng-48)
(DE81-028132; LBL-12893; CONF-8105104-3) Avail: NTIS HC A02/MF A01

Starting from Walecka's Lagrangian, the nucleons are represented by single particle spinors, which are determined by a Dirac equation containing a repulsive mean neutral vector field V/sub mu/ and an attractive mean isosclar field sigma. Both fields satisfy Klein-Gordon equations. Their source terms are again determined by the spinors. This relativistic mean field model was applied to the dynamics of two colliding slabs. They are translational invariant in two transverse dimensions and consist of spin and isospin symmetric nuclear matter. By specification of appropriate initial conditions for the collision of two equal slabs, the system of coupled Klein-Gordon-Dirac equations was solved for lab bombarding energies per nucleon up to 400 MeV. At low energies the results are identical with TDHF results. The damping of the collisions, the phenomenon of high nuclear density, and the effect of retardation during the reaction are studied. DOE

NEW EXACT AND ASYMPTOTIC SOLUTIONS OF THE STATIONARY VACUUM EINSTEIN EQUATIONS Ph.D. Thesis
Prasun Kumar Kundu 1980 124 p
Avail: Univ. Microfilms Order No. 8123984

A projection tensor calculus is described for treating spacetimes with two commuting Killing vectors and its use is illustrated by two examples--an alternative proof of a sufficient condition for such a spacetime to be orthogonally transitive (Papapetrou's Theorem) and an application to the Rainich-Misner-Wheeler (RMW) geometrization of the electromagnetic field. A special null tetrad is introduced which is naturally adapted to the group orbits and the components of the Weyl tensor was examined in this basis. This framework is applied to investigate the admissible Petrov types in the special case when the group orbits admit orthogonal two-surfaces. The new formalism is employed to obtain a class of noncanonical stationary axisymmetric vacuum metrics whose Killing orbits do not admit orthogonal two-surfaces. A metric is found which is Petrov type 2 with expansion-, twist-, and the shear-free geodesic rays and which includes the van Stockum solution as a limiting case. A multipole expansion scheme is also introduced for a wide class of stationary, asymptotically flat, vacuum solutions of Einstein's equations using the conformal techniques of Geroch and Hansen. HC A08/MF A01 CSCL 05/1

Support investment costs and recurring operations and support costs are through determined using a model for estimating aircraft cost of ownership (MACO), which also provides a framework for future research. An outgrowth of an earlier evaluation of the strengths and weaknesses of the most widely used aircraft life cycle cost models, MACO combines algorithms for major, maintenance related costs with formulas drawn from existing models for other cost elements. A full set of ownership cost elements is related to component level reliability and maintainability characteristics and to aircraft design, operations, logistics, and deployment parameters. Resource quantities are computed in units that can be related directly to Air Force programming categories, including base maintenance manning (by work center), depot manning, and recoverable spares inventory levels. Output and input parameters accommodate annual changes in system parameters and operating conditions such as component reliability and aircraft inventory size and activity rates. Author

THE EVALUATION OF TECHNOLOGY R&D: A CONTINUING DILEMMA

Peter deLeon Aug. 1981 31 p refs Prepared for UCLA
(RAND/P-6655) Avail: NTIS HC A03/MF A01

The development of new and advanced technologies, especially those with significant potential social effects are discussed. A technology evaluation agenda for the next decade with special emphasis on four issues is proposed: (1) appropriate technology R&D standards and criteria; (2) the institutional context; (3) comparisons to alternative options; and (4) the social effects. CONTROLLED SPEED ACCESSORY DRIVE DEMONSTRATION PROGRAM

Frank W. Hoehn 15 Oct. 1981 105 p refs
(Contracts NAS7-100; DE-AI01-80CS-50194)
(NASA-CR-165010; JPL-Pub-81-83) Avail: NTIS
HC A06/MF A01 CSCL 13F

A Controlled Speed Accessory Drive System was examined in an effort to improve the fuel economy of passenger cars. Concept feasibility and the performance of a typical system during actual road driving conditions were demonstrated. The CSAD system is described as a mechanical device which limits engine accessory speeds, thereby reducing parasitic horsepower losses and improving overall vehicle fuel economy. Fuel consumption data were compiled for fleets of GSA vehicles. Various motor pool locations were selected, each representing different climatic conditions. On the basis of a total accumulated fleet usage of nearly three million miles, an overall fuel economy improvement of 6 percent to 7 percent was demonstrated. Coincident chassis dynamometer tests were accomplished on selected vehicles to establish the effect of different accessory drive systems on exhaust emissions, and to evaluate the magnitude of the mileage benefits which could be derived. AIR FORCE TECHNICAL OBJECTIVE DOCUMENT FY 1982

Richard L. Varga Jan. 1981 29 p
(AD-A099741; AFWAL-TR-81-4041) Avail: NTIS
HC A03/MF A01 CSCL 11/4

The materials technology planning objectives (TPOs) for meeting future Air Force operational needs are described. The six TPOs encompass the full spectrum of materials capabilities required for future aircraft, missile, space, and electronic systems: thermal protection materials; aerospace structural materials; aerospace propulsion materials, fluid, lubricant, and elastomeric materials; protective coatings and materials; and electromagnetic windows and electronics. General objectives, specific goals, technical approaches, and a laboratory focal point are presented. Author

MEASURES OF EFFECTIVENESS OF TRANSPORTATION SYSTEMS MANAGEMENT Final Report

Apr. 1981 43 p refs Prepared jointly with Tri-State Regional Planning Commission
(PB81-233884; UTMA-IT-09-00890-81-1) Avail: NTIS
HC A03/MF A01 CSCL 13B

The basic concepts of transportation systems management (TSM) by providing simple classification schemes, geographic conditions of applicability, relative measures of effectiveness, and techniques for quantification were developed. Two key elements are emphasized: coordination of transportation activities, and maximization of efficiency and productivity. Some of the findings reported are: (1) traffic engineering improvements; (2) demand management measures achieve reductions in vehicle miles of travel; and (3) bus lanes and priority entry treatments. EVALUATION OF TECHNIQUES FOR REDUCING IN-USE AUTOMOTIVE FUEL CONSUMPTION Final Report, Jun. 1976 - Mar. 1978
L. Forrest, W. B. Lee, and W. M. Smalley Apr. 1981 330 p refs Prepared in cooperation with Transportation Systems Center
(Contract F04701-77-C-0078)
(PB81-233298; DOT-TSC-NHTSA-81-13; DOT-HS-805833)
Avail: NTIS HC A15/MF A01 CSCL 13F

Techniques for reducing fuel consumption in the light duty road vehicle fleet are assessed. Modification of vehicles, modification of traffic flow, and modification of driver behavior are considered. Factors included in the evaluation are fuel economy effects, safety impacts, availability for fleet implementation, and unit price. In addition, the implementation of each technique is assessed with regard to number of vehicles impacted, fuel savings effected, national cost, potential problems, and required lead time. Cost effective techniques are ranked in terms of their assessed potential for reducing fleet fuel consumption. GRA

PEDESTRIAN MOVEMENT CHARACTERISTICS ON BUILDING RAMPS Final Report
George Turner and Belinda Collins Jun. 1981 60 p refs
(PB81-229163; NBSIR-81-2310) Avail: NTIS HC A04/MF A01 CSCL 13M

Knowledge of design for effective pedestrian circulation is one of the main requirements in building planning. While an understanding of pedestrian movement characteristics on the various component parts that make up a building circulation system is the key to effective planning, one component type, the ramp, has rarely been the subject of building circulation research. The research described is the result of an investigation of pedestrian movement characteristics on four specific building ramps during two different professional athletic contests. Variables of pedestrian movement such as speed, flow, and density were studied as well as the relationships between them. In addition, counts of pedestrians by sex were made. Results were compared for the specific ramps and with previously reported data obtained for ramps, stairs, and level surfaces. GRA

HC SOD $16.00 CSCL 03A

The atomic resonance lines of the major elements were observed in the atmospheres of a few comets, by using vacuum ultraviolet spectrographs on board rockets or orbiting observatories. Dust-to-gas ratios were also deduced for two comets through a Finson-Probstein's analysis of their dust-tail isophotes. The geometric albedo of the dust for the phase angle alpha of the observations is not accurately known but, the dust-to-gas ratio is not overly sensitive to the actual value of this albedo. Infrared observations of the dust head of some comets show that the bulk of cometary dust must be silicates, although a minor component (5-10 percent) of carbon compounds is rather likely, because of poor dielectric properties of the grains. This interpretation is confirmed by the fact that interplanetary dust probably of cometary origin, that was collected in the stratosphere by NASA-U2 Spacecraft, is chondritic in nature. Metal abundances in the head of a sungrazing comet support the chondritic hypothesis. T.M.

OBSERVATIONAL DATA NEEDS USEFUL FOR MODELING THE COMA
W. F. Huebner and P. T. Giguere *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 14-18 refs (For primary document see N82-13989 04-89)
HC SOD $16.00 CSCL 03A

A computer model of comet comae is described; results from assumed composition of frozen gases are summarized and compared to coma observations. Restrictions on relative abundance of some frozen constituents are illustrated. Modeling, when tightly coupled to observational data, can be important for comprehensive analysis of observations, for predicting undetected molecular species and for improved understanding of coma and nucleus. To accomplish this, total gas production rates and relative elemental abundances of H:C:N:O:S are needed as a function of heliocentric distance of the comet. Also needed are relative column densitites and column density profiles with well defined diaphragm range and pointing position on the coma. Production rates are less desirable since they are model dependent. Total number (or upper limits) of molecules in the coma and analysis of unidentified spectral lines are needed also. T.M.

OBSERVATIONAL DATA NEEDS FOR PLASMA PHENOMENA

Malcolm B. Niedner, Jr. *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 21-32 refs (For primary document see N82-13989 04-89)
HC SOD $16.00 CSCL 03A

Bright comets display a rich variety of interesting plasma phenomena which occur over an enormous range of spatial scales, and which require different observational techniques to be studied effectively. Wide-angle photography of high time resolution is probably the best method of studying the phenomenon of largest known scale: the plasma tail disconnection event (DE), which has been attributed to magnetic reconnection at interplanetary sector boundary crossings. These structures usually accelerate as they recede from the head region and observed velocities are typically in the range 50 < V < km/s. They are often visible for several days following the time of disconnection, and are sometimes seen out past 0.2 AU from the cometary head. The following areas pertaining to plasma phenomena in the ionoshere are addressed: the existence, size, and heliocentric distance variations of the contact surface, and the observational signatures of magnetic reconnection at sector boundary crossings. T.M.

ANTICIPATED RESULTS FROM DUST EXPERIMENTS ON COMETARY MISSIONS

J. Kissel, H. Fechtig, and E. Grun *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 33-38 refs (For primary document see N82-13989 04-89)
HC SOD $16.00 CSCL 03A

The major scientific objectives of a mission are: to determine the chemical nature and physical structure of comet nuclei, and to characterize the changes that occur as a function of time orbital position; to characterize the chemical and physical nature of the atmospheres and ionospheres of comets as well as the processes that occur in them, and to characterize the development of the atmospheres and ionospheres as functions of time and orbital position; and to determine the nature of comet tails and processes by which they are formed, and to characterize the interaction of comets with the solar wind. Since dust is a major constituent of a comet, the achievement of these goals requires the intensive study of the paticulate emission from a comet. T.M.

COMETARY EPHEMERIDES - NEEDS AND CONCERNS

Donald K. Yeomans *In its* Mod. Observational Tech. for Comets 1 Oct. 1981 p 46-49 refs (For primary document see N82-13989 04-89)
(Contract NAS7-100)
HC SOD $16.00 CSCL 03A

With the use of narrow field-of-view instrumentation on faint comets, the accuracy requirements upon computed ephemerides are increasing. It is not uncommon for instruments with a one arc minute field-of-view to be tracking a faint comet that is not visible without a substantial integration time. As with all ephemerides of solar syste objects, the computed motion and reduction of these observations, the computed motion of a comet is further depenent upon effects related to the comet's activity. Thus, the ephemeris of an active comet is corrupted by both observational errors and errors due to the comet's activity. T.M.

N82-13996* Maryland Univ., College Park.

INTRODUCTORY REMARKS: PHOTOMETRY SECTION

Michael F. AHearn *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 53-56 (For primary document see N82-13989 04-89)
HC SOD $16.00 CSCL 03A

The principal goals of photometry and polarimetry are summarized. These goals include studies of the emission features of gaseous species of comets, the wavelength depenence of albedo, the phase function of scatter distribution, and time variation of rotation. Recent advances in photometric techniques were reviewed and include: use of proper filters, extension to the shortest and longest wavelengths, higher spectral resolving power, and polarization techniques. T.M.

RESULTS TO BE EXPECTED FROM LIGHT SCATTERING DUST ANALYZER DURING A RENDEZVOUS MISSION

R. H. Zerull, R. H. Giese, and B. Kneissel IN JPL Mod. Observaticnal Tech. from Comets 1 Oct. 1981 p 72-76 refs (For primary document see N82-13989 04-89)
HC SOD $16.00 CSCL 03A

The light scattering principle for particle detection is customary for the measurement of aerosols. Light scattering techniques can be applied to mixtures of particles (nephelometers) and to single particles as well. Measuring particle mixtures simplify detection because of the higher intensity level, however, information concerning the individual particle is lost. To provide well defined conditions over the whole rendezvous period, i.e., constant illumination beam and unchangeable scattering angle, the use of an artificial light source (instead of the sun) and a scattering volume located within the S/C is desirable. Considering this and the relatively low particle densities to be expected, the measurement of particle mixtures must be excluded. T.M.

INFRARED OBSERVATIONS OF COMETS

Robert W. Hobbs *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 79-82 refs (For primary document see N82-13989 04-89)

HC SOD $16.00 CSCL 03A

Infrared observation are important for deducing a great deal about properties of the cometary dust surrounding the cometary nucleus. All observations in the infrared are limited to long period comets. Three features of the spectrum which seem to be present in nearly all of the comets observed are discussed. First, there is a peak in the spectrum in the near infrared and visible wavelength, which can be attributed to scattered sunlight. This feature, as expected, gets fainter as a comet recedes from the sun. The second dominant feature in the spectrum is a broad peak in the infrared which is attributed to the thermal emission of the dust in the coma. This part of the spectrum also gets dimmer as the comet gets further from the sun but, at the same time the peak of the spectrum shifts to longer wavelengths, indicating that the dust from which this radiation arises is cooling as the comets receds. The other feature in the spectrum which is noted is the emission feature at about 10 microns attributed to emission from metallic ilicates. T.M.

INFRARED OBSERVATIONS OF FAINT COMETS

Humberto Campins, Jonathan Gradie, Marcia Lebofsky, and George Rieke *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 83-89 refs (For primary document see N82-13989 04-89)

HC SOD $16.00 CSCL 03A

Infrared observations of the periodic comets Encke, Stephan-Oterma and Chernykh indicate that the dusty component in this class of comets is not radically different from the dusty component found in nonperiodic comets. The differences in the infrared behavior among these three comets suggest that a range of behaviors rather than a single behavior typifies the cometary activity. The range in albedo (0.02 to 0.10) of the dust calculated for the periodic comets is similar to the range in albedos seen among the asteroids. T.M.

RADIO OBSERVATIONS OF COMETS

L. E. Snyder *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 93-95 refs (For primary document see N82-13989 04-89)

(Grant NSF AST-79-07830)

HC SOD $16.00 CSCL 03A

Three general techniques of radio science used to attempt to observe comets are discussed: spectral line, continum and radar observations. Of these, only radio spectral line observations achieved a degree of success but, more often than not, the results was negative. Cometary excitation and reasons why radio searches can fail were examined. T.M.

N82-14003* National Aeronautics and Space Administration. Goddard Space Flight Center, Greenbelt, Md.

MILLIMETER WAVE RADIOMETRY AS A MEANS OF DETERMINING COMETARY SURFACE AND SUBSURFACE TEMPERATURE

Robert W. Hobbs, John C. Brandt, and Stephan P. Maran *In* JPL Mod. Observations Tech. for Comets 1 Oct. 1981 p 96-103 refs (For primary document see N82-13989 04-89)

HC SOD $16.00 CSCL 03A

Thermal emission spectra for a variety of cometary nucleus models were evaluated by a radiative transfer technique adapted from modeling of terrestrial ice and snow fields. It appears that millimeter wave sensing from an interplanetary spacecraft is the most effective available means for distinguishing between alternate models of the nucleus and for evaluating the thermal state of the layer which is below the instantaneous surface where modern theories of the nucleus indicate that sublimation of the cometary volatiles actually occurs. T.M.

N82-14004* Toledo Univ., Ohio.

THE SPECTROSCOPY OF COMETS: INTRODUCTORY REMARKS

A. H. Delsemme *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 107-109 refs (For primary document see N82-13989 04-89)

HC SOD $16.00 CSCL 03A

Emphasis in cometary spectroscopy is on production rates, becuase they open the door to more fundamental clues about the origin and the history of the solar system, through the understanding of comet chemistry. In order to establish production rates quantitatively, suggestion are provided, in particular: to study the lifetimes of all hypothetical parents, against all processes of decay, namely photodissociations, photoionizations and ion-molecule reactions; and to study the velocity of all molecular fragments resulting from all the decay processes, through the balance sheet of the energy distribution before and after each decay process. T.M.

N82-14005* Arizona Univ., Tucson. Lunar and Planetary Lab.

A SYSTEMATIC PROGRAM OF COMETARY SPECTROSCOPY

Stephen M. Larson and Bertram Donn *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 110-114 refs (For primary document see N82-13989 04-89)

(Grant NGL-03-002-002)

HC SOD $16.00 CSCL 03A

Some early results of a systematic program of observing the spectroscopic behavior of comets as a function of heliocentric distance are presented. An ultraviolet sensitive microchannel plate intensifier spectrograph was used to record the 3000-5000A spectrum of comets brighter than magnitude 17 with a spectral resolution of 8 or 16A, followed by direct image for better interpretation of the spatial distribution of spectral features. Although the goals of the program require much more time and data, some interesting results from Comets Schwassmann-Wachmann, 1, Bradfield and Bowell were obtained. T.M.

N82-14006* European Southern Observatory, La Silla (Chile).

OBSERVING FACILITIES AT THE EUROPEAN SOUTHERN OBSERVATORY (ESO) IN CHILE FOR COMETARY OBSERVATIONS

Gerhard F. O. Schnur, Lubos Kohoutek (Hamburger Sternwarte), and Jurgen Rahe (Remeis Sternwarte, Bamberg) *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 115-128 refs (For primary document see N82-13989 04-89)

HC SOD $16.00 CSCL 03A

The (ESO) is located on the mountain La Silla (geographical coordinates: 4h42m55s10 west, -29 deg 15′ 25′.8 south, 2400 m elevation. The size of the telescopes ranges from a 40 cm Astrograph to the 3.6 m Richey-Chretien telescope. Future telescopes are discussed: a 2.2 m RC-Telescope which will be identical with the German 2.2 m telescope on Calor Alto in SE-Spain, and a 3.5 m telescope, the New Technology Telescope. In addition to these telescopes, a great number of auxiliary instrumentation are operational. Because ESO has to serve all requests of the visiting astronomers these instruments are designed for very different applications. The telescopes and auxiliary instruments that are especially suited for cometary observations are discussed. The dicussion is divided into three parts: photography, photometry-polarimetry and spectroscopy. T.M.

N82-14007* Arizona State Univ., Tempe. Dept. of Physics.

GROUND-BASED COMETARY SPECTROSCOPY

Susan Wyckoff *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 129-137 refs (For primary document see N82-13989 04-89)

HC SOD $16.00 CSCL 03A

The observational problems presented by bright comets near perihelion are discussed. High and low resolution spectra (3100-800A) of the bright comets Kohoutek, Kobayashi-Berger-Milon, West and d'Arrest are presented. Digital reduction of calibrated photographic spectra to relative intensity versus wavelength, can provide useful information. The reduction of comet spectra to absolute intensities involves, however, large uncertainties and should be interpreted cautiously. Data on recent comets lead to the following results: tentative identification of a new ion in the tail of comets, namely, NH(+); spectroscopic resolution of the fragmented nucleus of comet West; and an accurate monochromatic intensity profile of the Co+ emission (4020A) in comet West. T.M.

N82-14008* Maryland Univ., College Park.

CORRELATED GROUND-BASED AND THE OBSERVATIONS

Michael F. AHearn *In* JPL Mod. Observational Tech. for Coments 1 Oct. 1981 p 138-140 refs (For primary document see N82-13989 04-89)
HC SOD $16.00 CSCL 03A

The value of coordination among different observers particularly, those working in different wavelength regions is highlighted. This coordination is more important among observers of comets than among observers of almost any other class of astronomical object. The basic reason for this is that comets are highly time-variable, often erratically so, and observations of a particular comet usually cannot be repeated. As a result, some uncoordinated observations cannot be interpreted at all while others are susceptible to misinterpretation. Several specific examples of coordinated observations are discussed. T.M.

N82-14009* Johns Hopkins Univ., Baltimore, Md. Dept. of Physics.

ULTRAVIOLET SPECTROSCOPY OF COMETS USING SOUNDING ROCKETS, IUE AND SPACELAB

P. D. Feldman *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 141-147 refs (For primary document see N82-13989 04-89)
(Grants NGR-21-001-001; NsG-5393)
HC SOD $16.00 CSCL 03A

Ultraviolet spectroscopy is a very powerful tool for the study of cometary atmospheres since the four elemental cosmic species, H, C, N and O, as well as several simple molecules made from these species, have their strong resonance transitions in the ultraviolet region of the spectrum. However, due to the opacity of the atmosphere to ultraviolet, these observations must be made from space. Results are presented for observations of several comets along with plans for further cometary spectroscopy. T.M.

Modern observational techniques, developed for spectroscopy and photometry of faint galaxies and quasars, successfully applied to faint comets on the 2.7 m telescope. The periodic comets Van Biesbrock, Ashbrook-Jackson, Schwassmann-Wachmann 1, Tempel-2, Encke, Forbes, Brooks 2, Stephan-Oterma and the new comets Bradfield (19791), Bowell (1980b), Chernis-Petrauskas (1980k) were observed. The comets ranged in magnitude from 10th to 20th magnitude. For comets fainter than 19th magnitude, reflectance spectra at 100A resolution and area photometry were obtained. On comets of 17th or 18th magnitude, spectrometric scans (6A resolution) of the nucleus or inner coma region. On those comets which are brighter than 16th magnitude spatial spectrophotometric (6A resolution) studies of the inner and extended comae were done. An extensive spatial study of the comae of P/Encke and P/Stephen-Oterma, correlated with heliocentric distance is taking place. The observing process used is described and examples of the results obtained to date are discussed. A.R.H.

THE JOCR PROGRAM

John C. Brandt *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 171-184 refs (For primary document see N82-13989 04-89)
HC SOD $16.00 CSCL 03A

Observational data on large-scale plasma structures in comets is of value in (1) analyzing the interaction between the solar wind and comets, (2) using comets as solar wind probes, and (3) using comets as an astrophysical plasma laboratory with the CO+ plasma serving as tracers of the magnetic field. To obtain this data, the Joint Observatory for Cometary Research was built on South Baldy in the Magdalena Mountains west of Socorro, New Mexico, at an altitude of 10,615 feet. The telescope is a 14' f/2 Schmidt camera which records an 80 deg x 10 deg field onto 4 x 5 inch plates. The camera is designed for fixed focus operation, i.e., within design limits, the focus is not a function of temperature. A vacuum platen system allows the use of film for color photography. Sample observations of comets Kohoutek, West, Kobayashi-Berger-Milon and Bradfield are interpreted. A.R.H.

NARROW PASSBAND IMAGERY OF COMETS

T. R. Gull *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 185-190 refs (For primary document see N82-13989 04-89)
HC SOD $16.00 CSCL 03A

During an emission-line survey of the Milky Way, Comet West was accidently imaged through four different narrow passbands with a wide-field, image-intensified camera. Three passbands recorded very similar head plus tail structure. The fourth passband shows an additional large, diffuse component around the head. It was serendipitous that such was recorded as the filters, being selected for studies of emission nebulae, are not particularly suited for studies of comets. However the imagery, plus subsequent studies, suggests that much can be learned about the structure of comets using narrow passband imagery simultaneously with long slit spectroscopy. Author

ON OBSERVING COMETS FOR NUCLEAR ROTATION

Fred L. Whipple *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 191-207 refs (For primary document see N82-13989 04-89)
(Grant NsG-7082)
HC SOD $16.00 CSCL 03A

The prevalent non-gravitational motions among comets demonstrate that the sublimination does not reach a maximum at the instant of maximum insolation on the nucleus. The occurrence of halos or 'parabolic' envelopes in the comae of some comets and of jets, rays, fans, streamers and similar phenomena very near the nucleus in the brightest comets demonstrates that the sublimation process is not uniform over the nuclei. In other words, the nuclei of many comets contain relatively small active regions which provide much or most of the sublimation when these areas are turned toward the Sun. The period of rotation can be determind by measurement of the diameters of the halos or of the latus recta of the 'parabolic' envelopes, if the expansion velocities are averaged from observations as a function of solar distance. Experience from analyses of some 80 well observed comets shows that the nuclei are 'spotted' for more than a third of all comets, regardless of the 'age' as measured by the original inverse semimajor axis including correction for planetary perturbations. OUTBURST AND NUCLEAR BREAKUP OF COMET HALLEY - 1910

H. John Wood (Indiana Univ., Bloomington) and R. Albrecht *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 216-219 refs Sponsored in part by the AAS (For primary document see N82-13989 04-89)

HC SOD $16.00 CSCL 03A

Computer processing of five plates of Comet Halley taken during the 1910 apparition shows that on May 24 strong asymmetric (with respect to the tail axis) fountain-like parabolic plumes had developed on the sunward side of the nucleus. Visual observations showed that after an initial fading while passing in front of the sun, the brightness increased to about magnitude 1. On the plates taken May 31, the nucleus is clearly divided into at least three parts of nearly equal brightness. However, the last plate on June 3 shows a symmetrical coma with a small stellar-like nucleus. Author

NEAR PERIHELION OBSERVATIONS OF COMET HALLEY FROM SHUTTLE ORBITER

Jay T. Bergstralh *In its* Mod. Observational Tech. for Comets 1 Oct. 1981 p 241-248 refs (For primary document see N82-13989 04-89)

HC SOD $16.00 CSCL 03A

Intercept missions and the space telescope will return unique data on Comet Halley, but will leave important gaps in the observational coverage of the comet's activity, especially around the time of perihelion passage. A small package of instruments, which could be scheduled to fly on several shuttle missions, would be an effective means of extending observational coverage of Comet Halley to include the critical part of the apparition near perihelion passage. This approach would certainly be 'second best' to a dedicated orbital comet observatory. However, it would be feasible in the sense that payload space appears to be available for at least two flights during the apparition, and instruments exist, or could be modified, or are being developed, which could be integrated into a package of the required size, and which would return useful physical data on the comet. LABORATORY MEASUREMENTS OF THE COMETARY PHOTOCHEMICAL PHENOMENA

William M. Jackson *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 257-274 refs (For primary document see N82-13989 04-89)
(Contract N00014-80-C-0305; Grant NsG-C-5071)
HC SOD $16.00 CSCL 03A

Laboratory experiments are described that provide fundamental information about photochemical processes in comets. The yield of cometary radicals such as CN, OH, etc. can be determined as a function of photolyzing wavelength. Quantum state distributions of the internal energy of the cometary radicals can also be measured as a function of wavelength permitting one to define the recoil velocity of the fragments. This type of information supplies the data needed for more elaborate models to interpret the data being obtained on comets. Author

THE ESA MISSION TO COMET HALLEY

R. Reinhard *In* JPL Mod. Observational Tech. for Comets 1 Oct. 1981 p 284-312 refs (For primary document see N82-13989 04-89)
HC SOD $16.00 CSCL 03A

The Europeon Space Agency's approximately Giotto mission plans for a launch in July 1985 with a Halley encounter in mid-March 1986 4 weeks after the comet's perihelion passage. Giotto carries 10 scientific experiments, a camera, neutral, ion and dust mass spectrometers, a dust impact detector system, various plasma analyzers, a magnetometer and an optical probe. The instruments are described, the principles on which they are based are described, and the experiment key performance data are summarized. The launch constraints the helicentric transfer trajectory, and the encounter scenario are analyzed. The Giotto spacecraft major design criteria, spacecraft subsystem and the ground system are described. The problem of hypervelocity dust particle impacts in the innermost part of the coma, the problem of spacecraft survival, and the adverse effects of impact-generated plasma around the spacecraft are considered. A.R.H.

HC SOD $16.00 CSCL 03A

To prevent a repetition of the lack of reporting and dissemination of the data obtained during the 1910 observations of Comet Halley, a mechanism is proposed for coordinating the work of scientists and amateurs, including government, industrials, and academic personnel during the 1985-86 apparition of Comet Halley. Specialists from each discipline, in consultation with other experts in the field, would recommend specific objectives, standards, data format, and priorities for observations in that discipline. Following time for individual publication, scientists would be invited to contribute results to a multivolume compilation containing as complete as possible a record of the apparition. It is suggested that the discipline specialists be selected jointly by the IHW leader an by an international steering group with members from COSPAR, the IAU, etc., perhaps in response to some form of international announcement of opportunity. EVOLUTION OF CLOSE BINARY SYSTEMS: OBSERVATIONAL ASPECTS

Mirek J. Plavec Nov. 1981 22 p refs Presented at the IAU Colloq. No. 69, Binary and Multiple Stars as Tracers of Stellar Evolution, Bamberg, West Germany, Sep. 1981 Sponsored by NASA and NSF
(NASA-CR-165039; Rept-134) Avail: NTIS HC A02/MF A01 CSCL 03A

Detached close binary systems define the main sequence band satisfactorily, but very little is known about the masses of giants and supergiants. High dispersion international ultraviolet explorer satellite observations promise an improvement, since blue companions are now frequently found to late type supergiants. Mu Sagittaril and in particular Xi Aurigae are discussed in more detail. The barium star abundance anomaly appears to be due to mass transfer in interacting systems. The symbiotic stars are another type of binary systems containing late type giants; several possible models for the hotter star and for the type of interaction are discussed. The W Serpentis stars appear to be Algols in the rapid phase of mass transfer, but a possible link relating them to the symbiotics is also indicated. Evidence of hot circumstellar plasmas has now been found in several ordinary Algols; there may exist a smooth transition between very quiescent Algols and the W Serpentis stars. Beta Lyrae is discussed in the light of new spectrophotometric results. Author

X-RAY AND ULTRAVIOLET OBSERVATIONS OF STELLAR ATMOSPHERES Ph.D. Thesis

Marie-Christine Sophie Zolcinski 1981 137 p
Avail: Univ. Microfilms Order No. 8124181

Implications of atmospheric models for the observation of stellar atmospheres are discussed. Seven of the most luminous X-ray stars were observed with the IUE observatory. Flux determinations for emission lines originating from chromospheric and transition region like temperatures for four stars and upper limits for the three other stars were obtained. Combined with the Einstein observations, this allowed calculation of a differential emission measure for each star, and to constraint atmospheric parameters such as the pressure at the top of the chromosphere, the isothermal temperature of the corona and the fraction of stellar surface covered by emitting loops. Dissert. Abstr.

N82-14030 Florida Univ., Gainesville.

OPTICAL BRIGHTNESS VARIATIONS IN A SAMPLE OF NINETEEN RADIO-QUIET QUASI-STELLAR OBJECTS Ph.D. Thesis

Patricia Louise Edwards 1981 174 p
Avail: Univ. Microfilms Order No. 8124423

Monitoring of the optical brightnesses was done to study the characteristics of the variability of the RQQSOs for comparison with the much larger sample of quasi-stellar radio sources (QSRSs). A variability index (V.I.) was computed to facilitate numerical comparisons and to check for correlation between the extent of variability and other properties of the quasistellar objects (QSOs). Of the nineteen RQQSOs studied, eight did not show evidence of variability at the confidence level of at least 95 percent. Eight objects (PHL 3632, PHL 1186, PHL 1226, BSO 1, B 154, B 234, B 312, and BSO 11) were variable at a confidence level greater than 95 percent. An additional three objects showed variability at a confidence level greater than 99.9 percent. These strongly varying objects were PHL 1194, B 46, and B 114. The proportion of RQQSOs which show variability is similar to that of the QSRs. Dissert. Abstr.

THE TRANSFER OF POLARIZED RADIATION IN SPECTRAL LINES FROM ROTATIONALLY DISTORTED STARS Ph.D. Thesis
Sean Jeffrey McKenna 1981 182 p
Avail: Univ. Microfilms Order No. 8121830

The development of an accurate NLTE theory for the transport of polarized radiation in spectral lines with the inclusion of partial frequency redistribution of photons in the scattering process was investigated. The nature of the scattering process and the forms of the redistribution functions for model two level atoms are discussed. A NLTE theory for the transport of polarized radiation in spectral lines is derived, and is tested for lines formed in isothermal atmospheres. The theoretical line profiles and polarization structures for lines are computed for solar atmospheric conditions. There is a clear separation of the polarization maxima as the inclination of the system is varied. Using data from other spectral lines, it may be possible to determine the inclination of the rotational axis of the rapidly rotating stars, and ultimately the geometry of the emitting region. Dissert. Abstr.

AN INVESTIGATION OF WARM CARBON STARS Ph.D. Thesis
Sandra Bruce Yorka 1981 191 p
Avail: Univ. Microfilms Order No. 8121876

Warm carbon stars were investigated with narrow band photometric systems designed to measure band strengths of NH, CN, CH, and C2, an index of the C12/C13 ratio, and the color temperature. It is shown from molecular indices for R, CH, CH like, and barium stars as compared to G and K giants that the barium stars have slightly higher C/O ratios than normal field giants and, though they are N-enriched with respect to the sun, they generally are not as N enriched as the field giants. A comparison of the photometry with model atmospheres shows the energy distribution of the R stars in the near IR, but are underblanketed in the UV. It is found that the R stars have nitrogen abundances somewhat lower than those of the giants. Dissert. Abstr.

INTERMEDIATE BAND SURFACE PHOTOMETRY OF ELLIPTICAL GALAXIES Ph.D. Thesis
Robert James Boyle 1981 239 p
Avail: Univ. Microfilms Order No. 8124348

Detailed surface photometry of two normal elliptical galaxies, NGO 3379 and NGC 4406 was developed. The present structure of elliptical galaxies contains clues to the physical processes which played an important role in their early evolution. The photometric system provides six indicies measuring a variety of absorption and continuum features. The color profiles of these galaxies reveal two distinct classes of color and band strength gradients. A number of population syntheses were carried out using the color profiles derived for NGC 3379. The existence of an inflection point in the luminosity profile of the archetypal elliptical NGC 3379, is confirmed. The excess luminosity or bulge in the luminosity profile which gives rise to this inflection point can be adequately represented by a very broad gaussian. Dissert. Abstr.

POTASSIUM-ARGON AND IODINE-XENON GAS RETENTION AGES OF ENSTATITE CHONDRITE METEORITES Ph.D. Thesis
Burton Mack Kennedy 1981 311 p
Avail: Univ. Microfilms Order No. 8122742

Chondritic meteorites are generally considered to represent the most chemically primitive solar system material presently available for analysis. Due to their primitive nature, they preserve a record of the early solar system history and provide a substantial contribution to the knowledge of the events which characterized the early history of the solar system. The enstatite chondrites are a very unusual and rare group of meteorites characterized by a high degree of reduction. Radiometric ages of meteoritic material accordingly provide important data for the evaluation of early solar system history by establishing a time scale over which various discrete and/or episodic events have occurred. The potassium-argon an iodine zenon radiometric dating techniques were applied to a suite of enstatite chondrite meteorites. Dissert. Abstr.

PLANETARY RADIO ASTRONOMY OBSERVATIONS FROM VOYAGER-2 NEAR SATURN
J. W. Warwick, D. R. Evans, J. H. Romig, J. K. Alexander, M. D. Desch, M. L. Kaiser, M. Aubier, Y. Leblanc, A. Lecacheux, and B. M. Pedersen Nov. 1981 22 p refs Submitted for publication Prepared in cooperation with Radiophysics, Inc., Boulder, Colo. and Observatoire de Paris, Meudon, France
(Contract NAS7-100)
(NASA-TM-83856) Avail: NTIS HC A02/MF A01 CSCL 03B

Voyager-2 planetary radio astronomy measurements obtained near Saturn are discussed. They indicate that Saturnian kilometric radiation is emitted by a strong, dayside source at auroral latitudes in the Northern Hemisphere and by a weaker (by more than an order of magnitude) source at complementary latitudes in the

Southern Hemisphere These emissions are variable both due to Saturn's rotation and, on longer time scales, probably due to influences of the solar wind and the satellite Dione. The Saturn electrostatic discharge bursts first discovered by Voyager-1 and attributed to emissions from the B-ring were again observed with the same broadband spectral properties and a 10(h)11(m) + or - 5(m) episodic recurrence period but with an occurrence frequency of only of about 30 percent of that detected with Voyager-1. During the crossing of the ring plane at a distance of 2.88 R sub S, an intense noise event is interpreted to be consequence of the impact/vaporization/ionization of charged micron-size G-ring particles distributed over a total vertical thickness of about 1500 km. B.W.

REPORTS OF PLANETARY GEOLOGY PROGRAM, 1981
Henry E. Holt, comp. Dec. 1981 580 p refs
(NASA-TM-84211) Avail: NTIS HC A25/MF A01 CSCL 03B

Abstracts of 205 reports from Principal investigators of NASA's Planetary Geology Program succinctly summarize work conducted and reflect the significant accomplishments. The entries are arranged under the following topics: (1) Saturnian satellites; (2) asteroids, comets and Galilean satellites; (3) cratering processes and landform development; (4) volcanic processes and landforms; (5) Aerolian processes and landforms; (6) fluvial, preglacial, and other processes of landform development; (7) Mars polar deposits, volatiles, and climate; (8) structure, tectonics, and stratigraphy; (9) remote sensing and regolith chemistry; (10) cartography and geologic mapping; and (11) special programs. A.R.H.

92 SOLAR PHYSICS

Includes solar activity, solar flares, solar radiation and sunspots.

N82-14042# Nagoya Univ., Toyokawa (Japan).
A TRIGGERING OF SOLAR FLARE BY MAGNETOSONIC WAVES IN A NEUTRAL SHEET PLASMA
Jun-Ichi Sakai and Haruichi Washimi Sep. 1981 31 p refs
(IPPJ-540) Avail: NTIS HC A03/MF A01

A theoretical model of the triggering of a solar flare by magnetosonic waves in a neutral sheet plasma is discussed. It is shown that the ponderomotive force due to the magnetosonic waves strongly excites the plasma convection flow in the magnetic neutral sheet which in turn enhances the tearing instability. The system of basic equations for the tearing mode including the time-averaged nonlinear effects due to the magnetosonic waves is derived and the boundary value problem is solved. The results show that the growth time of the instability is shortened to about 100 sec for reasonable magnetosonic wave intensity. Author

SUBMILLIMETER OBSERVATIONS OF SOLAR LIMB-BRIGHTENING IN THE TOTAL SOLAR ECLIPSE OF 31 JULY 1981 Final Technical Report, 1 Oct. 1980 - 30 Sep. 1981
Eric E. Becklin, John T. Jefferies, Charles Lindsey, Frank Orrall, Ian Gatley, and Michael Werner 30 Sep. 1981 3 p
(NASA-CR-165023; Grant NAG2-59)
Avail: NTIS HC A02/MF A01 CSCL 03B

Eight flights of the Kuiper Airborne Observatory (KAO) were devoted to solar observation. The successful observation of a total solar eclipse was accomplished. The observations were made simultaneously at 30, 50, 100, and 200 microns. The successful adaptation of the KAO for solar observations thus provided the most detailed data to date in this spectral band. The results from a preliminary analysis of the KAO data are summarized: (1) the 200 micron limb is extended about 3 arc sec above the 30 micron limb, indicating the prescence of cool dense material up to the altitudes of spicules; (2) strong radial darkening of the quiet sun intensity profile appeared at 200 microns, probably an indication that hot material in the low chromosphere is recessed into vertical magnetic flux tubes embedded in a cooler nonmagnetic substrate, which obscures the heated material approaching the limb; (3) active regions were observed to undergo a strong increase in contrast above the quiet sun background at wave lengths of 100 microns and longer; and (4) the moon was mapped for use as a photometric standard for determining the absolute intensity of the sun in all four wavelength bands. N.W.

SOLAR-GEOPHYSICAL DATA. PROMPT REPORT, PART 1
Helen E. Coffey Mar. 1981 184 p
(PB81-221178; NOAA-81050602-Pt-1; SGD-439-Pt-1) Avail: NTIS HC A09/MF A01 CSCL 03B

In addition to an index for 1980-1981, this prompt report provides data for February 1981 on: alert periods, daily solar indices, solar flares, solar radio emission, inferred interplanetary magnetic field polarities, mean solar magnetic field, coronal holes and the Boulder geomagnetic substorm log. It also provides data for January 1981 on: daily solar activity centers, sudden ionospheric disturbances, spacecraft observations, solar radio emission, cosmic rays, geomagnetic indices and radio propagation indices. Late data includes solar radio emission for January 1981, cosmic rays Huancayo November, December 1980, geomagnetic indices for December 1980, and errata for December 1980 regions of solar activity. GRA

N82-14045# National Oceanic and Atmospheric Administration, Boulder, Colo. Environmental Data and Information Service.
SOLAR-GEOPHYSICAL DATA. COMPREHENSIVE REPORTS, PART 2
Helen E. Coffey, ed. Mar. 1981 131 p
(PB81-221186; NOAA-81050603-Pt-2; SGD-439-Pt-2) Avail: NTIS HC A07/MF A01 CSCL 03B

In addition to an index for 1980-1981, this issue of comprehensive reports provides data for September 1980 on: solar radio emission, solar X-ray radiation, and mass ejections from the sun. The daily flare index and the regional flare index appear 13 and 14 months from the date of observation. This report includes solar flares for September 1979 and for October 1979. Miscellaneous data includes: active regions July 5-August 29, 1980, synoptic solar maps July 5 - August 29, 1980, and the regional flare index for August 1979. GRA

SOLAR-GEOPHYSICAL DATA. EXPLANATION OF DATA REPORTS
Feb. 1981 94 p
(PB81-221194; NOAA-81050601-Suppl; SGD-438-Suppl.)
Avail: NTIS HC A05/MF A01 CSCL 03B

A complete index for data since July 1957 is presented. Data in the monthly publication, Solar-Geophysical Data are described and explained in an effort to keep research workers informed on a timely schedule of the major events of solar activity and the associated interplanetary, ionospheric, radio propagation and other geophysical effects. GRA

93 SPACE RADIATION

Includes cosmic radiation and inner and outer earth's radiation belts.

For biological effects of radiation see *52 Aerospace Medicine*. For theory see *73 Nuclear and High-Energy Physics*.

REPORT ON RESEARCH AND TECHNOLOGY-FY 1981
Annual Report
Nov. 1981 39 p
(NASA-TM-81367) Avail: NTIS HC A03/MF A01 CSCL 05A

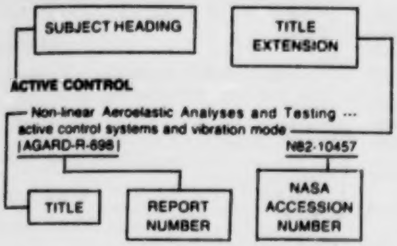
More than 65 technical reports, papers, and articles published by personnel and contractors at the Dryden Flight Research Center are listed. Activities performed for the Offices of Aeronautics and Space Technology, Space and Terrestrial Applications, Space Transportation Systems, and Space Tracking and Data Systems are summarized. Preliminary stability and control derivatives were determined for the shuttle orbiter at hypersonic speeds from the data obtained at reentry. The shuttle tile tests, spin research vehicle nose shapes flight investigations, envelope expansion flights for the Ames tilt rotor research aircraft, and the AD-1 oblique wing programs were completed as well as the KC-135 winglet program. A.R.H.

N82-14048# California Univ., Livermore. Lawrence Livermore Lab.
LLNL 1981: TECHNICAL HORIZONS
Jul. 1981 49 p
(Contract W-7405-eng-48)
(DE81-028265; UCRL-52000-81-7) Avail: NTIS HC A03/MF A01

Research programs are described in broad terms. A $481 million operating budget is projected for fiscal year 1982, up nearly 13% from last year. In projects for the Department of Energy and the Department of Defense, the Laboratory applies its technical facilities and capabilities to nuclear weapons design and development and other areas of defense research that include inertial confinement fusion, nonnuclear ordnances, and particle-beam technology. LLNL is also applying its unique experience and capabilities to a variety of projects that will help the nation meet its energy needs in an environmentally acceptable manner. DOE

SUBJECT INDEX

Typical Subject Index Listing



The subject heading is the key to the subject content of the document. Titles, report numbers, and accession numbers of pertinent documents are provided under each subject heading. When the title is insufficiently descriptive of the document content, a title extension has been added, separated from the title by three hyphens. The report number helps to indicate the type of document cited (e.g., NASA report, NASA translation, NASA contractor report). The NASA accession number is the number by which the document abstracts are arranged in this journal and by which the document is sold or requested. The titles, with title extensions if present, are arranged under each subject heading in ascending accession number order. The subject headings have been selected from the latest revision of the *NASA Thesaurus* (NASA SP-7050).

A

ABERRATION
Phase measurments in the focal region of an aberrated lens N82-13875
ABILITIES
Forecasting skill --- weather forecasting
[AD-A099778] N82-13626
ABLATIVE MATERIALS
Controlled overspray spray nozzle
[NASA-CASE-MFS-25139-1] N82-13376
ABRIKOSOV THEORY
Upper critical fields and span states in A-15 superconductors, part 1. Vortices in two-dimensional superconductors, part 2 N82-13942
ABSORBERS (EQUIPMENT)
Raven aircraft filter-absorber --- agricultural aircraft
[AD-A098862] N82-13139
ABSORPTION SPECTRA
Infrared vibrational predissociation spectroscopy of small molecular clusters
[DE81-028646] N82-13887
Intermediate band surface photometry of elliptical galaxies N82-14035
ABSORPTIVITY
Atomic pair processes and laser applications N82-13417
Critically evaluated data on optical and transport properties of solids (refractive index and absorption coefficient of selected optical materials)
[AD-A105069] N82-13879
ABUNDANCE
Observing chemical abundances in comets N82-13990
Ground-based photometry of comets in the spectral interval 3000 to 3500 angstrom N82-13997
ACCELERATED LIFE TESTS
An improved stress corrosion test medium for aluminum alloys
[NASA-TM-82452] N82-13216
Elevated temperature fatigue testing of metals N82-13281
Statistical analysis of accelerated temperature aging of semiconductor devices
[AD-A099439] N82-13946
ACCELERATION STRESSES (PHYSIOLOGY)
Influence of sine, and random, whole-body vibration on visual acuity
[BMVG-FBWT-79-17] N82-13653
A study on task difficulty and acceleration stress N82-13668
ACCESS CONTROL
Information storage in a decentralized computer system N82-13732
ACCESSORIES
Controlled Speed Accessory Drive demonstration program
[NASA-CR-165010] N82-13981
ACCIDENT PREVENTION
Control of methane by ventilation of shafts during raise drilling
[PB81-234502] N82-13487
Creating a safer environment in US coal mines: The Bureau of Mines Methane Control Program, 1964-79
[PB81-233918] N82-13488
ACCURACY
A comparison of three programs for the calculation of surface-ratio
[FOA-C-20392-D8] N82-13779
ACETYLENE
Metal ion modification of polymeric sulfur nitride, (SN) subx, electrodes and electrochemical reduction of acetylene at a molybdenum modified (SN)sub x electrode N82-13185
ACOUSTIC ATTENUATION
Laboratory study of sound propagation into a fast bottom medium
[AD-A104586] N82-13831
Ultrasonic attenuation and velocity studies in the alpha-alpha' solid solution phases of the Nb-H system
[DE81-026618] N82-13836
ACOUSTIC EMISSION
Investigation of the acoustic emission and deformation response of finite ice plates
[AD-A103731] N82-13471
ACOUSTIC IMPEDANCE
The relationship between the acoustic impedance and unsteady flow field near the orifice of a two dimensional Helmholtz resonator in grazing flow N82-13378
ACOUSTIC MEASUREMENTS
Acoustical speckle interferometry and applications in experimental mechanics N82-13626
Propagation of sound through the Earth's atmosphere
[NASA-CR-165006] N82-13828
ACOUSTIC PROPERTIES
Acoustic nondestructive evaluation of microstructure --- pure copper and plain carbon and low alloy steels N82-13211
ACOUSTIC SCATTERING
Acoustic boundary wave generation and shadowing at a seamount
[AD-A104594] N82-13832
Theoretical analysis of the effects of turbulence on a mobile parametric receiver
[AD-A101418] N82-13833
ACOUSTO-OPTICS
Linear acousto-optic filtering with heterodyne and frequency-plane control N82-13352
ACRYLIC RESINS
Large amplitude compression and shear wave propagation in impact-loaded PMMA
[AD-A105953] N82-13450
ACTINIDE SERIES
Electrochemical and spectroscopic studies of some less stable oxidation states of selected lanthanide and actinide elements N82-13182
ACTIVATION (BIOLOGY)
Benefits of detailed models of muscle activation and mechanics N82-13713
ACTIVATION ENERGY
Experimental and theorectical studies of excited state transport N82-13967
ACTIVE CONTROL
An analytical and experimental study of the steady and unsteady airloads on a wing with oscillating control including a streamlined gap --- wind tunnel test
[DFVLR-FB-81-18] N82-13119
Maneuver load control for the reduction of design loads and improvement of the maneuverability of modern fighter aircraft
[BMVG-FBWT-81-2] N82-13138
Design for active and passive flutter suppression and gust alleviation
[NASA-CR-3482] N82-13147
Interactive aircraft flight control and aeroelastic stabilization --- forward swept wing flight vehicles
[NASA-CR-165036] N82-13150
ADAPTIVE FILTERS
Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering N82-13648
Adaptive equalization algorithms for a dispersive channel
[ENST-E-80012] N82-13776
ADDITIVES
The effects of added softening agents upon the behavior of cold recycled asphalt mixtures
[PB81-231417] N82-13268
ADHESION TESTS
Test number 2 of propellants for rocket motor E573
[FOA-C-20411-D1] N82-13254
ADSORPTION
Surface characterization of dispersed supported metal catalysts using a 'time lapse' dynamic pulse technique N82-13177
Salt removal from brackish water by continuous processes with amphoteric, thermally regenerable ion-exchange resins N82-13202
Physical adsorption of quantum atomic and molecular systems N82-13846
Coexistence of non-registered monolayer and bilayer solid films N82-13931
AERIAL EXPLOSIONS
Electronic measurement of airblast overpressure
[AD-A105379] N82-13389
AERIAL RECONNAISSANCE
Aircraft data summaries for the SURE intensives, volume 1
[DE82-900314] N82-13568
Aircraft data summaries of the SURE intensives, volume 5
[DE82-900310] N82-13570
AERODYNAMIC BALANCE
Evaluation of an experimental technique to investigate the effects of the engine position on engine/pylon/wing interference N82-13090
AERODYNAMIC CHARACTERISTICS
Aerodynamics of Power Plant Installation
[AGARD-CP-301] N82-13065

Top-mounted inlet system feasibility for transonic-subsonic fighter aircraft applications N82-13067
Some RAE research on shielded and unshielded fuselage mounted air intakes at subsonic and supersonic speeds N82-13068
Subsonic military aircraft engine intake: An integrated theoretical experiment design N82-13073
The design and development of the Tornado engine air intake N82-13074
Integration of advanced exhaust nozzles N82-13075
Prop-fan integration at cruise speeds N82-13097
Force and moment, flow-visualization, and boundary-layer tests on a shuttle orbiter model at Mach 6
[NASA-TP-1952] N82-13106
An aerodynamic design and the overall stage performance of an air-cooled axial-flow turbine
[NAL-TR-321T] N82-13109
The effect of rotor blade thickness and surface finish on the performance of a small axial flow turbine
[NASA-TM-82726] N82-13114
Aerodynamics of an airfoil with a jet issuing from its surface N82-13121

AERODYNAMIC COEFFICIENTS
Experimental determination of the effect of physical properties on the drag of liquid drops N82-13380

AERODYNAMIC CONFIGURATIONS
Consolidation of data base for Army generalized missile model
[NASA-CR-166273] N82-13046

AERODYNAMIC DRAG
A review of the effect of Reynolds number on afterbody drag N82-13080
Wind tunnel test and analysis techniques using powered simulators for civil nacelle installation drag assessment N82-13088
Establishment of an experimental technique to provide accurate measurement of the installed drag of close coupled civil nacelle/airframe configurations, using a full span model with turbine powered engine simulators N82-13089
Prop-fan integration at cruise speeds N82-13097
Refinement of a method for determining the induced and profile drag of a finite wing from detailed wake measurements N82-13103
Experimental determination of the effect of physical properties on the drag of liquid drops N82-13380

AERODYNAMIC FORCES
Force measurements on a reflex cambered delta wing
[LOG-C4073] N82-13111

AERODYNAMIC HEAT TRANSFER
Influence of wall roughness, adverse pressure gradient and heat transfer on wall shear stress measurements with Preston tubes
[ILR-50] N82-13396

AERODYNAMIC HEATING
Aerodynamic heating on the corrugated surface of a 10.2 deg half-angle blunted cone at Mach 6.7
[NASA-TP-1928] N82-13383

AERODYNAMIC INTERFERENCE
Airframe-propulsion system aerodynamic interference predictions at high transonic Mach numbers including off-design engine airflow effects N82-13098
An analytical and experimental study of the steady and unsteady airloads on a wing with oscillating control including a streamlined gap — wind tunnel test
[DFVLR-FB-81-18] N82-13119

AERODYNAMIC LOADS
Contributions to the aerodynamics of wing-body configurations in the nonlinear range of angles of attack
[BMVG-FBWT-80-11] N82-13117
Maneuver load control for the reduction of design loads and improvement of the maneuverability of modern fighter aircraft
[BMVG-FBWT-81-2] N82-13138
Prediction of aerodynamic loads on aircrafts with external stores at transonic speeds N82-13613

AERODYNAMIC STABILITY
Wind-tunnel investigation of the tail-spoiler concept for stall-prevention on general aviation airplanes
[NASA-TM-83206] N82-13047
System identification helicopter parameters. Determination from flight tests, phase 2
[BMVG-FBWT-80-12] N82-13137

AERODYNAMIC STALLING
Wind-tunnel investigation of the tail-spoiler concept for stall-prevention on general aviation airplanes

[NASA-TM-82771] N82-13146

Comparison of closed loop model with flight test results N82-13691

On the use of the OCM's quadratic objective function as a pilot rating metric N82-13693

AIRCRAFT CONTROL

A standard control display unit for multi-aircraft application N82-13054

An analytical approach for predicting pilot induced oscillations N82-13688

Theoretical linear approach to the combined man-manipulator system in manual control of an aircraft N82-13702

AIRCRAFT DESIGN

The impact of new guidance and control systems on military aircraft cockpit design
[AGARD-CP-312] N82-13048

Aerodynamics of Power Plant Installation
[AGARD-CP-301] N82-13065

The design and development of the Tornado engine air intake N82-13074

Evaluation of an experimental technique to investigate the effects of the engine position on engine/pylon/wing interference N82-13090

AIRCRAFT ENGINES

Aerodynamics of Power Plant Installation
[AGARD-CP-301] N82-13065

Integration of advanced exhaust nozzles
N82-13075

A device for simulating at a compressor bench an air inlet with large incidence N82-13081

An acquisition and analysis system for dynamic tests of air inlets N82-13082

Wind tunnel test and analysis techniques using powered simulators for civil nacelle installation drag assessment N82-13088

Establishment of an experimental technique to provide accurate measurement of the installed drag of close coupled civil nacelle/airframe configurations, using a full span model with turbine powered engine simulators N82-13089

Evaluation of an experimental technique to investigate the effects of the engine position on engine/pylon/wing interference N82-13090

Thrust modulation methods for a subsonic V/STOL aircraft
[NASA-TM-82747] N82-13112

A real time Pegasus propulsion system model for VSTOL piloted simulation evaluation
[NASA-TM-82770] N82-13144

Sensor failure detection system — for the F100 turbofan engine
[NASA-CR-165515] N82-13145

AIRCRAFT EQUIPMENT

Practical aspects of instrumentation system installation, volume 13
[NASA-TM-84067] N82-13140

AIRCRAFT LANDING

Limited evaluation of an F-14A airplane utilizing an aileron-rudder interconnect control system in the landing configuration
[NASA-TM-81972] N82-13148

A comparison of landing maneuver piloting technique based on measurements made in an airline training simulator and in actual flight N82-13685

Identification of multiloop pilot describing functions obtained from simulated approaches to an aircraft carrier N82-13686

Comparison of closed loop model with flight test results N82-13691

AIRCRAFT MANEUVERS

Horizontal conflict resolution maneuvers with a cockpit display of traffic information N82-13671

A comparison of landing maneuver piloting technique based on measurements made in an airline training simulator and in actual flight N82-13685

Comparison of closed loop model with flight test results N82-13691

AIRCRAFT MODELS

Wind tunnel test and analysis techniques using powered simulators for civil nacelle installation drag assessment N82-13088

Establishment of an experimental technique to provide accurate measurement of the installed drag of close coupled civil nacelle/airframe configurations, using a full span model with turbine powered engine simulators N82-13089

Unsteady aeroelastic modeling and trailing-edge flap control of an experimental wing in a two dimensional wind tunnel N82-13122

AIRCRAFT PERFORMANCE

Further tests of a model-based scheme for predicting pilot opinion ratings for large commercial transports
N82-13687

AIRCRAFT PILOTS

Texas International Airlines LOFT program
N82-13128

Delta Airlines LOFT training N82-13129

Further tests of a model-based scheme for predicting pilot opinion ratings for large commercial transports
N82-13687

On the use of the OCM's quadratic objective function as a pilot rating metric N82-13693

Pilot scanning patterns while viewing cockpit displays of traffic information N82-13710

AIRCRAFT RELIABILITY

Helicopter reliability and maintainability trends during development and production
[AD-A105775] N82-13136

AIRCRAFT SAFETY

Issues related to line-oriented flight training
N82-13124

Feasibility study of a procedure to detect and warn of low level wind shear
[NASA-CR-3480] N82-13621

An investigation into pilot and system response to critical in-flight events, volume 1
[NASA-CR-166243-VOL-1] N82-13682

An investigation into pilot and system response to critical in-flight events, volume 2
[NASA-CR-166243-VOL-2] N82-13683

AIRCRAFT STRUCTURES

Calculation of wing-body-nacelle interference in subsonic and transonic potential flow N82-13095

AIRCRAFT TIRES

Measured pavement response to transient aircraft loadings N82-13442

AIRCRAFT WAKES

Turbulent wake development behind streamlined bodies N82-13104

AIRFOIL PROFILES

Some observations of surface pressures and the near wake of a blunt trailing edge airfoil N82-13100

Wind-tunnel investigation of the effects of blade tip geometry on the interaction of torsional loads and performance for an articulated helicopter rotor
[NASA-TP-1926] N82-13107

Force measurements on a reflex cambered delta wing
[LOG-C4073] N82-13111

The effect of rotor blade thickness and surface finish on the performance of a small axial flow turbine
[NASA-TM-82726] N82-13114

AIRFOILS

A numerical study of laminar unsteady compressible flow over airfoils N82-13099

AIRFRAMES

The role and implementation of different nacelle/engine simulation concepts for wind-tunnel testing in research and development work on transport aircraft N82-13086

Establishment of an experimental technique to provide accurate measurement of the installed drag of close coupled civil nacelle/airframe configurations, using a full span model with turbine powered engine simulators N82-13089

Airframe-propulsion system aerodynamic interference predictions at high transonic Mach numbers including off-design engine airflow effects
N82-13098

ALASKA

Transport and reaction of heavy metals in Alaskan fjord estuaries
[DE81-028319] N82-13474

Alaska's Water resources problems and research needs: Institute of Water Resources, five-year research plan
[PB81-231920] N82-13477

Environmental assessment of the Alaskan Continental Shelf: Annual reports of principal investigators for the year ending March 1980. Volume 5: Hazards
[PB81-225732] N82-13607

Petrology and geochemistry of ophiolite fragments in a tectonic melange, Kodiak Islands, Alaska
N82-13610

ALBEDO

Spectrophotometry of faint comets: The asteroid approach N82-13998

Infrared observations of faint comets N82-14001

ALGEBRA

Symbolic reasoning among 3-D models and 2-D images N82-13761

A stochastic extension of the structural properties of compartment models via a Kronecker algebra
N82-13810

ALGORITHMS

Regularized integration of gravity-perturbed trajectories: A numerical efficiency study
N82-13155

Analysis and behavior of structures on discrete tensionless foundations N82-13286

Topics in digital signal processing N82-13346

Development of an infrared radiative heating model
[NASA-CR-166272] N82-13622

Algorithms for imaging myocardial blood flow using X-ray computed tomography N82-13661

Simple geometric algorithms to aid in clearance management for robotic mechanisms N82-13680

Preemptive scheduling of a multiprocessor system with memories to minimize L sub max
[AD-A103795] N82-13734
Digital data compression algorithm performance comparisions: Proposed NATO standard algorithm provides better facsimile in a noisy communications environment than present Tactical Digital Facsimile algorithm
[AD-A103159] N82-13737
Capacity and coding for computer memory with defects N82-13750
A specification and proof technique for message-based systems and its application to distributed database algorithms N82-13756
Algorithms for the geometry of semi-algebraic sets N82-13763
Research on knowledge based programming and algorithm design
[AD-A105661] N82-13770
Solution of single linear tridiagonal systems and vectorization of the ICCG algorithm on the Cray 1 — laser fusion
[DE81-025461] N82-13773
Adaptive equalization algorithms for a dispersive channel
[ENST-E-80012] N82-13776
Trellis data compression N82-13784
Solving multiactivity multifacility capacity-constrained 0-1 assignment problems
[AD-A102583] N82-13796
A contribution to robust detection and estimation N82-13809
Parallel scheduling algorithms
[AD-A103786] N82-13820
Transforming contingency tables
[AD-A104182] N82-13821

ALIPHATIC COMPOUNDS
Grafting of 2 (2-hydroxy-5-vinylphenyl) 2H-benzotriazole onto polymers with aliphatic groups. Synthesis and polymerization of 2 (2-hydroxy-5-isopropenylphenyl) 2H-benzotriazole and a new synthesis of 2 (2-hydroxy-5-vinylphenyl) 2H-benzotriazole
[NASA-CR-165016] N82-13171
Creating a safer environment in US coal mines: The Bureau of Mines Methane Control Program, 1964-79
[PB81-233918] N82-13488

ALKALI METALS
Energy levels in and on an oxide film as measured by electrochemical methods
[AD-A103704] N82-13187
High-temperature measurements of alkali levels in an experimental 6-inch AFBC
[DE81-023632] N82-13193

ALKALIES
Electric fieiu-enhanced diffusion and electron stimulated desorption of alkali elements from glass surfaces during electron bombardment and Auger electron analysis N82-13961

ALKALINITY
Endurance test and evaluation of alkaline water electrolysis cells
[NASA-CR-165424] N82-13508

ALKENES
Surface characterization of dispersed supported metal catalysts using a 'time lapse' dynamic pulse technique N82-13177

ALL SKY PHOTOGRAPHY
Three-dimensional mapping of the aurora from digitized all-sky pictures
[REPT-550.366.8] N82-13591

ALLOCATIONS
Solving multiactivity multifacility capacity-constrained 0-1 assignment problems
[AD-A102583] N82-13796

ALTERNATING CURRENT
Bipolar conduction with AC excitation N82-13373
The ac propulsion system for an electric vehicle, phase 1
[NASA-CR-165480] N82-13506
Techniques for energy conservation in ac motor-driven systems
[DE82-900356] N82-13537

ALUMINUM
Deformation-enhanced photoemission from metals N82-13231
Defect structure and properties of intermetallic compound beta-LiAl N82-13959

ALUMINUM ALLOYS
Cyclic deformation and fatigue crack initiation of a coherently precipitating Ni-14.4 at % Al alloy N82-13212
An improved stress corrosion test medium for aluminum alloys
[NASA-TM-82452] N82-13216
Mechanisms by which humidity alters ductility
[AD-A105530] N82-13221
Strengthening phases and deformation mechanisms in dispersion strengthened solid solutions and pure metals N82-13229
Materials studies for magnetic fusion energy applications at low temperatures -4
[PB81-222507] N82-13928
Superconductivity of the A15 compound niobium aluminum N82-13932

ALUMINUM GALLIUM ARSENIDES
Development of high-efficiency cascade solar cells
[DE81-029633] N82-13540

AMMONIUM COMPOUNDS
Constitution of silicate anions in tetraethyl-ammonium silicates and their aqueous solutions
[NRC/CNR-TT-2004] N82-13170

AMMONIUM NITRATES
Nitrogen and phosphorus reactions in overland flow of wastewater
[PB81-239311] N82-13574

AMORPHOUS MATERIALS
Preparation and characterization of hydrogenated amorphous silicon
[DE81-030973] N82-13197
The structural and vibrational properties of amorphous and crystalline group V elements N82-13933

AMPLIFIERS
Double beam-in-time photoacoustic spectroscopy N82-13180
FOA 27 control instruments data system. Control instruments and their functions
[FOA-C-20394-D3] N82-13410

AMPLITUDE DISTRIBUTION ANALYSIS
The formation of radiation patterns of arc antennas N82-13305
Solution of the problem of the synthesis of antennas with the aid of a coherent optical system N82-13313

AMPLITUDE MODULATION
Spectral efficiency of amplitude companded sideband systems N82-13345

ANAEROBES
Economic and kinetic studies of the biological production of farm energy and chemicals from biomass
[DE82-000044] N82-13542

ANALOG CIRCUITS
Design and fabricate a CCD analog multiplier
[AD-A105557] N82-13364
Fiber optic analog and timing monitoring system for the Antares laser fusion program
[DE81-028799] N82-13925

ANALOG TO DIGITAL CONVERTERS
FOA 27 control instruments data system. Control instruments and their functions
[FOA-C-20394-D3] N82-13410

ANALOGIES
Calculation of wing-body-nacelle interference in subsonic and transonic potential flow N82-13095

ANALOGS
Performance of chemical analogs of the explosive CP
[DE81-025836] N82-13251

ANALYSIS (MATHEMATICS)
Preemptive scheduling of a multiprocessor system with memories to minimize L sub max
[AD-A103795] N82-13734
A difference in efficiency between synchronous and asynchronous systems
[AD-A102260] N82-13742
Prediction of aerodynamic loads on aircrafts with external stores at transonic speeds N82-13813

ANALYTIC GEOMETRY
On high beta equilibria of plasmas in the quasi-uniform current model: Influence of shaping the plasma cross section and of the second order in the inverse aspect ratio
[REPT-81-131] N82-13927

ANALYZERS
An apparatus and procedure for calibrating a water vapor analyzer in the 0.1- to 15-ppm range
[PB81-231195] N82-13413

ANGLE OF ATTACK
Consolidation of data base for Army generalized missile model
[NASA-CR-166273] N82-13046
Force and moment, flow-visualization, and boundary-layer tests on a shuttle orbiter model at Mach 6
[NASA-TP-1952] N82-13108
A calculation method for slender wing-body configurations in supersonic flow at high angles of attack — nonlinear force and pitching moment characteristics
[BMVG-FBWT-79-15] N82-13115
Contributions to the aerodynamics of wing-body configurations in the nonlinear range of angles of attack
[BMVG-FBWT-80-11] N82-13117

ANGULAR DISTRIBUTION
Single mode optical waveguide design investigation
[AD-A098979] N82-13881

ANGULAR RESOLUTION
A possible technique for cometary studies with high angular and spectral resolution N82-14012

ANIONS
Constitution of silicate anions in tetraethyl-ammonium silicates and their aqueous solutions
[NRC/CNR-TT-2004] N82-13170
Spectroelectrochemical investigations in molten salt and aqueous media N82-13183

ANISOTROPY
EBT Stability Theory: Proceedings of the workshop
[DE81-030635] N82-13909
Rudimentary theories of the stability of microwave-heated plasmas N82-13910
Microstability of the EBT boundary N82-13919

ANNEALING
Boron implanted strontium titanate N82-13939
CW laser annealing and CW laser assisted diffusion in gallium arsenide N82-13943

ANNUAL VARIATIONS
Annual cycle energy system experimental performance and national applicability
[DE81-028570] N82-13523

ANNULAR FLOW
Numerical study of multicellular natural convection in vertical cavities N82-13403

ANNULAR NOZZLES
Navier-Stokes solutions for a supersonic coflowing axisymmetric nozzle with a thick annulus N82-13101

ANODES
Insoluble anodes for electrowinning zinc and other metals
[PB81-227365] N82-13227
Endurance test and evaluation of alkaline water electrolysis cells
[NASA-CR-165424] N82-13508

ANODIC STRIPPING
Application of electrochemistry to biochemical problems — immunoassay technique using differential pulse anodic stripping voltammetry N82-13179

ANTARCTIC REGIONS
Compensation for use of monthly-averaged winds in numerical modeling
[NASA-TM-83855] N82-13623

ANTENNA ARRAYS
Antenna (Selected Articles)
[AD-A106522] N82-13297
Methods of automatic measurement of antenna parameters N82-13298
Antenna (selected articles)
[AD-A106474] N82-13311
Solution of the problem of the synthesis of antennas with the aid of a coherent optical system N82-13313
Antenna (selected articles)
[AD-A106500] N82-13327
Synthesis of nonequidistant line-source antenna by the statistical methods of search N82-13329
Characteristics of antennas with frequency beam swinging N82-13332

ANTENNA COMPONENTS

Antenna (selected articles) [AD-B060598] N82-13307

Two-mirror antenna for radio relay communication N82-13308

Excitation of radial resonator with annular slot N82-13328

Principles of the construction of systems, which possess potential frequency independence — antenna design N82-13330

ANTENNA DESIGN

Antenna (selected articles) [AD-A106476] N82-13294

Cophased directed surface wave splitters using dielectric waveguides N82-13296

Antenna (Selected Articles) [AD-A106522] N82-13297

Radio astronomical antennas of meter wavelengths N82-13298

Antenna (selected articles) [AD-A106474] N82-13311

Antenna (selected articles) [AD-B060573] N82-13318

The development of domestic technology for television transmitting antennas N82-13319

Antenna (selected articles) [AD-A106500] N82-13327

Principles of the construction of systems, which possess potential frequency independence — antenna design N82-13330

Characteristics of antennas with frequency beam swinging N82-13332

Experimental and theoretical investigations with laboratory models of phased array antenna [BMVG-FBWT-79-21] N82-13341

ANTENNA FEEDS

Antenna (selected articles) [AD-A106476] N82-13294

Cophased directed surface wave splitters using dielectric waveguides N82-13296

Antenna (Selected Articles) [AD-A106522] N82-13297

Radio astronomical antennas of meter wavelengths N82-13298

ANTENNA RADIATION PATTERNS

High frequency scattering from multiple finite elliptic cylinders N82-13291

Antenna (selected articles) [AD-A106476] N82-13294

The use of the Kirchoff method for asymptotic solution of a problem of the diffraction of a plane wave on dielectric bodies of revolution N82-13295

Antenna (Selected Articles) [AD-A106522] N82-13297

Methods of automatic measurement of antenna parameters N82-13299

Antenna (selected articles) [AD-A106523] N82-13304

The formation of radiation patterns of arc antennas N82-13305

Antenna (selected articles) [AD-B060598] N82-13307

Use of principle of regularization in direct and mixed problems of the theory of the synthesis of radiating systems N82-13309

Some properties of the radiating aperture superdirectionality N82-13312

Solution of the problem of the synthesis of antennas with the aid of a coherent optical system N82-13313

Thin magnetic impedance antennas N82-13314

Open resonators, formed by confocal mirrors with the variable reflection coefficient and the generalized hyper-spheroidal functions N82-13315

Antenna (selected articles) [AD-B060573] N82-13318

Radiation of an antenna in the form of a ribbed shaft of finite length N82-13321

One use of methods of the statistical theory of antennas N82-13325

Antenna (selected articles) [AD-A106500] N82-13327

Excitation of radial resonator with annular slot N82-13328

Synthesis of nonequidistant line-source antenna by the statistical methods of search N82-13329

Principles of the construction of systems, which possess potential frequency independence — antenna design N82-13330

Natural and mutual conductivities of half-wave slots, arbitrarily oriented on the conducting surface of circular cylinder — slot antennas N82-13331

Characteristics of antennas with frequency beam swinging N82-13332

ANTENNAS

Shape determination and control for large space structures [JPL-PUB-81-71] N82-13166

Antenna (selected articles) [AD-A106500] N82-13327

ANTHROPOMETRY

Anthropometric sizing systems for Army women's field clothing [AD-A102104] N82-13724

ANTIBODIES

Application of electrochemistry to biochemical problems — immunoassay technique using differential pulse anodic stripping voltammetry N82-13179

ANTIFOULING

Mitigation of biofouling using coatings [DE81-027900] N82-13647

ANTIFRICTION BEARINGS

Development of advanced rotor-bearing systems for feedwater pumps, phase 2 [DE82-900376] N82-13431

ANTIGENS

Application of electrochemistry to biochemical problems — immunoassay technique using differential pulse anodic stripping voltammetry N82-13179

ANTIMONY COMPOUNDS

Development of high-efficiency cascade solar cells [DE81-029633] N82-13540

ANTIREFLECTION COATINGS

Thermal performance of windows having high solar transmittance [DE81-026672] N82-13524

ANTITANK MISSILES

Modeling human tracking error in several different anti-tank systems N82-13699

APERTURES

Bounding signal levels at terminations of multiconductor transmission line behind an aperture [AD-A102031] N82-13362

APPROACH AND LANDING TESTS (STS)

Analysis of a longitudinal pilot-induced oscillation experienced on the approach and landing test of the space shuttle [NASA-TM-81366] N82-13149

APPROACH CONTROL

Identification of multiloop pilot describing functions obtained from simulated approaches to an aircraft carrier N82-13686

APPROXIMATION

Structural dynamics: Modified calculations — natural and harmonically excited vibrations of modified structures; increased computation efficiency [BMVG-FBWT-81-1] N82-13457

High order approximations to Eigensolutions of Sturm-Liouville problems by deferred corrections [TRITA-NA-8104] N82-13800

APTITUDE

Weighting of aptitude components based on differences in technical school difficulty [AD-A102045] N82-13725

AQUEOUS SOLUTIONS

Constitution of silicate anions in tetraethyl-ammonium silicates and their aqueous solutions [NRC/CNR-TT-2004] N82-13170

Electrochemical and spectroscopic studies of some less stable oxidation states of selected lanthanide and actinide elements N82-13182

Spectroelectrochemical investigations in molten salt and aqueous media N82-13183

Fatigue crack initiation and electrochemical behavior of 403 stainless steel in aqueous environments N82-13210

Mechanistic studies of electron exchange kinetics using ab initio [DE81-026096] N82-13856

AQUIFERS

The occurrence and control of land subsidence due to ground water withdrawal with special reference to the San Joaquin and Santa Clara Valleys, California N82-13466

Analysis of the development of shallow groundwater supplies by pumping from ponds [PB81-231904] N82-13476

Five-year Hawaii water research agenda, 1982-1987 [PB81-231912] N82-13479

Compressed air energy storage: Preliminary design and site development program in an aquifer. Volume 2: Utility system planning [DE82-000466] N82-13544

ARCHITECTURE

Pedestrian movement characteristics on building ramps [PB81-229163] N82-13968

ARCHITECTURE (COMPUTERS)

An analytical study of multiprocessor system reliability N82-13726

Information storage in a decentralized computer system N82-13732

Introduction to the configurable highly parallel computer, revision [AD-A099776] N82-13735

Concurrent testing and checking in computer systems N82-13751

Automated partitioning of hierarchically specified digital systems N82-13752

Direct execution string processor N82-13753

Design of a real time, interactive, parallel simulation computer N82-13781

ARGON

A study of the formation and structure of small clusters of noble gases and sulfur hexafluoride formed in Laval Nozzle molecular beams N82-13201

Development of technique for AR coating and nickel and copper metallization of solar cells: FPS project, product development [NASA-CR-165033] N82-13499

Molecular beam electric resonance studies of weakly bound complexes N82-13887

Coexistence of non-registered monolayer and bilayer solid films N82-13931

ARMED FORCES

Laser heat treatment of track components in combat vehicles, phase 1 [AD-A102761] N82-13219

ARSENIC

The structural and vibrational properties of amorphous and crystalline group V elements N82-13933

ARTIFICIAL INTELLIGENCE

The intelligent use of intelligent systems: Problems in engineering man/machine symbiosis N82-13058

Structure of the knowledge base for an expert labeling system N82-13723

Research on knowledge based programming and algorithm design [AD-A105661] N82-13770

ARTIFICIAL SATELLITES

Conduction and charge storage in electron irradiated spacecraft insulators [AD-A104798] N82-13167

ARTILLERY

Two-channel telemeter for use in a 3-inch spin air gun [AD-A102566] N82-13165

ASHES

Environmental effects of pollutants from coal combustion. 1: The Four Corners Power Plant, Farmington, N.M. [PB81-230427] N82-13572

ASPECT RATIO

Refinement of a method for determining the induced and profile drag of a finite wing from detailed wake measurements N82-13103

ASPHALT

The effects of added softening agents upon the behavior of cold recycled asphalt mixtures [PB81-231417] N82-13268

A laboratory evaluation of modified asphalt [PB81-231615] N82-13269

ASSEMBLING

Further developments in integrated circuit assembling technology [BMFT-FB-T-80-179] N82-13369

Design, fabrication, test, qualification, and price analysis of third generation design solar cell modules [NASA-CR-165007] N82-13502

ASTEROIDS

Astrometric observations of comets and asteroids and subsequent orbital investigations [NASA-CR-165004] N82-14039

ASTROMETRY
Modern Observational Techniques for Comets — conferences
[NASA-CR-165006] N82-13989
Astrometric observations of comets and asteroids and subsequent orbital investigations
[NASA-CR-165004] N82-14039
ASTRONAUT PERFORMANCE
Design and development of a six degree of freedom hand controller N82-13706
ASTRONOMICAL CATALOGS
Existing cometary data and future needs N82-14017
Astronomical data bases and retrieval systems N82-14020
ASTRONOMICAL PHOTOGRAPHY
The JOCR program — Joint Observatory for Cometary research N82-14013
On observing comets for nuclear rotation N82-14015
Photographic observations of comets at Lowell Observatory — Halley's comet N82-14016
Outburst and nuclear breakup of Comet Halley - 1910 N82-14018
Near perihelion observations of Comet Halley from Shuttle orbiter N82-14021
ASTRONOMICAL PHOTOMETRY
Modern Observational Techniques for Comets — conferences
[NASA-CR-165006] N82-13989
Observations of faint comets at McDonald Observatory: 1976-1980 N82-14010
ASTRONOMICAL SPECTROSCOPY
Modern Observational Techniques for Comets — conferences
[NASA-CR-165006] N82-13989
The spectroscopy of comets: Introductory remarks N82-14004
A systematic program of cometary spectroscopy N82-14005
Ground-based cometary spectroscopy N82-14007
Correlated ground-based and the observations N82-14008
Ultraviolet spectroscopy of comets using sounding rockets, IUE and Spacelab N82-14009
Spectral imagery: Recent results with the SPIFI and their implications for cometary atmospheric studies — servocontrolled polarimetric imaging Fabry-Perot interferometer N82-14011
A possible technique for cometary studies with high angular and spectral resolution N82-14012
Narrow passband imagery of comets — Comet West N82-14014
The ESA mission to Comet Halley N82-14025
ASTRONOMICAL TELESCOPES
Observing facilities at the European Southern Observatory (ESO) in Chile for cometary observations N82-14006
Astronomical activities report
[ISSN-0531-4496] N82-14028
ASYMPTOTES
An upper asymptote for the three-parameter logistic item-response model
[AD-A103013] N82-13816
ASYMPTOTIC METHODS
A hybrid method which combines a moment method current with an asymptotic current
[AD-A102199] N82-13340
An upper asymptote for the three-parameter logistic item-response model
[AD-A103013] N82-13816
New exact and asymptotic solutions of the stationary vacuum Einstein equations N82-13973
ATLANTIC OCEAN
Mixed layer depth distributions from SVSTD data
[AD-A105889] N82-13634
ATLAS CENTAUR LAUNCH VEHICLE
Launch mission summary: Intelsat 5 (F3) Atlas/Centaur-55
[NASA-TM-84068] N82-13161
ATMOSPHERIC ATTENUATION
Microwave attenuation and brightness temperature due to the gaseous atmosphere: A comparison of JPL and CCIR values
[NASA-CR-165027] N82-13300
DMSP water vapor radiances: A preliminary evaluation
[AD-A099305] N82-13625
Propagation of sound through the Earth's atmosphere
[NASA-CR-165008] N82-13626
Measurement of sound absorption in the air — data processing N82-13629
Detection of infrasound generated by Clear Air Turbulence (CAT) N82-13630
ATMOSPHERIC BOUNDARY LAYER
An experimental study of turbulence in an urban environment N82-13618
ATMOSPHERIC CHEMISTRY
Response of the oceans to increasing atmospheric carbon dioxide
[DE81-028178] N82-13558
Infrared experiments for spaceborne planetary atmospheres research. Full report
[NASA-TM-84414] N82-13676
Infrared experiments for spaceborne planetary atmospheres research. Executive summary
[NASA-TM-84413] N82-13677
ATMOSPHERIC CIRCULATION
Wind Power: Research on network wind power over the Pacific northwest. Executive summary
[DE81-029360] N82-13519
ATMOSPHERIC DIFFUSION
Atmospheric dispersion forecasts at selected locations in the United States
[PB81-230443] N82-13635
ATMOSPHERIC ELECTRICITY
Spring program summary, 1980
[PB81-234940] N82-13628
ATMOSPHERIC MODELS
Microwave attenuation and brightness temperature due to the gaseous atmosphere: A comparison of JPL and CCIR values
[NASA-CR-165027] N82-13300
X-ray and ultraviolet observations of stellar atmospheres N82-14029
An investigation of warm carbon stars N82-14033
ATMOSPHERIC OPTICS
The effects of atmospheric turbulence on the atmospheric transmittance at optical frequencies N82-13608
ATMOSPHERIC PHYSICS
Project Skywater: Fiscal year 1979 report. Atmospheric Resources Research Program
[PB81-234494] N82-13629
ATMOSPHERIC PRESSURE
X-ray and ultraviolet observations of stellar atmospheres N82-14029
ATMOSPHERIC STRATIFICATION
Atmospheric 222Rn measurements at San Nicolas Island during 1980
[AD-A104802] N82-13602
ATMOSPHERIC TURBULENCE
Turbulent transfers in the atmospheric surface layer under varied stability conditions. A laboratory study N82-13586
The effects of atmospheric turbulence on the atmospheric transmittance at optical frequencies N82-13608
ATOM CONCENTRATION
Local density studies of electronic structure and bonding in transition metal compounds N82-13936
ATOMIC COLLISIONS
Atomic pair processes and laser applications N82-13417
Monte Carlo calculations of channeling radiation
[DE81-027655] N82-13818
ATOMIC EXCITATIONS
Outer-shell excitation in sputtered atoms N82-13839
ATOMIC MOBILITIES
Monte Carlo calculations of channeling radiation
[DE81-027655] N82-13818
ATOMIC STRUCTURE
Local density studies of electronic structure and bonding in transition metal compounds N82-13936
Electron band theory and high pressure equation of state
[DE81-027436] N82-13955
Defect structure and properties of intermetallic compound beta-LiAl N82-13959
ATOMS
A comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture N82-13868
ATTACK AIRCRAFT
Using voice control onboard combat aircraft N82-13056
A new approach to modeling the cost of ownership for aircraft systems
[AD-A104434] N82-13679
ATTENTION
A model of the human observer and decision maker N82-13714
ATTENUATION
Transmission of sound across a vortex layer enclosing a cylindrical column of jet N82-13838
ATTITUDE CONTROL
On the modeling and control of flexible space structures N82-13168
AUDITORY SIGNALS
Visual/motion cue mismatch in a coordinated roll maneuver
[NASA-CR-166259] N82-13664
AUGER SPECTROSCOPY
Electric field-enhanced diffusion and electron stimulated desorption of alkali elements from glass surfaces during electron bombardment and Auger electron analysis N82-13961
AURORAS
Three-dimensional mapping of the aurora from digitized all-sky pictures
[REPT-550.368.6] N82-13591
AUSTENITIC STAINLESS STEELS
Fatigue crack propagation studies in two cryogenic steels N82-13213
Welding of austenitic stainless steels for liquid-helium service
[DE81-025602] N82-13429
AUTOMATA THEORY
Automated partitioning of hierarchically specified digital systems N82-13752
AUTOMATIC CONTROL
Sensor failure detection system — for the F100 turbofan engine
[NASA-CR-165515] N82-13145
Further developments in integrated circuit assembling technology
[BMFT-FB-T-80-179] N82-13369
FOA 27 control instruments data system. Control instruments and their functions
[FOA-C-20394-D3] N82-13410
Computer-automated controls for superconducting magnetic energy storage
[DE81-028697] N82-13521
Supervisory control of remote manipulation: A preliminary evaluation N82-13675
Beyond mere automation
[AD-A103836] N82-13736
AUTOMATIC TEST EQUIPMENT
Two-channel telemeter for use in a 3-inch spin air gun
[AD-A102566] N82-13165
Fatigue Test Methodology
[AGARD-LS-118] N82-13274
AUTOMOBILE ENGINES
Performance characteristics of automotive engines in the United States, third series: 1977 Chrysler 318 CID (5.2L), 2V
[PB81-233025] N82-13435
Controlled Speed Accessory Drive demonstration program
[NASA-CR-165010] N82-13981
AUTOMOBILE FUELS
Performance characteristics of automotive engines in the United States, third series: 1977 Chrysler 318 CID (5.2L), 2V
[PB81-233025] N82-13435
Evaluation of techniques for reducing in-use automotive fuel consumption
[PB81-233298] N82-13985
Highway fuel economy study
[PB81-233850] N82-13986
AUTOMOBILES
The influence of motion cues on driver-vehicle performance in a simulator N82-13681
A data collection scheme for identification of parameters in a driver model N82-13696
Manual control analysis of drug effects on driving performance N82-13709
Stability analysis of automobile driver steering control N82-13717
Measures of effectiveness of transportation systems management
[PB81-233884] N82-13984

Weight reduction potential of automobiles and light trucks: 1980 summary source document
[PB81-235756] N82-13987

AUTOREGRESSIVE PROCESSES
Computational problems in autoregressive moving average (ARMA) models N82-13696

AUXILIARY POWER SOURCES
A preliminary estimate of future communications traffic for the electric power system
[NASA-CR-165015] N82-13493

AVALANCHE DIODES
Three-5 heterostructure avalanche photodiode modules for fiber optic communication links in the 1.0 to 1.3 micrometer spectral range
[AD-A099506] N82-13334

AVIONICS
The impact of new guidance and control systems on military aircraft cockpit design
[AGARD-CP-312] N82-13048
How the helicopter cockpit designer uses digital avionics N82-13049
Electronic flight deck displays for military transport aircraft N82-13050
Integration of controls and displays in US Army helicopter cockpits N82-13053
A standard control display unit for multi-aircraft application N82-13054
Command-response data transmision to mechanical systems management effect on the crew/system interface N82-13057
Tanker avionics and aircrew complement evaluation N82-13063
Techniques for interfacing multiplex systems
[AD-A101457] N82-13135
Electronic master monitor and advisory display system test and demonstration report
[AD-A105317] N82-13141
Report on research and technology-FY 1981
[NASA-TM-81367] N82-14047

AXES OF ROTATION
On observing comets for nuclear rotation
N82-14015

AXIAL COMPRESSION LOADS
Effective stress-strain-strength behavior of silicate-grouted sand N82-13257

AXIAL FLOW TURBINES
An aerodynamic design and the overall stage performance of an air-cooled axial-flow turbine
[NAL-TR-321T] N82-13109

AXISYMMETRIC FLOW
Analysis of the development of shallow groundwater supplies by pumping from ponds
[PB81-231904] N82-13476
Investigation of acoustic interactions in jet thrust augmenting ejectors
[AD-A106083] N82-13835

AZIMUTH
The formation of radiation patterns of arc antennas N82-13305

AZOLES
Grafting of 2 (2-hydroxy-5-vinylphenyl) 2H-benzotriazole onto polymers with aliphatic groups. Synthesis and polymerization of 2 (2-hydroxy-5-isopropenylphenyl) 2H-benzotriazole and a new synthesis of 2 (2-hydroxy-5-vinylphenyl) 2H-benzotriazole
[NASA-CR-165016] N82-13171

B

BACKGROUND RADIATION
Detection of trace gases using high resolution spectroscopy
[AD-A104841] N82-13883

BACKSCATTERING
Data on the backscattering coefficients of light ions from solids
[IPPJ-AM-18] N82-13907

BALL BEARINGS
Study of methods for applying and enhancing transfer film coatings of polytetrafluoroethylene (PTEE) to Space Shuttle Main Engine (SSME) High Pressure Oxygen Turbo Pump (HPOTP) bearings
[NASA-CR-161916] N82-13428

BALLISTIC MISSILES
A comparison of three programs for the calculation of surface-ratio
[FOA-C-20392-D8] N82-13779

BALLISTIC TRAJECTORIES
Modeling human tracking error in several different anti-tank systems N82-13699
On the internal target model in a tracking task
N82-13700

BALLISTICS
Transitional ballistics of hypervelocity projectiles
[BMVG-FBWT-80-1] N82-13163

BAND STRUCTURE OF SOLIDS
Electron band theory and high pressure equation of state
[DE81-027436] N82-13955

BANDPASS FILTERS
Narrow passband imagery of comets — Comet West N82-14014

BANDWIDTH
Visual/motion cue mismatch in a coordinated roll maneuver
[NASA-CR-166259] N82-13684

BARRIER LAYERS
Suppression of coal dust explosion by water barrier in a conveyor belt entry
[PB81-233306] N82-13489

BASALT
Catalog of lunar mare basalts greater than 40 grams. Part 1: Major and trace chemistry, with megascopic descriptions and rock and thin section photographs
[NASA-TM-84065] N82-14040

BASES
System design of the distributed Loop Data Base System (BLDBS) N82-13729

BASES (CHEMICAL)
A study of the surface reactivity of silver: An acid base characterization of oxidation reactions
N82-13233

BAYES THEOREM
Application of Bayesian analysis for wind energy site evaluation N82-13619
A Bayesian approach to the symmetric multiple comparisons problem in the two-way balanced design N82-13819

BEAM INTERACTIONS
Numerical study on the interaction between a modulated electron beam and a plasma
[IPPJ-543] N82-13906

BEAM WAVEGUIDES
Construction and maintenance of SUNY facilities at the National Synchrotron Light Source
[DE81-027855] N82-13152
Antenna (selected articles)
[AD-A106409] N82-13323
A statistical analysis of irregular quasi-optical lines (beam guides) with the aid of computer(s)
N82-13324

BEAMS (RADIATION)
Properties of matter at ultra-high pressures
[DE81-026504] N82-13190
Characteristics of antennas with frequency beam swinging N82-13332
Saturnian kilometric radiation: Source locations
[NASA-TM-83846] N82-14038

BEAMS (SUPPORTS)
An experimental study of a reinforced concrete folded plate structure with edge beams N82-13443
Analysis of steel beam-to-column moment connections N82-13444
Moment-strain relationships in elastic-plastic bending of beams
[AD-A101722] N82-13446

BEDROCK
Basement rocks of the main interior basins of the midcontinent
[NASA-CR-164935] N82-13596

BEDS (PROCESS ENGINEERING)
H-Coal product physical properties measurement
[DE81-029095] N82-13245

BENDING MOMENTS
Moment-strain relationships in elastic-plastic bending of beams
[AD-A101722] N82-13446

BENEFICIATION
Benefication with magnetic fluids
[PB81-227128] N82-13485
Water and energy usage in coal preparation
[PB81-238248] N82-13486

BENZENE
Grafting of 2 (2-hydroxy-5-vinylphenyl) 2H-benzotriazole onto polymers with aliphatic groups. Synthesis and polymerization of 2 (2-hydroxy-5-isopropenylphenyl) 2H-benzotriazole and a new synthesis of 2 (2-hydroxy-5-vinylphenyl) 2H-benzotriazole
[NASA-CR-165016] N82-13171
Gas-solid chromatography on cation forms of lightly sulfonated porous polymers N82-13237

BERMUDA
The nitrogen cycle and heat budget of a subtropical lagoon, Devils Hole, Harrington Sound, Bermuda: Implications for nitrous oxide production and consumption in marine environments N82-13611

BERYLLIUM
Theoretical equations of state for metals
[DE81-028743] N82-13224

BERYLLIUM COMPOUNDS
Observation of high field DHVA effect and induced magnetism in single crystal TiBe sub 2
[DE81-025292] N82-13950

BETA FACTOR
EBT Stability Theory: Proceedings of the workshop
[DE81-030635] N82-13909
Effect of Beta limits on reactor performance in EBT N82-13922
On high beta equilibria of plasmas in the quasi-uniform current model: Influence of shaping the plasma cross section and of the second order in the inverse aspect ratio
[REPT-81-131] N82-13927

BIBLIOGRAPHIES
Aeronautical engineering: A continuing bibliography with indexes, supplement 140 — October 1981
[NASA-SP-7037(140)] N82-13044
Compilation of abstracts of dissertations theses, and research papers submitted by candidates for degrees, 1 October 1979 - 30 September 1980
[AD-A104124] N82-13974

BICRYSTALS
Fundamental studies of grain-boundary passivation in polycrystalline silicon with application to improved photovoltaic devices
[DE82-000625] N82-13956

BINARY CODES
Capacity and coding for computer memory with defects N82-13750

BINARY MIXTURES
Solubilities in multicomponent systems of nonspecific interactions N82-13205
A comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture N82-13868

BINARY STARS
Evolution of close binary systems: Observational aspects
[NASA-CR-165039] N82-14027

BINDERS (MATERIALS)
A laboratory evaluation of modified asphalt
[PB81-231615] N82-13269

BIOCONVERSION
Environmental and economic comparison of advanced processes for conversion of coal and biomass into clean energy
[PB81-234239] N82-13256
Biomethanation of biomass pyrolysis gases
[DE82-000236] N82-13541

BIODEGRADATION
Mitigation of biofouling using coatings
[DE81-027900] N82-13647

BIODYNAMICS
Determination of efficient methods of lift by comparing trained and untrained male and female lifters
[AD-A100349] N82-13650

BIOENGINEERING
Pupillometry, a bioengineering overview
N82-13711

BIOLOGICAL EFFECTS
National Research and Development Program: Environmental air. Summary — air pollution monitoring and modeling; effects on people and their environment N82-13571
Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update
[PB81-232611] N82-13655

BIOLOGICAL MODELS (MATHEMATICS)
Model simulation studies to clarify the effect on saccadic eye movements of initial condition velocities set by the Vestibular Ocular Reflex (VOR)
N82-13712
Benefits of detailed models of muscle activation and mechanics N82-13713
BIOMASS ENERGY PRODUCTION
Environmental and economic comparison of advanced processes for conversion of coal and biomass into clean energy
[PB81-234239] N82-13256
Solar-central-receiver fuels and chemicals
[DE82-000941] N82-13530
Technology assessment of solar energy systems: Availability and impacts of woody biomass utilization in the Pacific Northwest
[DE82-000705] N82-13535
Biomass energy systems: Descriptions and employment requirements for typical operations
[DE82-000236] N82-13538
Biomethanation of biomass pyrolysis gases
[DE82-000238] N82-13541
Economic and kinetic studies of the biological production of farm energy and chemicals from biomass
[DE82-000044] N82-13542
Treatment of biomass gasification wastewaters using reverse osmosis
[DE82-000886] N82-13566
Treatment of biomass-gasification wastewaters by wet-air oxidation
[DE82-000805] N82-13567
BIOPHYSICS
Benefits of detailed models of muscle activation and mechanics N82-13713
BIOSYNTHESIS
Biomethanation of biomass pyrolysis gases
[DE82-000236] N82-13541
BIPOLARITY
Bipolar conduction with AC excitation N82-13373
BLADE TIPS
Wind-tunnel investigation of the effects of blade tip geometry on the interaction of torsional loads and performance for an articulated helicopter rotor
[NASA-TP-1926] N82-13107
BLAST LOADS
Computer program for optimum nonlinear dynamic design of reinforced concrete slabs under blast loading (CBARCS)
[AD-A104253] N82-13262
Electronic measurement of airblast overpressure
[AD-A105379] N82-13389
BLOOD FLOW
A monitor for noninvasive estimation of pulmonary blood flow N82-13656
Algorithms for imaging myocardial blood flow using X-ray computed tomography N82-13661
BLUNT BODIES
Aerodynamic heating on the corrugated surface of a 10.2 deg half-angle blunted cone at Mach 6.7
[NASA-TP-1928] N82-13383
BLUNT TRAILING EDGES
Some observations of surface pressures and the near wake of a blunt trailing edge airfoil N82-13100
BODY FLUIDS
The 'measurements of fluid shifts and of the tissue compliance along body axis in man
[BMFT-FB-W-80-011] N82-13654
BODY KINEMATICS
Determination of efficient methods of lift by comparing trained and untrained male and female lifters
[AD-A100349] N82-13650
BODY MEASUREMENT (BIOLOGY)
Anthropometric sizing systems for Army women's field clothing
[AD-A102104] N82-13724
BODY SIZE (BIOLOGY)
Anthropometric sizing systems for Army women's field clothing
[AD-A102104] N82-13724
BODY-WING CONFIGURATIONS
The influence of closed-coupled, rear fuselage mounted nacelles on the design of an advanced high speed wing N82-13092
A calculation method for slender wing-body configurations in supersonic flow at high angles of attack — nonlinear force and pitching moment characteristics
[BMVG-FBWT-79-15] N82-13115
Contributions to the aerodynamics of wing-body configurations in the nonlinear range of angles of attack
[BMVG-FBWT-80-11] N82-13117
BOILERS
Workshop proceedings: Corrosion of Inconel 600 Steam Generator Tubing in the Tubesheet Crevice
[DE81-903554] N82-13226
Workshop proceedings: U-bend tube cracking in steam generators
[DE81-903765] N82-13515
Evaluation of creep-fatigue life-prediction models for the solar central receiver
[DE82-000942] N82-13529
Optical scanner system for internal inspection of steam-generator tubes
[EPRI-NP-1944] N82-13884
BOLTZMANN TRANSPORT EQUATION
A comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture N82-13888
BONE MARROW
Absorbed dose to active red bone marrow from diagnostic and therapeutic uses of radiation
[ARL-TR-021] N82-13651
BORON
Boron implanted strontium titanate N82-13939
BORON CARBIDES
Helium diffusion in irradiated boron carbide
[DE81-027846] N82-13951
BOROSILICATE GLASS
A preliminary analysis of the data from experiment 77-13 and final report on glass fining experiments in zero gravity
[NASA-CR-161884] N82-13154
BOSONS
The hadronic decay rate of the Higgs boson: An application of the running mass N82-13842
BOUNDARIES
The missing boundary problem for smooth manifolds of dimension greater than or equal to six
N82-13806
BOUNDARY LAYER CONTROL
An experimental study of Tollmien-Schlichting wave cancellation — friction drag reduction N82-13120
BOUNDARY LAYER EQUATIONS
Application of the method of weighted residuals to the boundary layer momentum and turbulent stress transport equations N82-13374
BOUNDARY LAYER FLOW
Calculation of transonic air-intakes using a computer package for inviscid and boundary layer flows
N82-13072
An experimental investigation of the turbulent flow in the junction of a flat plate and a body of constant thickness N82-13102
Force and moment, flow-visualization, and boundary-layer tests on a shuttle orbiter model at Mach 6
[NASA-TP-1952] N82-13106
An analytical and experimental study of the steady and unsteady airloads on a wing with oscillating control including a streamlined gap — wind tunnel test
[DFVLR-FB-81-18] N82-13119
An experimental study of Tollmien-Schlichting wave cancellation — friction drag reduction N82-13120
BOUNDARY LAYERS
A review of the effect of Reynolds number on afterbody drag N82-13080
Microstability of the EBT boundary N82-13919
BOUNDARY VALUE PROBLEMS
A nonlinear conservation law with memory — history boundary value problems in viscoelastic motion
[AD-A103882] N82-13791
Solution of initial-value problems for some infinite eventually periodic chains of harmonic oscillators
N82-13807
BRAKING
The influence of high temperature on braking — wheel brakes N82-13433
BRANCHING (MATHEMATICS)
An extension to N dimensions of the Von Karman equations N82-13441
On the buckling force of floating ice plates
[AD-A103733] N82-13472
Solving multiactivity multifacility capacity-constrained 0-1 assignment problems
[AD-A102583] N82-13796
BRAYTON CYCLE
Manual for the program CASLE: Cycle analysis and second-life evaluation
[DE81-027467] N82-13971
BRAZING
Dynamic mass spectrometry: A residual gas analysis method and some applications
[DE81-026230] N82-13195
BREADBOARD MODELS
Experimental and theoretical investigations with laboratory models of phased array antenna
[BMVG-FBWT-79-21] N82-13341
BREEDER REACTORS
Assessment of the computer code COBRA/CFTL — for thermal-hydraulic analysis of simulated gas-cooled fast breeder reactor cores
[DE81-027933] N82-13771
BRIDGES (STRUCTURES)
Inelastic overload analysis of continuous steel multi-girder highway bridges by the finite-element method N82-13440
Effects of restrained thermal movement in a continuous, prestressed concrete bridge without interior expansion joints N82-13461
BRIGHTNESS
Spectrophotometry of faint comets: The asteroid approach N82-13998
A systematic program of cometary spectroscopy
N82-14005
Outburst and nuclear breakup of Comet Halley - 1910 N82-14018
Optical brightness variations in a sample of nineteen radio-quiet quasi-stellar objects N82-14030
BRIGHTNESS TEMPERATURE
Microwave attenuation and brightness temperature due to the gaseous atmosphere: A comparison of JPL and CCIR values
[NASA-CR-165027] N82-13300
Detection of trace gases using high resolution spectroscopy
[AD-A104841] N82-13883
BROADBAND
Principles of the construction of systems, which possess potential frequency independence — antenna design N82-13330
Planetary radio astronomy observations from Voyager-2 near Saturn
[NASA-TM-83856] N82-14037
BUBBLE TECHNIQUE
Reduction of nitric oxide in a fluidized bed
[DE81-030488] N82-13198
BUBBLES
A preliminary analysis of the data from experiment 77-13 and final report on glass fining experiments in zero gravity
[NASA-CR-161884] N82-13154
Two studies of fluidized beds: Heat transfer and grid jets N82-13203
BUCKLING
On the buckling force of floating ice plates
[AD-A103733] N82-13472
BUMPY TORUSES
EBT Stability Theory: Proceedings of the workshop
[DE81-030635] N82-13909
Rudimentary theories of the stability of microwave-heated plasmas N82-13910
Review of recent EBT coupled ring-core stability theory N82-13911
Brief survey of experimental investigation of instabilities in microwave-heated plasmas
N82-13912
Fluctuation measurements in EBT N82-13913
Eigenmode stability analysis for a bumpy torus
N82-13915
Numerical solutions of the EBT Radial eigenmode problem N82-13916
Stability of hot electron plasma in the ELMO bumpy torus N82-13917
Analytical theory of interchange and compressional Alfven instabilities in EBT N82-13918
Microstability of the EBT boundary N82-13919
Kinetic stability analyses in a bumpy cylinder
N82-13921
Effect of Beta limits on reactor performance in EBT N82-13922

BURNING RATE
Test number 2 of propellants for rocket motor E573
[FOA-C-20411-D1] N82-13254

BURSTS
Outburst and nuclear breakup of Comet Halley - 1910 N82-14016

BUTADIENE
Investigation of test methods, material properties, and processes for solar cell encapsulants
[NASA-CR-165031] N82-13503

BY-PRODUCTS
Power-plant fly-ash utilization: A chemical-processing perspective
[DE81-025452] N82-13191

BYPASS RATIO
The role and implementation of different nacelle/engine simulation concepts for wind-tunnel testing in research and development work on transport aircraft N82-13086
Aerodynamic aspects of a high bypass ratio engine installation on a fuselage afterbody N82-13093

C

C-141 AIRCRAFT
Submillimeter observations of solar limb-brightening in the total solar eclipse of 31 July 1981 N82-14043

CADMIUM
The trace metal stratigraphy and recent sedimentary history of anthrogenous particulates on the San Pedro Shelf, California N82-13579

CADMIUM TELLURIDES
HgCdTe fabrication using directed energy techniques
[AD-A105626] N82-13947

CALCIUM COMPOUNDS
Colloidal properties of coagulated calcium-montmorillonite suspensions N82-13609

CALCULATORS
SEASAT equator crossing program
[AD-A099442] N82-13156

CALCULUS
Analysis of coupled translational and rotational diffusion using operator calculus N82-13649

CALIBRATING
Wind tunnel test and analysis techniques using powered simulators for civil nacelle installation drag assessment N82-13088
Practical aspects of instrumentation system installation, volume 13
[NASA-TM-84067] N82-13140
JASPIC-DIP: The digital impedance probe in the JASPIC project
[BMFT-FB-W-80-034] N82-13169
An apparatus and procedure for calibrating a water vapor analyzer in the 0.1- to 15-ppm range
[PB81-231165] N82-13413
Requirements for an effective National Nonionizing Radiation Measurement System
[PB81-223455] N82-13414
Calibration of probabilities: The state of the art to 1980
[AD-A101986] N82-13817

CALIFORNIA
Program planner's guide to geothermal development in California
[DE82-000700] N82-13527
The trace metal stratigraphy and recent sedimentary history of anthrogenous particulates on the San Pedro Shelf, California N82-13579
Recurrence intervals and recency of faulting along the San Gregorio fault zone, San Mateo County, California N82-13581
Atmospheric 222Rn measurements at San Nicolas Island during 1980
[AD-A104802] N82-13602
Biological and physical oceanographic observations pertaining to the trawl fishery in a region of persistent coastal upwelling
[NASA-TM-81332] N82-13637

CAMBERED WINGS
Force measurements on a reflex cambered delta wing
[LOG-C4073] N82-13111

CAMERA SHUTTERS
Electrooptic shutter devices utilizing PLZT ceramic wafers
[DE81-025470] N82-13885

CANARD CONFIGURATIONS
Consolidation of data base for Army generalized missile model
[NASA-CR-166273] N82-13046

CAP CLOUDS
The Sierra Cooperative Pilot Project: Precipitation management research in the Sierra Nevada
[PB81-234452] N82-13630

CAPACITANCE
Charge-based modeling of capacitance in MOS transistors N82-13350

CAPACITORS
Charge-based modeling of capacitance in MOS transistors N82-13350

CAPILLARY FLOW
Heat pipe startup from the supercritical state N82-13400

CARBON
The trace metal stratigraphy and recent sedimentary history of anthrogenous particulates on the San Pedro Shelf, California N82-13579

CARBON CYCLE
Energy generation and the sulfur-carbon cycle
[DE81-030949] N82-13562
On the inadequacy of one dimensional ocean models for the global carbon cycle
[CM-51] N82-13643

CARBON DIOXIDE
Response of the oceans to increasing atmospheric carbon dioxide
[DE81-028178] N82-13558

CARBON DIOXIDE LASERS
Laser heat treatment of track components in combat vehicles, phase 1
[AD-A102761] N82-13219
Long-term operation of a sealed waveguide CO sub 2 laser
[AD-A105261] N82-13420
Surface failure of CO2 laser irradiated glass
[AD-A105454] N82-13421
Fiber optic analog and timing monitoring system for the Antares laser fusion program
[DE81-028799] N82-13925

CARBON MONOXIDE
Control of hydrocarbons and carbon monoxide via catalytic incineration
[DE82-000508] N82-13560

CARBON STARS
An investigation of warm carbon stars N82-14033

CARBON STEELS
Rapid cycle casting of steel
[AD-A103567] N82-13260

CARDIOVASCULAR SYSTEM
Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering N82-13648

CARRIER TO NOISE RATIOS
Transport noise arising from diffusion and bulk or surface generation recombination in semiconductors N82-13963

CARRIER TRANSPORT (SOLID STATE)
Transport noise arising from diffusion and bulk or surface generation recombination in semiconductors N82-13963
The growth and carrier transport properties of sputter deposited GaAs thin films doped with silicon and magnesium N82-13965

CARTESIAN COORDINATES
Interpolating for the location of remote sensor data
[NASA-TM-82169] N82-13469

CASCADE FLOW
Computation of unsteady two-dimensional inviscid flow in turbomachinery cascades N82-13401

CASTING
Rapid cycle casting of steel
[AD-A103567] N82-13260

CASTOR OIL
Some experiences with the use of castor oil as a dielectric
[AD-A102348] N82-13363

CATALOGS (PUBLICATIONS)
Catalog of lunar mare basalts greater than 40 grams. Part 1: Major and trace chemistry, with megascopic descriptions and rock and thin section photographs
[NASA-TM-84085] N82-14040

CATALYSTS
Surface characterization of dispersed supported metal catalysts using a 'time lapse' dynamic pulse technique N82-13177
Preparation, characterization and performance of non-uniform metal catalysts N82-13204
Endurance test and evaluation of alkaline water electrolysis cells
[NASA-CR-165424] N82-13506
Control of hydrocarbons and carbon monoxide via catalytic incineration
[DE82-000508] N82-13560

CATALYTIC ACTIVITY
Catalytic combustion of residual fuels
[NASA-TM-82731] N82-13504
Transient catalytic combustor model
[NASA-CR-165324] N82-13507

CATHODE RAY TUBES
Electronic flight deck displays for military transport aircraft N82-13050
Color CRT displays for the cockpit N82-13051

CATIONS
Gas-solid chromatography on cation forms of lightly sulfonated porous polymers N82-13237

CAVITIES
Numerical study of multicellular natural convection in vertical cavities N82-13403

CEILINGS (METEOROLOGY)
Atmospheric dispersion forecasts at selected locations in the United States
[PB81-230443] N82-13635

CELESTIAL BODIES
Reports of Planetary Geology Program, 1981
[NASA-TM-84211] N82-14041

CELLULOSE
Economic and kinetic studies of the biological production of farm energy and chemicals from biomass
[DE82-000044] N82-13542

CELLULOSE NITRATE
Investigations towards the understanding of surface treatment of propellant grains by means of trace elements
[BMVG-FBWT-79-14] N82-13253

CEMENTS
Micromechanics of expansive mechanisms in expansive cement concretes N82-13258
Construction of a recycled Portland cement concrete pavement — Connecticut expressway
[PB81-233553] N82-13267

CENTER OF PRESSURE
An approximate analytical method for vortex-lift and center of pressure on the slender wing
[NASA-TM-83198] N82-13045

CENTIMETER WAVES
Directed dividers on the metal-dielectric waveguides N82-13326

CERAMICS
Electrooptic shutter devices utilizing PLZT ceramic wafers
[DE81-025470] N82-13885

CERENKOV RADIATION
Inverse cerenkov interaction between relativistic electrons and laser light N82-13425
A vacuum ultraviolet radiation source using Cerenkov radiation N82-13894

CERTIFICATION
COBOL compiler: Northern Telecom, Inc. NTI COBOL/3
[PB81-226417] N82-13749

CESIUM COMPOUNDS
Effects of pressure on the mixed valent properties of Ce and its intermetallic compounds
[DE81-028572] N82-13953

CESIUM VAPOR
Three laser experiments in gases N82-13418

CHANNELS (DATA TRANSMISSION)
Command-response data transmision to mechanical systems management effect on the crew/system interface N82-13057
Techniques for interfacing multiplex systems
[AD-A101457] N82-13135
Adaptive equalization algorithms for a dispersive channel
[ENST-E-80012] N82-13778

CHARACTERIZATION
The internal structure of the magnetopause
[AERONOMICA-ACTA-A-221-1980] N82-13589

CHARGE CARRIERS
A stochastic Langevin dynamics study of correlated ionic motion in one-dimensonal framework solid electrolytes N82-13966

CHARGE COUPLED DEVICES
Design and fabricate a CCD analog multiplier
[AD-A108857] N82-13364

CHARGE DISTRIBUTION
Bipolar conduction with AC excitation N82-13373

CHARGE TRANSFER
Laser induced charge transfer collisions
N82-13418

CHARGED PARTICLES
Electrostatic and hydrodynamic interactions of charged macromolecular systems N82-13242
Laser induced charge transfer collisions
N82-13418
Camelot: A novel concept for a multiterawatt pulse power generator for single pulse burst or repetition rate operation
[AD-A103024] N82-13513
Inclusive charged particle spectrum from the interaction of nuclei with intermediate energy proton
N82-13848
Inelastic scattering of high energy muons from nuclear targets N82-13874
Charge trapping in interface doped MNOS structures N82-13930

CHEMICAL ANALYSIS
Workshop proceedings: Corrosion of Inconel 600 Steam Generator Tubing in the Tubesheet Crevice
[DE81-903554] N82-13226
Beyond mere automation
[AD-A103838] N82-13736

CHEMICAL ATTACK
Rates and mechanisms of chemical weathering in an organic environment at Panolo Mountain, Georgia
N82-13615

CHEMICAL BONDS
Constitution of silicate anions in tetraethyl-ammonium silicates and their aqueous solutions
[NRC/CNR-TT-2004] N82-13170
Molecular interactions in amphiphilic association structures N82-13206
Molecular beam electric resonance studies of weakly bound complexes N82-13867
The structural and vibrational properties of amorphous and crystalline group V elements
N82-13933
Local density studies of electronic structure and bonding in transition metal compounds N82-13936

CHEMICAL COMPOSITION
Observing chemical abundances in comets
N82-13990
Observational data needs useful for modeling the coma N82-13991
Ground-based photometry of comets in the spectral interval 3000 to 3500 angstrom N82-13997

CHEMICAL PROPERTIES
Solar-central-receiver fuels and chemicals
[DE82-000941] N82-13530

CHEMICAL PROPULSION
Low-thrust chemical propulsion system pump technology
[NASA-CR-165219] N82-13427

CHEMICAL REACTIONS
The chemistry of saline water chlorination
N82-13178
Preparation, characterization and performance of non-uniform metal catalysts N82-13204
Polymers with mesomorphic organization in the side chains from vinyl monomers with mesogenic or potentially mesogenic elements N82-13234
Energy generation and the sulfur-carbon cycle
[DE81-030949] N82-13562
Role of molecular dynamics on descriptions of shock front processes
[DE81-028687] N82-13857

CHEMICAL REACTORS
Controlled-flash pyrolysis
[DE82-000284] N82-13196
Catalytic combustion of residual fuels
[NASA-TM-82731] N82-13504

CHEMICAL TESTS
An improved stress corrosion test medium for aluminum alloys
[NASA-TM-82452] N82-13216
Testing and evaluation of MHD materials and substructures
[DE81-024331] N82-13926

CHIPS (ELECTRONICS)
Further developments in integrated circuit assembling technology
[BMFT-FB-T-80-179] N82-13369

CHLORIDES
Stress corrosion cracking of type 304 stainless steel in high temperature dilute chloride solution
N82-13228

CHLORINATION
The chemistry of saline water chlorination
N82-13178

CHLORINE
Evaluation of low-chlorine TATB from a production source
[DE81-025474] N82-13249

CHOLESTEROL
Nonlinear optical effects in liquid crystals
N82-13937

CHONDRITES
Potassium-argon and iodine-xenon gas retention ages of enstatite chondrite meteorites N82-14036

CHROMIUM
The trace metal stratigraphy and recent sedimentary history of anthrogenous particulates on the San Pedro Shelf, California N82-13579

CHROMIUM OXIDES
Quantitative investigations of mixed oxidation states of some first row transition metals in insulator matrices by photoelectron spectroscopy N82-13184

CIRCUIT BREAKERS
High voltage DC switchgear development for multi-kW space power system: Aerospace technology development of three types of solid state power controllers for 200-1100VDC with current ratings of 25, 50, and 80 amperes with one type utilizing an electromechanical device
[NASA-CR-165413] N82-13357

CIRCUIT DIAGRAMS
Direct digital simulation of power semiconductor-controlled electrical machines
N82-13355

CIRCUIT PROTECTION
Distributed photovoltaic systems: Utility interface issues and their present status
[NASA-CR-165019] N82-13492

CIRCULAR CYLINDERS
Effects of intake geometry on circular pitot intake performance at zero and low forward speeds
N82-13070
An experimental investigation of the flow past a finite circular cylinder at a low subcritical Reynolds number
N82-13105
Natural and mutual conductivities of half-wave slots, arbitrarily oriented on the conducting surface of circular cylinder --- slot antennas N82-13331

CIRCULAR TUBES
Experimental and analytical investigation of a fluidic power generator
[JPL-PUB-81-100] N82-13386

CITIES
An experimental study of turbulence in an urban environment N82-13618

CIVIL AVIATION
Guidelines for line-oriented flight training, volume 2
[NASA-CP-2184-VOL-2] N82-13123
Issues related to line-oriented flight training
N82-13124
Line-oriented flight training: Northwest Airlines
N82-13125
United Airlines LOFT training N82-13126
Eastern Airlines LOFT program N82-13127
Texas International Airlines LOFT program
N82-13128
Delta Airlines LOFT training N82-13129
American Airlines LOFT evaluation program
N82-13130
Group 1: Scenario design and development issues N82-13131
Group 2: Real time LOFT operations N82-13132

CLADDING
Asymmetric stress and failure analysis
[DE81-026842] N82-13451

CLASSIFICATIONS
On the dependence of the growth of an entire function of the distribution of the zeros of its derivatives and a conjecture of G. Polya N82-13605

CLAYS
Colloidal properties of coagulated calcium-montmorillonite suspensions N82-13609

CLEAN ENERGY
Environmental and economic comparison of advanced processes for conversion of coal and biomass into clean energy
[PB81-234239] N82-13256

CLEAR AIR TURBULENCE
Feasibility study of a procedure to detect and warn of low level wind shear
[NASA-CR-3480] N82-13621
Detection of infrasound generated by Clear Air Turbulence (CAT) N82-13630

CLIMATOLOGY
Regional hydrologic models for climatology: An application to three Wisconsin watersheds
N82-13467

CLOCKS
Electronic master monitor and advisory display system test and demonstration report
[AD-A105317] N82-13141

CLOUD GLACIATION
Field tests of a surface ice accretion measurement system
[AD-A100282] N82-13624

CLOUD PHYSICS
Hawaii Mesoscale Energy and Climate project (HAMEC). 3: Atmospheric aerosol and cloud microphysics measurements
[PB81-231482] N82-13633

CLOUD SEEDING
Project Skywater: Fiscal year 1979 report. Atmospheric Resources Research Program
[PB81-234494] N82-13629
The Sierra Cooperative Pilot Project: Precipitation management research in the Sierra Nevada
[PB81-234452] N82-13630

CLOUDS
Magnetic clouds between 2-4 AU: Voyager observations
[NASA-TM-83849] N82-13593
Detection of trace gases using high resolution spectroscopy
[AD-A104841] N82-13883

CLUMPS
A study of the formation and structure of small clusters of noble gases and sulfur hexafluoride formed in Laval Nozzle molecular beams N82-13201
Some small sample non-parametric space-time clustering tests N82-13611

CMOS
Effect of gate oxide thickness on the radiation hardness of silicon-gate CMOS
[DE81-027202] N82-13366

COAL
Power-plant fly-ash utilization: A chemical-processing perspective
[DE81-025452] N82-13191
Controlled-flash pyrolysis
[DE82-000284] N82-13196
Environmental and economic comparison of advanced processes for conversion of coal and biomass into clean energy
[PB81-234239] N82-13256
Three Bureau of Mines optical dust probes
[PB81-231441] N82-13412
Water and energy usage in coal preparation
[PB81-236248] N82-13486
Environmental effects of pollutants from coal combustion. 2: The Colstrip, Montana Power Plant
[PB81-234114] N82-13573
Pyrolytic characterization of the organic matter in selected coals and in the Devonian shales of southern West Virginia N82-13578
A depositional model for major coal seams in the Rock Springs Formation, Upper Cretaceous, southwest Wyoming N82-13580

COAL GASIFICATION
Soviet UCG experience specifically related to field experiments in the United States
[DE81-026642] N82-13244
Low/medium Btu coal gasification assessment program for potential users in New Jersey: Executive summary
[DE81-025475] N82-13247

Low-Btu gasification of coal for electric power generation, phase 1, 2, and 3
[DE81-029482] N82-13248
Solar-central-receiver fuels and chemicals
[DE82-000941] N82-13530
Environmental hazard rankings of pollutants generated in coal gasification processes
[PB81-231698] N82-13576

COAL LIQUEFACTION
Controlled-flash pyrolysis
[DE82-000284] N82-13196
H-Coal product physical properties measurement
[DE81-029095] N82-13245
Environmental and economic comparison of advanced processes for conversion of coal and biomass into clean energy
[PB81-234239] N82-13256

COASTAL ECOLOGY
Ecology and distribution of the Benthic community on the Monterey Breakwater, Monterey, California
[AD-A102047] N82-13555

COASTAL WATER
The propagation of inertial-internal waves in coastal upwelling regions N82-13645

COATING
Study of methods for applying and enhancing transfer film coatings of polytetrafluoroethylene (PTEE) to Space Shuttle Main Engine (SSME) High Pressure Oxygen Turbo Pump (HPOTP) bearings
[NASA-CR-161916] N82-13428

COBALT
An investigation of the nickel-cobalt occurrence in the southeast Missouri mining district N82-13613

COBOL
Digital Equation Corporation PDP-11 COBOL, version 4.1
[PB81-232423] N82-13746
Digital equipment corporation, PDP-11 COBOL version, 4.1 indexed 1-0 module
[PB81-232415] N82-13747
Sperry Univac ASCII COBOL level 5R2
[PB81-228892] N82-13748
COBOL compiler: Northern Telecom, Inc. NTI COBOL/3
[PB81-226417] N82-13749

COCKPITS
The impact of new guidance and control systems on military aircraft cockpit design
[AGARD-CP-312] N82-13048
How the helicopter cockpit designer uses digital avionics N82-13049
Electronic flight deck displays for military transport aircraft N82-13050
Color CRT displays for the cockpit N82-13051
Integration of controls and displays in US Army helicopter cockpits N82-13053
F/A 18 Hornet crew station N82-13064
Modeling of the aircraft in-trail-following task during profile descent N82-13690
Functional structure and dynamics of the human nervous system N82-13692

CODING
Digital video bandwidth compression systems employing block truncation coding N82-13290
Capacity and coding for computer memory with defects N82-13750

COGNITION
Pupillometric measurement of operator workload N82-13666
The cognitive demands of second order manual control: Applications of the event related brain potential N82-13667
Identification of cognitive factors related to remote work performance using closed circuit TV displays N82-13679

COHERENT LIGHT
Theory and calculation of Raman line shapes and excitation profiles near a one photon resonance N82-13866

COHERENT RADIATION
Solution of the problem of the synthesis of antennas with the aid of a coherent optical system N82-13313

COHERENT SCATTERING
Defect studies of molecular and rare-gas crystals down to 50mK and up to 150 MPa
[DE81-026617] N82-13949

COLD FLOW TESTS
Flow characteristics of a multiple nozzle exhaust gas eductor system
[AD-A104072] N82-13387

COLD WORKING
Load and resistance factor design of cold-formed steel structural members N82-13464

COLLIMATION
Head up displays N82-13052

COLLISION PARAMETERS
Laser induced charge transfer collisions N82-13418

COLLISIONLESS PLASMAS
Ion cyclotron resonance heating and its effect on confinement in Tokamaks N82-13896

COLLISIONS
New problems of cometary observations from space N82-13994

COLLOCATION
Simulation studies on the computation of the gravity vector in space from surface data considering the topography of the Earth N82-13612

COLLOIDS
Colloidal properties of coagulated calcium-montmorillonite suspensions N82-13609

COLOR
Intermediate band surface photometry of elliptical galaxies N82-14035

COLUMNS (SUPPORTS)
Analysis of steel beam-to-column moment connections N82-13444

COMBAT
Use of a helmet-mounted matrix display for presenting energy-maneuverability information during simulated close combat N82-13061

COMBINED CYCLE POWER GENERATION
Experimental and analytical systems studies of a combined thermal-photovoltaic residential solar system
[DE81-029539] N82-13534

COMBUSTION CHAMBERS
Gas turbine combustor soot and radiation N82-13174
High-temperature measurements of alkali levels in an experimental 6-inch AFBC
[DE81-023632] N82-13193
Catalytic combustion of residual fuels
[NASA-TM-82731] N82-13504
Transient catalytic combustor model
[NASA-CR-165324] N82-13507
Gas-turbine critical research and advanced technology support project
[NASA-TM-81708] N82-13509
Testing and evaluation of MHD materials and substructures
[DE81-024331] N82-13926
Update on Specified European R and D Efforts. Part 1: Appendices
[DE81-026404] N82-13983

COMBUSTION EFFICIENCY
Catalytic combustion of residual fuels
[NASA-TM-82731] N82-13504

COMBUSTION PHYSICS
Gas turbine combustor soot and radiation N82-13174
Cyclic compression, combustion and expansion of a fuel and air mixture in a cylinder containing a catalyst
[PB81-232480] N82-13434

COMBUSTION PRODUCTS
Gas turbine combustor soot and radiation N82-13174
Power-plant fly-ash utilization: A chemical-processing perspective
[DE81-025452] N82-13191
Catalytic combustion of residual fuels
[NASA-TM-82731] N82-13504
High altitude testing of residential wood-fired combustion equipment
[PB81-226151] N82-13575

COMET HEADS
Observational data needs for plasma phenomena N82-13992
New problems of cometary observations from space N82-13994

COMET NUCLEI
Infrared observations of comets N82-14000
On observing comets for nuclear rotation N82-14015
Outburst and nuclear breakup of Comet Halley - 1910 N82-14018

COMET TAILS
Observational data needs for plasma phenomena N82-13992

COMETARY ATMOSPHERES
Spectral imagery: Recent results with the SPIFI and their implications for cometary atmospheric studies --- servocontrolled polarimetric imaging Fabry-Perot interferometer N82-14011
Laboratory measurements of the cometary photochemical phenomena N82-14023

COMETS
Modern Observational Techniques for Comets --- conferences
[NASA-CR-165006] N82-13989
Observing chemical abundances in comets N82-13990
Observational data needs useful for modeling the coma N82-13991
Anticipated results from dust experiments on cometary missions N82-13993
Cometary ephemerides - needs and concerns N82-13995
Introductory remarks: Photometry section N82-13996
Ground-based photometry of comets in the spectral interval 3000 to 3500 angstrom N82-13997
Spectrophotometry of faint comets: The asteroid approach N82-13998
Results to be expected from light scattering dust analyzer during a rendezvous mission N82-13999
Infrared observations of faint comets N82-14001
Radio observations of comets N82-14002
Millimeter wave radiometry as a means of determining cometary surface and subsurface temperature N82-14003
The spectroscopy of comets: Introductory remarks N82-14004
A systematic program of cometary spectroscopy N82-14005
Observing facilities at the European Southern Observatory (ESO) in Chile for cometary observations N82-14006
Ground-based cometary spectroscopy N82-14007
Correlated ground-based and the observations N82-14008
Ultraviolet spectroscopy of comets using sounding rockets, IUE and Spacelab N82-14009
Observations of faint comets at McDonald Observatory: 1978-1980 N82-14010
A possible technique for cometary studies with high angular and spectral resolution N82-14012
The JOCR program --- Joint Observatory for Cometary research N82-14013
Existing cometary data and future needs N82-14017
Laboratory Research --- spectroscopic analysis, photochemical reactions, and proton irradiation of ice N82-14022
Astrometric observations of comets and asteroids and subsequent orbital investigations
[NASA-CR-165004] N82-14039

COMMAND AND CONTROL
Using voice control onboard combat aircraft N82-13056
Voice control of the space shuttle video system N82-13719

COMMERCIAL ENERGY
Ultimate in building energy analysis: DOE-2 and BLAST
[DE81-028703] N82-13263

COMMUNICATING
Linguistic and human performance considerations in the design of an anticipatory communication aid N82-13657

COMMUNICATION NETWORKS
The 30/20 GHz communications satellite trunking network study
[NASA-CR-165467] N82-13302
Fiber optics (optical waveguides) technology: Potential application in the DCS
[AD-A104740] N82-13303
Three-stage commutation field of the system of the repeated use of short-wave receiving antennas N82-13317
The message processing and distribution system development
[AD-A104585] N82-13333

Flow control and routing in an integrated voice and data communication network
[AD-A103342] N82-13337

COMMUNICATION SATELLITES

Technical basis for efficient management of geostationary satellite orbit/spectrum N82-13159

The 30/20 GHz communications satellite trunking network study
[NASA-CR-165467] N82-13302

COMMUNICATION THEORY

Preliminary analysis of a breadth-first parsing algorithm: Theoretical and experimental results
[AD-A101852] N82-13797

COMPARISON

A Bayesian approach to the symmetric multiple comparisons problem in the two-way balanced design N82-13819

COMPARTMENTS

A stochastic extension of the structural properties of compartment models via a Kronecker algebra N82-13810

COMPATIBILITY

Studies of polymer compatibility by nonradiative energy transfer N82-13235

COMPILERS

Digital Equipment Corporation VAX-11 FORTRAN, version 2
[PB81-232431] N82-13745

Digital Equation Corporation PDP-11 COBOL, version 4.1
[PB81-232423] N82-13746

Digital equipment corporation, PDP-11 COBOL version, 4.1 indexed 1-0 module
[PB81-232415] N82-13747

Sperry Univac ASCII COBOL level 5R2
[PB81-226892] N82-13748

COBOL compiler: Northern Telecom, Inc. NTI COBOL/3
[PB81-226417] N82-13749

Compiler generation from lambda calculus definitions of programming languages N82-13759

COMPLEX COMPOUNDS

Molecular beam electric resonance studies of weakly bound complexes N82-13867

COMPLEX SYSTEMS

Descriptive techniques for digital system containing complex hardware components N82-13754

COMPONENT RELIABILITY

Practical aspects of instrumentation system installation, volume 13
[NASA-TM-84067] N82-13140

Passive/hybrid solar components: An approach to standard thermal test methods
[PB81-227886] N82-13549

Fiber optic quality assurance at the Nevada Test Site
[DE81-028740] N82-13890

COMPRESSED AIR

Compressed air energy storage: Preliminary design and site development program in an aquifer. Volume 2: Utility system planning
[DE82-000466] N82-13544

COMPRESSIBLE FLOW

A numerical study of laminar unsteady compressible flow over airfoils N82-13099

Modeling of turbulent mixing at density discontinuities in nonsteady compressible flows
[AD-A105564] N82-13391

COMPRESSION LOADS

Cyclic compression, combustion and expansion of a fuel and air mixture in a cylinder containing a catalyst
[PB81-232480] N82-13434

Measured pavement response to transient aircraft loadings N82-13442

On the buckling force of floating ice plates
[AD-A103733] N82-13472

Electron band theory and high pressure equation of state
[DE81-027436] N82-13955

COMPRESSION TESTS

Effective stress-strain-strength behavior of silicate-grouted sand N82-13257

COMPRESSOR BLADES

The effect of rotor blade thickness and surface finish on the performance of a small axial flow turbine
[NASA-TM-82726] N82-13114

COMPRESSOR EFFICIENCY

Compressor stall inducing installation effects of an engine control parameter for the CF-5 aircraft N82-13085

COMPRESSORS

A device for simulating at a compressor bench an air inlet with large incidence N82-13081

COMPTON EFFECT

Energy spectral analysis in projection radiography N82-13293

Compton scattering in a uniform, constant magnetic field N82-13968

COMPUTATION

Technical evaluation report on the Fluid Dynamics Panel Symposium on Computation of Viscous-Inviscid Interactions
[AGARD-AR-171] N82-13384

Probabilistic error analysis of floating point and CRD arithmetics N82-13758

Solution of single linear tridiagonal systems and vectorization of the ICOG algorithm on the Cray 1 — laser fusion
[DE81-025461] N82-13773

Feedback plasma control in hybrid poloidal coil system
[IPPJ-542] N82-13905

COMPUTATIONAL FLUID DYNAMICS

Prediction and measurement of time-variant, three-dimensional flows in military aircraft intakes N82-13069

Navier-Stokes solutions for a supersonic coflowing axisymmetric nozzle with a thick annulus N82-13101

Lagrangian fluid dynamics using the Voronoi-Delaunay mesh
[LA-UR-81-1421] N82-13393

A solution of the Navier-Stokes equations by a mixed finite element method
[ONERA-NT-1981-1] N82-13398

COMPUTER COMPONENTS

Descriptive techniques for digital system containing complex hardware components N82-13754

COMPUTER DESIGN

Methods of verification of digital logic N82-13783

COMPUTER GRAPHICS

PLOT2K: A graphics interface of system 2000
[DE81-028706] N82-13774

Increase in the profitability of design and process planning by integrated and graphic data processing, phase 1
[BMFT-FB-W-81-005] N82-13777

Generation of orthogonal and nearly orthogonal boundary-fitted coordinates with direct control of grid spacing
[LOG-J12610] N82-13790

The interactive astronomical data analysis facility - image enhancement techniques to Comet Halley N82-14019

COMPUTER NETWORKS

Flow control and routing in an integrated voice and data communication network
[AD-A103342] N82-13337

Simplified extension of the LSI-11 Q-Bus for a high energy laser control application
[DE81-027001] N82-13424

Beyond mere automation
[AD-A103838] N82-13736

On the formal specification of computer communication protocols
[AD-A100189] N82-13738

Distributed and decentralized control in fully distributed processing systems
[AD-A104379] N82-13739

A difference in efficiency between synchronous and asynchronous systems
[AD-A102280] N82-13742

COMPUTER PROGRAM INTEGRITY

Assessment of the computer code COBRA/CFTL — for thermal-hydraulic analysis of simulated gas-cooled fast breeder reactor cores
[DE81-027933] N82-13771

COMPUTER PROGRAMMING

Computer science and technology: NBS Programming Environment Workshop report
[PB81-237869] N82-13744

SEPAC software configuration control plan and procedures, revision 1
[NASA-CR-161915] N82-13765

Software design and documentation language: User's guide for SDDL release 4
[NASA-CR-165025] N82-13767

Problems with the multitasking facilities in the ADA programming language
[AD-A105229] N82-13769

Research on knowledge based programming and algorithm design
[AD-A105861] N82-13770

A comparison of three programs for the calculation of surface-ratio
[FOA-C-20392-D6] N82-13779

Parallel scheduling algorithms
[AD-A103796] N82-13820

HETFIS: High-energy nucleon-meson transport code with fission
[DE81-027674] N82-13873

COMPUTER PROGRAMS

Subsonic military aircraft engine intake: An integrated theoretical experiment design N82-13073

Numerical analysis of the scramjet-inlet flow field by using two-dimensional Navier-Stokes equations
[NASA-TP-1940] N82-13142

Ultimate in building energy analysis: DOE-2 and BLAST
[DE81-028703] N82-13263

MAGNA: A finite element program for the materially and geometrically nonlinear analysis of three-dimensional structures subjected to static and transient loading
[AD-A099454] N82-13448

Dynamic analysis of flexible spatial mechanisms and robotic manipulators N82-13460

Proceedings of the 1981 Army Numerical Analysis and Computers Conference
[AD-A103175] N82-13727

Playbk-routines to drive a digital-to-analog converter
[AD-A102049] N82-13741

Computer science and technology: NBS Programming Environment Workshop report
[PB81-237869] N82-13744

Digital Equipment Corporation VAX-11 FORTRAN, version 2
[PB81-232431] N82-13745

Digital Equation Corporation PDP-11 COBOL, version 4.1
[PB81-232423] N82-13746

Digital equipment corporation, PDP-11 COBOL version, 4.1 indexed 1-0 module
[PB81-232415] N82-13747

SEPAC software configuration control plan and procedures, revision 1
[NASA-CR-161915] N82-13765

Software design and documentation language: User's guide for SDDL release 4
[NASA-CR-165025] N82-13767

Assessment of the computer code COBRA/CFTL — for thermal-hydraulic analysis of simulated gas-cooled fast breeder reactor cores
[DE81-027933] N82-13771

User's manuals for DYNA3D and DYNAP: Nonlinear dynamic analysis of solids in three dimensions
[DE81-028360] N82-13772

Solution of single linear tridiagonal systems and vectorization of the ICOG algorithm on the Cray 1 — laser fusion
[DE81-025461] N82-13773

PLOT2K: A graphics interface of system 2000
[DE81-028706] N82-13774

MERLIN: A computer program to transfer finite-element meshes
[DE82-000806] N82-13775

Study on the implementation of a program for quality control of computer programs, phase 1 — European Space Agency
[ESA-CR(P)-1444] N82-13780

Solving multiactivity multifacility capacity-constrained 0-1 assignment problems
[AD-A102583] N82-13796

Computer programs for line shape analysis of X-ray diffraction peaks — thin film analysis
[PB81-227787] N82-13958

Manual for the program CASLE: Cycle analysis and second-life evaluation
[DE81-027487] N82-13971

COMPUTER STORAGE DEVICES

An approach for numerical database management N82-13731

Capacity and coding for computer memory with defects N82-13750
Direct execution string processor N82-13753

COMPUTER SYSTEMS DESIGN
The SACLANTCEN oceanographic data base. Volume 1: Design criteria and data structure and content
[AD-A103277] N82-13639
System design of the distributed Loop Data Base System (BLDBS) N82-13729
An integrated approach for the specification and the design of the conceptual level in database systems N82-13730
Concurrent testing and checking in computer systems N82-13751
Automated partitioning of hierarchically specified digital systems N82-13752
Direct execution string processor N82-13753
Research on knowledge based programming and algorithm design
[AD-A105661] N82-13770
Design of a real time, interactive, parallel simulation computer N82-13781

COMPUTER SYSTEMS PERFORMANCE
An analytical study of multiprocessor system reliability N82-13728
Concurrent testing and checking in computer systems N82-13751

COMPUTER SYSTÊMS PROGRAMS
Use of principle of regularization in direct and mixed problems of the theory of the synthesis of radiating systems N82-13309
An integrated approach for the specification and the design of the conceptual level in database systems N82-13730
Concurrent testing and checking in computer systems N82-13751

COMPUTER SYSTEMS SIMULATION
An analytical study of multiprocessor system reliability N82-13728
An integrated approach for the specification and the design of the conceptual level in database systems N82-13730
Descriptive techniques for digital system containing complex hardware components N82-13754

COMPUTER TECHNIQUES
Computer aided manual tracking N82-13705
Compilation of abstracts of dissertations theses, and research papers submitted by candidates for degrees, 1 October 1979 - 30 September 1980
[AD-A104124] N82-13974

COMPUTER VISION
Symbolic reasoning among 3-D models and 2-D images N82-13761
Computer vision
[NASA-CR-165012] N82-13766

COMPUTERIZED DESIGN
Geometric programming for engineering design optimization N82-13288
Direct digital simulation of power semiconductor-controlled electrical machines N82-13355
Validation, modeling, and computer assisted design program for power converters — confirmation of dc/dc converters predicted performance
[ESTEC/DERA-8/7208] N82-13370
Statistical energy analysis computer program, user's guide
[NASA-CR-161913] N82-13764
Computer implementation of optimal multivariable controller design in the frequency domain N82-13785

COMPUTERIZED SIMULATION
Subsonic military aircraft engine intake: An integrated theoretical experiment design N82-13073
Satellite attitude control with decomposed controller
[LOG-G888] N82-13160
Titanium response to a nuclear radiation environment
[AD-A102516] N82-13220
Ultimate in building energy analysis: DOE-2 and BLAST
[DE81-028703] N82-13263
Environment simulator for radar signals on the digital level
[FOA-A-30025-E4] N82-13343
Charge-based modeling of capacitance in MOS transistors N82-13350
Direct digital simulation of power semiconductor-controlled electrical machines N82-13355
Application of a gravity-driven wickless heat pipe for ice production in a cold energy storage system N82-13377
Mixing of a passive scalar in isotropic and sheared homogeneous turbulence N82-13405
MAGNA: A finite element program for the materially and geometrically nonlinear analysis of three-dimensional structures subjected to static and transient loading
[AD-A099454] N82-13448
Silicon solar cell optimization
[AD-A106005] N82-13514
Predictor symbology in computer-generated perspective displays N82-13674
Model simulation studies to clarify the effect on saccadic eye movements of initial condition velocities set by the Vestibular Ocular Reflex (VOR) N82-13712
Multi-sensor image registration N82-13755
Assessment of the computer code COBRA/CFTL — for thermal-hydraulic analysis of simulated gas-cooled fast breeder reactor cores
[DE81-027933] N82-13771
Design of a real time, interactive, parallel simulation computer N82-13781
The reverse-field rigid rotor model, calculation and simulation N82-13898
Observational data needs useful for modeling the coma N82-13991

COMPUTERS
Interruption as a test of the user-computer interface N82-13721
A model for the control mode man-computer interface dialogue N82-13722
Proceedings of the 1981 Army Numerical Analysis and Computers Conference
[AD-A103175] N82-13727
Application of computer voice input/output
[DE81-026769] N82-13743
Probabilistic error analysis of floating point and CRD arithmetics N82-13758

CONCENTRATING
Concentration of organic compounds in water: A literature survey
[DE81-026517] N82-13556

CONCENTRATION
Response of the oceans to increasing atmospheric carbon dioxide
[DE81-028178] N82-13558

CONCRETE STRUCTURES
An experimental study of a reinforced concrete folded plate structure with edge beams N82-13443
Elastic-plastic-fracture analysis of concrete structures N82-13462
Theory and application of experimental model analysis in earthquake engineering N82-13[illegible]

CONCRETES
Micromechanics of expansive mechanisms in expansive cement concretes N82-13258
Construction of a recycled Portland cement concrete pavement — Connecticut expressway
[PB81-233553] N82-13267
Simultaneous heat and mass transfer in a porous medium N82-13404

CONDENSATES
Environmental effects of pollutants from coal combustion. 1: The Four Corners Power Plant, Farmington, N.M.
[PB81-230427] N82-13572
Environmental effects of pollutants from coal combustion. 2: The Colstrip, Montana Power Plant
[PB81-234114] N82-13573

CONDUCTION BANDS
Three laser experiments in gases N82-13416

CONDUCTORS
A hybrid method which combines a moment method current with an asymptotic current
[AD-A102199] N82-13340

CONES
Aerodynamic heating on the corrugated surface of a 10.2 deg half-angle blunted cone at Mach 6.7
[NASA-TP-1926] N82-13383

CONFERENCES
The impact of new guidance and control systems on military aircraft cockpit design
[AGARD-CP-312] N82-13048
Guidelines for line-oriented flight training, volume 2
[NASA-CP-2184-VOL-2] N82-13123
Workshop proceedings: Corrosion of Inconel 600 Steam Generator Tubing in the Tubesheet Crevice
[DE81-903554] N82-13226
Papers presented to the Conference on the Processes of Planetary Rifting
[LPI-CONTRIB-457] N82-13595
Artificial Reefs: Proceedings of a Conference
[PB81-227779] N82-13644
Proceedings of the Seventeenth Annual Conference on Manual Control
[NASA-CR-165005] N82-13665
Proceedings of the 1981 Army Numerical Analysis and Computers Conference
[AD-A103175] N82-13727
Managing information technology change in the decade of the 80's
[AD-A099441] N82-13976

CONFIDENCE LIMITS
Confidence intervals for the reliability of a future system configuration
[AD-A105031] N82-13814

CONFIGURATION INTERACTION
Introduction to the configurable highly parallel computer, revision
[AD-A099776] N82-13735

CONGRESSIONAL REPORTS
Natural gas plan needed to provide greater protection for high-priority and critical uses
[PB81-228488] N82-13255

CONICAL NOZZLES
The subsonic performance of practical military variable area convergent nozzles N82-13076

CONNECTORS
Analysis of steel beam-to-column moment connections N82-13444

CONSECUTIVE EVENTS
Assessing probability assessors: Calibration and refinement
[AD-A104174] N82-13815

CONSERVATION LAWS
A nonlinear conservation law with memory — history boundary value problems in viscoelastic motion
[AD-A103882] N82-13791

CONSOLES
Development of a miniaturised digital thrust demand unit N82-13055

CONSTANTAN
Pressure measurements of non-planar stress waves — dual element strain gage
[DE81-028729] N82-13454

CONSTANTS
Determination of optical constants from extinction measurements
[AD-A099494] N82-13882

CONTEXT FREE LANGUAGES
Preliminary analysis of a breadth-first parsing algorithm: Theoretical and experimental results
[AD-A101852] N82-13797

CONTINENTAL SHELVES
Surface waves in strong ground motion with application to offshore environments N82-13584
Environmental assessment of the Alaskan Continental Shelf: Annual reports of principal investigators for the year ending March 1980. Volume 5: Hazards
[PB81-225732] N82-13607

CONTINENTS
Papers presented to the Conference on the Processes of Planetary Rifting
[LPI-CONTRIB-457] N82-13595

CONTINUITY (MATHEMATICS)
The least fixed point property for omega chain continuous functions N82-13787

CONTINUOUS SPECTRA
Ground-based cometary spectroscopy N82-14007

CONTINUOUS WAVE LASERS
CW laser annealing and CW laser assisted diffusion in gallium arsenide N82-13943

CONTINUUM MECHANICS
Nonlinear waves in rods
[AD-A101333] N82-13447
Long-range interactions in lattice field theory N82-13941

CONTRACTION
Thermal contraction and flexure of intracratonic basins: A three dimensional study of the Michigan Basin N82-13582

CONTROL

A model for the control mode man-computer interface dialogue N82-13722

CONTROL BOARDS

Tanker avionics and aircrew complement evaluation N82-13063

F/A 18 Hornet crew station N82-13064

CONTROL EQUIPMENT

The impact of new guidance and control systems on military aircraft cockpit design [AGARD-CP-312] N82-13046

Integration of controls and displays in US Army helicopter cockpits N82-13053

A standard control display unit for multi-aircraft application N82-13054

Development of a miniaturised digital thrust demand unit N82-13055

Sensor failure detection system --- for the F100 turbofan engine [NASA-CR-165515] N82-13145

Shape determination and control for large space structures [JPL-PUB-81-71] N82-13166

FOA 27 control instruments data system. Control instruments and their functions [FOA-C-20394-D3] N82-13410

Controlled Speed Accessory Drive demonstration program [NASA-CR-165010] N82-13981

CONTROL SIMULATION

Man/machine interface development for the REMOTEX concept N82-13678

Identification of multiloop pilot describing functions obtained from simulated approaches to an aircraft carrier N82-13686

Feedback plasma control in hybrid poloidal coil system [IPPJ-542] N82-13905

CONTROL STABILITY

Stability analysis of automobile driver steering control N82-13717

CONTROL SURFACES

Force and moment, flow-visualization, and boundary-layer tests on a shuttle orbiter model at Mach 6 [NASA-TP-1952] N82-13106

Pressure distributions on three different cruciform aft-tail control surfaces of a wingless missile at Mach 1.60, 2.36, and 3.70. Volume 1: Trapezoidal tail [NASA-TM-80097] N82-13110

CONTROL THEORY

Satellite attitude control with decomposed controller [LOG-G668] N82-13160

Distributed and decentralized control in fully distributed processing systems [AD-A104379] N82-13739

CONTROL UNITS (COMPUTERS)

Application of computer voice input/output [DE81-026769] N82-13743

CONTROLLABILITY

Evaluation of a pilot workload assessment device to test alternate display formats and control handling qualities N82-13062

Limited evaluation of an F-14A airplane utilizing an aileron-rudder interconnect control system in the landing configuration [NASA-TM-81972] N82-13148

On the use of the OCM's quadratic objective function as a pilot rating metric N82-13693

CONTROLLED FUSION

Gas target neutron generator studies [UTIAS-251] N82-13850

CONTROLLERS

Control design for parameter sensitivity reduction in linear regulators: Application to large flexible space structures N82-13156

Simplified extension of the LSI-11 Q-Bus for a high energy laser control application [DE81-027001] N82-13424

A data collection scheme for identification of parameters in a driver model N82-13696

Playbk-routines to drive a digital-to-analog converter [AD-A102049] N82-13741

Computer implementation of optimal multivariable controller design in the frequency domain N82-13785

CONVERGENCE

Strong convergence of nearest neighbor regression estimators [AD-A104479] N82-13794

CONVERGENT NOZZLES

The subsonic performance of practical military variable area convergent nozzles N82-13076

Comparison of different nozzle concepts for a reheated turbofan N82-13077

Investigation of acoustic interactions in jet thrust augmenting ejectors [AD-A106083] N82-13835

CONVERGENT-DIVERGENT NOZZLES

Comparison of different nozzle concepts for a reheated turbofan N82-13077

CONVOLUTION INTEGRALS

Comparison of data inversion techniques for remotely sensed wide-angle observations of Earth emitted radiation [NASA-TP-1924] N82-13620

Evaluation of HALO deconvolution schemes [AD-A105125] N82-13878

COOLING

Electric coheating experiment to determine the heat-loss coefficient of a double-envelope house [DE81-027937] N82-13264

Thermal contraction and flexure of intracratonic basins: A three dimensional study of the Michigan Basin N82-13582

COORDINATES

Three-dimensional mapping of the aurora from digitized all-sky pictures [REPT-550.388.8] N82-13591

MERLIN: A computer program to transfer finite-element meshes [DE82-000606] N82-13775

Curvature singularities in certain space-times N82-13824

COORDINATION POLYMERS

Studies of polymer compatibility by nonradiative energy transfer N82-13235

COPOLYMERS

Structure-property relationships in segmented elastomers: Small angle X-ray scattering, thermal, and mechanical studies N82-13240

COPPER

Acoustic nondestructive evaluation of microstructure --- pure copper and plain carbon and low alloy steels N82-13211

The trace metal stratigraphy and recent sedimentary history of anthrogenous particulates on the San Pedro Shelf, California N82-13579

CORE SAMPLING

A depositional model for major coal seams in the Rock Springs Formation, Upper Cretaceous, southwest Wyoming N82-13580

Acoustical properties of sediments [AD-A103726] N82-13638

CORRELATION

Proving total correctness of nondeterministic programs in infinitary logic [MC-IW-150/80] N82-13799

Correlated ground-based and the observations N82-14008

CORRELATION COEFFICIENTS

Analysis of soil moisture extraction algorithm using data from aircraft experiments [NASA-CR-166719] N82-13470

CORROSION

Mathematical model of differential reflectometry for use in the investigation of thin film corrosion products N82-13232

Development of the high-temperature redox electrode and improved corrosion rate meter [DE82-000933] N82-13409

Aging and corrosion problems with flat solar energy absorbers. Study based upon literature and experiment exchanges [SP-RAPP-1979/4] N82-13548

Update on Specified European R and D Efforts. Part 1: Appendices [DE81-026404] N82-13963

CORROSION PREVENTION

Workshop proceedings: Corrosion of Inconel 600 Steam Generator Tubing in the Tubesheet Crevice [DE81-903554] N82-13226

Development of the high-temperature redox electrode and improved corrosion rate meter [DE82-000933] N82-13409

CORROSION RESISTANCE

Workshop proceedings: Corrosion of Inconel 600 Steam Generator Tubing in the Tubesheet Crevice [DE81-903554] N82-13226

CORROSION TESTS

An improved stress corrosion test medium for aluminum alloys [NASA-TM-82452] N82-13216

CORRUGATED PLATES

Aerodynamic heating on the corrugated surface of a 10.2 deg half-angle blunted cone at Mach 6.7 [NASA-TP-1928] N82-13383

Study of corrugated plates N82-13426

COST ESTIMATES

A new approach to modeling the cost of ownership for aircraft systems [AD-A104434] N82-13979

COUNTER ROTATION

The reverse-field rigid rotor model, calculation and simulation N82-13898

COUNTERMEASURES

Camelot: A novel concept for a multiterawatt pulse power generator for single pulse burst or repetition rate operation [AD-A103024] N82-13513

COUPLED MODES

Studies of sample introduction for inductively coupled plasma emission spectrometry N82-13209

CRACK INITIATION

Fatigue crack initiation and electrochemical behavior of 403 stainless steel in aqueous environments N82-13210

Cyclic deformation and fatigue crack initiation of a coherently precipitating Ni-14.4 at % Al alloy N82-13212

Cyclic deformation and fatigue microcrack initiation in pearlitic eutectoid steel N82-13230

Methods of obtaining crack growth data in metals N82-13283

CRACK PROPAGATION

Fatigue crack propagation studies in two cryogenic steels N82-13213

Methods of obtaining crack growth data in metals N82-13283

Monitoring of damage in fibre composites N82-13284

Cyclic strain approach to fatigue in metals N82-13285

Dynamic effects on fracture of elastic - plastic materials N82-13463

Workshop proceedings: U-bend tube cracking in steam generators [DE81-903765] N82-13515

Evaluation of creep-fatigue life-prediction models for the solar central receiver [DE82-000942] N82-13529

CRACKING (FRACTURING)

Fatigue Test Methodology [AGARD-LS-118] N82-13274

CRACKS

Workshop proceedings: Corrosion of Inconel 600 Steam Generator Tubing in the Tubesheet Crevice [DE81-903554] N82-13226

CREEP ANALYSIS

Analysis of stress drop in multistage creep experiments: Predictions of exponential creep law [DE81-029279] N82-13453

CREEP PROPERTIES

Creep and creep rupture of laminated graphite/epoxy composites N82-13173

CROP INVENTORIES

Structure of the knowledge base for an expert labeling system N82-13723

CROSS FLOW

Crossflow effects on steady and fluctuating pressures on an ogive-cylinder cone-frustum model in supersonic separated flow [NASA-TP-1951] N82-13108

CRUSTAL FRACTURES

Studies of natural fractures, fault zone permeability, and a pore space-permeability model N82-13616

Two detailed seismic studies in Central California. Part 1: Earthquake clustering and crustal structure studies of the San Andrea fault near San Juan Bautista. Part 2: Seismic velocity structure along the Sierra foothills near Oroville, California N82-13617

CRYOGENIC COOLING

Cryogenic testing of 100-m superconducting power transmission test facility [DE81-028331] N82-13517

CRYOGENIC MAGNETS
Materials studies for magnetic fusion energy applications at low temperatures -4
[PB81-222507] N82-13928
CRYSTAL DEFECTS
Defect structure and properties of intermetallic compound beta-LiAl N82-13959
CRYSTAL DISLOCATIONS
Push-pull fatigue of LiF and MgO single crystals N82-13960
The structure and properties of grain boundaries N82-13962
CRYSTAL GROWTH
Large area sheet task: Advanced dendritic web growth development
[NASA-CR-165013] N82-13497
Continuous Czochralski growth: Silicon sheet growth development of the large area sheet task of the low cost silicon solar array project
[NASA-CR-165030] N82-13500
Development of high-efficiency cascade solar cells
[DE81-029633] N82-13540
Fluorescent guest-host effect in scattering liquid crystals and new physical phenomena in thin liquid crystal films N82-13940
CRYSTAL LATTICES
Physical adsorption of quantum atomic and molecular systems N82-13846
Role of molecular dynamics on descriptions of shock front processes
[DE81-028687] N82-13857
Long-range interactions in lattice field theory N82-13941
CRYSTAL STRUCTURE
Potential use of the minicomputer controlled powder diffractometer for the structure determination of small quantities of rather impure materials N82-13207
The structural and vibrational properties of amorphous and crystalline group V elements N82-13933
Defect studies of molecular and rare-gas crystals down to 50mK and up to 150 MPa
[DE81-026617] N82-13949
CRYSTALLIZATION
Strain-induced crystallization of polymers N82-13239
Large area sheet task: Advanced dendritic web growth development
[NASA-CR-165013] N82-13497
CRYSTALLOGRAPHY
Petrology and geochemistry of ophiolite fragments in a tectonic melange, Kodiak Islands, Alaska N82-13610
Spectrometric properties of crystals for low-energy X-ray diagnostics
[DE81-028763] N82-13954
CRYSTALS
The structural and vibrational properties of amorphous and crystalline group V elements N82-13933
Spectrometric properties of crystals for low-energy X-ray diagnostics
[DE81-028763] N82-13954
CUMULATIVE DAMAGE
Positron lifetime and Doppler broadening techniques applied to irradiation damaged silver
[DE81-028688] N82-13854
CURING
Investigation of test methods, material properties, and processes for solar cell encapsulants
[NASA-CR-165031] N82-13503
CURRENT DENSITY
Soft and hard major disruptions in the profile control experiment of the JIPP T-2 Tokamak
[IPPJ-547] N82-13902
CURRENT DISTRIBUTION
A hybrid method which combines a moment method current with an asymptotic current
[AD-A102199] N82-13340
CURRENT REGULATORS
Distributed photovoltaic systems: Utility interface issues and their present status
[NASA-CR-165019] N82-13492
CURVATURE
Curvature singularities in certain space-times N82-13824
CURVE FITTING
Weighting of aptitude components based on differences in technical school difficulty
[AD-A102045] N82-13725
CYANO COMPOUNDS
Review of low-voltage CP detonators
[DE81-025837] N82-13250
Performance of chemical analogs of the explosive CP
[DE81-025836] N82-13251
CYBERNETICS
A model for the control mode man-computer interface dialogue N82-13722
CYCLES
The nitrogen cycle and heat budget of a subtropical lagoon, Devils Hole, Harrington Sound, Bermuda: Implications for nitrous oxide production and consumption in marine environments N82-13611
CYCLIC HYDROCARBONS
Solubilities in multicomponent systems of nonspecific interactions N82-13205
CYCLIC LOADS
Cyclic deformation and fatigue microcrack initiation in pearlitic eutectoid steel N82-13230
CYCLONES
Some mean characteristics of Central North Pacific tropical cyclones
[PB81-230492] N82-13634
Annual data and verification tabulation, eastern North Pacific tropical storms and hurricanes 1980
[PB81-230336] N82-13636
CYCLOTRON FREQUENCY
Electromagnetic cyclotron harmonic waves --- plasma heating
[IPPJ-536] N82-13903
CYCLOTRON RADIATION
Electromagnetic cyclotron harmonic waves --- plasma heating
[IPPJ-536] N82-13903
CYCLOTRON RESONANCE
Ion cyclotron resonance heating and its effect on confinement in Tokamaks N82-13896
CYLINDRICAL ANTENNAS
The formation of radiation patterns of arc antennas N82-13305
Thin magnetic impedance antennas N82-13314
Natural and mutual conductivities of half-wave slots, arbitrarily oriented on the conducting surface of circular cylinder --- slot antennas N82-13331
CYLINDRICAL BODIES
Crossflow effects on steady and fluctuating pressures on an ogive-cylinder cone-frustum model in supersonic separated flow
[NASA-TP-1951] N82-13106

D

DARK ADAPTATION
Pupillometry, a bioengineering overview N82-13711
DATA ACQUISITION
An acquisition and analysis system for dynamic tests of air inlets N82-13062
Optical scanner system for internal inspection of steam-generator tubes
[EPRI-NP-1944] N82-13864
Data management in a fusion energy research experiment
[DE81-027932] N82-13978
DATA BASE MANAGEMENT SYSTEMS
The SACLANTCEN oceanographic data base. Volume 1: Design criteria and data structure and content
[AD-A103277] N82-13639
An integrated approach for the specification and the design of the conceptual level in database systems N82-13730
An approach for numerical database management N82-13731
Survey of standards applicable to a database management system
[NASA-CR-165009] N82-13766
PLOT2K: A graphics interface of system 2000
[DE81-026706] N82-13774
Data management in a fusion energy research experiment
[DE81-027932] N82-13978
DATA BASES
International seismological data center. Input data for an experimental data base
[FOA-C-20380-T1] N82-13604
An integrated approach for the specification and the design of the conceptual level in database systems N82-13730
A specification and proof technique for message-based systems and its application to distributed database algorithms N82-13756
Query optimization by semantic reasoning N82-13762
Separations Science data base: An abstractor's manual
[DE81-029101] N82-13977
Astronomical data bases and retrieval systems N82-14020
DATA COMPRESSION
Digital video bandwidth compression systems employing block truncation coding N82-13290
Digital data compression algorithm performance comparisions: Proposed NATO standard algorithm provides better facsimile in a noisy communications environment than present Tactical Digital Facsimile algorithm
[AD-A103159] N82-13737
Trellis data compression N82-13784
DATA CONVERSION ROUTINES
Simple geometric algorithms to aid in clearance management for robotic mechanisms N82-13680
Playbk-routines to drive a digital-to-analog converter
[AD-A102049] N82-13741
DATA CORRELATION
Weighting of aptitude components based on differences in technical school difficulty
[AD-A102045] N82-13725
DATA PROCESSING
Direct execution string processor N82-13753
Increase in the profitability of design and process planning by integrated and graphic data processing, phase 1
[BMFT-FB-W-81-005] N82-13777
Measurement of sound absorption in the air --- data processing N82-13829
Managing information technology change in the decade of the 80's
[AD-A099441] N82-13976
Data management in a fusion energy research experiment
[DE81-027932] N82-13978
DATA PROCESSING EQUIPMENT
An analytical study of multiprocessor system reliability N82-13728
PLOT2K: A graphics interface of system 2000
[DE81-026706] N82-13774
The interactive astronomical data analysis facility - image enhancement techniques to Comet Halley N82-14019
DATA RECORDERS
On-board data recorder for hard-target weapons
[DE81-026645] N82-13408
DATA REDUCTION
Comparison of data inversion techniques for remotely sensed wide-angle observations of Earth emitted radiation
[NASA-TP-1924] N82-13620
DATA STORAGE
An approach for numerical database management N82-13731
Information storage in a decentralized computer system N82-13732
DATA SYSTEMS
FOA 27 control instruments data system. Control instruments and their functions
[FOA-C-20394-D3] N82-13410
DATA TRANSMISSION
Joint agency Doppler technology tests
[AD-A100208] N82-13335
Time dependent recording of images transmitted over optical fibers
[DE81-026599] N82-13889
DECAY RATES
The hadronic decay rate of the Higgs boson: An application of the running mass N82-13842
DECISION MAKING
The intelligent use of intelligent systems: Problems in engineering man/machine symbiosis N82-13058
Building a consensus about energy technologies
[DE82-000501] N82-13536
Identification of cognitive factors related to remote work performance using closed circuit TV displays N82-13679

Decision aids for airborne intercept operations in advanced aircrafts N82-13660
A model of the human observer and decision maker N82-13714
Dynamic decision-making in multi-task environments: Theory and experimental results
[AD-A102086] N82-13740
Calibration of probabilities: The state of the art to 1980
[AD-A101968] N82-13817

DECISION THEORY
Synthesis of a plane system of discrete emitters N82-13310
Assessing probability assessors: Calibration and refinement
[AD-A104174] N82-13815

DECODERS
Capacity and coding for computer memory with defects N82-13750
Trellis data compression N82-13784

DECODING
Trellis data compression N82-13784

DEFECTS
Defect structure and properties of intermetallic compound beta-LiAl N82-13959

DEFLECTION
Measured pavement response to transient aircraft loadings N82-13442

DEFLECTORS
Transonic flows in an air inlet with large incidence and the effect of a blowing trap N82-13071

DEFORMATION
Measured pavement response to transient aircraft loadings N82-13442

DEGREES OF FREEDOM
A mixed variational principle for finite element analysis N82-13789

DELAMINATING
Creep and creep rupture of laminated graphite/epoxy composites N82-13173

DELTA WINGS
Force measurements on a reflex cambered delta wing
[LOG-C4073] N82-13111

DELTAS
A depositional model for major coal seams in the Rock Springs Formation, Upper Cretaceous, southwest Wyoming N82-13580

DEMODULATION
Modulation/demodulation techniques for satellite communications. Part 1: Background
[NASA-CR-165020] N82-13301

DEMULTIPLEXING
Time dependent recording of images transmitted over optical fibers
[DE81-026599] N82-13889

DENDRITIC CRYSTALS
Large area sheet task: Advanced dendritic web growth development
[NASA-CR-165013] N82-13497

DENSE PLASMAS
Electromagnetic cyclotron harmonic waves — plasma heating
[IPPJ-536] N82-13900
Plasma focus breeder
[IPPJ-541] N82-13904

DENSITY (MASS/VOLUME)
Review of low-voltage CP detonators
[DE81-025837] N82-13250

DEPENDENCE
Radiatively cooled stellar winds N82-14034

DEPOSITION
Field tests of a surface ice accretion measurement system
[AD-A100282] N82-13624
Deposition of aerosol particles in the human respiratory tract N82-13659

DEPTH
A model for the submarine depthkeeping team N82-13689

DERIVATION
Zeros of successive derivatives of some entire functions of infinite order N82-13798
On the dependence of the growth of an entire function of the distribution of the zeros of its derivatives and a conjecture of G. Polya N82-13805

DESALINIZATION
Salt removal from brackish water by continuous processes with amphoteric, thermally regenerable ion-exchange resins N82-13202

DESCRIPTIVE GEOMETRY
Geometric programming for engineering design optimization N82-13266

DESIGN ANALYSIS
A numerical investigation of exhaust plume temperature effects on nonaxisymmetric nozzle/afterbody performance N82-13079
Establishment of an experimental technique to provide accurate measurement of the installed drag of close coupled civil nacelle/airframe configurations, using a full span model with turbine powered engine simulators N82-13089
Parametric study of silo-material interaction N82-13259
Load and resistance factor design of cold-formed steel structural members N82-13464
Information and display requirements for aircraft terrain following N82-13695
Beyond mere automation
[AD-A103836] N82-13736
Methods of verification of digital logic N82-13783
Transition radiation as an X-ray source N82-13840
Optics of mass separator 1
[DE81-028242] N82-13886

DESIGN TO COST
Control design for parameter sensitivity reduction in linear regulators: Application to large flexible space structures N82-13156

DESORPTION
Electric field-enhanced diffusion and electron stimulated desorption of alkali elements from glass surfaces during electron bombardment and Auger electron analysis N82-13961

DESTRUCTIVE TESTS
Testing of a work bench for handling of explosives in the laboratory
[FOA-C-20393-D1] N82-13397

DETECTION
Sensor failure detection system — for the F100 turbofan engine
[NASA-CR-165515] N82-13145
Analytical detection of organic species by means of laser-induced multiphoton ionization N82-13646

DETONATION
Explosive-metal composites and electrical switch technology
[AD-A099476] N82-13361

DETONATORS
Review of low-voltage CP detonators
[DE81-025837] N82-13250
Performance of chemical analogs of the explosive CP
[DE81-025836] N82-13251

DIAGNOSIS
The relationship between the number of factors and size of an experiment — a medical diagnostics case
[AD-A103877] N82-13792

DIAMAGNETISM
Driving force of the ballooning instability
[DE81-023099] N82-13923

DICHROISM
Relativistic many-body perturbation theory of parity-violation in atoms N82-13845

DIELECTRIC PROPERTIES
Antenna (selected articles)
[AD-A106499] N82-13323
Directed dividers on the metal-dielectric waveguides N82-13326
DC dielectric strengths of fluorinated benzenes and the stored-energy theory
[DE81-026515] N82-13516

DIELECTRICS
Studies of photoionization in liquids using a laser two-photon ionization conductivity technique
[DE81-026514] N82-13194
One use of methods of the statistical theory of antennas N82-13325
Some experiences with the use of castor oil as a dielectric
[AD-A102346] N82-13363
Role of electron swarm studies in the development of gaseous dielectrics
[DE81-026349] N82-13962

DIESEL ENGINES
Examination of early wear detection in diesel engines by energy dispersive radioisotope X ray fluorescence analysis
[BMVG-FBWT-79-19] N82-13432

Alternate hybrid power sources for remote site applications
[AD-A099471] N82-13512

DIFFERENTIAL EQUATIONS
A sharper estimate of the renewal function
[CTH-MATH-1980-18] N82-13796
Pointwise error estimation for finite element discretizations, part 1
[TRITA-NA-8105-PT-1] N82-13801
On the relationship between analytical regularization and regularization by surgery N82-13823

DIFFERENTIAL GEOMETRY
Ultraviolet structure of supersymmetric non-linear sigma-models N82-13843

DIFFERENTIAL PULSE CODE MODULATION
Application of electrochemistry to biochemical problems — immunoassay technique using differential pulse anodic stripping voltammetry N82-13179

DIFFRACTION PATTERNS
High frequency scattering from multiple finite elliptic cylinders N82-13291
Low energy X-ray spectrometer
[DE81-025624] N82-13407

DIFFRACTOMETERS
Potential use of the minicomputer controlled powder diffractometer for the structure determination of small quantities of rather impure materials N82-13207

DIFFUSION
A monitor for noninvasive estimation of pulmonary blood flow N82-13656
Helium diffusion in irradiated boron carbide
[DE81-027848] N82-13951

DIGITAL COMPUTERS
Development report: Automatic System Test and Calibration (ASTAC) equipment
[NASA-CR-165403] N82-13505

DIGITAL DATA
Time dependent recording of images transmitted over optical fibers
[DE81-026599] N82-13889

DIGITAL FILTERS
Topics in digital signal processing N82-13346
Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering N82-13648

DIGITAL INTEGRATORS
Techniques for interfacing multiplex systems
[AD-A101457] N82-13135

DIGITAL SIMULATION
A real time Pegasus propulsion system model for VSTOL piloted simulation evaluation
[NASA-TM-82770] N82-13144
An integrated approach for the specification and the design of the conceptual level in database systems N82-13730

DIGITAL SYSTEMS
How the helicopter cockpit designer uses digital avionics N82-13049
Development of a miniaturised digital thrust demand unit N82-13055
Modulation/demodulation techniques for satellite communications. Part 1: Background
[NASA-CR-165020] N82-13301
Automated partitioning of hierarchically specified digital systems N82-13752
Descriptive techniques for digital system containing complex hardware components N82-13754
Measurement of sound absorption in the air — data processing N82-13629
Far infrared source classification system — digital system
[ENST-E-80005] N82-13891

DIGITAL TECHNIQUES
Command-response data transmision to mechanical systems management effect on the crew/system interface N82-13057
JASPIC-DIP: The digital impedance probe in the JASPIC project
[BMFT-FJ-W-80-034] N82-13169
Three-dimensional mapping of the aurora from digitized all-sky pictures
[REPT-550.366.8] N82-13591
The interactive astronomical data analysis facility - image enhancement techniques to Comet Halley N82-14019

DIGITAL TO ANALOG CONVERTERS
Playbk-routines to drive a digital-to-analog converter
[AD-A102049] N82-13741

DIRAC EQUATION
Pattern of neutrino mixing in grand unified theories
[DE81-029034] N82-13872
Compton scattering in a uniform, constant magnetic field N82-13968

DIRECT CURRENT
Fundamental studies of direct current plasmas N82-13895
Nonlinear optical effects in liquid crystals N82-13937

DIRECT POWER GENERATORS
Develop and test fuel cell powered on-site integrated total energy system. Phase 3: Full-scale power plant development
[NASA-CR-165326] N82-13490

DIRECTIONAL ANTENNAS
Antenna (selected articles)
[AD-B060573] N82-13318
Discrimination of hologram and antenna theory N82-13320

DIRECTORS (ANTENNA ELEMENTS)
Nonlinear waves in rods
[AD-A101333] N82-13447

DISCHARGE COEFFICIENT
Hydrodynamic computations of pressures generated by steam pipe rupture
[AD-A102046] N82-13449
Stability considerations for light-ion beam transport in Z discharge channels
[AD-A101426] N82-13852

DISCONTINUITY
Rayleigh-Taylor stability for a shock wave-density discontinuity interaction
[DE81-028707] N82-13394

DISCRETE FUNCTIONS
Simulation studies on the computation of the gravity vector in space from surface data considering the topography of the Earth N82-13612
On general 1 exp p summability methods
[CTH-MATH-1981-07] N82-13803

DISPLAY DEVICES
The impact of new guidance and control systems on military aircraft cockpit design
[AGARD-CP-312] N82-13048
Electronic flight deck displays for military transport aircraft N82-13050
Color CRT displays for the cockpit N82-13051
Integration of controls and displays in US Army helicopter cockpits N82-13053
A standard control display unit for multi-aircraft application N82-13054
Evaluation of a pilot workload assessment device to test alternate display formats and control handling qualities N82-13062
Tanker avionics and aircrew complement evaluation N82-13063
F/A 18 Hornet crew station N82-13064
Electronic master monitor and advisory display system test and demonstration report
[AD-A105317] N82-13141
Proceedings of the Seventeenth Annual Conference on Manual Control
[NASA-CR-165005] N82-13665
Horizontal conflict resolution maneuvers with a cockpit display of traffic information N82-13671
Predictor symbology in computer-generated perspective displays N82-13674
Modeling of the aircraft in-trail-following task during profile descent N82-13690
Functional structure and dynamics of the human nervous system N82-13692
Information and display requirements for aircraft terrain following N82-13695
Pilot scanning patterns while viewing cockpit displays of traffic information N82-13710
Multifunctions - liquid crystal displays
[BMFT-FB-T-80-181] N82-13957

DISSOCIATION
Role of molecular dynamics on descriptions of shock front processes
[DE81-028687] N82-13857

DISSOLVED GASES
Solubilities of dissolved gases in sea water
[AD-A100675] N82-13189

DISTILLATION
Synthetic fuel aromaticity and staged combustion
[DE81-024205] N82-13246

DISTORTION
A synthesis method for estimating maximum instantaneous inlet distortion based on measured inlet steady state and RMS pressures N82-13083
One use of methods of the statistical theory of antennas N82-13325
Impacts of vertical scale distortion on turbulent mixing in hydraulic models N82-13382

DISTRIBUTED PARAMETER SYSTEMS
System design of the distributed Loop Data Base System (BLDBS) N82-13729
Distributed and decentralized control in fully distributed processing systems
[AD-A104379] N82-13739

DISTRIBUTING
Solving multiactivity multifacility capacity-constrained 0-1 assignment problems
[AD-A102583] N82-13796

DISTRIBUTION MOMENTS
Some mean characteristics of Central North Pacific tropical cyclones
[PB81-230482] N82-13634

DISTRICT OF COLUMBIA
The District of Columbia Five-Year Water Resources Research Program Plan, 1982-1987
[PB81-234682] N82-13482

DIVERTERS
Subsonic military aircraft engine intake: An integrated theoretical experiment design N82-13073

DOORS
Subsonic military aircraft engine intake: An integrated theoretical experiment design N82-13073

DOPED CRYSTALS
Charge trapping in interface doped MNOS structures N82-13930
The growth and carrier transport properties of sputter deposited GaAs thin films doped with silicon and magnesium N82-13966

DOPPLER EFFECT
Report of survey for McDonald Observatory, Harvard Radio Astronomy Station, and vicinity
[PB81-234336] N82-13606
Positron lifetime and Doppler broadening techniques applied to irradiation damaged silver
[DE81-028688] N82-13854

DOPPLER RADAR
Joint agency Doppler technology tests
[AD-A100206] N82-13335
Feasibility study of a procedure to detect and warn of low level wind shear
[NASA-CR-3480] N82-13621
Spring program summary, 1980
[PB81-234940] N82-13628

DOSIMETERS
Requirements for an effective National Nonionizing Radiation Measurement System
[PB81-223455] N82-13414
Specific gamma-ray dose constants for nuclides important to dosimetry and radiological assessment
[DE81-031980] N82-13863

DRAG
Energetics and dynamics of droplet evaporation in high temperature intermediate Reynolds number flows N82-13379

DRAG MEASUREMENT
Model testing techniques for measuring inlet drag N82-13084

DRAG REDUCTION
An experimental study of Tollmien-Schlichting wave cancellation — friction drag reduction N82-13120

DRAINAGE
An initial study of the application of the numerical method of characteristics to unsteady flow analysis in partially filled gravity drainage sized pipes
[PB81-229189] N82-13399

DRAINAGE PATTERNS
Alaska's Water resources problems and research needs: Institute of Water Resources, five-year research plan
[PB81-231920] N82-13477

DRIFT RATE
Two-satellite study of proton drift on quiet days
[AD-A104736] N82-13801

DRILL BITS
Preliminary evaluation of ion implantation as a surface treatment to reduce wear of tool bits
[AD-A105063] N82-13261

DRILLING
Control of methane by ventilation of shafts during raise drilling
[PB81-234502] N82-13487

DROPS (LIQUIDS)
Energetics and dynamics of droplet evaporation in high temperature intermediate Reynolds number flows N82-13379
Experimental determination of the effect of physical properties on the drag of liquid drops N82-13380
Numerical experiments on two-phase liquid-vapor mist transport N82-13402

DRUGS
Manual control analysis of drug effects on driving performance N82-13709

DRYING APPARATUS
Appliance efficiency and the solar building
[DE81-029073] N82-13265
Some experiences with the use of castor oil as a dielectric
[AD-A102348] N82-13363

DUCT GEOMETRY
Effects of intake geometry on circular pitot intake performance at zero and low forward speeds N82-13070
Effect of vacuum exhaust pressure on the performance of MHD ducts at high D-field
[NASA-TM-82750] N82-13906

DUCTED FLOW
Computational methods for internal flows with emphasis on turbomachinery
[NASA-TM-82764] N82-13113

DUCTILITY
Mechanisms by which humidity alters ductility
[AD-A105530] N82-13221

DUST
Three Bureau of Mines optical dust probes
[PB81-231441] N82-13412
Suppression of coal dust explosion by water barrier in a conveyor belt entry
[PB81-233306] N82-13489
Anticipated results from dust experiments on cometary missions N82-13993
Results to be expected from light scattering dust analyzer during a rendezvous mission N82-13999
Infrared observations of comets N82-14000
Infrared observations of faint comets N82-14001

DUST COLLECTORS
High-pressure shrouded water sprays for dust control
[PB81-231456] N82-13483

DYE LASERS
Investigation of fluctuation phenomena in dye lasers N82-13419

DYES
Spectroelectrochemistry, flash photolysis and photogalvanic effect of methylene blue and safranin-0 N82-13208

DYNAMIC CHARACTERISTICS
A study of the dynamic and transient properties of polymer solutions N82-13241
Determination of efficient methods of lift by comparing trained and untrained male and female lifters
[AD-A100349] N82-13650
Role of molecular dynamics on descriptions of shock front processes
[DE81-028687] N82-13857

DYNAMIC LOADS
Measured pavement response to transient aircraft loadings N82-13442

DYNAMIC MODELS
Shape determination and control for large space structures
[JPL-PUB-81-71] N82-13166
Theory and application of experimental model analysis in earthquake engineering N82-13588
Benefits of detailed models of muscle activation and mechanics N82-13713
A model of the human observer and decision maker N82-13714

DYNAMIC RESPONSE
Effects of hygrothermal conditioning on the dynamic behavior of resin matrix composites N82-13172
Titanium response to a nuclear radiation environment
[AD-A102516] N82-13220
Dynamic effects on fracture of elastic - plastic materials N82-13463

Surface waves in strong ground motion with application to offshore environments N82-13584

Dynamic measurement of human vertical fusional response N82-13660

DYNAMIC STRUCTURAL ANALYSIS

MAGNA: A finite element program for the materially and geometrically nonlinear analysis of three-dimensional structures subjected to static and transient loading
[AD-A099454] N82-13448

Structural dynamics: Modified calculations --- natural and harmonically excited vibrations of modified structures; increased computation efficiency
[BMVG-FBWT-81-1] N82-13457

Dynamic analysis of flexible spatial mechanisms and robotic manipulators N82-13460

User's manuals for DYNA3D and DYNAP: Nonlinear dynamic analysis of solids in three dimensions
[DE81-028360] N82-13772

DYNAMIC TESTS

An acquisition and analysis system for dynamic tests of air inlets N82-13082

E

EARTH ATMOSPHERE

Aircraft data summaries for the SURE intensives, volume 1
[DE82-900314] N82-13568

Propagation of sound through the Earth's atmosphere
[NASA-CR-165008] N82-13826

EARTH CORE

The crustal structure of Kilauea and Mauna Loa volcanoes, Hawaii, from seismic refraction and gravity data N82-13583

EARTH CRUST

Thermal contraction and flexure of intracratonic basins: A three dimensional study of the Michigan Basin N82-13582

The crustal structure of Kilauea and Mauna Loa volcanoes, Hawaii, from seismic refraction and gravity data N82-13583

Surface waves in strong ground motion with application to offshore environments N82-13584

Studies of natural fractures, fault zone permeability, and a pore space-permeability model N82-13616

EARTH MANTLE

The crustal structure of Kilauea and Mauna Loa volcanoes, Hawaii, from seismic refraction and gravity data N82-13583

EARTH MOVEMENTS

Surface waves in strong ground motion with application to offshore environments N82-13584

EARTH PLANETARY STRUCTURE

Papers presented to the Conference on the Processes of Planetary Rifting
[LPI-CONTRIB-457] N82-13595

Basement rocks of the main interior basins of the midcontinent
[NASA-CR-164935] N82-13596

EARTH RESOURCES

Creating a safer environment in US coal mines: The Bureau of Mines Methane Control Program, 1964-79
[PB81-233918] N82-13486

EARTH SURFACE

Interpolating for the location of remote sensor data
[NASA-TM-82169] N82-13469

Simulation studies on the computation of the gravity vector in space from surface data considering the topography of the Earth N82-13612

Field tests of a surface ice accretion measurement system
[AD-A100282] N82-13624

EARTHQUAKE RESISTANT STRUCTURES

Theory and application of experimental model analysis in earthquake engineering N82-13586

EARTHQUAKES

Recurrence intervals and recency of faulting along the San Gregorio fault zone, San Mateo County, California N82-13581

Two detailed seismic studies in Central California. Part 1: Earthquake clustering and crustal structure studies of the San Andreas fault near San Juan Bautista. Part 2: Seismic velocity structure along the Sierra foothills near Oroville, California N82-13617

ECHOES

Acoustical speckle interferometry and applications in experimental mechanics N82-13826

ECONOMIC ANALYSIS

Environmental and economic comparison of advanced processes for conversion of coal and biomass into clean energy
[PB81-234239] N82-13256

ECONOMIC DEVELOPMENT

Barriers to the utilization of synthetic fuels for transportation
[NASA-CR-165517] N82-13243

ECONOMIC IMPACT

Project Skywater: Fiscal year 1979 report. Atmospheric Resources Research Program
[PB81-234484] N82-13629

ECONOMICS

Program planner's guide to geothermal development in California
[DE82-000700] N82-13527

EDDY CURRENTS

Anamolous loss in transformer steels N82-13371

Feedback plasma control in hybrid poloidal coil system
[IPPJ-542] N82-13905

EDGES

An experimental study of a reinforced concrete folded plate structure with edge beams N82-13443

EDUCATION

Group 4: Instructor training and qualifications N82-13134

EFFERENT NERVOUS SYSTEMS

The influence of motion cues on driver-vehicle performance in a simulator N82-13661

Load compensating reactions to perturbations at wrist joint in normal man N82-13706

EFFICIENCY

A difference in efficiency between synchronous and asynchronous systems
[AD-A102280] N82-13742

EFFLUENTS

H-Coal product physical properties measurement
[DE81-029095] N82-13245

EIGENVALUES

Unsteady aeroelastic modeling and trailing-edge flap control of an experimental wing in a two dimensional wind tunnel N82-13122

A control canonical form for a class of linear hyperbolic systems N82-13786

High order approximations to Eigensolutions of Sturm-Liouville problems by deferred corrections
[TRITA-NA-8104] N82-13800

EINSTEIN EQUATIONS

New exact and asymptotic solutions of the stationary vacuum Einstein equations N82-13973

EJECTORS

Investigation of acoustic interactions in jet thrust augmenting ejectors
[AD-A106083] N82-13835

ELASTIC BUCKLING

An extension to N dimensions of the Von Karman equations N82-13441

ELASTIC DAMPING

Design for active and passive flutter suppression and gust alleviation
[NASA-CR-3482] N82-13147

ELASTIC DEFORMATION

Moment-strain relationships in elastic-plastic bending of beams
[AD-A101722] N82-13446

Behavior of plane panels in ship structures with local initial deflections
[BMVG-FBWT-80-18] N82-13455

Elastic-plastic-fracture analysis of concrete structures N82-13462

Investigation of the acoustic emission and deformation response of finite ice plates
[AD-A103731] N82-13471

ELASTIC MEDIA

Application of the theory of linear elastic materials with voids
[DE81-027903] N82-13452

ELASTIC PLATES

An extension to N dimensions of the Von Karman equations N82-13441

ELASTIC PROPERTIES

Ultrasonic attenuation and velocity studies in the alpha-alpha' solid solution phases of the Nb-H system
[DE81-026618] N82-13836

ELASTIC WAVES

Variable amplitude fatigue testing N82-13278

The influence of pressure waves on measurements of high speed train noise --- high pass filtering of pressure waves
[DFVLR-FB-81-06] N82-13637

ELASTOMERS

Structure-property relationships in segmented elastomers: Small angle X-ray scattering, thermal, and mechanical studies N82-13240

ELASTOPLASTICITY

Dynamic effects on fracture of elastic - plastic materials N82-13463

ELECTRIC ARCS

Antenna (selected articles)
[AD-A106523] N82-13304

ELECTRIC CHARGE

Charge-based modeling of capacitance in MOS transistors N82-13350

ELECTRIC CONDUCTORS

Natural and mutual conductivities of half-wave slots, arbitrarily oriented on the conducting surface of circular cylinder --- slot antennas N82-13331

Bounding signal levels at terminations of multiconductor transmission line behind an aperture
[AD-A102031] N82-13362

ELECTRIC CURRENT

Bounding signal levels at terminations of multiconductor transmission line behind an aperture
[AD-A102031] N82-13362

Two-dimensional effects in power take-off region
[DE82-000091] N82-13367

Current transient spectroscopy of deep levels in silicon N82-13929

ELECTRIC DIPOLES

Radiation of an antenna in the form of a ribbed shaft of finite length N82-13321

Molecular beam electric resonance studies of weakly bound complexes N82-13667

ELECTRIC GENERATORS

Experimental and analytical investigation of a fluidic power generator
[JPL-PUB-81-100] N82-13386

Development of advanced rotor-bearing systems for feedwater pumps, phase 2
[DE82-900376] N82-13431

A preliminary estimate of future communications traffic for the electric power system
[NASA-CR-165015] N82-13493

Alternate hybrid power sources for remote site applications
[AD-A099471] N82-13512

Energy and momentum deposition to plasmas due to the lower hybrid wave by a finite source
[IPPJ-546] N82-13899

ELECTRIC MOTOR VEHICLES

The ac propulsion system for an electric vehicle, phase 1
[NASA-CR-165480] N82-13506

ELECTRIC POTENTIAL

Bounding signal levels at terminations of multiconductor transmission line behind an aperture
[AD-A102031] N82-13362

ELECTRIC POWER PLANTS

Assessment of rotor-bearing dynamics: A planning study for the utility industry
[DE82-900378] N82-13430

Distributed photovoltaic systems: Utility interface issues and their present status
[NASA-CR-165019] N82-13492

Compressed air energy storage: Preliminary design and site development program in an aquifer. Volume 2: Utility system planning
[DE82-000466] N82-13544

ELECTRIC POWER SUPPLIES

Experimental and analytical investigation of a fluidic power generator
[JPL-PUB-81-100] N82-13386

ELECTRIC POWER TRANSMISSION

Bipolar conduction with AC excitation N82-13373

Distributed photovoltaic systems: Utility interface issues and their present status
[NASA-CR-165019] N82-13492

ELECTRIC SWITCHES

Explosive-metal composites and electrical switch technology
[AD-A099476] N82-13361

ELECTRIC WIRE
Review of fire test methods and incident data for portable electric cables in underground coal mines
[PB81-227878] N82-13272

ELECTRICAL ENGINEERING
Compilation of abstracts of dissertations theses, and research papers submitted by candidates for degrees, 1 October 1979 - 30 September 1980
[AD-A104124] N82-13974

ELECTRICAL IMPEDANCE
Radiation of an antenna in the form of a ribbed shaft of finite length N82-13321

ELECTRICAL INSULATION
Conduction and charge storage in electron irradiated spacecraft insulators
[AD-A104796] N82-13167

ELECTRICAL MEASUREMENT
Two-channel telemeter for use in a 3-inch spin air gun
[AD-A102566] N82-13165

ELECTRICAL PROPERTIES
The physical and electrical properties of polycrystalline-silicon N82-13964

ELECTRICAL RESISTIVITY
Natural and mutual conductivities of half-wave slots, arbitrarily oriented on the conducting surface of circular cylinder — slot antennas N82-13331
Conductivity and permittivity measurements of fast ion conductors in the microwave region N82-13351

ELECTRO-OPTICS
Electrooptic shutter devices utilizing PLZT ceramic wafers
[DE81-025470] N82-13885
Minimum/constant voltage PLZT electrooptic shutters --- lead lanthanum zirconate titanate wafers for flash protective goggles
[DE81-028646] N82-13888
Multifunctions - liquid crystal displays
[BMFT-FB-T-80-181] N82-13957

ELECTROACOUSTIC WAVES
Antenna (selected articles)
[AD-A106474] N82-13311

ELECTROCATALYSTS
Development of a high-temperature durable catalyst for use in catalytic combustors for advanced automotive gas turbine engines
[NASA-CR-165396] N82-13510

ELECTROCHEMICAL CELLS
Endurance test and evaluation of alkaline water electrolysis cells
[NASA-CR-165424] N82-13506

ELECTROCHEMICAL CORROSION
Fatigue crack initiation and electrochemical behavior of 403 stainless steel in aqueous environments
N82-13210

ELECTROCHEMISTRY
Energy levels in and on an oxide film as measured by electrochemical methods
[AD-A103704] N82-13187

ELECTRODEPOSITION
Wear properties of electrodeposited titanium diboride coatings
[PB81-233314] N82-13199

ELECTRODES
Surface enhanced Raman spectroscopy for interfacial characterization N82-13175
Metal ion modification of polymeric sulfur nitride, (SN) subx, electrodes and electrochemical reduction of acetylene at a molybdenum modified (SN)sub x electrode N82-13185
Development of the high-temperature redox electrode and improved corrosion rate meter
[DE82-000933] N82-13409
Electrical effects of slag in a diffuse mode magnetohydrodynamic generator N82-13550

ELECTRODYNAMICS
Antenna (selected articles)
[AD-B060596] N82-13307
Two-mirror antenna for radio relay communication
N82-13308
Use of principle of regularization in direct and mixed problems of the theory of the synthesis of radiating systems N82-13309

ELECTROLYTES
Colloidal properties of coagulated calcium-montmorillonite suspensions N82-13609
A stochastic Langevin dynamics study of correlated ionic motion in one-dimensonal framework solid electrolytes N82-13966

ELECTROLYTIC CELLS
Endurance test and evaluation of alkaline water electrolysis cells
[NASA-CR-165424] N82-13506

ELECTROMAGNETIC ABSORPTION
Atomic pair processes and laser applications
N82-13417
Determination of optical constants from extinction measurements
[AD-A099494] N82-13662

ELECTROMAGNETIC COMPATIBILITY
Effects of the Satellite Power System on low Earth orbit and geosynchronous satellites
[PB81-232019] N82-13157

ELECTROMAGNETIC FIELDS
The use of the Kirchoff method for asymptotic solution of a problem of the diffraction of a plane wave on dielectric bodies of revolution N82-13295

ELECTROMAGNETIC INTERACTIONS
Adaptation of the TH Epsilon Mu formalism for the analysis of the equivalence principle in the presence of the weak and electroweak interaction
[NASA-TM-82450] N82-13851

ELECTROMAGNETIC MEASUREMENT
Antenna (Selected Articles)
[AD-A106522] N82-13297
Methods of automatic measurement of antenna parameters N82-13299

ELECTROMAGNETIC NOISE
Antenna (selected articles)
[AD-A106499] N82-13323
One use of methods of the statistical theory of antennas N82-13325
Digital data compression algorithm performance comparisions: Proposed NATO standard algorithm provides better facsimile in a noisy communications environment than present Tactical Digital Facsimile algorithm
[AD-A103159] N82-13737

ELECTROMAGNETIC PULSES
Bounding signal levels at terminations of multiconductor transmission line behind an aperture
[AD-A102031] N82-13362

ELECTROMAGNETIC RADIATION
Antenna (selected articles)
[AD-A106474] N82-13311
Some properties of the radiating aperture superdirectionality N82-13312
Surface-patch techniques for modeling three-dimensional radiating or scattering objects
[AD-A100212] N82-13336
Electromagnetic cyclotron harmonic waves --- plasma heating
[IPPJ-536] N82-13903

ELECTROMAGNETIC SCATTERING
Surface-patch techniques for modeling three-dimensional radiating or scattering objects
[AD-A100212] N82-13336
A hybrid method which combines a moment method current with an asymptotic current
[AD-A102199] N82-13340

ELECTROMAGNETIC WAVE FILTERS
Linear acousto-optic filtering with heterodyne and frequency-plane control N82-13352

ELECTROMECHANICAL DEVICES
Direct digital simulation of power semiconductor-controlled electrical machines
N82-13355

ELECTROMYOGRAPHY
Load compensating reactions to perturbations at wrist joint in normal man N82-13706

ELECTRON BEAMS
Photon-electron correlation in the laboratory testing of electronic components. Part 2: Beam conditioning and diagnostics
[DE81-026606] N82-13365
Electron Beam-Induced Current (EBIC) measurements of heat treated polycrystalline cuprous sulfide/cadimum sulfide solar cells N82-13552
Numerical study on the interaction between a modulated electron beam and a plasma
[IPPJ-543] N82-13906
Electron beam evaporation of superconducting, A15 niobium-silicon N82-13944

ELECTRON CAPTURE
Analytical detection of organic species by means of laser-induced multiphoton ionization N82-13646

ELECTRON COUNTERS
High latitude measurements of the Total Electron Content (TEC) using the Faraday technique and comparisons with TEC estimates from NAVSTAR-GPS data
[AD-A103042] N82-13603

ELECTRON CYCLOTRON HEATING
Electron-cyclotron resonant heated electron distribution functions N82-13920

ELECTRON DENSITY (CONCENTRATION)
JASPIC-DIP: The digital impedance probe in the JASPIC project
[BMFT-FB-W-80-034] N82-13169

ELECTRON DIFFUSION
Energy levels in and on an oxide film as measured by electrochemical methods
[AD-A103704] N82-13187
Electric field-enhanced diffusion and electron stimulated desorption of alkali elements from glass surfaces during electron bombardment and Auger electron analysis N82-13961

ELECTRON DISTRIBUTION
Mechanistic studies of electron exchange kinetics using ab initio
[DE81-026096] N82-13856
Electron-cyclotron resonant heated electron distribution functions N82-13920
Phase separation of a two component electron-hole liquid in (111) stressed Ge N82-13938

ELECTRON ENERGY
Background fitting for electron energy-loss spectra
[DE81-027117] N82-13655
Energy losses and mean free paths of electruns in silicon dioxide
[DE81-026353] N82-13660

ELECTRON FLUX DENSITY
Inverse cerenkov interaction between relativistic electrons and laser light N82-13425

ELECTRON IRRADIATION
HgCdTe fabrication using directed energy techniques
[AD-A105626] N82-13947

ELECTRON MICROSCOPY
Measurement of surface recombination velocity for silicon solar cells using a scanning electron microscope with pulsed beam
[JPL-PUB-81-64] N82-13494

ELECTRON OPTICS
Atmospheric 222Rn measurements at San Nicolas Island during 1980
[AD-A104602] N82-13602

ELECTRON ORBITALS
Shock anomaly and s-d transition in high-pressure lanthanum
[DE81-027659] N82-13946

ELECTRON PLASMA
Review of recent EBT coupled ring-core stability theory N82-13911
Brief survey of experimental investigation of instabilities in microwave-heated plasmas
N82-13912
Hot-electron ring stability at the University of Tennessee N82-13914
Stability of hot electron plasma in the ELMO bumpy torus N82-13917
Kinetic stability analyses in a bumpy cylinder
N82-13921

ELECTRON SCATTERING
Schwinger's variational principle for electron-ion scattering N82-13844

ELECTRON STATES
Outer-shell excitation in sputtered atoms
N82-13839

ELECTRON TRANSITIONS
Outer-shell excitation in sputtered atoms
N82-13839
A correlated treatment of bound-continuum transitions within the electron propagator formalism
N82-13869

ELECTRONIC CONTROL
The persistence of a visual dominance effect in a telemanipulator task: A comparison between visual and electrotactile feedback N82-13677

ELECTRONIC EQUIPMENT
Photon-electron correlation in the laboratory testing of electronic components. Part 2: Beam conditioning and diagnostics
[DE81-026606] N82-13365

Future directions in Navy electronic system reliability and survivability
[AD-A102480] N82-13436
ELECTRONIC MODULES
Descriptive techniques for digital system containing complex hardware components N82-13754
ELECTRONIC PACKAGING
Magnetically undetectable electronic circuit assemblies
[AD-A100669] N82-13358
Further developments in integrated circuit assembling technology
[BMFT-FB-T-80-179] N82-13369
ELECTRONS
Raman probe of equilibrium and laser modulated populations of electrons and phonons in GaAs N82-13934
ELECTROPLATING
Development of technique for AR coating and nickel and copper metallization of solar cells: FPS project, product development
[NASA-CR-165033] N82-13499
ELECTROSTATIC CHARGE
Electrostatic and hydrodynamic interactions of charged macromolecular systems N82-13242
ELECTROWINNING
Insoluble anodes for electrowinning zinc and other metals
[PB81-227365] N82-13227
ELLIPTICAL CYLINDERS
High frequency scattering from multiple finite elliptic cylinders N82-13291
ELLIPTICAL GALAXIES
Intermediate band surface photometry of elliptical galaxies N82-14035
EMBEDDING
Problems with the multitasking facilities in the ADA programming language
[AD-A105229] N82-13769
EMISSION
Performance characteristics of automotive engines in the United States, third series: 1977 Chrysler 318 CID (5.2L), 2V
[PB81-233025] N82-13435
EMISSION SPECTRA
Fundamental studies of direct current plasmas N82-13895
Narrow passband imagery of comets — Comet West N82-14014
EMITTERS
Antenna (selected articles)
[AD-B060596] N82-13307
Synthesis of a plane system of discrete emitters N82-13310
FOA 27 control instruments data system. Control instruments and their functions
[FOA-C-20394-D3] N82-13410
EMULSIONS
Molecular interactions in amphiphilic association structures N82-13206
Microemulsions, emulsions and related systems: Energy applications N82-13545
ENCAPSULATING
High resolution, low cost solar cell contact development
[NASA-CR-165032] N82-13501
Investigation of test methods, material properties, and processes for solar cell encapsulants
[NASA-CR-165031] N82-13503
ENCKE METHOD
Regularized integration of gravity-perturbed trajectories: A numerical efficiency study N82-13155
ENERGETIC PARTICLES
Measurements of heavy ions in the low altitude regions of the outer zone
[AD-A099453] N82-13600
ENERGY BANDS
Electron band theory and high pressure equation of state
[DE81-027436] N82-13955
ENERGY BUDGETS
Comparison of data inversion techniques for remotely sensed wide-angle observations of Earth emitted radiation
[NASA-TP-1924] N82-13620
ENERGY CONSERVATION
Appliance efficiency and the solar building
[DE81-029073] N82-13265
Annual cycle energy system experimental performance and national applicability
[DE81-028570] N82-13523
Techniques for energy conservation in ac motor-driven systems
[DE82-900358] N82-13537
A central microprocessor controlled electrical storage heating system
[BMFT-FB-T-80-182] N82-13547
Evaluation of techniques for reducing in-use automotive fuel consumption
[PB81-233298] N82-13985
Highway fuel economy study
[PB81-233650] N82-13986
ENERGY CONSUMPTION
Ultimate in building energy analysis: DOE-2 and BLAST
[DE81-028703] N82-13263
Appliance efficiency and the solar building
[DE81-029073] N82-13265
Water and energy usage in coal preparation
[PB81-238248] N82-13486
ENERGY CONVERSION
Rate coefficients of combustion/fuel conversion reactions by high-temperature photochemistry
[DE81-027965] N82-13192
Experimental and analytical investigation of a fluidic power generator
[JPL-PUB-81-100] N82-13386
Distributed photovoltaic systems: Utility interface issues and their present status
[NASA-CR-165019] N82-13492
A preliminary estimate of future communications traffic for the electric power system
[NASA-CR-165015] N82-13493
Technology assessment of solar energy systems: Availability and impacts of woody biomass utilization in the Pacific Northwest
[DE82-000705] N82-13535
New and renewable energy in the United States of America
[DE81-030887] N82-13539
Treatment of biomass gasification wastewaters using reverse osmosis
[DE82-000698] N82-13566
ENERGY CONVERSION EFFICIENCY
Develop and test fuel cell powered on-site integrated total energy system. Phase 3: Full-scale power plant development
[NASA-CR-165328] N82-13490
High resolution, low cost solar cell contact development
[NASA-CR-165032] N82-13501
Cell module and fuel conditioner development
[NASA-CR-165462] N82-13511
Intermediate photovoltaic system application experiment operational performance report. Volume 2 for Beverly High School, Beverly, Mass.
[DE82-000611] N82-13532
Data report for the northeast residential experiment station, June 1981 — photovoltaic systems
[DE82-000066] N82-13533
Electrical effects of slag in a diffuse mode magnetohydrodynamic generator N82-13550
ENERGY DISSIPATION
Electric coheating experiment to determine the heat-loss coefficient of a double-envelope house
[DE81-027937] N82-13264
Anamolous loss in transformer steels N82-13371
Background fitting for electron energy-loss spectra
[DE81-027117] N82-13855
Energy losses and mean free paths of electrons in silicon dioxide
[DE81-026353] N82-13860
ENERGY DISTRIBUTION
Low energy X-ray spectrometer
[DE81-025824] N82-13407
Statistical energy analysis computer program, user's guide
[NASA-CR-161913] N82-13764
ENERGY LEVELS
Enhanced energy deposition symmetry by hot electron transport
[DE81-028774] N82-13861
ENERGY POLICY
Power-plant fly-ash utilization: A chemical-processing perspective
[DE81-025452] N82-13191
Barriers to the utilization of synthetic fuels for transportation
[NASA-CR-165517] N82-13243
Natural gas plan needed to provide greater protection for high-priority and critical uses
[PB81-228488] N82-13256
Information resources in the USA on new and renewable energy, a description and directory
[DE81-028867] N82-13522
Building a consensus about energy technologies
[DE82-000501] N82-13536
Microemulsions, emulsions and related systems: Energy applications N82-13545
ENERGY SPECTRA
Energy spectral analysis in projection radiography N82-13293
Low energy X-ray spectrometer
[DE81-025824] N82-13407
ENERGY STORAGE
A preliminary estimate of future communications traffic for the electric power system
[NASA-CR-165015] N82-13493
Alternate hybrid power sources for remote site applications
[AD-A099471] N82-13512
Camelot: A novel concept for a multiterawatt pulse power generator for single pulse burst or repetition rate operation
[AD-A103024] N82-13513
DC dielectric strengths of fluorinated benzenes and the stored-energy theory
[DE81-026515] N82-13516
Computer-automated controls for superconducting magnetic energy storage
[DE81-028697] N82-13521
A central microprocessor controlled electrical storage heating system
[BMFT-FB-T-80-182] N82-13547
ENERGY TECHNOLOGY
Alternate hybrid power sources for remote site applications
[AD-A099471] N82-13512
Information resources in the USA on new and renewable energy, a description and directory
[DE81-028867] N82-13522
Microemulsions, emulsions and related systems: Energy applications N82-13545
Health and safety research division
[DE81-026088] N82-13652
LLNL 1981: Technical horizons
[DE81-028265] N82-14048
ENERGY TRANSFER
Studies of polymer compatibility by nonradiative energy transfer N82-13235
Development, analysis and control of the inductor-converter bridge N82-13349
Environmental impacts of energy transportation
[DE82-900316] N82-13559
On the vibrational energy transfer processes of polyatomic molecules in the gas and solid phases N82-13865
ENGINE CONTROL
Development of a miniaturised digital thrust demand unit N82-13055
Sensor failure detection system — for the F100 turbofan engine
[NASA-CR-165515] N82-13145
ENGINE DESIGN
Aerodynamic aspects of a high bypass ratio engine installation on a fuselage afterbody N82-13093
An aerodynamic design and the overall stage performance of an air-cooled axial-flow turbine
[NAL-TR-321T] N82-13109
ENGINE INLETS
Aerodynamics of Power Plant Installation
[AGARD-CP-301] N82-13065
Performance of highly integrated inlets for supersonic aircraft N82-13066
Top-mounted inlet system feasibility for transonic-subsonic fighter aircraft applications N82-13067
Some RAE research on shielded and unshielded fuselage mounted air intakes at subsonic and supersonic speeds N82-13068
Prediction and measurement of time-variant, three-dimensional flows in military aircraft intakes N82-13069
Effects of intake geometry on circular pitot intake performance at zero and low forward speeds N82-13070

Subsonic military aircraft engine intake: An integrated theoretical experiment design
N82-13073

The design and development of the Tornado engine air intake N82-13074

Wind tunnel tests of powered models: A comparison of two methods of simulating the jets of jet engines
N82-13087

Numerical analysis of the scramjet-inlet flow field by using two-dimensional Navier-Stokes equations
[NASA-TP-1940] N82-13142

ENGINEERING DRAWINGS

Geometric programming for engineering design optimization N82-13268

ENTIRE FUNCTIONS

Zeros of successive derivatives of some entire functions of infinite order N82-13788

A sharper estimate of the renewal function
[CTH-MATH-1980-18] N82-13798

On the dependence of the growth of an entire function of the distribution of the zeros of its derivatives and a conjecture of G. Polya N82-13805

ENVIRONMENT EFFECTS

Environmental and economic comparison of advanced processes for conversion of coal and biomass into clean energy
[PB81-234239] N82-13256

Deep Ocean Mining Environmental Study. Environmental effects of commercial-scale mining
[PB81-227753] N82-13484

Residual-energy-applications program environmental analysis report — industrial scale waste heat recovery equipment and utilization
[DE81-027538] N82-13525

Program planner's guide to geothermal development in California
[DE82-000700] N82-13527

Technology assessment of solar energy systems: Availability and impacts of woody biomass utilization in the Pacific Northwest
[DE82-000705] N82-13535

Compressed air energy storage: Preliminary design and site development program in an aquifer. Volume 2: Utility system planning
[DE82-000466] N82-13544

Environmental impacts of energy transportation
[DE82-900316] N82-13559

National Research and Development Program: Environmental air. Summary — air pollution monitoring and modeling; effects on people and their environment N82-13571

Environmental hazard rankings of pollutants generated in coal gasification processes
[PB81-231698] N82-13576

Environmental assessment of the Alaskan Continental Shelf: Annual reports of principal investigators for the year ending March 1980. Volume 5: Hazards
[PB81-225732] N82-13607

Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update
[PB81-232811] N82-13655

ENVIRONMENT MANAGEMENT

Artificial Reefs: Proceedings of a Conference
[PB81-227779] N82-13644

ENVIRONMENT POLLUTION

Transport and reaction of heavy metals in Alaskan fjord estuaries
[DE81-028319] N82-13474

Environmental assessment of the Alaskan Continental Shelf: Annual reports of principal investigators for the year ending March 1980. Volume 5: Hazards
[PB81-225732] N82-13607

Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update
[PB81-232811] N82-13655

ENVIRONMENT SIMULATORS

Environment simulator for radar signals on the digital level
[FOA-A-30025-E4] N82-13343

ENVIRONMENTAL MONITORING

Aircraft data summaries of the SURE intensives, volume 4
[DE82-900311] N82-13569

ENVIRONMENTAL QUALITY

An automated system for global atmospheric sampling using B-747 airliners
[NASA-CR-165264] N82-13554

Environmental and radiological safety studies: interaction of (238) PuO2 heat sources with terrestrial and aquatic environments
[DE81-032019] N82-13565

Aircraft data summaries for the SURE intensives, volume 1
[DE82-900314] N82-13568

Aircraft data summaries of the SURE intensives, volume 4
[DE82-900311] N82-13569

ENVIRONMENTAL TESTS

Design, fabrication, test, qualification, and price analysis of third generation design solar cell modules
[NASA-CR-165007] N82-13502

EPHEMERIDES

Cometary ephemerides - needs and concerns
N82-13995

EPITAXY

Electron beam evaporation of superconducting, A15 niobium-silicon N82-13944

HgCdTe fabrication using directed energy techniques
[AD-A105626] N82-13947

EPOXY RESINS

Flammability and photo-stability of selected polymer systems N82-13238

EQUALIZERS (CIRCUITS)

Adaptive equalization algorithms for a dispersive channel
[ENST-E-80012] N82-13776

EQUATIONS OF STATE

Theoretical equations of state for metals
[DE81-028743] N82-13224

Molecular dynamics calculations for sodium using pseudopotential theory
[DE81-029022] N82-13853

EQUIPMENT

The impact of new guidance and control systems on military aircraft cockpit design
[AGARD-CP-312] N82-13048

EQUIPMENT SPECIFICATIONS

Practical aspects of instrumentation system installation, volume 13
[NASA-TM-84067] N82-13140

Review of low-voltage CP detonators
[DE81-025637] N82-13250

Two-mirror antenna for radio relay communication
N82-13306

The message processing and distribution system development
[AD-A104585] N82-13333

Future directions in Navy electronic system reliability and survivability
[AD-A102460] N82-13438

ERROR ANALYSIS

Compressor stall inducing installation effects of an engine control parameter for the CF-5 aircraft
N82-13085

Two-path model of fading in a high data rate communication channel N82-13292

Standard Bit Error Rate (BER) versus received signal level testing
[AD-A104573] N82-13338

Probabilistic error analysis of floating point and CRD arithmetics N82-13758

Pointwise error estimation for finite element discretizations, part 1
[TRITA-NA-8105-PT-1] N82-13801

An upper asymptote for the three-parameter logistic item-response model
[AD-A103013] N82-13816

ERROR CORRECTING CODES

Capacity and coding for computer memory with defects N82-13750

An algebraic model of fault masking logic
N82-13804

ERROR FUNCTIONS

Error bounds for reconstruction of a function f from a finite sequence (SGN(ft sub i) + x sub i))
[AD-A104477] N82-13795

ERRORS

Standard Bit Error Rate (BER) versus received signal level testing
[AD-A104573] N82-13338

Modeling human tracking error in several different anti-tank systems N82-13699

On the internal target model in a tracking task
N82-13700

ESTIMATES

A sharper estimate of the renewal function
[CTH-MATH-1980-18] N82-13798

ESTIMATING

Estimation of variable latency signals via unwrapped phase averaging with application to visual evoked potentials N82-13347

New optimization research
[AD-A104864] N82-13793

ESTUARIES

Transport and reaction of heavy metals in Alaskan fjord estuaries
[DE81-028319] N82-13474

ETHERS

Effect of solvents on the radiation-induced polymerization of ethyl and isopropyl vinyl ethers
N82-13236

ETHYL ALCOHOL

Feasibility study report for the Imperial Valley Ethanol Refinery: A 14.9-million-gallon-per-year ethanol synfuel refinery utilizing geothermal energy
[DE82-000288] N82-13252

Neurotransmitter function in the basal ganglia after acute and chronic ethanol treatment
[AD-A103744] N82-13649

ETHYL COMPOUNDS

Constitution of silicate anions in tetraethyl-ammonium silicates and their aqueous solutions
[NRC/CNR-TT-2004] N82-13170

Gas-solid chromatography on cation forms of lightly sulfonated porous polymers N82-13237

Effect of solvents on the radiation-induced polymerization of ethyl and isopropyl vinyl ethers
N82-13236

ETHYLENE

Metal ion modification of polymeric sulfur nitride, (SN) subx, electrodes and electrochemical reduction of acetylene at a molybdenum modified (SN)sub x electrode N82-13165

ETHYLENE COMPOUNDS

Investigation of test methods, material properties, and processes for solar cell encapsulants
[NASA-CR-165031] N82-13503

EUCLIDEAN GEOMETRY

Algorithms for the geometry of semi algebraic sets
N82-13783

EUROPEAN SPACE PROGRAMS

Plans for Comet Halley — ESA's Giotto mission, Japan's Planet-A mission, and the U.S.S.R. Venera-Halley mission N82-14024

The ESA mission to Comet Halley N82-14025

EUTECTIC ALLOYS

A quantitative study of factors influencing lamellar eutectic morphology during solidification
[NASA-TM-82451] N82-13218

Cyclic deformation and fatigue microcrack initiation in pearlitic eutectoid steel N82-13230

EVAPORATION

Energetics and dynamics of droplet evaporation in high temperature intermediate Reynolds number flows N82-13379

Design procedures for a commercial scale thermal evaporation system to deposit CdS for solar cell manufacture N82-13551

Inclusive charged particle spectrum from the interaction of nuclei with intermediate energy proton
N82-13848

Fluorescent guest-host effect in scattering liquid crystals and new physical phenomena in thin liquid crystal films N82-13940

Electron beam evaporation of superconducting, A15 niobium-silicon N82-13944

HgCdTe fabrication using directed energy techniques
[AD-A105626] N82-13947

EXCITATION

Excitation of radial resonator with annular slot
N82-13326

EXHAUST EMISSION

Effect of fuel-air-ratio nonuniformity on emissions of nitrogen oxides
[NASA-TP-1798] N82-13143

Pilot-scale development of a low-NOx coal-fired tangential system
[PB81-242513] N82-13270

Proton-induced X-ray emission analysis: A complement to analytical methods used in environmental studies
[DE81-029012] N82-13557
Control of hydrocarbons and carbon monoxide via catalytic incineration
[DE82-000508] N82-13560

EXHAUST FLOW SIMULATION
Wind tunnel test and analysis techniques using powered simulators for civil nacelle installation drag assessment N82-13088
Establishment of an experimental technique to provide accurate measurement of the installed drag of close coupled civil nacelle/airframe configurations, using a full span model with turbine powered engine simulators N82-13089

EXHAUST GASES
Pilot-scale development of a low-NOx coal-fired tangential system
[PB81-242513] N82-13270
Cyclic compression, combustion and expansion of a fuel and air mixture in a cylinder containing a catalyst
[PB81-232480] N82-13434
Control of hydrocarbons and carbon monoxide via catalytic incineration
[DE82-000508] N82-13560

EXHAUST NOZZLES
Aerodynamics of Power Plant Installation
[AGARD-CP-301] N82-13065
Integration of advanced exhaust nozzles N82-13075
Advanced exhaust nozzle technology N82-13078
A numerical investigation of exhaust plume temperature effects on nonaxisymmetric nozzle/afterbody performance N82-13079
Evaluation of an experimental technique to investigate the effects of the engine position on engine/pylon/wing interference N82-13090
Flow characteristics of a multiple nozzle exhaust gas eductor system
[AD-A104072] N82-13387

EXHAUST SYSTEMS
Investigation of acoustic interactions in jet thrust augmenting ejectors
[AD-A106083] N82-13835

EXHAUST VELOCITY
Determination of two-stroke engine exhaust noise by the method of characteristics
[NASA-TM-84061] N82-13827

EXPANSION
Micromechanics of expansive mechanisms in expansive cement concretes N82-13258
Underexpanded free jets and their interaction with adjacent surfaces
[LOG-J12276] N82-13385
Design and development of a reciprocating low-temperature freon expander
[DE81-028609] N82-13392

EXPERIMENTAL DESIGN
The influence of closed-coupled, rear fuselage mounted nacelles on the design of an advanced high speed wing N82-13092
Some experimental design techniques in image processing problems N82-13782
Detection of infrasound generated by Clear Air Turbulence (CAT) N82-13630
Laboratory study of sound propagation into a fast bottom medium
[AD-A104598] N82-13631
Laboratory measurements of the cometary photochemical phenomena N82-14023

EXPERIMENTATION
Soviet UCG experience specifically related to field experiments in the United States
[DE81-028642] N82-13244
Laboratory Research — spectroscopic analysis, photochemical reactions, and proton irradiation of ice N82-14022

EXPLORER 55 SATELLITE
Ionospheric scintillation N82-13585

EXPLOSIONS
Testing of a work bench for handling of explosives in the laboratory
[FOA-C-20393-D1] N82-13367

EXPLOSIVES
Evaluation of low-chlorine TATB from a production source
[DE81-025474] N82-13249
Review of low-voltage CP detonators
[DE81-028837] N82-13250
Performance of chemical analogs of the explosive CP
[DE81-028836] N82-13251
Explosive-metal composites and electrical switch technology
[AD-A099476] N82-13361

EXPOSURE
Gamma ray buildup factors in lead-iron and iron-lead shields
[EUR-7086-EN] N82-13864

EXTERNAL STORES
Prediction of aerodynamic loads on aircrafts with external stores at transonic speeds N82-13813

EXTERNAL SURFACE CURRENTS
Molecular beam electric resonance studies of weakly bound complexes N82-13667

EXTRACTION
Soviet UCG experience specifically related to field experiments in the United States
[DE81-028642] N82-13244
Separations Science data base: An abstractor's manual
[DE81-029101] N82-13977

EXTRAPOLATION
A method for accelerating convergence to the solution of nonlinear structural equations by reducing residual work N82-13439

EYE MOVEMENTS
Dynamic measurement of human vertical fusional response N82-13660

F

F-14 AIRCRAFT
Limited evaluation of an F-14A airplane utilizing an aileron-rudder interconnect control system in the landing configuration
[NASA-TM-81972] N82-13148

F-18 AIRCRAFT
F/A 18 Hornet crew station N82-13064

FABRICATION
Explosive-metal composites and electrical switch technology
[AD-A099476] N82-13361
High resolution, low cost solar cell contact development
[NASA-CR-165032] N82-13501
Design, fabrication, test, qualification, and price analysis of third generation design solar cell modules
[NASA-CR-165007] N82-13502
Cell module and fuel conditioner development
[NASA-CR-165462] N82-13511
HgCdTe fabrication using directed energy techniques
[AD-A105626] N82-13947

FABRY-PEROT INTERFEROMETERS
Spectral imagery: Recent results with the SPIFI and their implications for cometary atmospheric studies — servocontrolled polarimetric imaging Fabry-Perot interferometer N82-14011

FACTORIAL DESIGN
The relationship between the number of factors and size of an experiment — a medical diagnostics case
[AD-A103677] N82-13792

FAILURE ANALYSIS
Surface failure of CO2 laser irradiated glass
[AD-A105454] N82-13421
Asymmetric stress and failure analysis
[DE81-026842] N82-13451
Confidence intervals for the reliability of a future system configuration
[AD-A105031] N82-13814
Statistical analysis of accelerated temperature aging of semiconductor devices
[AD-A099439] N82-13946

FAILURE MODES
Fatigue testing of fibre composites N82-13280
Surface failure of CO2 laser irradiated glass
[AD-A105454] N82-13421
Elastic-plastic-fracture analysis of concrete structures N82-13462
Computer-automated controls for superconducting magnetic energy storage
[DE81-028697] N82-13521

FAN BLADES
Thrust modulation methods for a subsonic V/STOL aircraft
[NASA-TM-82747] N82-13112

FAR INFRARED RADIATION
Far infrared source classification system — digital system
[ENST-E-80005] N82-13891

FAR ULTRAVIOLET RADIATION
A vacuum ultraviolet radiation source using Cerenkov radiation N82-13894

FARADAY EFFECT
High latitude measurements of the Total Electron Content (TEC) using the Faraday technique and comparisons with TEC estimates from NAVSTAR-GPS data
[AD-A103042] N82-13603

FATIGUE (MATERIALS)
Fatigue crack propagation studies in two cryogenic steels N82-13213
Mechanisms by which humidity alters ductility
[AD-A105530] N82-13221
Endurance test and evaluation of alkaline water electrolysis cells
[NASA-CR-165424] N82-13508
Push-pull fatigue of LiF and MgO single crystals N82-13960

FATIGUE LIFE
Fatigue crack initiation and electrochemical behavior of 403 stainless steel in aqueous environments N82-13210
An investigation of notch low cycle fatigue life behavior of Rene' 80 at high temperature N82-13214
The role of fatigue testing N82-13275
Fatigue test machines N82-13277
On-line computers in fatigue testing N82-13279
Fatigue testing of fibre composites N82-13280
Elevated temperature fatigue testing of metals N82-13281
Monitoring of damage in fibre composites N82-13284
Evaluation of creep-fatigue life-prediction models for the solar central receiver
[DE82-000942] N82-13529

FATIGUE TESTING MACHINES
Fatigue Test Methodology
[AGARD-LS-118] N82-13274
The role of fatigue testing N82-13275
Fatigue test machines N82-13277
Variable amplitude fatigue testing N82-13278
On-line computers in fatigue testing N82-13279
Methods of obtaining crack growth data in metals N82-13283

FATIGUE TESTS
The role of fatigue testing N82-13275
Planning and analysis of a fatigue test programme N82-13276
On-line computers in fatigue testing N82-13279
Fatigue testing of fibre composites N82-13280
Elevated temperature fatigue testing of metals N82-13281
Fatigue tests with a corrosive environment N82-13282
Monitoring of damage in fibre composites N82-13284
Cyclic strain approach to fatigue in metals N82-13285

FAULT TOLERANCE
Future directions in Navy electronic system reliability and survivability
[AD-A102460] N82-13436
An algebraic model of fault masking logic N82-13804

FEASIBILITY ANALYSIS
Feasibility study report for the Imperial Valley Ethanol Refinery: A 14.9-million-gallon-per-year ethanol synfuel refinery utilizing geothermal energy
[DE82-000288] N82-13252

FEEDBACK CONTROL
Comparison of closed loop model with flight test results N82-13691
Functional structure and dynamics of the human nervous system N82-13692
On the use of the OCM's quadratic objective function as a pilot rating metric N82-13693
Information and display requirements for aircraft terrain following N82-13695
The role of manipulator characteristics in selecting the ideal effective vehicle N82-13704

Computer aided manual tracking N82-13705
Experimental results with a six-degree-of-freedom force-reflecting hand controller N82-13707
Feedback plasma control in hybrid poloidal coil system
[IPPJ-542] N82-13905
FERMIONS
Long-range interactions in lattice field theory N82-13941
FERRIC IONS
Mechanistic studies of electron exchange kinetics using ab initio
[DE81-026096] N82-13856
FERRITIC STAINLESS STEELS
Fatigue crack propagation studies in two cryogenic steels N82-13213
FERROFLUIDS
Benefication with magnetic fluids
[PB81-227126] N82-13485
FERROMAGNETIC RESONANCE
An investigation of some magnetic properties of calcium substituted yttrium iron garnet films N82-13935
FERROUS METALS
Mechanistic studies of electron exchange kinetics using ab initio
[DE81-026096] N82-13856
FIBER COMPOSITES
Fatigue testing of fibre composites N82-13280
Monitoring of damage in fibre composites N82-13284
FIBER OPTICS
The 30/20 GHz communications satellite trunking network study
[NASA-CR-165467] N82-13302
Fiber optics (optical waveguides) technology: Potential application in the DCS
[AD-A104740] N82-13303
Three-5 heterostructure avalanche photodiode modules for fiber optic communication links in the 1.0 to 1.3 micrometer spectral range
[AD-A099506] N82-13334
Single mode optical waveguide design investigation
[AD-A098979] N82-13881
Time dependent recording of images transmitted over optical fibers
[DE81-026599] N82-13889
Fiber optic quality assurance at the Nevada Test Site
[DE81-028740] N82-13890
Fiber optic time domain reflectometers: Approaches to performance improvement N82-13893
Fiber optic analog and timing monitoring system for the Antares laser fusion program
[DE81-028799] N82-13925
FIBER REINFORCED COMPOSITES
Creep and creep rupture of laminated graphite/epoxy composites N82-13173
FIBER STRENGTH
Fatigue testing of fibre composites N82-13280
FIELD OF VIEW
Scanner --- photography from a spin stabilized synchronous satellite
[NASA-CASE-GSC-12032-2] N82-13465
Interpolating for the location of remote sensor data
[NASA-TM-82169] N82-13469
Comparison of data inversion techniques for remotely sensed wide-angle observations of Earth emitted radiation
[NASA-TP-1924] N82-13620
Some effects of Field Of View (FOV) and target size on lateral tracking at hover N82-13672
FIELD STRENGTH
DC dielectric strengths of fluorinated benzenes and the stored-energy theory
[DE81-026515] N82-13516
FIELD THEORY (PHYSICS)
Experimental and theoretical investigations with laboratory models of phased array antenna
[BMVG-FBWT-79-21] N82-13341
Nuclear slab collision in a relativistic quantum field theory
[DE81-028132] N82-13972
FIGHTER AIRCRAFT
Aerodynamics of Power Plant Installation
[AGARD-CP-301] N82-13065
Performance of highly integrated inlets for supersonic aircraft N82-13066
Top-mounted inlet system feasibility for transonic-subsonic fighter aircraft applications N82-13067
Some RAE research on shielded and unshielded fuselage mounted air intakes at subsonic and supersonic speeds N82-13068
Prediction and measurement of time-variant, three-dimensional flows in military aircraft intakes N82-13069
The subsonic performance of practical military variable area convergent nozzles N82-13076
Final report on the FueFo-4 major theme: Interference drag with airframe/engine integration on fighter aircraft
[BMVG-FBWT-79-20] N82-13116
Maneuver load control for the reduction of design loads and improvement of the maneuverability of modern fighter aircraft
[BMVG-FBWT-81-2] N82-13138
FINITE DIFFERENCE THEORY
Calculation of wing-body-nacelle interference in subsonic and transonic potential flow N82-13095
Numerical analysis of the scramjet-inlet flow field by using two-dimensional Navier-Stokes equations
[NASA-TP-1940] N82-13142
Numerical study of multicellular natural convection in vertical cavities N82-13403
FINITE ELEMENT METHOD
Calculation of transonic air-intakes using a computer package for inviscid and boundary layer flows N82-13072
A solution of the Navier-Stokes equations by a mixed finite element method
[ONERA-NT-1981-1] N82-13398
Analysis of multicylinder IC-Engine crankshafts with hydrodynamic bearings using a finite element-transfer matrix approach N82-13437
Inelastic overload analysis of continuous steel multi-girder highway bridges by the finite-element method N82-13440
MAGNA: A finite element program for the materially and geometrically nonlinear analysis of three-dimensional structures subjected to static and transient loading
[AD-A099454] N82-13448
Analysis of the development of shallow groundwater supplies by pumping from ponds
[PB81-231904] N82-13476
User's manuals for DYNA3D and DYNAP: Nonlinear dynamic analysis of solids in three dimensions
[DE81-028360] N82-13772
MERLIN: A computer program to transfer finite-element meshes
[DE82-000606] N82-13775
A mixed variational principle for finite element analysis N82-13789
Error bounds for reconstruction of a function f from a finite sequence (SGN(ft sub i) + x sub i))
[AD-A104477] N82-13795
Pointwise error estimation for finite element discretizations, part 1
[TRITA-NA-8105-PT-1] N82-13801
FINLAND
Sulfur in the air in the capital (Helsinki) metropolitan area: ITASAT-project
[RR-614.71] N82-13553
Magnetic results from Nurmijaervi Geophysical Observatory 1980, No. 22
[ISBN-951-697-155-5] N82-13590
FINNED BODIES
Transitional ballistics of hypervelocity projectiles
[BMVG-FBWT-80-1] N82-13163
FIR FILTERS
Frequency sampling filters, design and applications N82-13354
FIRE EXTINGUISHERS
Development and testing of dry chemicals in advanced extinguishing systems for jet engine nacelle fires
[NASA-CR-165011] N82-13186
FIRES
Review of fire test methods and incident data for portable electric cables in underground coal mines
[PB81-227878] N82-13272
FISHERIES
Biological and physical oceanographic observations pertaining to the trawl fishery in a region of persistent coastal upwelling
[NASA-TM-81332] N82-13637
Artificial Reefs: Proceedings of a Conference
[PB81-227779] N82-13644
FISSILE FUELS
Plasma focus breeder
[IPPJ-541] N82-13904
FIXED POINT ARITHMETIC
Probabilistic error analysis of floating point and CRD arithmetics N82-13758
FIXED POINTS (MATHEMATICS)
The least fixed point property for omega chain continuous functions N82-13787
FLAME RETARDANTS
Flammability and photo-stability of selected polymer systems N82-13236
FLAME TEMPERATURE
Gas turbine combustor soot and radiation N82-13174
FLAMMABILITY
Flammability and photo-stability of selected polymer systems N82-13236
FLASH POINT
Controlled-flash pyrolysis
[DE82-000284] N82-13196
FLAT CONDUCTORS
Method of the study of complex waveguide junctions with one or several regions of communication N82-13316
FLAT PLATES
An experimental investigation of the turbulent flow in the junction of a flat plate and a body of constant thickness N82-13102
Turbulent wake development behind streamlined bodies N82-13104
On the buckling force of floating ice plates
[AD-A103733] N82-13472
A Module Experimental Process System Development Unit (MEPSDU)
[NASA-CR-165014] N82-13496
FLEXIBILITY
Dynamic analysis of flexible spatial mechanisms and robotic manipulators N82-13480
FLEXIBLE SPACECRAFT
Shape determination and control for large space structures
[JPL-PUB-81-71] N82-13166
On the modeling and control of flexible space structures N82-13168
FLEXING
Thermal contraction and flexure of intracratonic basins: A three dimensional study of the Michigan Basin N82-13582
FLIGHT CHARACTERISTICS
Further tests of a model-based scheme for predicting pilot opinion ratings for large commercial transports N82-13687
Comparison of closed loop model with flight test results N82-13691
FLIGHT CONTROL
Limited evaluation of an F-14A airplane utilizing an aileron-rudder interconnect control system in the landing configuration
[NASA-TM-81972] N82-13148
Interactive aircraft flight control and aeroelastic stabilization --- forward swept wing flight vehicles
[NASA-CR-165036] N82-13150
Functional structure and dynamics of the human nervous system N82-13692
On the use of the OCM's quadratic objective function as a pilot rating metric N82-13693
FLIGHT CREWS
Tanker avionics and aircrew complement evaluation N82-13063
F/A 18 Hornet crew station N82-13064
Guidelines for line-oriented flight training, volume 2
[NASA-CP-2184-VOL-2] N82-13123
Issues related to line-oriented flight training N82-13124
Line-oriented flight training: Northwest Airlines N82-13125
United Airlines LOFT training N82-13126
Eastern Airlines LOFT program N82-13127
Texas International Airlines LOFT program N82-13128
Delta Airlines LOFT training N82-13129
American Airlines LOFT evaluation program N82-13130
Group 1: Scenario design and development issues N82-13131
Group 2: Real time LOFT operations N82-13132

Group 3: Performance evaluation and assessment N82-13133

FLIGHT PLANS

Launch mission summary: Intelsat 5 (F3) Atlas/Centaur-55 [NASA-TM-84066] N82-13161

FLIGHT SIMULATION

Use of a helmet-mounted matrix display for presenting energy-maneuverability information during simulated close combat N82-13061

FLIGHT SIMULATORS

A real time Pegasus propulsion system model for VSTOL piloted simulation evaluation [NASA-TM-82770] N82-13144

FLIGHT TEST INSTRUMENTS

Practical aspects of instrumentation system installation, volume 13 [NASA-TM-84067] N82-13140

FLIGHT TESTS

Experimental and analytical investigation of a fluidic power generator [JPL-PUB-81-100] N82-13386

Report on research and technology-FY 1981 [NASA-TM-81367] N82-14047

FLIGHT TIME

Electronic master monitor and advisory display system test and demonstration report [AD-A106317] N82-13141

FLIGHT TRAINING

Guidelines for line-oriented flight training, volume 2 [NASA-CP-2184-VOL-2] N82-13123

Issues related to line-oriented flight training N82-13124

Line-oriented flight training: Northwest Airlines N82-13125

United Airlines LOFT training N82-13126

Eastern Airlines LOFT program N82-13127

Texas International Airlines LOFT program N82-13128

Delta Airlines LOFT training N82-13129

American Airlines LOFT evaluation program N82-13130

Group 1: Scenario design and development issues N82-13131

Group 2: Real time LOFT operations N82-13132

Group 3: Performance evaluation and assessment N82-13133

Group 4: Instructor training and qualifications N82-13134

FLOATING POINT ARITHMETIC

On the buckling force of floating ice plates [AD-A103733] N82-13472

Probabilistic error analysis of floating point and CRD arithmetics N82-13758

FLOOD PLAINS

Five-year water resources research plan, 1982-1987 [PB81-231938] N82-13479

FLOW

Determination of two-stroke engine exhaust noise by the method of characteristics [NASA-TM-84061] N82-13827

FLOW CHARACTERISTICS

An approximate analytical method for vortex-lift and center of pressure on the slender wing [NASA-TM-83196] N82-13045

The influence of closed-coupled, rear fuselage mounted nacelles on the design of an advanced high speed wing N82-13092

Experimental and analytical investigation of a fluidic power generator [JPL-PUB-81-100] N82-13386

FLOW DISTRIBUTION

Subsonic military aircraft engine intake: An integrated theoretical experiment design N82-13073

Model testing techniques for measuring inlet drag N82-13084

The role and implementation of different nacelle/engine simulation concepts for wind-tunnel testing in research and development work on transport aircraft N82-13086

Contributions to the aerodynamics of wing-body configurations in the nonlinear range of angles of attack [BMVG-FBWT-80-11] N82-13117

Numerical analysis of the scramjet-inlet flow field by using two-dimensional Navier-Stokes equations [NASA-TP-1940] N82-13142

Underexpanded free jets and their interaction with adjacent surfaces [LOG-J12276] N82-13365

The transonic flow field for a fluidic-generator fuze assembly [AD-A099816] N82-13388

Flow distribution control characteristics in marine gas turbine waste-heat recovery systems. Phase 1: Flow distribution characteristics and control in diffusers [AD-A104560] N82-13390

A review of one-dimensional oceanic mixed-layer models [AD-A103279] N82-13640

FLOW EQUATIONS

Prediction and measurement of time-variant, three-dimensional flows in military aircraft intakes N82-13069

Navier-Stokes solutions for a supersonic coflowing axisymmetric nozzle with a thick annulus N82-13101

Separate numerical treatment of attached and detached flow regions in general viscous flows N82-13375

Lagrangian fluid dynamics using the Voronoi-Delaunay mesh [LA-UR-81-1421] N82-13393

An initial study of the application of the numerical method of characteristics to unsteady flow analysis in partially filled gravity drainage sized pipes [PB81-229189] N82-13399

Coexistence of non-registered monolayer and bilayer solid films N82-13931

FLOW MEASUREMENT

Prediction and measurement of time-variant, three-dimensional flows in military aircraft intakes N82-13069

Prop-fan integration at cruise speeds N82-13097

An experimental investigation of the flow past a finite circular cylinder at a low subcritical Reynolds number N82-13105

H-Coal product physical properties measurement [DE81-029095] N82-13245

Numerical wind-speed simulation model [DE82-000956] N82-13627

Theoretical analysis of the effects of turbulence on a mobile parametric receiver [AD-A101418] N82-13633

FLOW STABILITY

Numerical study of multicellular natural convection in vertical cavities N82-13403

Transmission of sound across a vortex layer enclosing a cylindrical column of jet N82-13836

FLOW THEORY

Prop-fan integration at cruise speeds N82-13097

Crossflow effects on steady and fluctuating pressures on an ogive-cylinder cone-frustum model in supersonic separated flow [NASA-TP-1951] N82-13106

Lagrangian fluid dynamics using the Voronoi-Delaunay mesh [LA-UR-81-1421] N82-13393

FLOW VELOCITY

Investigation of the vortex field generated by an airfoil model in a wind tunnel, using ultrasonic pulses [MPIS-MITT-69] N82-13118

Separate numerical treatment of attached and detached flow regions in general viscous flows N82-13375

Mixing of a passive scalar in isotropic and sheared homogeneous turbulence N82-13405

Infiltration and indoor air quality in energy efficient houses in Eugene, Oregon [DE82-000971] N82-13561

FLUCTUATION THEORY

Investigation of fluctuation phenomena in dye lasers N82-13419

FLUID DYNAMICS

Two studies of fluidized beds: Heat transfer and grid jets N82-13203

Numerical methods for the analysis of fluid-structure interaction problems N82-13361

Rayleigh-Taylor stability for a shock wave-density discontinuity interaction [DE81-026707] N82-13394

FLUIDICS

Experimental and analytical investigation of a fluidic power generator [JPL-PUB-81-100] N82-13386

FLUIDIZED BED PROCESSORS

High-temperature measurements of alkali levels in an experimental 6-inch AFBC [DE81-023632] N82-13193

Reduction of nitric oxide in a fluidized bed [DE81-030488] N82-13196

Two studies of fluidized beds: Heat transfer and grid jets N82-13203

An experimental study of heat transfer to a horizontal tube in a large particle fluidized bed at elevated temperature N82-13406

FLUORESCENCE

On the vibrational energy transfer processes of polyatomic molecules in the gas and solid phases N82-13865

Fluorescent guest-host effect in scattering liquid crystals and new physical phenomena in thin liquid crystal films N82-13940

FLUORIDES

Critically evaluated data on optical and transport properties of solids (refractive index and absorption coefficient of selected optical materials) [AD-A105059] N82-13879

FLUOROHYDROCARBONS

DC dielectric strengths of fluorinated benzenes and the stored-energy theory [DE81-026515] N82-13516

FLUTTER

Unsteady aeroelastic modeling and trailing-edge flap control of an experimental wing in a two dimensional wind tunnel N82-13122

Design for active and passive flutter suppression and gust alleviation [NASA-CR-3482] N82-13147

FLUTTER ANALYSIS

Interactive aircraft flight control and aeroelastic stabilization — forward swept wing flight vehicles [NASA-CR-165036] N82-13150

FLUX DENSITY

Planetary radio astronomy observations from Voyager-2 near Saturn [NASA-TM-83856] N82-14037

FOCI

Phase measurments in the focal region of an aberrated lens N82-13875

FORCED VIBRATION

Influence of sine, and random, whole-body vibration on visual acuity [BMVG-FBWT-79-17] N82-13553

FORMALISM

Symbolic reasoning among 3-D models and 2-D images N82-13761

Methods of verification of digital logic N82-13783

Proving total correctness of nondeterministic programs in infinitary logic [MC-IW-150/80] N82-13799

FORMATIONS

A depositional model for major coal seams in the Rock Springs Formation, Upper Cretaceous, southwest Wyoming N82-13580

FORMULAS (MATHEMATICS)

Proving total correctness of nondeterministic programs in infinitary logic [MC-IW-150/80] N82-13799

FORTRAN

Digital Equipment Corporation VAX-11 FORTRAN, version 2 [PB81-232431] N82-13745

Solving multiactivity multifacility capacity-constrained 0-1 assignment problems [AD-A102583] N82-13796

Computer programs for line shape analysis of X-ray diffraction peaks — thin film analysis [PB81-227787] N82-13958

FORWARD SCATTERING

Ionospheric scintillation N82-13585

FOSSIL FUELS

Rate coefficients of combustion/fuel conversion reactions by high-temperature photochemistry [DE81-027965] N82-13192

Assessment of rotor-bearing dynamics: A planning study for the utility industry [DE82-900378] N82-13430

Development of advanced rotor-bearing systems for feedwater pumps, phase 2 [DE82-900376] N82-13431

Development of peatlands in northern Minnesota [DE82-000873] N82-13475

Design and test of two-step solar oil shale retort [DE82-000964] N82-13543

Update on Specified European R and D Efforts. Part 1: Appendices
[DE81-026404] N82-13963

FOUNDATIONS
Evaluation of reef shell embankment
[PB81-232761] N82-13266
Analysis and behavior of structures on discrete tensionless foundations N82-13286

FOURIER SERIES
The relationship between the acoustic impedance and unsteady flow field near the orifice of a two dimensional Helmholtz resonator in grazing flow N82-13378
Thermoelastic instability in a seal-like configuration N82-13436

FRACTURE MECHANICS
Planning and analysis of a fatigue test programme N82-13276
Elastic-plastic-fracture analysis of concrete structures N82-13462
Investigation of the acoustic emission and deformation response of finite ice plates
[AD-A103731] N82-13471

FRACTURE STRENGTH
Monitoring of damage in fibre composites N82-13284

FRACTURES (MATERIALS)
Dynamic effects on fracture of elastic - plastic materials N82-13463

FREE CONVECTION
Numerical study of multicellular natural convection in vertical cavities N82-13403

FREE ELECTRONS
Role of electron swarm studies in the development of gaseous dielectrics
[DE81-026349] N82-13952

FREE JETS
Underexpanded free jets and their interaction with adjacent surfaces
[LOG-J12276] N82-13385

FREON
Design and development of a reciprocating low-temperature freon expander
[DE81-028609] N82-13392
Heat pipe startup from the supercritical state N82-13400

FREQUENCY CONVERTERS
Techniques for energy conservation in ac motor-driven systems
[DE82-900356] N82-13537

FREQUENCY DISTRIBUTION
Principles of the construction of systems, which possess potential frequency independence --- antenna design N82-13330

FREQUENCY DIVIDERS
Antenna (selected articles)
[AD-A106499] N82-13323
Directed dividers on the metal-dielectric waveguides N82-13326

FREQUENCY DIVISION MULTIPLEXING
Energy spectral analysis in projection radiography N82-13293

FREQUENCY MODULATION
Beam propagation in the frequency-converted subsystems of Nova and Novette
[DE81-026253] N82-13862

FREQUENCY RANGES
Visual/motion cue mismatch in a coordinated roll maneuver
[NASA-CR-166259] N82-13664

FROZEN EQUILIBRIUM FLOW
On a dusty-gas shock tube
[UTIAS-250] N82-13151

FRUSTUMS
Crossflow effects on steady and fluctuating pressures on an ogive-cylinder cone-frustum model in supersonic separated flow
[NASA-TP-1951] N82-13108

FUEL CELLS
Asymmetric stress and failure analysis
[DE81-026842] N82-13451
Develop and test fuel cell powered on-site integrated total energy system. Phase 3: Full-scale power plant development
[NASA-CR-165328] N82-13490

FUEL COMBUSTION
Effect of fuel-air-ratio nonuniformity on emissions of nitrogen oxides
[NASA-TP-1798] N82-13143
Gas turbine combustor soot and radiation N82-13174
Rate coefficients of combustion/fuel conversion reactions by high-temperature photochemistry
[DE81-027965] N82-13192
Pilot-scale development of a low-NOx coal-fired tangential system
[PB81-242513] N82-13270
Catalytic combustion of residual fuels
[NASA-TM-82731] N82-13504
Environmental effects of pollutants from coal combustion. 1: The Four Corners Power Plant, Farmington, N.M.
[PB81-230427] N82-13572
Environmental effects of pollutants from coal combustion. 2: The Colstrip, Montana Power Plant
[PB81-234114] N82-13573

FUEL CONSUMPTION
Performance characteristics of automotive engines in the United States, third series: 1977 Chrysler 318 CID (5.2L), 2V
[PB81-233025] N82-13435
Controlled Speed Accessory Drive demonstration program
[NASA-CR-165010] N82-13981
Evaluation of techniques for reducing in-use automotive fuel consumption
[PB81-233296] N82-13985
Highway fuel economy study
[PB81-233850] N82-13986

FUEL PRODUCTION
Controlled-flash pyrolysis
[DE82-000284] N82-13196
Low/medium Btu coal gasification assessment program for potential users in New Jersey: Executive summary
[DE81-025475] N82-13247
Feasibility study report for the Imperial Valley Ethanol Refinery: A 14.9-million-gallon-per-year ethanol synfuel refinery utilizing geothermal energy
[DE82-000288] N82-13252
Creating a safer environment in US coal mines: The Bureau of Mines Methane Control Program, 1964-79
[PB81-233918] N82-13488
Solar-central-receiver fuels and chemicals
[DE82-000941] N82-13530

FUEL TESTS
Low/medium Btu coal gasification assessment program for potential users in New Jersey: Executive summary
[DE81-025475] N82-13247
Catalytic combustion of residual fuels
[NASA-TM-82731] N82-13504

FUEL-AIR RATIO
Effect of fuel-air-ratio nonuniformity on emissions of nitrogen oxides
[NASA-TP-1798] N82-13143
Cyclic compression, combustion and expansion of a fuel and air mixture in a cylinder containing a catalyst
[PB81-232480] N82-13434
Catalytic combustion of residual fuels
[NASA-TM-82731] N82-13504

FUNCTIONAL DESIGN SPECIFICATIONS
Residual-energy-application program: EAST facility requirements document, volume 1
[DE81-027536] N82-13526

FUNCTIONS (MATHEMATICS)
The least fixed point property for omega chain continuous functions N82-13787
Spectral functions in quantum chromodynamics and applications N82-13969

FURNACES
Pilot-scale development of a low-NOx coal-fired tangential system
[PB81-242513] N82-13270

FUSELAGES
Some RAE research on shielded and unshielded fuselage mounted air intakes at subsonic and supersonic speeds N82-13088
The influence of closed-coupled, rear fuselage mounted nacelles on the design of an advanced high speed wing N82-13092
Aerodynamic aspects of a high bypass ratio engine installation on a fuselage afterbody N82-13093

FUSION REACTORS
Materials studies for magnetic fusion energy applications at low temperatures -4
[PB81-222507] N82-13928

G

GALLIUM
Upper critical fields and span states in A-15 superconductors, part 1. Vortices in two-dimensional superconductors, part 2 N82-13942

GALLIUM ARSENIDES
Three-5 heterostructure avalanche photodiode modules for fiber optic communication links in the 1.0 to 1.3 micrometer spectral range
[AD-A099506] N82-13334
Raman probe of equilibrium and laser modulated populations of electrons and phonons in GaAs N82-13934
CW laser annealing and CW laser assisted diffusion in gallium arsenide N82-13943
The growth and carrier transport properties of sputter deposited GaAs thin films doped with silicon and magnesium N82-13965

GAMMA RAY SPECTROMETERS
Determination of radionuclide species by on-line radiochromatography using high resolution gamma ray spectroscopy N82-13181

GAMMA RAYS
Inclusive charged particle spectrum from the interaction of nuclei with intermediate energy proton N82-13848
Specific gamma-ray dose constants for nuclides important to dosimetry and radiological assessment
[DE81-031980] N82-13863
Gamma ray buildup factors in lead-iron and iron-lead shields
[EUR-7086-EN] N82-13864

GANGLIA
Neurotransmitter function in the basal ganglia after acute and chronic ethanol treatment
[AD-A103744] N82-13649

GAS ANALYSIS
Dynamic mass spectrometry: A residual gas analysis method and some applications
[DE81-026230] N82-13195

GAS CHROMATOGRAPHY
A miniature, thin-film thermal conductivity detector for an integrated gas chromatograph N82-13200
Gas-solid chromatography on cation forms of lightly sulfonated porous polymers N82-13237
Synthetic fuel aromaticity and staged combustion
[DE81-024205] N82-13246

GAS COMPOSITION
Observational data needs useful for modeling the coma N82-13991
Ground-based cometary spectroscopy N82-14007

GAS COOLED FAST REACTORS
Assessment of the computer code COBRA/CFTL --- for thermal-hydraulic analysis of simulated gas-cooled fast breeder reactor cores
[DE81-027933] N82-13771

GAS DENSITY
Gas target neutron generator studies
[UTIAS-251] N82-13850

GAS FLOW
Flow distribution control characteristics in marine gas turbine waste-heat recovery systems. Phase 1: Flow distribution characteristics and control in diffusers
[AD-A104560] N82-13390

GAS JETS
Two studies of fluidized beds: Heat transfer and grid jets N82-13203

GAS PRESSURE
On a dusty-gas shock tube
[UTIAS-250] N82-13151

GAS TRANSPORT
Transport properties of gaseous ions N82-13870
Oxygen transport and line emissions in a tokamak plasma
[IPPJ-544] N82-13900

GAS TURBINE ENGINES
Flow distribution control characteristics in marine gas turbine waste-heat recovery systems. Phase 1: Flow distribution characteristics and control in diffusers
[AD-A104560] N82-13390
Gas-turbine critical research and advanced technology support project
[NASA-TM-81708] N82-13509
Development of a high-temperature durable catalyst for use in catalytic combustors for advanced automotive gas turbine engines
[NASA-CR-165396] N82-13510

GAS TURBINES
Gas turbine combustor soot and radiation
N82-13174
Update on Specified European R and D Efforts. Part 1: Appendices
[DE81-026404] N82-13983

GAS-METAL INTERACTIONS
Investigation into the role of NaCl deposited on oxide and metal substrates in the initiation of hot corrosion
[NASA-CR-165029] N82-13217
Development and optimization of hydrogen storage materials using surface analytical techniques
[BMVG-FBWT-80-6] N82-13546

GASEOUS DIFFUSION
Transport properties of gaseous ions N82-13870

GASES
Infiltration and indoor air quality in energy efficient houses in Eugene, Oregon
[DE82-000971] N82-13561
On the vibrational energy transfer processes of polyatomic molecules in the gas and solid phases
N82-13865
Role of electron swarm studies in the development of gaseous dielectrics
[DE81-026349] N82-13952

GATES (CIRCUITS)
Effect of gate oxide thickness on the radiation hardness of silicon-gate CMOS
[DE81-027202] N82-13366

GAUSS EQUATION
Intermediate band surface photometry of elliptical galaxies N82-14095

GENERAL AVIATION AIRCRAFT
NASA research in aircraft propulsion
[NASA-TM-82771] N82-13146

GENERATION
Mesh generating and plotting facilities of the LAMCAL program
[EUR-7099-EN] N82-13778

GEOCHEMISTRY
Alaska's Water resources problems and research needs: Institute of Water Resources, five-year research plan
[PB81-231920] N82-13477
Petrology and geochemistry of ophiolite fragments in a tectonic melange, Kodiak Islands, Alaska
N82-13610
Catalog of lunar mare basalts greater than 40 grams. Part 1: Major and trace chemistry, with megascopic descriptions and rock and thin section photographs
[NASA-TM-84065] N82-14040

GEOCHRONOLOGY
Development of peatlands in northern Minnesota
[DE82-000673] N82-13475

GEOCORONAL EMISSIONS
Temperature and density of geocoronal helium derived from a rocket-borne He resonance cell experiment
[BMFT-FB-W-80-015] N82-13605

GEODESIC LINES
Curvature singularities in certain space-times
N82-13824

GEODESY
Reports of Planetary Geology Program, 1981
[NASA-TM-84211] N82-14041

GEODETIC SURVEYS
Report of survey for McDonald Observatory, Harvard Radio Astronomy Station, and vicinity
[PB81-234338] N82-13606

GEOLOGICAL FAULTS
Recurrence intervals and recency of faulting along the San Gregorio fault zone, San Mateo County, California N82-13581
Plastic flow and unstable deformation of geological materials N82-13587
Papers presented to the Conference on the Processes of Planetary Rifting
[LPI-CONTRIB-457] N82-13595
Studies of natural fractures, fault zone permeability, and a pore space-permeability model N82-13616

GEOLOGY
A depositional model for major coal seams in the Rock Springs Formation, Upper Cretaceous, southwest Wyoming N82-13580

GEOMETRIC RECTIFICATION (IMAGERY)
Symbolic reasoning among 3-D models and 2-D images N82-13761

GEOMETRICAL OPTICS
Possibilities of phase correction on the small reflector in a two-reflector antenna N82-13322
Optics of mass separator 1
[DE81-026242] N82-13886

GEOMORPHOLOGY
Basement rocks of the main interior basins of the midcontinent
[NASA-CR-164935] N82-13596

GEOPHYSICAL OBSERVATORIES
Geophysical monitoring for climatic change, number 8: Summary Report, 1979
[PB81-233355] N82-13631

GEOPHYSICS
Solar-geophysical data. Prompt report, part 1
[PB81-221178] N82-14044
Solar-geophysical data. Comprehensive reports, part 2
[PB81-221186] N82-14045
Solar-geophysical data. Explanation of data reports
[PB81-221194] N82-14046

GEORGIA
Analysis of the development of shallow groundwater supplies by pumping from ponds
[PB81-231904] N82-13476

GEOSYNCHRONOUS ORBITS
Technical basis for efficient management of geostationary satellite orbit/spectrum N82-13159

GEOTECHNICAL ENGINEERING
Evaluation of reef shell embankment
[PB81-232761] N82-13266

GEOTHERMAL ENERGY CONVERSION
Workshop proceedings: U-bend tube cracking in steam generators
[DE81-903765] N82-13515
New and renewable energy in the United States of America
[DE81-030887] N82-13539

GEOTHERMAL ENERGY UTILIZATION
Feasibility study report for the Imperial Valley Ethanol Refinery: A 14.9-million-gallon-per-year ethanol synfuel refinery utilizing geothermal energy
[DE82-000288] N82-13252
Program planner's guide to geothermal development in California
[DE82-000700] N82-13527

GEOTHERMAL RESOURCES
Feasibility study report for the Imperial Valley Ethanol Refinery: A 14.9-million-gallon-per-year ethanol synfuel refinery utilizing geothermal energy
[DE82-000288] N82-13252
Geothermal-resource verification for Air Force Bases
[DE81-027482] N82-13520

GERMANIUM
Critically evaluated data on optical and transport properties of solids (refractive index and absorption coefficient of selected optical materials)
[AD-A105059] N82-13879
Phase separation of a two component electron-hole liquid in (111) stressed Ge N82-13938

GIANT STARS
Evolution of close binary systems: Observational aspects
[NASA-CR-165039] N82-14027

GLASS
Surface failure of CO2 laser irradiated glass
[AD-A105454] N82-13421
Electric field-enhanced diffusion and electron stimulated desorption of alkali elements from glass surfaces during electron bombardment and Auger electron analysis N82-13961

GLAZES
Field tests of a surface ice accretion measurement system
[AD-A100262] N82-13624

GLOBAL AIR SAMPLING PROGRAM
An automated system for global atmospheric sampling using B-747 airliners
[NASA-CR-165264] N82-13554

GOGGLES
Minimum/constant voltage PLZT electrooptic shutters --- lead lanthanum zirconate titanate wafers for flash protective goggles
[DE81-028646] N82-13888

GOVERNMENTS
Building a consensus about energy technologies
[DE82-000501] N82-13536

GRAIN BOUNDARIES
Fundamental studies of grain-boundary passivation in polycrystalline silicon with application to improved photovoltaic devices
[DE82-000825] N82-13658
The structure and properties of grain boundaries
N82-13962

GRAMMARS
Preliminary analysis of a breadth-first parsing algorithm: Theoretical and experimental results
[AD-A101852] N82-13797

GRANULAR MATERIALS
Plastic flow and unstable deformation of geological materials N82-13587

GRAPHITE
Physical adsorption of quantum atomic and molecular systems N82-13646

GRAPHITE-EPOXY COMPOSITE MATERIALS
Effects of hygrothermal conditioning on the dynamic behavior of resin matrix composites N82-13172
Creep and creep rupture of laminated graphite/epoxy composites N82-13173

GRATINGS (SPECTRA)
Synthesis of nonequidistant line-source antenna by the statistical methods of search N82-13329

GRAVIMETRY
Progress in the global standarization of gravity: An analysis of the Woollard and Rose international gravity values
[AD-A099459] N82-13599

GRAVITATION
Problems in quantum mechanics and gravitation
N82-13970

GRAVITATIONAL EFFECTS
Adaptation of the TH Epsilon Mu formalism for the analysis of the equivalence principle in the presence of the weak and electroweak interaction
[NASA-TM-82450] N82-13851

GRAVITATIONAL FIELDS
Simulation studies on the computation of the gravity vector in space from surface data considering the topography of the Earth N82-13612

GRAVITY ANOMALIES
Regularized integration of gravity-perturbed trajectories: A numerical efficiency study
N82-13155
Progress in the global standarization of gravity: An analysis of the Woollard and Rose international gravity values
[AD-A099459] N82-13599

GRAZING INCIDENCE
The relationship between the acoustic impedance and unsteady flow field near the orifice of a two dimensional Helmholtz resonator in grazing flow
N82-13378

GREAT LAKES (NORTH AMERICA)
Method for measuring brash ice thickness with impulse radar
[AD-A103738] N82-13597

GREEN FUNCTION
Simulation studies on the computation of the gravity vector in space from surface data considering the topography of the Earth N82-13612

GROUND STATE
Trapped ion research
[AD-A098648] N82-13188

GROUND STATIONS
Correlated ground-based and the observations
N82-14006

GROUND WATER
The occurrence and control of land subsidence due to ground water withdrawal with special reference to the San Joaquin and Santa Clara Valleys, California
N82-13466
Analysis of the development of shallow groundwater supplies by pumping from ponds
[PB81-231904] N82-13476
Five-year Hawaii water research agenda, 1982-1987
[PB81-231912] N82-13478
Massachusetts' five-year water resources research needs, 1982-1987
[PB81-231961] N82-13480
Preliminary investigation of a shallow ground-water flow system associated with Connetquot Brook, Long Island, New York
[PB81-228751] N82-13481
The District of Columbia Five-Year Water Resources Research Program Plan, 1982-1987
[PB81-234882] N82-13482

Environmental and radiological safety studies: interaction of (238) PuO2 heat sources with terrestrial and aquatic environments [DE81-032019] N82-13565

GROUND WIND
Network wind power over the Pacific northwest. Appendix 1: Wind statistics summaries for the wind power data stations [DE81-029291] N82-13518
Wind Power: Research on network wind power over the Pacific northwest. Executive summary [DE81-029360] N82-13519
Application of Bayesian analysis for wind energy site evaluation N82-13619

GROUT
Effective stress-strain-strength behavior of silicate-grouted sand N82-13257
Injection and distribution of silicate grout in sand N82-13287

GRUNEISEN CONSTANT
Shock anomaly and s-d transition in high-pressure lanthanum [DE81-027659] N82-13948

GUIDE VANES
Transonic flows in an air inlet with large incidence and the effect of a blowing trap N82-13071

GUNFIRE
Electronic measurement of airblast overpressure [AD-A105379] N82-13389

GUST ALLEVIATORS
Design for active and passive flutter suppression and gust alleviation [NASA-CR-3482] N82-13147

GYROSCOPIC COUPLING
Satellite attitude control with decomposed controller [LOG-G668] N82-13160

H

HADRONS
The hadronic decay rate of the Higgs boson: An application of the running mass N82-13842
Two-photon physics as a probe of hadron dynamics [DE81-028757] N82-13858

HALIDES
Critically evaluated data on optical and transport properties of solids (refractive index and absorption coefficient of selected optical materials) [AD-A105059] N82-13879

HALL EFFECT
Effect of vacuum exhaust pressure on the performance of MHD ducts at high D-field [NASA-TM-82750] N82-13906
Boron implanted strontium titanate N82-13939
Fundamental studies of grain-boundary passivation in polycrystalline silicon with application to improved photovoltaic devices [DE82-000825] N82-13956

HALLEY'S COMET
Photographic observations of comets at Lowell Observatory — Halley's comet N82-14016
Outburst and nuclear breakup of Comet Halley - 1910 N82-14018
The interactive astronomical data analysis facility - image enhancement techniques to Comet Halley N82-14019
Near perihelion observations of Comet Halley from Shuttle orbiter N82-14021
The ESA mission to Comet Halley N82-14025
The International Halley Watch: A program of coordination, cooperation and advocacy N82-14026

HALOCARBONS
Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update [PB81-232811] N82-13655

HALOGEN COMPOUNDS
Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update [PB81-232811] N82-13655

HALOGENS
Flammability and photo-stability of selected polymer systems N82-13236

HALOS
On observing comets for nuclear rotation N82-14015

HANDICAPS
A data collection scheme for identification of parameters in a driver model N82-13686

HARDENING (MATERIALS)
Laser heat treatment of track components in combat vehicles, phase 1 [AD-A102761] N82-13219

HARDNESS TESTS
Test number 2 of propellants for rocket motor E573 [FOA-C-20411-D1] N82-13254

HARDWARE
Descriptive techniques for digital system containing complex hardware components N82-13754

HARMONIC ANALYSIS
Electromagnetic cyclotron harmonic waves --- plasma heating [IPPJ-536] N82-13903

HARMONIC EXCITATION
Structural dynamics: Modified calculations --- natural and harmonically excited vibrations of modified structures; increased computation efficiency [BMVG-FBWT-81-1] N82-13457
Theory and calculation of Raman line shapes and excitation profiles near a one photon resonance N82-13866

HARMONIC GENERATIONS
Nonlinear optical effects in liquid crystals N82-13937

HARMONIC OSCILLATORS
Solution of initial-value problems for some infinite eventually periodic chains of harmonic oscillators N82-13807

HARMONIC RADIATION
Electromagnetic cyclotron harmonic waves --- plasma heating [IPPJ-536] N82-13903

HARMONICS
AC harmonic filtering using controlled current injection N82-13348

HARRIER AIRCRAFT
A real time Pegasus propulsion system model for VSTOL piloted simulation evaluation [NASA-TM-82770] N82-13144

HAULING
Environmental impacts of energy transportation [DE82-900316] N82-13559

HAWAII
Five-year Hawaii water research agenda, 1982-1987 [PB81-231912] N82-13478
The crustal structure of Kilauea and Mauna Loa volcanoes, Hawaii, from seismic refraction and gravity data N82-13583
Hawaii Mesoscale Energy and Climate project (HAMEC). 3: Atmospheric aerosol and cloud microphysics measurements [PB81-231482] N82-13633

HAZARDS
Environmental assessment of the Alaskan Continental Shelf: Annual reports of principal investigators for the year ending March 1980. Volume 5: Hazards [PB81-225732] N82-13607

HEAD MOVEMENT
A comparison of head and manual control for a position-control pursuit tracking task N82-13720

HEAD-UP DISPLAYS
Head up displays N82-13052

HEALTH PHYSICS
Health and safety research division [DE81-026088] N82-13652

HEAT BUDGET
The nitrogen cycle and heat budget of a subtropical lagoon, Devils Hole, Harrington Sound, Bermuda: Implications for nitrous oxide production and consumption in marine environments N82-13611

HEAT EXCHANGERS
Mitigation of biofouling using coatings [DE81-027900] N82-13647

HEAT FLUX
H-Coal product physical properties measurement [DE81-029095] N82-13245
Compensation for use of monthly-averaged winds in numerical modeling [NASA-TM-83855] N82-13623

HEAT OF COMBUSTION
Gas turbine combustor soot and radiation N82-13174

HEAT PIPES
Application of a gravity-driven wickless heat pipe for ice production in a cold energy storage system N82-13377
Heat pipe startup from the supercritical state N82-13400

HEAT RESISTANT ALLOYS
An investigation of notch low cycle fatigue life behavior of Rene' 80 at high temperature N82-13214
Aerodynamic heating on the corrugated surface of a 10.2 deg half-angle blunted cone at Mach 6.7 [NASA-TP-1928] N82-13383

HEAT STORAGE
Solar thermal energy systems [DE81-029295] N82-13531

HEAT TRANSFER
Two studies of fluidized beds: Heat transfer and grid jets N82-13203
Electric coheating experiment to determine the heat-loss coefficient of a double-envelope house [DE81-027937] N82-13264
Flow distribution control characteristics in marine gas turbine waste-heat recovery systems. Phase 1: Flow distribution characteristics and control in diffusers [AD-A104560] N82-13390
Simultaneous heat and mass transfer in a porous medium N82-13404
Turbulent transfers in the atmospheric surface layer under varied stability conditions. A laboratory study N82-13586

HEAT TRANSFER COEFFICIENTS
Electric coheating experiment to determine the heat-loss coefficient of a double-envelope house [DE81-027937] N82-13264
An experimental study of heat transfer to a horizontal tube in a large particle fluidized bed at elevated temperature N82-13406

HEAT TREATMENT
Laser heat treatment of track components in combat vehicles, phase 1 [AD-A102761] N82-13219
Electron Beam-Induced Current (EBIC) measurements of heat treated polycrystalline cuprous sulfide/cadimum sulfide solar cells N82-13552

HEATING EQUIPMENT
Workshop proceedings: U-bend tube cracking in steam generators [DE81-903765] N82-13515
Passive/hybrid solar components: An approach to standard thermal test methods [PB81-227886] N82-13549

HEAVY IONS
Measurements of heavy ions in the low altitude regions of the outer zone [AD-A099453] N82-13600

HELICAL INDUCERS
Enhanced-confinement class of stellarators [DE81-026727] N82-13924

HELICOPTER DESIGN
How the helicopter cockpit designer uses digital avionics N82-13049
Integration of controls and displays in US Army helicopter cockpits N82-13053

HELICOPTER PERFORMANCE
System identification helicopter parameters. Determination from flight tests, phase 2 [BMVG-FBWT-80-12] N82-13137

HELICOPTERS
Monocular vision and tactical flight on the helicopter N82-13059
Experimental investigation of a helmet mounted sight/display for helicopter N82-13060
Helicopter reliability and maintainability trends during development and production [AD-A105775] N82-13136

HELIOSTATS
Solar thermal energy systems [DE81-029295] N82-13531

HELIUM
Effect of low-temperature irradiation with (n, alpha) helium production on tensile properties of 12 Cr-1 Mo VW-type steels [DE81-028578] N82-13222
Temperature and density of geocoronal helium derived from a rocket-borne He resonance cell experiment [BMFT-FB-W-80-015] N82-13605
Helium diffusion in irradiated boron carbide [DE81-027848] N82-13951

HELIUM ISOTOPES
Physical adsorption of quantum atomic and molecular systems N82-13846

HELMET MOUNTED DISPLAYS
Head up displays N82-13052
Experimental investigation of a helmet mounted sight/display for helicopter N82-13060
Use of a helmet-mounted matrix display for presenting energy-maneuverability information during simulated close combat N82-13061

HELMHOLTZ RESONATORS
The relationship between the acoustic impedance and unsteady flow field near the orifice of a two dimensional Helmholtz resonator in grazing flow N82-13378

HERMETIC SEALS
Magnetically undetectable electronic circuit assemblies
[AD-A100669] N82-13358

HETEROGENEITY
A statistical analysis of irregular quasi-optical lines (beam guides) with the aid of computer(s) N82-13324

HEURISTIC METHODS
Computer vision
[NASA-CR-165012] N82-13766

HIERARCHIES
Automated partitioning of hierarchically specified digital systems N82-13752

HIGH ENERGY INTERACTIONS
Study of the neutron-proton interaction in the 300-700 MeV energy region
[DE81-026733] N82-13859

HIGH FLUX ISOTOPE REACTORS
Effect of low-temperature irradiation with (n, alpha) helium production on tensile properties of 12 Cr-1 Mo VW-type steels
[DE81-026576] N82-13222

HIGH FREQUENCIES
Statistical energy analysis computer program, user's guide
[NASA-CR-161913] N82-13764

HIGH PASS FILTERS
The influence of pressure waves on measurements of high speed train noise — high pass filtering of pressure waves
[DFVLR-FB-81-06] N82-13837

HIGH POWER LASERS
Large volume multiple-path nuclear pumped laser
[NASA-CASE-LAR-12592-1] N82-13415
Impedance-match experiments using high intensity lasers
[DE81-025802] N82-13422
Impedance-matching experiments using high-pressure, laser-driven shock waves
[DE81-028732] N82-13423
Simplified extension of the LSI-11 Q-Bus for a high energy laser control application
[DE81-027001] N82-13424

HIGH PRESSURE
High-pressure shrouded water sprays for dust control
[PB81-231458] N82-13483
Electron band theory and high pressure equation of state
[DE81-027436] N82-13955

HIGH RESOLUTION
A possible technique for cometary studies with high angular and spectral resolution N82-14012

HIGH STRENGTH ALLOYS
An improved stress corrosion test medium for aluminum alloys
[NASA-TM-82452] N82-13216

HIGH TEMPERATURE
Energetics and dynamics of droplet evaporation in high temperature intermediate Reynolds number flows N82-13379
An experimental study of heat transfer to a horizontal tube in a large particle fluidized bed at elevated temperature N82-13406
The influence of high temperature on braking — wheel brakes N82-13433

HIGH TEMPERATURE ENVIRONMENTS
Rate coefficients of combustion/fuel conversion reactions by high-temperature photochemistry
[DE81-027965] N82-13192

HIGH TEMPERATURE FLUIDS
Stress corrosion cracking of type 304 stainless steel in high temperature dilute chloride solution N82-13228

HIGH TEMPERATURE GAS COOLED REACTORS
High-temperature gas-cooled reactor technology development program
[DE81-029096] N82-13871

HIGH TEMPERATURE PLASMAS
Electromagnetic cyclotron harmonic waves — plasma heating
[IPPJ-536] N82-13903
Brief survey of experimental investigation of instabilities in microwave-heated plasmas N82-13912
Hot-electron ring stability at the University of Tennessee N82-13914
Stability of hot electron plasma in the ELMO bumpy torus N82-13917

HIGH TEMPERATURE TESTS
High-temperature measurements of alkali levels in an experimental 6-inch AFBC
[DE81-023632] N82-13193

HIGH VOLTAGES
Camelot: A novel concept for a multiterawatt pulse power generator for single pulse burst or repetition rate operation
[AD-A103024] N82-13513

HIGHWAYS
Construction of a recycled Portland cement concrete pavement -- Connecticut expressway
[PB81-233553] N82-13267

HISTORIES
ICAPS oceanographic data for the Indian Ocean
[AD-A103173] N82-13641

HOLES (ELECTRON DEFICIENCIES)
Phase separation of a two component electron-hole liquid in (111) stressed Ge N82-13936

HOMOGENEITY
Composition dependence of neodymium optical homogeneous linewidths in glasses N82-13945

HOMOLOGY
Steenrod operations in spectral cohomology theories
[CTH-MATH-1981-06] N82-13802

HOMOTOPY THEORY
Steenrod operations in spectral cohomology theories
[CTH-MATH-1981-06] N82-13802

HONEYCOMB STRUCTURES
Development of a high-temperature durable catalyst for use in catalytic combustors for advanced automotive gas turbine engines
[NASA-CR-165396] N82-13510

HORN ANTENNAS
Two-mirror antenna for radio relay communication N82-13306
Use of principle of regularization in direct and mixed problems of the theory of the synthesis of radiating systems N82-13309
Synthesis of a plane system of discrete emitters N82-13310

HOT CORROSION
Investigation into the role of NaCl deposited on oxide and metal substrates in the initiation of hot corrosion
[NASA-CR-165029] N82-13217
Gas-turbine critical research and advanced technology support project
[NASA-TM-81706] N82-13509

HOT ELECTRONS
Enhanced energy deposition symmetry by hot electron transport
[DE81-028774] N82-13861
Kinetic stability analyses in a bumpy cylinder N82-13921

HOT STARS
An investigation of warm carbon stars N82-14033

HOT SURFACES
Development and testing of dry chemicals in advanced extinguishing systems for jet engine nacelle fires
[NASA-CR-165011] N82-13186

HUGONIOT EQUATION OF STATE
Properties of matter at ultra-high pressures
[DE81-026504] N82-13190

HUMAN BEHAVIOR
A theory of human error N82-13716

HUMAN BODY
A digital TV system for the detection of high speed human motion N82-13269
The measurements of fluid shifts and of the tissue compliance along body axis in man
[BMFT-FB-W-80-011] N82-13654

HUMAN FACTORS ENGINEERING
Color CRT displays for the cockpit N82-13051
Using voice control onboard combat aircraft N82-13056
Monocular vision and tactical flight on the helicopter N82-13059
Experimental investigation of a helmet mounted sight/display for helicopter N82-13060
Tanker avionics and aircrew complement evaluation N82-13063
F/A 18 Hornet crew station N82-13064
Raven aircraft filter-absorber — agricultural aircraft
[AD-A098962] N82-13139
Testing of a work bench for handling of explosives in the laboratory
[FOA-C-20393-D1] N82-13397
Determination of efficient methods of lift by comparing trained and untrained male and female lifters
[AD-A100349] N82-13650
Linguistic and human performance considerations in the design of an anticipatory communication aid N82-13657
An investigation into pilot and system response to critical in-flight events, volume 1
[NASA-CR-166243-VOL-1] N82-13662
An investigation into pilot and system response to critical in-flight events, volume 2
[NASA-CR-166243-VOL-2] N82-13663
Visual/motion cue mismatch in a coordinated roll maneuver
[NASA-CR-166259] N82-13664
Supervisory control of remote manipulation: A preliminary evaluation N82-13675
Design and development of a six degree of freedom hand controller N82-13706
Human supervision and microprocessor control of an optical tracking system N82-13715
A model for the control mode man-computer interface dialogue N82-13722
Taxonomy of the human factors in man machine systems N82-13726
An information processing model for predicting error detection and correction: An analysis of operator performance
[AD-A105079] N82-13733
Dynamic decision-making in multi-task environments: Theory and experimental results
[AD-A102055] N82-13740

HUMAN PERFORMANCE
Linguistic and human performance considerations in the design of an anticipatory communication aid N82-13657
The influence of motion cues on driver-vehicle performance in a simulator N82-13681
Multiple man-machine interfaces N82-13682
A model of the human observer and decision maker N82-13714
Dynamic decision-making in multi-task environments: Theory and experimental results
[AD-A102055] N82-13740

HUMAN REACTIONS
Load compensating reactions to perturbations at wrist joint in normal man N82-13706

HUMIDITY
Mechanisms by which humidity alters ductility
[AD-A105530] N82-13221

HURRICANES
Some mean characteristics of Central North Pacific tropical cyclones
[PB81-230492] N82-13634
Annual data and verification tabulation, eastern North Pacific tropical storms and hurricanes 1980
[PB81-230336] N82-13636

HYBRID CIRCUITS
Magnetically undetectable electronic circuit assemblies
[AD-A100669] N82-13358

HYBRID COMPUTERS
Development report: Automatic System Test and Calibration (ASTAC) equipment
[NASA-CR-165403] N82-13505

HYDRATION
Micromechanics of expensive mechanisms in expansive cement concretes N82-13256
Development and optimization of hydrogen storage materials using surface analytical techniques
[BMVG-FBWT-80-6] N82-13546

HYDRAULIC EQUIPMENT
Fatigue test machines N82-13277

Variable amplitude fatigue testing N82-13276

HYDRIDES

Preparation and characterization of hydrogenated amorphous silicon
[DE81-030973] N82-13197

HYDROCARBON COMBUSTION

Control of hydrocarbons and carbon monoxide via catalytic incineration
[DE82-000508] N82-13560

HYDROCARBON FUELS

Development and testing of dry chemicals in advanced extinguishing systems for jet engine nacelle fires
[NASA-CR-165011] N82-13186

Cyclic compression, combustion and expansion of a fuel and air mixture in a cylinder containing a catalyst
[PB81-232480] N82-13434

Gas-turbine critical research and advanced technology support project
[NASA-TM-81706] N82-13509

HYDROCARBONS

Pyrolytic characterization of the organic matter in selected coals and in the Devonian shales of southern West Virginia N82-13578

HYDRODYNAMICS

Electrostatic and hydrodynamic interactions of charged macromolecular systems N82-13242

Assessment of the computer code COBRA/CFTL — for thermal-hydraulic analysis of simulated gas-cooled fast breeder reactor cores
[DE81-027933] N82-13771

HYDROELECTRIC POWER STATIONS

Assessment of rotor-bearing dynamics: A planning study for the utility industry
[DE82-900378] N82-13430

HYDROFLUORIC ACID

Interatomic potential energy hypersurfaces for molecules N82-13841

HYDROGEN

Solubilities of dissolved gases in sea water
[AD-A100675] N82-13189

Ultrasonic attenuation and velocity studies in the alpha-alpha' solid solution phases of the Nb-H system
[DE81-026618] N82-13836

Physical adsorption of quantum atomic and molecular systems N82-13846

Fundamental studies of grain-boundary passivation in polycrystalline silicon with application to improved photovoltaic devices
[DE82-000625] N82-13956

HYDROGEN BONDS

Infrared vibrational predissociation spectroscopy of small molecular clusters
[DE81-028648] N82-13887

HYDROGENATION

Surface characterization of dispersed supported metal catalysts using a 'time lapse' dynamic pulse technique N82-13177

Preparation and characterization of hydrogenated amorphous silicon
[DE81-030973] N82-13197

HYDROGEOLOGY

Alaska's Water resources problems and research needs: Institute of Water Resources, five-year research plan
[PB81-231920] N82-13477

HYDROLOGY

Preliminary investigation of a shallow ground-water flow system associated with Connetquot Brook, Long Island, New York
[PB81-228751] N82-13481

HYDROLOGY MODELS

Regional hydrologic models for climatology: An application to three Wisconsin watersheds
N82-13467

HYDROPHONES

Theoretical analysis of the effects of turbulence on a mobile parametric receiver
[AD-A101418] N82-13833

HYGRAL PROPERTIES

A laboratory evaluation of modified asphalt
[PB81-231615] N82-13269

HYPERBOLIC DIFFERENTIAL EQUATIONS

A nonlinear conservation law with memory — history boundary value problems in viscoelastic motion
[AD-A103682] N82-13791

HYPERBOLIC FUNCTIONS

A control canonical form for a class of linear hyperbolic systems N82-13786

HYPERSONIC FLOW

On a dusty-gas shock tube
[UTIAS-250] N82-13151

HYPERVELOCITY GUNS

Transitional ballistics of hypervelocity projectiles
[BMVG-FBWT-80-1] N82-13163

I

ICE

Investigation of the acoustic emission and deformation response of finite ice plates
[AD-A103731] N82-13471

Laboratory Research — spectroscopic analysis, photochemical reactions, and proton irradiation of ice
N82-14022

ICE FORMATION

Application of a gravity-driven wickless heat pipe for ice production in a cold energy storage system
N82-13377

Field tests of a surface ice accretion measurement system
[AD-A100282] N82-13624

ICE NUCLEI

Environmental effects of pollutants from coal combustion. 1: The Four Corners Power Plant, Farmington, N.M.
[PB81-230427] N82-13572

Environmental effects of pollutants from coal combustion. 2: The Colstrip, Montana Power Plant
[PB81-234114] N82-13573

Field tests of a surface ice accretion measurement system
[AD-A100282] N82-13624

Hawaii Mesoscale Energy and Climate project (HAMEC). 3: Atmospheric aerosol and cloud microphysics measurements
[PB81-231482] N82-13633

ICE REPORTING

Field tests of a surface ice accretion measurement system
[AD-A100282] N82-13624

IMAGE CORRELATORS

Far infrared source classification system — digital system
[ENST-E-80005] N82-13891

IMAGE ENHANCEMENT

Some expurimental design techniques in image processing problems N82-13782

The interactive astronomical data analysis facility - image enhancement techniques to Comet Halley
N82-14019

IMAGE PROCESSING

Structure of the knowledge base for an expert labeling system N82-13723

Multi-sensor image registration N82-13755

Some experimental design techniques in image processing problems N82-13782

Outburst and nuclear breakup of Comet Halley - 1910 N82-14018

The interactive astronomical data analysis facility - image enhancement techniques to Comet Halley
N82-14019

Astronomical activities report
[ISSN-0531-4496] N82-14028

IMAGE RESOLUTION

Discrimination of hologram and antenna theory
N82-13320

Video framerate, resolution and grayscale tradeoffs for undersea telemanipulator N82-13673

IMAGES

Symbolic reasoning among 3-D models and 2-D images N82-13761

Computer vision
[NASA-CR-165012] N82-13768

IMAGING TECHNIQUES

Head up displays N82-13052

Discrimination of hologram and antenna theory
N82-13320

Imaging systems for fast electrophotographic processes
[BMFT-FB-T-80-183] N82-13411

Multi-sensor image registration N82-13755

Computer vision
[NASA-CR-165012] N82-13768

IMMUNOASSAY

Application of electrochemistry to biochemical problems — immunoassay technique using differential pulse anodic stripping voltammetry N82-13179

IMPACT LOADS

Hydrodynamic computations of pressures generated by steam pipe rupture
[AD-A102046] N82-13449

Large amplitude compression and shear wave propagation in impact-loaded PMMA
[AD-A105953] N82-13450

IMPACT STRENGTH

Cyclic strain approach to fatigue in metals
N82-13285

IMPACT TESTS

Properties of matter at ultra-high pressures
[DE81-026504] N82-13190

Evaluation of low-chlorine TATB from a production source
[DE81-025474] N82-13249

Cyclic strain approach to fatigue in metals
N82-13285

IMPAIRMENT

Detecting human operator impairment with a psychomotor task N82-13718

IMPEDANCE MATCHING

Thin magnetic impedance antennas N82-13314

Impedance-match experiments using high intensity lasers
[DE81-025802] N82-13422

Impedance-matching experiments using high-pressure, laser-driven shock waves
[DE81-028732] N82-13423

IMPLOSIONS

Radiation-hydrodynamics of HII regions and molecular clouds
[DE81-028696] N82-14032

IMPULSES

Method for measuring brash ice thickness with impulse radar
[AD-A103738] N82-13597

IMPURITIES

Oxygen transport and line emissions in a tokamak plasma
[IPPJ-544] N82-13900

INCENTIVES

Building a consensus about energy technologies
[DE82-000501] N82-13536

Multiple man-machine interfaces N82-13682

INCIDENCE

Transonic flows in an air inlet with large incidence and the effect of a blowing trap N82-13071

INCINERATORS

Control of hydrocarbons and carbon monoxide via catalytic incineration
[DE82-000508] N82-13560

INCOMPRESSIBLE FLOW

An experimental investigation of the turbulent flow in the junction of a flat plate and a body of constant thickness N82-13102

INCONEL (TRADEMARK)

Workshop proceedings: Corrosion of Inconel 600 Steam Generator Tubing in the Tubesheet Crevice
[DE81-903554] N82-13226

INDEPENDENT VARIABLES

A quasi-Newton procedure for identifying pilot-related parameters of the optimal control model
N82-13694

Two-D results on human operator perception
N82-13697

A mixed variational principle for finite element analysis N82-13789

INDEXES (DOCUMENTATION)

Astronomical data bases and retrieval systems
N82-14020

INDEXES (RATIOS)

Weighting of aptitude components based on differences in technical school difficulty
[AD-A102045] N82-13725

INDIAN OCEAN

ICAPS oceanographic data for the Indian Ocean
[AD-A103173] N82-13641

INDIUM PHOSPHIDES

Three-5 heterostructure avalanche photodiode modules for fiber optic communication links in the 1.0 to 1.3 micrometer spectral range
[AD-A099506] N82-13334

INDUCTANCE

Electron Beam-Induced Current (EBIC) measurements of heat treated polycrystalline cuprous sulfide/cadmium sulfide solar cells N82-13552

INDUSTRIAL ENERGY

Low/medium Btu coal gasification assessment program for potential users in New Jersey: Executive summary
[DE81-025475] N82-1324

INDUSTRIAL PLANTS

Residual-energy-applications program environmental analysis report --- industrial scale waste heat recovery equipment and utilization
[DE81-027538] N82-13525

INDUSTRIAL SAFETY

Testing of a work bench for handling of explosives in the laboratory
[FOA-C-20393-D1] N82-13397

INDUSTRIAL WASTES

Transport and reaction of heavy metals in Alaskan fjord estuaries
[DE81-026319] N82-13474

INDUSTRIES

Dynamic mass spectrometry: A residual gas analysis method and some applications
[DE81-026230] N82-13195

INELASTIC SCATTERING

Energy losses and mean free paths of electrons in silicon dioxide
[DE81-026353] N82-13860

Inelastic scattering of high energy muons from nuclear targets N82-13874

INELASTIC STRESS

Inelastic overload analysis of continuous steel multi-girder highway bridges by the finite-element method N82-13440

INEQUALITIES

On general 1 exp p summability methods
[CTH-MATH-1981-07] N82-13803

INERTIA

The propagation of inertial-internal waves in coastal upwelling regions N82-13645

INERTIAL FUSION (REACTOR)

Stability considerations for light-ion beam transport in Z discharge channels
[AD-A101426] N82-13852

INERTIAL REFERENCE SYSTEMS

Quantum frames of reference N82-13822

INFERENCE

Language, computation, and reality N82-13757

INFLECTION POINTS

Intermediate band surface photometry of elliptical galaxies N82-14035

INFORMATION DISSEMINATION

Massachusetts' five-year water resources research needs, 1982-1987
[PB81-231961] N82-13480

The International Halley Watch: A program of coordination, cooperation and advocacy N82-14026

INFORMATION FLOW

On the formal specification of computer communication protocols
[AD-A100 89] N82-13738

INFORMATION MANAGEMENT

Information resources in the USA on new and renewable energy, a description and directory
[DE81-026867] N82-13522

Managing information technology change in the decade of the 80's
[AD-A099441] N82-13976

INFORMATION RETRIEVAL

Information storage in a decentralized computer system N82-13732

Query optimization by semantic reasoning N82-13762

PLOT2K: A graphics interface of system 2000
[DE81-026706] N82-13774

Astronomical data bases and retrieval systems N82-14020

INFORMATION THEORY

A model of the human observer and decision maker N82-13714

INFRARED ABSORPTION

Detection of trace gases using high resolution spectroscopy
[AD-A104841] N82-13863

INFRARED ASTRONOMY

Infrared experiments for spaceborne planetary atmospheres research. Full report
[NASA-TM-84414] N82-13876

Infrared experiments for spaceborne planetary atmospheres research. Executive summary
[NASA-TM-84413] N82-13877

Modern Observational Techniques for Comets --- conferences
[NASA-CR-165006] N82-13969

Astronomical data bases and retrieval systems N82-14020

Astronomical activities report
[ISSN-0531-4496] N82-14029

INFRARED DETECTORS

Far infrared source classification system --- digital system
[ENST-E-80005] N82-13891

INFRARED INSTRUMENTS

Infrared experiments for spaceborne planetary atmospheres research. Full report
[NASA-TM-84414] N82-13876

Infrared experiments for spaceborne planetary atmospheres research. Executive summary
[NASA-TM-84413] N82-13877

INFRARED RADIATION

Short-range communications using diffusely scattered infrared radiation N82-13344

Development of an infrared radiative heating model
[NASA-CR-166272] N82-13622

INFRARED RADIOMETERS

Millimeter wave radiometry as a means of determining cometary surface and subsurface temperature N82-14003

INFRARED SPECTROSCOPY

Infrared vibrational predissociation spectroscopy of small molecular clusters
[DE81-026646] N82-13887

Infrared observations of comets N82-14000

Infrared observations of faint comets N82-14001

INFRASONIC FREQUENCIES

Detection of infrasound generated by Clear Air Turbulence (CAT) N82-13830

INITIATORS (EXPLOSIVES)

Review of low-voltage CP detonators
[DE81-025837] N82-13250

INLET AIRFRAME CONFIGURATIONS

Aerodynamics of Power Plant Installation
[AGARD-CP-301] N82-13065

Performance of highly integrated inlets for supersonic aircraft N82-13066

Top-mounted inlet system feasibility for transonic-subsonic fighter aircraft applications N82-13067

Some RAE research on shielded and unshielded fuselage mounted air intakes at subsonic and supersonic speeds N82-13068

Prediction and measurement of time-variant, three-dimensional flows in military aircraft intakes N82-13069

Effects of intake geometry on circular pitot intake performance at zero and low forward speeds N82-13070

The design and development of the Tornado engine air intake N82-13074

A synthesis method for estimating maximum instantaneous inlet distortion based on measured inlet steady state and RMS pressures N82-13083

Final report on the FueFo-4 major theme: Interference drag with airframe/engine integration on fighter aircraft
[BMVG-FBWT-79-20] N82-13116

INLET FLOW

Prediction and measurement of time-variant, three-dimensional flows in military aircraft intakes N82-13069

Effects of intake geometry on circular pitot intake performance at zero and low forward speeds N82-13070

Subsonic military aircraft engine intake: An integrated theoretical experiment design N82-13073

The design and development of the Tornado engine air intake N82-13074

An acquisition and analysis system for dynamic tests of air inlets N82-13082

A synthesis method for estimating maximum instantaneous inlet distortion based on measured inlet steady state and RMS pressures N82-13083

Model testing techniques for measuring inlet drag N82-13084

Thrust modulation methods for a subsonic V/STOL aircraft
[NASA-TM-82747] N82-13112

Numerical analysis of the scramjet-inlet flow field by using two-dimensional Navier-Stokes equations
[NASA-TP-1940] N82-13142

INPUT

International seismological data center. Input data for an experimental data base
[FOA-C-20380-T1] N82-13604

INPUT/OUTPUT ROUTINES

Computational problems in autoregressive moving average (ARMA) models N82-13696

INSPECTION

Optical scanner system for internal inspection of steam-generator tubes
[EPRI-NP-1944] N82-13864

INSTALLATION MANUALS

Practical aspects of instrumentation system installation, volume 13
[NASA-TM-84067] N82-13140

INSTALLING

Wind tunnel test and analysis techniques using powered simulators for civil nacelle installation drag assessment N82-13086

INSTRUCTORS

Group 4: Instructor training and qualifications N82-13134

INSTRUMENT PACKAGES

Near perihelion observations of Comet Halley from Shuttle orbiter N82-14021

INSULATION

Study of the physics of insulating films as related to the reliability of metal-oxide semiconductor devices
[AD-A105030] N82-13359

INSULATORS

Conduction and charge storage in electron irradiated spacecraft insulators
[AD-A104796] N82-13167

Advanced indium antimonide monolithic charge coupled infrared imaging arrays
[NASA-CR-165799] N82-13356

Aging and corrosion problems with flat solar energy absorbers. Study based upon literature and experiment exchanges
[SP-RAPP-1979/4] N82-13548

INTEGRAL EQUATIONS

An integral equation method for cutout problems in shells N82-13459

A sharper estimate of the renewal function
[CTH-MATH-1980-18] N82-13798

INTEGRATED CIRCUITS

A miniature, thin-film thermal conductivity detector for an integrated gas chromatograph N82-13200

Further developments in integrated circuit assembling technology
[BMFT-FB-T-80-179] N82-13369

Introduction to the configurable highly parallel computer, revision
[AD-A099776] N82-13735

INTEGRATED ENERGY SYSTEMS

Distributed photovoltaic systems: Utility interface issues and their present status
[NASA-CR-165019] N82-13492

INTELSAT 5 SATELLITE

Launch mission summary: Intelsat 5 (F3) Atlas/Centaur-55
[NASA-TM-84068] N82-13161

Mission operation report: INTELSAT V-C(F-3)
[NASA-TM-84072] N82-13162

INTERATOMIC FORCES

Interatomic potential energy hypersurfaces for molecules N82-13841

INTERFACES

Practical aspects of instrumentation system installation, volume 13
[NASA-TM-84067] N82-13140

Interruption as a test of the user-computer interface N82-13721

A model for the control mode man-computer interface dialogue N82-13722

INTERFERENCE DRAG

Evaluation of an experimental technique to investigate the effects of the engine position on engine/pylon/wing interference N82-13090

The influence of closed-coupled, rear fuselage mounted nacelles on the design of an advanced high speed wing N82-13092

Aerodynamic aspects of a high bypass ratio engine installation on a fuselage afterbody N82-13093
Final report on the FusFo-4 major theme: Interference drag with airframe/engine integration on fighter aircraft
[BMVG-FBWT-79-20] N82-13116

INTERFERENCE LIFT
Evaluation of an experimental technique to investigate the effects of the engine position on engine/pylon/wing interference N82-13090

INTERFEROMETRY
Acoustical speckle interferometry and applications in experimental mechanics N82-13826

INTERMETALLICS
Development and optimization of hydrogen storage materials using surface analytical techniques
[BMVG-FBWT-80-6] N82-13546
Effects of pressure on the mixed valent properties of Ce and its intermetallic compounds
[DE81-028572] N82-13953
Defect structure and properties of intermetallic compound beta-LiAl N82-13959

INTERNAL COMBUSTION ENGINES
Barriers to the utilization of synthetic fuels for transportation
[NASA-CR-165517] N82-13243
Analysis of multicylinder IC-Engine crankshafts with hydrodynamic bearings using a finite element-transfer matrix approach N82-13437
Development of a high-temperature durable catalyst for use in catalytic combustors for advanced automotive gas turbine engines
[NASA-CR-165396] N82-13510
Determination of two-stroke engine exhaust noise by the method of characteristics
[NASA-TM-84061] N82-13827

INTERNAL WAVES
Surface signs of internal ocean dynamics
[AD-A101380] N82-13642
The propagation of inertial-internal waves in coastal upwelling regions N82-13645

INTERNATIONAL COOPERATION
The International Halley Watch: A program of coordination, cooperation and advocacy N82-14026

INTERPLANETARY MAGNETIC FIELDS
Magnetic clouds between 2-4 AU: Voyager observations
[NASA-TM-83849] N82-13593
Large-scale variations of the interplanetary magnetic field: Voyager 1 and 2 observations between 1-5 AU
[NASA-TM-83850] N82-13594

INTERPLANETARY MEDIUM
New problems of cometary observations from space N82-13994
Existing cometary data and future needs N82-14017

INTERPOLATION
Interpolating for the location of remote sensor data
[NASA-TM-82169] N82-13469

INTERPROCESSOR COMMUNICATION
A specification and proof technique for message-based systems and its application to distributed database algorithms N82-13756
Complexity of communication among asynchronous parallel processes N82-13760

INTERRUPTION
Interruption as a test of the user-computer interface N82-13721

INTERVALS
Recurrence intervals and recency of faulting along the San Gregorio fault zone, San Mateo County, California N82-13581

INTOXICATION
Detecting human operator impairment with a psychomotor task N82-13718

INTRAMOLECULAR STRUCTURES
Infrared vibrational predissociation spectroscopy of small molecular clusters
[DE81-028848] N82-13887

INVERTERS
The ac propulsion system for an electric vehicle, phase 1
[NASA-CR-165480] N82-13506

INVESTMENTS
A new approach to modeling the cost of ownership for aircraft systems
[AD-A104434] N82-13979

INVISCID FLOW
Calculation of transonic air-intakes using a computer package for inviscid and boundary layer flows N82-13072
Aerodynamic aspects of a high bypass ratio engine installation on a fuselage afterbody N82-13093
A numerical method for studying nacelle-jet-airfoil interaction in inviscid three-dimensional flow N82-13094
Technical evaluation report on the Fluid Dynamics Panel Symposium on Computation of Viscous-Inviscid Interactions
[AGARD-AR-171] N82-13384
Underexpanded free jets and their interaction with adjacent surfaces
[LOG-J12276] N82-13385
Computation of unsteady two-dimensional inviscid flow in turbomachinery cascades N82-13401

IODINE
Solubilities in multicomponent systems of nonspecific interactions N82-13205

ION BEAMS
Stability considerations for light-ion beam transport in Z discharge channels
[AD-A101426] N82-13852
Optics of mass separator 1
[DE81-028242] N82-13886

ION CURRENTS
Conductivity and permittivity measurements of fast ion conductors in the microwave region N82-13351

ION EXCHANGE MEMBRANE ELECTROLYTES
Conductivity and permittivity measurements of fast ion conductors in the microwave region N82-13351

ION EXCHANGE RESINS
Salt removal from brackish water by continuous processes with amphoteric, thermally regenerable ion-exchange resins N82-13202

ION EXCHANGING
Separations Science data base: An abstractor's manual
[DE81-029101] N82-13977

ION IMPLANTATION
Preliminary evaluation of ion implantation as a surface treatment to reduce wear of tool bits
[AD-A105053] N82-13261
Boron implanted strontium titanate N82-13939
CW laser annealing and CW laser assisted diffusion in gallium arsenide N82-13943

ION SCATTERING
Schwinger's variational principle for electron-ion scattering N82-13644

ION STRIPPING
Measurements of heavy ions in the low altitude regions of the outer zone
[AD-A099453] N82-13600

ION TRAPS (INSTRUMENTATION)
Trapped ion research
[AD-A098646] N82-13188

IONIC DIFFUSION
Transport properties of gaseous ions N82-13870

IONIC MOBILITY
Stability considerations for light-ion beam transport in Z discharge channels
[AD-A101426] N82-13852
A stochastic Langevin dynamics study of correlated ionic motion in one-dimensonal framework solid electrolytes N82-13966

IONIC REACTIONS
Mechanistic studies of electron exchange kinetics using ab initio
[DE81-026096] N82-13856

IONIZATION
Analytical detection of organic species by means of laser-induced multiphoton ionization N82-13646
Outer-shell excitation in sputtered atoms N82-13839

IONIZATION POTENTIALS
Mechanistic studies of electron exchange kinetics using ab initio
[DE81-026096] N82-13856
A correlated treatment of bound-continuum transitions within the electron propagator formalism N82-13869

IONIZED GASES
Gas target neutron generator studies
[UTIAS-251] N82-13850
Transport properties of gaseous ions N82-13870

IONIZING RADIATION
Data on the backscattering coefficients of light ions from solids
[IPPJ-AM-18] N82-13907

IONOSPHERIC COMPOSITION
JASPIC-DIP: The digital impedance probe in the JASPIC project
[BMFT-FB-W-80-034] N82-13169

IONOSPHERIC PROPAGATION
Ionospheric scintillation N82-13585

IONS
Energy levels in and on an oxide film as measured by electrochemical methods
[AD-A103704] N82-13167

IOWA
Five-year water resources research plan, 1982-1987
[PB81-231938] N82-13479

IRIDIUM
The chemical vapor deposition of iridium
[AD-A104582] N82-13360

IRON
Theoretical equations of state for metals
[DE81-028743] N82-13224
Double differential continuum neutron scattering cross sections in iron and nickel for incident energies of 7.5, 10 and 12 MeV N82-13847
Gamma ray buildup factors in lead-iron and iron-lead shields
[EUR-7086-EN] N82-13864

IRON OXIDES
Resonance Raman spectroscopic investigations of the active site structures of hemoglobin and hemerythrin N82-13176

IRRADIATION
Photon-electron correlation in the laboratory testing of electronic components. Part 2: Beam conditioning and diagnostics
[DE81-026606] N82-13365
Surface failure of CO2 laser irradiated glass
[AD-A105454] N82-13421
Gas target neutron generator studies
[UTIAS-251] N82-13850

ISOPROPYL COMPOUNDS
Effect of solvents on the radiation-induced polymerization of ethyl and isopropyl vinyl ethers N82-13238

ISOTHERMS
Shock anomaly and s-d transition in high-pressure lanthanum
[DE81-027659] N82-13948

ISOTOPIC LABELING
Investigations towards the understanding of surface treatment of propellant grains by means of trace elements
[BMVG-FBWT-79-14] N82-13253

ITERATION
Transforming contingency tables
[AD-A104182] N82-13821

IUE
Ultraviolet spectroscopy of comets using sounding rockets, IUE and Spacelab N82-14009
Evolution of close binary systems: Observational aspects
[NASA-CR-165039] N82-14027

J

JAMMING
Millimeter wave alternate route study
[AD-A102303] N82-13339
Camelot: A novel concept for a multiterawatt pulse power generator for single pulse burst or repetition rate operation
[AD-A103024] N82-13513

JAPANESE SPACE PROGRAM
Plans for Comet Halley --- ESA's Giotto mission, Japan's Planet-A mission, and the U.S.S.R. Venera-Halley mission N82-14024

JET AIRCRAFT
The influence of closed-coupled, rear fuselage mounted nacelles on the design of an advanced high speed wing N82-13092

JET ENGINES
Subsonic military aircraft engine intake: An integrated theoretical experiment design N82-13073
The design and development of the Tornado engine air intake N82-13074

Integration of advanced exhaust nozzles
N82-13075
Development and testing of dry chemicals in advanced extinguishing systems for jet engine nacelle fires
[NASA-CR-165011] N82-13186
Dish stirling solar receiver combustor test program
[NASA-CR-165017] N82-13495

JET EXHAUST
Prediction of subsonic aircraft flows with jet exhaust interactions N82-13096

JET FLOW
Aerodynamics of an airfoil with a jet issuing from its surface N82-13121
Experimental and analytical investigation of a fluidic power generator
[JPL-PUB-81-100] N82-13386
Hydrodynamic computations of pressures generated by steam pipe rupture
[AD-A102046] N82-13449

JET IMPINGEMENT
Underexpanded free jets and their interaction with adjacent surfaces
[LOG-J12276] N82-13385

JET MIXING FLOW
Investigation of acoustic interactions in jet thrust augmenting ejectors
[AD-A106083] N82-13835

JET PROPULSION
Aerodynamics of an airfoil with a jet issuing from its surface N82-13121

JOINTS (ANATOMY)
Computational problems in autoregressive moving average (ARMA) models N82-13696

JOINTS (JUNCTIONS)
Effects of restrained thermal movement in a continuous, prestressed concrete bridge without interior expansion joints N82-13461

JOURNAL BEARINGS
Analysis of multicylinder IC-Engine crankshafts with hydrodynamic bearings using a finite element-transfer matrix approach N82-13437

K

KALMAN FILTERS
A contribution to robust detection and estimation
N82-13609

KERR CELLS
Electrooptic shutter devices utilizing PLZT ceramic wafers
[DE81-025470] N82-13865

KERR ELECTROOPTICAL EFFECT
Electrooptic shutter devices utilizing PLZT ceramic wafers
[DE81-025470] N82-13865

KILOMETRIC WAVES
Planetary radio astronomy observations from Voyager-2 near Saturn
[NASA-TM-83856] N82-14037
Saturnian kilometric radiation: Source locations
[NASA-TM-83846] N82-14036

KINEMATICS
Numerical methods for the analysis of fluid-structure interaction problems N82-13381
Application of the theory of linear elastic materials with voids
[DE81-027903] N82-13452
Dynamic analysis of flexible spatial mechanisms and robotic manipulators N82-13460

KINETIC ENERGY
Eigenmode stability analysis for a bumpy torus
N82-13915

KINETIC THEORY
The internal structure of the magnetopause
[AERONOMICA-ACTA-A-221-1980] N82-13589
On the vibrational energy transfer processes of polyatomic molecules in the gas and solid phases
N82-13865
A comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture N82-13868

KINETICS
Rate coefficients of combustion/fuel conversion reactions by high-temperature photochemistry
[DE81-027965] N82-13192
Micromechanics of expansive mechanisms in expansive cement concretes N82-13258

KRAMERS-KRONIG FORMULA
Determination of optical constants from extinction measurements
[AD-A099494] N82-13662

KRYPTON
A study of the formation and structure of small clusters of noble gases and sulfur hexafluoride formed in Laval Nozzle molecular beams N82-13201
Coexistence of non-registered monolayer and bilayer solid films N82-13931

L

LABORATORY EQUIPMENT
Beyond mere automation
[AD-A103838] N82-13736

LAGOONS
The nitrogen cycle and heat budget of a subtropical lagoon, Devils Hole, Harrington Sound, Bermuda: Implications for nitrous oxide production and consumption in marine environments N82-13611

LAGRANGE COORDINATES
Lagrangian fluid dynamics using the Voronoi-Delaunay mesh
[LA-UR-81-1421] N82-13393

LAKE ICE
Method for measuring brash ice thickness with impulse radar
[AD-A103738] N82-13597

LAKES
Laboratory measurements of physical, chemical, and optical characteristics of Lake Chicot sediment waters
[NASA-TP-1941] N82-13468
Energy generation and the sulfur-carbon cycle
[DE81-030949] N82-13562

LAMELLA (METALLURGY)
A quantitative study of factors influencing lamellar eutectic morphology during solidification
[NASA-TM-82451] N82-13218

LAMINAR BOUNDARY LAYER
Calculation of transonic air-intakes using a computer package for inviscid and boundary layer flows
N82-13072

LAMINAR FLOW
A numerical study of laminar unsteady compressible flow over airfoils N82-13099
An experimental study of Tollmien-Schlichting wave cancellation --- friction drag reduction N82-13120

LAMINATES
Materials studies for magnetic fusion energy applications at low temperatures -4
[PB81-222507] N82-13926

LAND MANAGEMENT
The occurrence and control of land subsidence due to ground water withdrawal with special reference to the San Joaquin and Santa Clara Valleys, California
N82-13466

LANDAU DAMPING
Laser induced charge transfer collisions
N82-13418

LANDING INSTRUMENTS
Predictor symbology in computer-generated perspective displays N82-13674

LANGEVIN FORMULA
A stochastic Langevin dynamics study of correlated ionic motion in one-dimensonal framework solid electrolytes N82-13966

LANGUAGE PROGRAMMING
Preliminary analysis of a breadth-first parsing algorithm: Theoretical and experimental results
[AD-A101852] N82-13797

LANTHANUM
Shock anomaly and s-d transition in high-pressure lanthanum
[DE81-027659] N82-13948

LANTHANUM COMPOUNDS
Minimum/constant voltage PLZT electrooptic shutters --- lead lanthanum zirconate titanate wafers for flash protective goggles
[DE81-028646] N82-13886

LARGE SCALE INTEGRATION
Simplified extension of the LSI-11 Q-Bus for a high energy laser control application
[DE81-027001] N82-13424
Future directions in Navy electronic system reliability and survivability
[AD-A102480] N82-13436
Application of computer voice input/output
[DE81-028769] N82-13743

LARGE SPACE STRUCTURES
Control design for parameter sensitivity reduction in linear regulators: Application to large flexible space structures N82-13158
Shape determination and control for large space structures
[JPL-PUB-81-71] N82-13166
On the modeling and control of flexible space structures N82-13168

LASER APPLICATIONS
Studies of photoionization in liquids using a laser two-photon ionization conductivity technique
[DE81-026514] N82-13194
Three laser experiments in gases N82-13416
Atomic pair processes and laser applications
. N82-13417
Laser induced charge transfer collisions
N82-13418
Raman probe of equilibrium and laser modulated populations of electrons and phonons in GaAs
N82-13934

LASER FUSION
Solution of single linear tridiagonal systems and vectorization of the ICCG algorithm on the Cray 1 --- laser fusion
[DE81-025461] N82-13773
Beam propagation in the frequency-converted subsystems of Nova and Novette
[DE81-026253] N82-13862
Fiber optic analog and timing monitoring system for the Antares laser fusion program
[DE81-028799] N82-13925

LASER OUTPUTS
Investigation of fluctuation phenomena in dye lasers N82-13419
Inverse cerenkov interaction between relativistic electrons and laser light N82-13425

LASER PUMPING
Large volume multiple-path nuclear pumped laser
[NASA-CASE-LAR-12592-1] N82-13415

LASER TARGET INTERACTIONS
Impedance-match experiments using high intensity lasers
[DE81-025602] N82-13422
Impedance-matching experiments using high-pressure, laser-driven shock waves
[DE81-028732] N82-13423

LATERAL CONTROL
Analysis of a longitudinal pilot-induced oscillation experienced on the approach and landing test of the space shuttle
[NASA-TM-81366] N82-13149

LATTICE VIBRATIONS
The structural and vibrational properties of amorphous and crystalline group V elements
N82-13933

LAUNCH WINDOWS
Launch mission summary: Intelsat 5 (F3) Atlas/Centaur-55
[NASA-TM-84068] N82-13161

LAVAL NUMBER
A study of the formation and structure of small clusters of noble gases and sulfur hexafluoride formed in Laval Nozzle molecular beams N82-13201

LAW (JURISPRUDENCE)
Natural gas plan needed to provide greater protection for high-priority and critical uses
[PB81-226488] N82-13255

LAWS
Have we found Asymptopia: The ultimate form of physical laws?
[DE81-029853] N82-13825

LEAD (METAL)
Properties of matter at ultra-high pressures
[DE81-026504] N82-13190
The trace metal stratigraphy and recent sedimentary history of anthrogenous particulates on the San Pedro Shelf, California N82-13579
Gamma ray buildup factors in lead-iron and iron-lead shields
[EUR-7086-EN] N82-13864

LEAD OXIDES
Insoluble anodes for electrowinning zinc and other metals
[PB81-227365] N82-13227

LEAD TITANATES
Minimum/constant voltage PLZT electrooptic shutters — lead lanthanum zirconate titanate wafers for flush protective goggles
[DE81-028646] N82-13886
LENS ANTENNAS
Method of the study of complex waveguide junctions with one or several regions of communication
N82-13316
LENSES
Phase measurments in the focal region of an aberrated lens N82-13875
LIBYA
Structural and stratigraphic analysis of the paleozoic Murzuk and Ghadames basins, western Libya
N82-13614
LIFE (DURABILITY)
Future directions in Navy electronic system reliability and survivability
[AD-A102460] N82-13436
LIFE CYCLE COSTS
A new approach to modeling the cost of ownership for aircraft systems
[AD-A104434] N82-13979
LIFE SCIENCES
Health and safety research division
[DE81-026066] N82-13652
LIFT
Determination of efficient methods of lift by comparing trained and untrained male and female lifters
[AD-A100346] N82-13650
LIGHT (VISIBLE RADIATION)
Thermal performance of windows having high solar transmittance
[DE81-028672] N82-13524
LIGHT ADAPTATION
Pupillometry, a bioengineering overview
N82-13711
LIGHT EMISSION
Atomic pair processes and laser applications
N82-13417
LIGHT IONS
Stability considerations for light-ion beam transport in Z discharge channels
[AD-A101426] N82-13852
Data on the backscattering coefficients of light ions from solids
[IPPJ-AM-18] N82-13907
LIGHT SCATTERING
Results to be expected from light scattering dust analyzer during a rendezvous mission N82-13999
The transfer of polarized radiation in spectral lines from rotationally distorted stars N82-14031
LIGHT TRANSMISSION
Experimental study of heterodyne photodetection. Perspectives for applications to optical transmission
[ENST-E-80013] N82-13892
LIGHTING EQUIPMENT
Appliance efficiency and the solar building
[DE81-029073] N82-13265
LIMB DARKENING
Submillimeter observations of solar limb-brightening in the total solar eclipse of 31 July 1981
N82-14043
LINE CURRENT
Synthesis of nonequidistant line-source antenna by the statistical methods of search N82-13329
LINE OF SIGHT
Experimental investigation of a helmet mounted sight/display for helicopter N82-13060
LINE SHAPE
Theory and calculation of Raman line shapes and excitation profiles near a one photon resonance
N82-13866
Computer programs for line shape analysis of X-ray diffraction peaks — thin film analysis
[PB81-227787] N82-13958
LINE SPECTRA
Theory and calculation of Raman line shapes and excitation profiles near a one photon resonance
N82-13866
Oxygen transport and line emissions in a tokamak plasma
[IPPJ-E 14] N82-13900
Spectral imagery: Recent results with the SPIFI and their implications for cometary atmospheric studies — servocontrolled polarimetric imaging Fabry-Perot interferometer N82-14011
The transfer of polarized radiation in spectral lines from rotationally distorted stars N82-14031
LINEAR ARRAYS
Antenna (selected articles)
[AD-A106523] N82-13304
Energy characteristics of periodic systems of radiators: Efficiency and output coefficient of power, directive gain, and gain factor N82-13306
LINEAR EQUATIONS
Solution of single linear tridiagonal systems and vectorization of the ICCG algorithm on the Cray 1 — laser fusion
[DE81-025461] N82-13773
LINEAR FILTERS
Linear acousto-optic filtering with heterodyne and frequency-plane control N82-13352
LINEAR PROGRAMMING
Frequency sampling filters, design and applications
N82-13354
LINEAR RECEIVERS
Three-stage commutation field of the system of the repeated use of short-wave receiving antennas
N82-13317
LINEAR SYSTEMS
Control design for parameter sensitivity reduction in linear regulators: Application to large flexible space structures N82-13158
A control canonical form for a class of linear hyperbolic systems N82-13786
LINEARITY
Effect of vacuum exhaust pressure on the performance of MHD ducts at high D-field
[NASA-TM-82750] N82-13908
LINGUISTICS
Linguistic and human performance considerations in the design of an anticipatory communication aid
N82-13657
LIQUEFIED NATURAL GAS
Environmental impacts of energy transportation
[DE82-900316] N82-13559
LIQUID CHROMATOGRAPHY
Determination of radionuclide species by on-line radiochromatography using high resolution gamma ray spectroscopy N82-13181
LIQUID CRYSTALS
Physical adsorption of quantum atomic and molecular systems N82-13846
Nonlinear optical effects in liquid crystals
N82-13937
Fluorescent guest-host effect in scattering liquid crystals and new physical phenomena in thin liquid crystal films N82-13940
Multifunctions - liquid crystal displays
[BMFT-FB-T-80-181] N82-13957
LIQUID HELIUM
Welding of austenitic stainless steels for liquid-helium service
[DE81-025602] N82-13429
LIQUID METAL FAST BREEDER REACTORS
Substructure of 316 stainless steel pipe weldments — liquid metal fast breeder reactor materials
N82-13215
LIQUID PHASE EPITAXY
Advanced indium antimonide monolithic charge coupled infrared imaging arrays
[NASA-CR-165790] N82-13366
An investigation of some magnetic properties of calcium substituted yttrium iron garnet films
N82-13935
LIQUID-SOLID INTERFACES
Surface enhanced Raman spectroscopy for interfacial characterization N82-13175
A quantitative study of factors influencing lamellar eutectic morphology during solidification
[NASA-TM-82451] N82-13218
LITHIUM
Defect structure and properties of intermetallic compound beta-LiAl N82-13959
LITHIUM FLUORIDES
Push-pull fatigue of LiF and MgO single crystals
N82-13960
LITHIUM NIOBATES
Investigation of photoacoustorefractive effect in LiNbO sub 3 SAW devices
[AD-A103705] N82-13880
LITHOSPHERE
Papers presented to the Conference on the Processes of Planetary Rifting
[LPI-CONTRIB-457] N82-13595
LOAD DISTRIBUTION (FORCES)
Calculation of wing-body-nacelle interference in subsonic and transonic potential flow N82-13086
Prediction of subsonic aircraft flows with jet exhaust interactions N82-13088
LOAD TESTS
Planning and analysis of a fatigue test programme
N82-13276
Variable amplitude fatigue testing N82-13278
LOADS (FORCES)
An experimental study of a reinforced concrete folded plate structure with edge beams N82-13443
Load and resistance factor design of cold-formed steel structural members N82-13464
LOCOMOTION
A digital TV system for the detection of high speed human motion N82-13289
LOCOMOTIVES
The influence of pressure waves on measurements of high speed train noise — high pass filtering of pressure waves
[DFVLR-FB-81-06] N82-13837
LOGARITHMS
Probabilistic error analysis of floating point and CRD arithmetics N82-13758
LOGIC CIRCUITS
Concurrent testing and checking in computer systems N82-13751
LOGIC DESIGN
Interruption as a test of the user-computer interface N82-13721
Concurrent testing and checking in computer systems N82-13751
Automated partitioning of hierarchically specified digital systems N82-13752
Methods of verification of digital logic N82-13783
An algebraic model of fault masking logic
N82-13804
LOGICAL ELEMENTS
Methods of verification of digital logic N82-13783
LOGISTICS
The message processing and distribution system development
[AD-A104585] N82-13333
LONG TERM EFFECTS
Long-term operation of a sealed waveguide CO sub 2 laser
[AD-A105261] N82-13420
Geophysical monitoring for climatic change, number 8: Summary Report, 1979
[PB81-233355] N82-13631
LONGITUDINAL CONTROL
An analytical approach for predicting pilot induced oscillations N82-13688
A model for the submarine depthkeeping team
N82-13689
LONGITUDINAL STABILITY
Analysis of a longitudinal pilot-induced oscillation experienced on the approach and landing test of the space shuttle
[NASA-TM-81366] N82-13149
LONGITUDINAL WAVES
Nonlinear waves in rods
[AD-A101333] N82-13447
LOOP ANTENNAS
Excitation of radial resonator with annular slot
N82-13326
LOW ALTITUDE
Measurements of heavy ions in the low altitude regions of the outer zone
[AD-A099453] N82-13600
LOW FREQUENCIES
Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering
N82-13648
LOW SPEED
Effects of intake geometry on circular pilot intake performance at zero and low forward speeds
N82-13070
LOW TEMPERATURE PHYSICS
Observation of high field DHVA effect and induced magnetism in single crystal TiBe sub 2
[DE81-025292] N82-13950
LOW THRUST PROPULSION
Low-thrust chemical propulsion system pump technology
[NASA-CR-165219] N82-13427
LOW VOLTAGE
Review of low-voltage CP detonators
[DE81-025837] N82-13250

LUBRICATING OILS

Examination of early wear detection in diesel engines by energy dispersive radioisotope X ray fluorescence analysis
[BMVG-FBWT-79-19] N82-13432

LUMINOUS INTENSITY

Submillimeter observations of solar limb-brightening in the total solar eclipse of 31 July 1981
N82-14043

LUNAR ROCKS

Catalog of lunar mare basalts greater than 40 grams. Part 1: Major and trace chemistry, with megascopic descriptions and rock and thin sectinn photographs
[NASA-TM-84065] N82-14040

M

MACH NUMBER

Studies of air inlets at Reynolds numbers comparable to flight in ONERA's F1 and S1MA wind tunnels
N82-13091

Airframe-propulsion system aerodynamic interference predictions at high transonic Mach numbers including off-design engine airflow effects
N82-13098

MACHINE TOOLS

Mini-seminars on machining technology
[PB81-223034] N82-13273

MACHINING

Mini-seminars on machining technology
[PB81-223034] N82-13273

MAGNESIUM CHLORIDES

An improved stress corrosion test medium for aluminum alloys
[NASA-TM-82452] N82-13216

MAGNESIUM OXIDES

Push-pull fatigue of LiF and MgO single crystals
N82-13960

MAGNETIC COILS

Feedback plasma control in hybrid poloidal coil system
[IPPJ-542] N82-13905

MAGNETIC DISTURBANCES

Magnetic results from Nurmijaervi Geophysical Observatory 1980, No. 22
[ISBN-951-697-155-5] N82-13590

MAGNETIC FIELD CONFIGURATIONS

Large-scale variations of the interplanetary magnetic field: Voyager 1 and 2 observations between 1-5 AU
[NASA-TM-83850] N82-13594

Rudimentary theories of the stability of microwave-heated plasmas N82-13910

MAGNETIC FIELDS

Compton scattering in a uniform, constant magnetic field N82-13968

MAGNETIC FLUX

Large-scale variations of the interplanetary magnetic field: Voyager 1 and 2 observations between 1-5 AU
[NASA-TM-83850] N82-13594

MAGNETIC LENSES

Optics of mass separator 1
[DE81-028242] N82-13886

MAGNETIC MATERIALS

Benefication with magnetic fluids
[PB81-227126] N82-13485

MAGNETIC MEASUREMENT

Magnetic results from Nurmijaervi Geophysical Observatory 1980, No. 22
[ISBN-951-697-155-5] N82-13590

Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering
N82-13648

MAGNETIC PROPERTIES

An investigation of some magnetic properties of calcium substituted yttrium iron garnet films
N82-13935

Observation of high field DHVA effect and induced magnetism in single crystal TiBe sub 2
[DE81-025292] N82-13950

MAGNETIC SIGNATURES

Magnetically undetectable electronic circuit assemblies
[AD-A100669] N82-13356

MAGNETIC STORMS

Solar-geophysical data. Comprehensive reports, part 2
[PB81-221186] N82-14045

MAGNETIC VARIATIONS

Large-scale variations of the interplanetary magnetic field: Voyager 1 and 2 observations between 1-5 AU
[NASA-TM-83850] N82-13594

MAGNETICALLY TRAPPED PARTICLES

Two-satellite study of proton drift on quiet days
[AD-A104736] N82-13601

MAGNETOCARDIOGRAPHY

Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering
N82-13648

MAGNETOELASTIC WAVES

A triggering of solar flare by magnetosonic waves in a neutral sheet plasma
[IPPJ-540] N82-14042

MAGNETOHYDRODYNAMIC FLOW

Magnetic clouds between 2-4 AU: Voyager observations
[NASA-TM-83849] N82-13593

MAGNETOHYDRODYNAMIC GENERATORS

Two-dimensional effects in power take-off region
[DE82-000091] N82-13367

Electrical effects of slag in a diffuse mode magnetohydrodynamic generator N82-13550

Testing and evaluation of MHD materials and substructures
[DE81-024331] N82-13926

MAGNETOHYDRODYNAMIC STABILITY

Stability considerations for light-ion beam transport in Z discharge channels
[AD-A101426] N82-13852

Plasma focus breeder
[IPPJ-541] N82-13904

EBT Stability Theory: Proceedings of the workshop
[DE81-030635] N82-13909

Rudimentary theories of the stability of microwave-heated plasmas N82-13910

Review of recent EBT coupled ring-core stability theory N82-13911

Brief survey of experimental investigation of instabilities in microwave-heated plasmas
N82-13912

Fluctuation measurements in EBT N82-13913

Hot-electron ring stability at the University of Tennessee N82-13914

Eigenmode stability analysis for a bumpy torus
N82-13915

Stability of hot electron plasma in the ELMO bumpy torus N82-13917

Analytical theory of interchange and compressional Alfven instabilities in EBT N82-13918

Microstability of the EBT boundary N82-13919

Kinetic stability analyses in a bumpy cylinder
N82-13921

Driving force of the ballooning instability
[DE81-023099] N82-13923

Enhanced-confinement class of stellarators
[DE81-026727] N82-13924

MAGNETOHYDRODYNAMICS

Effect of vacuum exhaust pressure on the performance of MHD ducts at high D-field
[NASA-TM-82750] N82-13908

MAGNETOPAUSE

The internal structure of the magnetopause
[AERONOMICA-ACTA-A-221-1980] N82-13589

MAGNETORESISTIVITY

An investigation of some magnetic properties of calcium substituted yttrium iron garnet films
N82-13935

MAGNETOSPHERE

Measurements of heavy ions in the low altitude regions of the outer zone
[AD-A099453] N82-13600

MAGNETRONS

A relativistic magnetron with a thermionic cathode
N82-13353

MAGNITUDE

Observations of faint comets at McDonald Observatory: 1978-1980 N82-14010

MAINTAINABILITY

Helicopter reliability and maintainability trends during development and production
[AD-A105775] N82-13136

MAINTENANCE

Practical aspects of instrumentation system installation, volume 13
[NASA-TM-84067] N82-13140

Dynamic mass spectrometry: A residual gas analysis method and some applications
[DE81-026230] N82-13196

Future directions in Navy electronic system reliability and survivability
[AD-A102460] N82-13436

MAN MACHINE SYSTEMS

Using voice control onboard combat aircraft
N82-13056

Command-response data transmission to mechanical systems management effect on the crew/system interface N82-13057

The intelligent use of intelligent systems: Problems in engineering man/machine symbiosis N82-13058

Proceedings of the Seventeenth Annual Conference on Manual Control
[NASA-CR-165005] N82-13665

Supervisory control of remote manipulation: A preliminary evaluation N82-13675

Research issues in implementing remote presence in teleoperator control N82-13676

The persistence of a visual dominance effect in a telemanipulator task: A comparison between visual and electrotactile feedback N82-13677

Man/machine interface development for the REMOTEX concept N82-13678

Identification of cognitive factors related to remote work performance using closed circuit TV displays
N82-13679

The influence of motion cues on driver-vehicle performance in a simulator N82-13681

Multiple man-machine interfaces N82-13682

Decision aids for airborne intercept operations in advanced aircrafts N82-13683

Using rewards and penalties to obtain desired subject performance N82-13684

A quasi-Newton procedure for identifying pilot-related parameters of the optimal control model
N82-13694

Information and display requirements for aircraft terrain following N82-13695

A data collection scheme for identification of parameters in a driver model N82-13696

Multi-axis manual controllers: A state-of-the-art report N82-13701

Theoretical linear approach to the combined man-manipulator system in manual control of an aircraft N82-13702

The influence of ship motion of manual control skills N82-13703

The role of manipulator characteristics in selecting the ideal effective vehicle N82-13704

Experimental results with a six-degree-of-freedom force-reflecting hand controller N82-13707

Manual control analysis of drug effects on driving performance N82-13709

Human supervision and microprocessor control of an optical tracking system N82-13715

A theory of human error N82-13716

Stability analysis of automobile driver steering control N82-13717

Detecting human operator impairment with a psychomotor task N82-13718

A comparison of head and manual control for a position-control pursuit tracking task N82-13720

Interruption as a test of the user-computer interface N82-13721

A model for the control mode man-computer interface dialogue N82-13722

Taxonomy of the human factors in man machine systems N82-13726

MANAGEMENT METHODS

A summary of the Naval Postgraduate School Research Program
[AD-A104112] N82-13975

MANAGEMENT PLANNING

Five-year Hawaii water research agenda, 1982-1987
[PB81-231912] N82-13478

Managing information technology change in the decade of the 80's
[AD-A099441] N82-13976

MANAGEMENT SYSTEMS

SEPAC software configuration control plan and procedures, revision 1
[NASA-CR-161915] N82-13765

MANEUVERABILITY

Use of a helmet-mounted matrix display for presenting energy-maneuverability information during simulated close combat N82-13061

Maneuver load control for the reduction of design loads and improvement of the maneuverability of modern fighter aircraft
[BMVG-FBWT-81-2] N82-13136

MANGANESE
Spectroelectrochemical investigations in molten salt and aqueous media N82-13183

MANGANESE OXIDES
Quantitative investigations of mixed oxidation states of some first row transition metals in insulator matrices by photoelectron spectroscopy N82-13184

MANGANIN (TRADEMARK)
Pressure measurements of non-planer stress waves --- dual element strain gage
[DE81-028729] N82-13454

MANIFOLDS (MATHEMATICS)
The missing boundary problem for smooth manifolds of dimension greater than or equal to six N82-13806

MANIPULATORS
Dynamic analysis of flexible spatial mechanisms and robotic manipulators N82-13460
Multi-axis manual controllers: A state-of-the-art report N82-13701
Theoretical linear approach to the combined man-manipulator system in manual control of an aircraft N82-13702
The role of manipulator characteristics in selecting the ideal effective vehicle N82-13704
Design and development of a six degree of freedom hand controller N82-13706
Experimental results with a six-degree-of-freedom force-reflecting hand controller N82-13707

MANUAL CONTROL
Proceedings of the Seventeenth Annual Conference on Manual Control
[NASA-CR-165005] N82-13665
Pupillometric measurement of operator workload N82-13666
The cognitive demands of second order manual control: Applications of the event related brain potential N82-13667
A study on task difficulty and acceleration stress N82-13668
Subjective rating scales as a workload N82-13669
Physiological assessment of operator workload during manual tracking. 1: Pupillary responses N82-13670
Horizontal conflict resolution maneuvers with a cockpit display of traffic information N82-13671
Some effects of Field Of View (FOV) and target size on lateral tracking at hover N82-13672
Video framerate, resolution and grayscale tradeoffs for undersea telemanipulator N82-13673
Predictor symbology in computer-generated perspective displays N82-13674
Multi-axis manual controllers: A state-of-the-art report N82-13701
Theoretical linear approach to the combined man-manipulator system in manual control of an aircraft N82-13702
The influence of ship motion of manual control skills N82-13703
The role of manipulator characteristics in selecting the ideal effective vehicle N82-13704
Computer aided manual tracking N82-13705
Design and development of a six degree of freedom hand controller N82-13706
Manual control analysis of drug effects on driving performance N82-13709
A theory of human error N82-13716
Stability analysis of automobile driver steering control N82-13717
A comparison of head and manual control for a position-control pursuit tracking task N82-13720

MANUFACTURING
Design procedures for a commercial scale thermal evaporation system to deposit CdS for solar cell manufacture N82-13551
Increase in the profitability of design and process planning by integrated and graphic data processing, phase 1
[BMFT-FB-W-81-005] N82-13777

MANY BODY PROBLEM
Relativistic many-body perturbation theory of parity-violation in atoms N82-13845

MAPPING
The existence of nonzero maps from injectives to projectives N82-13808

MARINE BIOLOGY
Ecology and distribution of the Benthic community on the Monterey Breakwater, Monterey, California
[AD-A102047] N82-13555

MARINE ENVIRONMENTS
Flow distribution control characteristics in marine gas turbine waste-heat recovery systems. Phase 1: Flow distribution characteristics and control in diffusers
[AD-A104580] N82-13390
Environmental and radiological safety studies: Interaction of (238) PuO2 heat sources with terrestrial and aquatic environments
[DE81-032019] N82-13565
Environmental assessment of the Alaskan Continental Shelf: Annual reports of principal investigators for the year ending March 1980. Volume 5: Hazards
[PB81-225732] N82-13607
A review of one-dimensional oceanic mixed-layer models
[AD-A103279] N82-13640
Artificial Reefs: Proceedings of a Conference
[PB81-227779] N82-13644

MARKING
Structure of the knowledge base for an expert labeling system N82-13723

MARKOV PROCESSES
A systems analysis of the maturation of sleep using a semi-Markov model N82-13658

MARSHLANDS
Evaluation of reef shell embankment
[PB81-232761] N82-13266

MARTENSITIC STAINLESS STEELS
Fatigue crack propagation studies in two cryogenic steels N82-13213
Effect of low-temperature irradiation with (n, alpha) helium production on tensile properties of 12 Cr-1 Mo VW-type steels
[DE81-028578] N82-13222

MASS FLOW
Experimental and analytical investigation of a fluidic power generator
[JPL-PUB-81-100] N82-13386

MASS RATIOS
Pattern of neutrino mixing in grand unified theories
[DE81-029034] N82-13872

MASS SPECTRA
Spectral functions in quantum chromodynamics and applications N82-13969

MASS SPECTROMETERS
Dynamic mass spectrometry: A residual gas analysis method and some applications
[DE81-026230] N82-13195

MASS TRANSFER
Simultaneous heat and mass transfer in a porous medium N82-13404
Turbulent transfers in the atmospheric surface layer under varied stability conditions. A laboratory study N82-13586

MASSACHUSETTS
Massachusetts' five-year water resources research needs, 1982-1987
[PB81-231961] N82-13480
Intermediate photovoltaic system application experiment operational performance report. Volume 2 for Beverly High School, Beverly, Mass.
[DE82-000811] N82-13532

MATERIAL ABSORPTION
Studies of photoionization in liquids using a laser two-photon ionization conductivity technique
[DE81-026514] N82-13194
Aircraft measurements and mathematical modeling of the removal of gaseous air pollutants at natural air-land and air-water interfaces N82-13577

MATERIALS HANDLING
Testing of a work bench for handling of explosives in the laboratory
[FOA-C-20393-D1] N82-13397
Creating a safer environment in US coal mines: The Bureau of Mines Methane Control Program, 1964-79
[PB81-233916] N82-13488

MATERIALS RECOVERY
Power-plant fly-ash utilization: A chemical-processing perspective
[DE81-025452] N82-13191

MATHEMATICAL LOGIC
Proving total correctness of nondeterministic programs in infinitary logic
[MC-IW-150/80] N82-13799
Parallel scheduling algorithms
[AD-A103796] N82-1382[illegible]

MATHEMATICAL MODELS
Subsonic military aircraft engine intake: An integrated theoretical experiment design N82-13073
A real time Pegasus propulsion system model for VSTOL piloted simulation evaluation
[NASA-TM-82770] N82-13144
On the modeling and control of flexible space structures N82-13166
Theoretical equations of state for metals
[DE81-026743] N82-13224
Optical polishing of metals
[DE81-026690] N82-13225
Mathematical model of differential reflectometry for use in the investigation of thin film corrosion products N82-13232
Analysis and behavior of structures on discrete tensionless foundations N82-13286
Two-path model of fading in a high data rate communication channel N82-13292
Antenna (selected articles)
[AD-B060598] N82-13307
Use of principle of regularization in direct and mixed problems of the theory of the synthesis of radiating systems N82-13309
Synthesis of a plane system of discrete emitters N82-13310
Surface-patch techniques for modeling three-dimensional radiating or scattering objects
[AD-A100212] N82-13336
Two-dimensional effects in power take-off region
[DE82-000091] N82-13367
Validation, modeling, and computer assisted design program for power converters --- confirmation of dc/dc converters predicted performance
[ESTEC/DERA-8/7208] N82-13370
Experimental and analytical investigation of a fluidic power generator
[JPL-PUB-81-100] N82-13386
Modeling of turbulent mixing at density discontinuities in nonsteady compressible flows
[AD-A105584] N82-13391
Formulas for one-dimensional local properties for molecular-dynamics simulations of shock waves
[DE82-000906] N82-13395
Numerical experiments on two-phase liquid-vapor mist transport N82-13402
Study of corrugated plates N82-13428
Analysis of multicylinder IC-Engine crankshafts with hydrodynamic bearings using a finite element-transfer matrix approach N82-13437
A continuum model for friction with applications in metal forming plasticity N82-13445
Camelot: A novel concept for a multiterawatt pulse power generator for single pulse burst or repetition rate operation
[AD-A103024] N82-13513
The internal structure of the magnetopause
[AERONOMICA-ACTA-A-221-1980] N82-13569
On the inadequacy of one dimensional ocean models for the global carbon cycle
[CM-51] N82-13643
Proceedings of the Seventeenth Annual Conference on Manual Control
[NASA-CR-165005] N82-13665
On the internal target model in a tracking task N82-13700
Language, computation, and reality N82-13757
Compiler generation from lambda calculus definitions of programming languages N82-13759
An upper asymptote for the three-parameter logistic item-response model
[AD-A103013] N82-13816
Inclusive charged particle spectrum from the interaction of nuclei with intermediate energy proton N82-13846
Analysis of coupled translational and rotational diffusion using operator calculus N82-13849
On high beta equilibria of plasmas in the quasi-uniform current model: Influence of shaping the plasma cross section and of the second order in the inverse aspect ratio
[REPT-81-131] N82-13927
Fundamental studies of grain-boundary passivation in polycrystalline silicon with application to improved photovoltaic devices
[DE82-000825] N82-13956

The physical and electrical properties of polycrystalline-silicon N82-13964
A new approach to modeling the cost of ownership for aircraft systems
[AD-A104434] N82-13979
A triggering of solar flare by magnetosonic waves in a neutral sheet plasma
[IPPJ-540] N82-14042

MATHEMATICAL PROGRAMMING
Synthesis of nonequidistant line-source antenna by the statistical methods of search N82-13329
New optimization research
[AD-A104664] N82-13793

MATRICES (MATHEMATICS)
MERLIN: A computer program to transfer finite-element meshes
[DE82-000606] N82-13775
A stochastic extension of the structural properties of compartment models via a Kronecker algebra N82-13810
Mechanistic studies of electron exchange kinetics using ab initio
[DE81-026096] N82-13856
Pattern of neutrino mixing in grand unified theories
[DE81-029034] N82-13872

MAXIMUM LIKELIHOOD ESTIMATES
A contribution to robust detection and estimation N82-13809
Transforming contingency tables
[AD-A104182] N82-13821

MEAN
A Bayesian approach to the symmetric multiple comparisons problem in the two-way balanced design N82-13819

MEAN FREE PATH
Energy losses and mean free paths of electrons in silicon dioxide
[DE81-026353] N82-13860

MECHANICAL DRIVES
Low-thrust chemical propulsion system pump technology
[NASA-CR-165219] N82-13427
The ac propulsion system for an electric vehicle, phase 1
[NASA-CR-165480] N82-13506
Controlled Speed Accessory Drive demonstration program
[NASA-CR-165010] N82-13981

MECHANICAL ENGINEERING
Compilation of abstracts of dissertations theses, and research papers submitted by candidates for degrees, 1 October 1979 - 30 September 1980
[AD-A104124] N82-13974

MECHANICAL PROPERTIES
Strengthening phases and deformation mechanisms in dispersion strengthened solid solutions and pure metals N82-13229
Structure-property relationships in segmented elastomers: Small angle X-ray scattering, thermal, and mechanical studies N82-13240
Micromechanics of expansive mechanisms in expansive cement concretes N82-13258
A laboratory evaluation of modified asphalt
[PB81-231615] N82-13269
Thin-walled structures. Trapezoidal sheet bending and under shear stresses
[VTT-11] N82-13456
The physical and electrical properties of polycrystalline-silicon N82-13964

MEDICAL SCIENCE
Health and safety research division
[DE81-026086] N82-13652
The relationship between the number of factors and size of an experiment — a medical diagnostics case
[AD-A103877] N82-13792

MELTING
New ways of looking for phase transitions at multi-megabar dynamic pressures
[DE81-028771] N82-13223

MENTAL PERFORMANCE
The cognitive demands of second order manual control: Applications of the event related brain potential N82-13867

MERCURY COMPOUNDS
HgCdTe fabrication using directed energy techniques
[AD-A105626] N82-13947

MESH
Mesh generating and plotting facilities of the LAMCAL program
[EUR-7099-EN] N82-13776

MESSAGE PROCESSING
The message processing and distribution system development
[AD-A104565] N82-13333
A specification and proof technique for message-based systems and its application to distributed database algorithms N82-13756

METABOLISM
Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update
[PB81-232811] N82-13655

METAL COATINGS
Wear properties of electrodeposited titanium diboride coatings
[PB81-233314] N82-13199

METAL COMPOUNDS
Determination of radionuclide species by on-line radiochromatography using high resolution gamma ray spectroscopy N82-13181

METAL CRYSTALS
Low energy X-ray spectrometer
[DE81-025824] N82-13407
The structure and properties of grain boundaries N82-13962

METAL CUTTING
Mini-seminars on machining technology
[PB81-223034] N82-13273

METAL FATIGUE
Cyclic deformation and fatigue crack initiation of a coherently precipitating Ni-14.4 at % Al alloy N82-13212
Cyclic deformation and fatigue microcrack initiation in pearlitic eutectoid steel N82-13230
Fatigue Test Methodology
[AGARD-LS-118] N82-13274
The role of fatigue testing N82-13275
Elevated temperature fatigue testing of metals N82-13281
Fatigue tests with a corrosive environment N82-13282
Methods of obtaining crack growth data in metals N82-13283
Cyclic strain approach to fatigue in metals N82-13285

METAL FILMS
The chemical vapor deposition of iridium
[AD-A104582] N82-13360
An investigation of some magnetic properties of calcium substituted yttrium iron garnet films N82-13935

METAL FOILS
Impedance-match experiments using high intensity lasers
[DE81-025802] N82-13422

METAL HALIDES
Preparation, characterization and performance of non-uniform metal catalysts N82-13204

METAL HYDRIDES
Development and optimization of hydrogen storage materials using surface analytical techniques
[BMVG-FBWT-80-6] N82-13546

METAL IONS
Metal ion modification of polymeric sulfur nitride, (SN) subx, electrodes and electrochemical reduction of acetylene at a molybdenum modified (SN)sub x electrode N82-13165
Composition dependence of neodymium optical homogeneous linewidths in glasses N82-13945

METAL JOINTS
Analysis of steel beam-to-column moment connections N82-13444

METAL MATRIX COMPOSITES
Explosive-metal composites and electrical switch technology
[AD-A099476] N82-13361

METAL OXIDE SEMICONDUCTORS
Charge-based modeling of capacitance in MOS transistors N82-13350
Study of the physics of insulating films as related to the reliability of metal-oxide semiconductor devices
[AD-A105030] N82-13359
A simplified two-dimensional numerical analysis of MOS devices including transient penomena N82-13372

METAL OXIDES
Deformation-enhanced photoemission from metals N82-13231
Mathematical model of differential reflectometry for use in the investigation of thin film corrosion products N82-13232

METAL PARTICLES
Examination of early wear detection in diesel engines by energy dispersive radioisotope X ray fluorescence analysis
[BMVG-FBWT-79-19] N82-13432

METAL PLATES
Behavior of plane panels in ship structures with local initial deflections
[BMVG-FBWT-80-18] N82-13455
Gamma ray buildup factors in lead-iron and iron-lead shields
[EUR-7086-EN] N82-13864

METAL POLISHING
Optical polishing of metals
[DE81-026690] N82-13225

METAL POWDER
Potential use of the minicomputer controlled powder diffractometer for the structure determination of small quantities of rather impure materials N82-13207

METAL SHEETS
Thin-walled structures. Trapezoidal sheet bending and under shear stresses
[VTT-11] N82-13456

METAL SURFACES
Surface enhanced Raman spectroscopy for interfacial characterization N82-13175
Investigation into the role of NaCl deposited on oxide and metal substrates in the initiation of hot corrosion
[NASA-CR-165029] N82-13217
Development and optimization of hydrogen storage materials using surface analytical techniques
[BMVG-FBWT-80-6] N82-13546

METAL WORKING
A continuum model for friction with applications in metal forming plasticity N82-13445

METAL-NITRIDE-OXIDE-SILICON
Charge trapping in interface doped MNOS structures N82-13930

METALLIC GLASSES
Composition dependence of neodymium optical homogeneous linewidths in glasses N82-13945

METALLIZING
Magnetically undetectable electronic circuit assemblies
[AD-A100669] N82-13358
Development of technique for AR coating and nickel and copper metallization of solar cells: FPS project, product development
[NASA-CR-165033] N82-13499
High resolution, low cost solar cell contact development
[NASA-CR-165032] N82-13501

METEOROIDS
New problems of cometary observations from space N82-13994

METEOROLOGICAL CHARTS
Annual data and verification tabulation, eastern North Pacific tropical storms and hurricanes 1980
[PB81-230336] N82-13636

METEOROLOGICAL PARAMETERS
The District of Columbia Five-Year Water Resources Research Program Plan, 1982-1987
[PB81-234882] N82-13482
Tables of statistical summaries for the SURE aircraft measurements
[DE82-900317] N82-13564
Geophysical monitoring for climatic change, number 8: Summary Report, 1979
[PB81-233355] N82-13631

METEOROLOGICAL RADAR
Joint agency Doppler technology tests
[AD-A100208] N82-13335

METEOROLOGICAL SERVICES
National Weather Service public forecast verification
[PB81-231714] N82-13632

METEOROLOGY
Project Skywater: Fiscal year 1979 report. Atmospheric Resources Research Program
[PB81-234494] N82-13629
A summary of the Naval Postgraduate School Research Program
[AD-A104112] N82-13975

METHANATION
Solar-central-receiver fuels and chemicals [DE82-000941] N82-13530
METHANE
Control of methane by ventilation of shafts during raise drilling [PB81-234502] N82-13487
Creating a safer environment in US coal mines: The Bureau of Mines Methane Control Program, 1964-79 [PB81-233918] N82-13488
Solar-central-receiver fuels and chemicals [DE82-000941] N82-13530
Biomethanation of biomass pyrolysis gases [DE82-000238] N82-13541
METHOD OF CHARACTERISTICS
An initial study of the application of the numerical method of characteristics to unsteady flow analysis in partially filled gravity drainage sized pipes [PB81-229169] N82-13399
Determination of two-stroke engine exhaust noise by the method of characteristics [NASA-TM-84061] N82-13627
METHOD OF MOMENTS
A hybrid method which combines a moment method current with an asymptotic current [AD-A102199] N82-13340
METHYLENE BLUE
Spectroelectrochemistry, flash photolysis and photogalvanic effect of methylene blue and safranin-0 N82-13208
MICA
Low energy X-ray spectrometer [DE81-025824] N82-13407
MICROANALYSIS
Micromechanics of expansive mechanisms in expansive cement concretes N82-13258
MICROCOMPUTERS
Potential use of the minicomputer controlled powder diffractometer for the structure determination of small quantities of rather impure materials N82-13207
Development report: Automatic System Test and Calibration (ASTAC) equipment [NASA-CR-165403] N82-13505
MICROCRACKS
Micromechanics of expansive mechanisms in expansive cement concretes N82-13258
Investigation of the acoustic emission and deformation response of finite ice plates [AD-A103731] N82-13471
MICROORGANISMS
Ecology and distribution of the Benthic community on the Monterey Breakwater, Monterey, California [AD-A102047] N82-13555
MICROPHONES
Double beam-in-time photoacoustic spectroscopy N82-13180
MICROPROCESSORS
A central microprocessor controlled electrical storage heating system [BMFT-FB-T-80-182] N82-13547
Human supervision and microprocessor control of an optical tracking system N82-13715
Beyond mere automation [AD-A103638] N82-13736
MICROSTRIP TRANSMISSION LINES
Experimental and theoretical investigations with laboratory models of phased array antenna [BMVG-FBWT-79-21] N82-13341
MICROSTRUCTURE
Acoustic nondestructive evaluation of microstructure --- pure copper and plain carbon and low alloy steels N82-13211
An investigation of notch low cycle fatigue life behavior of Rene' 80 at high temperature N82-13214
Substructure of 316 stainless steel pipe weldments --- liquid metal fast breeder reactor materials N82-13215
Structure-property relationships in segmented elastomers: Small angle X-ray scattering, thermal, and mechanical studies N82-13240
Micromechanics of expansive mechanisms in expansive cement concretes N82-13258
The structure and properties of grain boundaries N82-13962
MICROWAVE ATTENUATION
Microwave attenuation and brightness temperature due to the gaseous atmosphere: A comparison of JPL and CCIR values [NASA-CR-165027] N82-13300
MICROWAVE HOLOGRAPHY
Discrimination of hologram and antenna theory N82-13320
MICROWAVE SCATTERING
High frequency scattering from multiple finite elliptic cylinders N82-13291
MICROWAVE SPECTRA
Conductivity and permittivity measurements of fast ion conductors in the microwave region N82-13351
MICROWAVE TRANSMISSION
Effects of the Satellite Power System on low Earth orbit and geosynchronous satellites [PB81-232019] N82-13157
MICROWAVES
Microwave attenuation and brightness temperature due to the gaseous atmosphere: A comparison of JPL and CCIR values [NASA-CR-165027] N82-13300
Conductivity and permittivity measurements of fast ion conductors in the microwave region N82-13351
MILITARY AIR FACILITIES
Geothermal-resource verification for Air Force Bases [DE81-027482] N82-13520
MILITARY AIRCRAFT
Electronic flight deck displays for military transport aircraft N82-13050
MILITARY HELICOPTERS
Integration of controls and displays in US Army helicopter cockpits N82-13053
MILITARY TECHNOLOGY
Fiber optics (optical waveguides) technology: Potential application in the DCS [AD-A104740] N82-13303
MILLIMETER WAVES
Antenna (selected articles) [AD-A106499] N82-13323
A statistical analysis of irregular quasi-optical lines (beam guides) with the aid of computer(s) N82-13324
Directed dividers on the metal-dielectric waveguides N82-13326
Millimeter wave alternate route study [AD-A102303] N82-13339
Millimeter wave radiometry as a means of determining cometary surface and subsurface temperature N82-14003
MINERAL DEPOSITS
A depositional model for major coal seams in the Rock Springs Formation, Upper Cretaceous, southwest Wyoming N82-13580
Petrology and geochemistry of ophiolite fragments in a tectonic melange, Kodiak Islands, Alaska N82-13610
An investigation of the nickel-cobalt occurrence in the southeast Missouri mining district N82-13613
MINERALOGY
An investigation of the nickel-cobalt occurrence in the southeast Missouri mining district N82-13613
MINERALS
Rates and mechanisms of chemical weathering in an organic environment at Panola Mountain, Georgia N82-13615
MINES (EXCAVATIONS)
Review of fire test methods and incident data for portable electric cables in underground coal mines [PB81-227878] N82-13272
Deep Ocean Mining Environmental Study. Environmental effects of commercial-scale mining [PB81-227753] N82-13484
Control of methane by ventilation of shafts during raise drilling [PB81-234502] N82-13487
Suppression of coal dust explosion by water barrier in a conveyor belt entry [PB81-233306] N82-13489
MINIATURE ELECTRONIC EQUIPMENT
Development of a miniaturised digital thrust demand unit N82-13055
MINICOMPUTERS
A digital TV system for the detection of high speed human motion N82-13289
MINNESOTA
Development of peatlands in northern Minnesota [DE82-000873] N82-13475
MIRROR FUSION
Electron-cyclotron resonant heated electron distribution functions N82-13920
MIRRORS
Double beam-in-time photoacoustic spectroscopy N82-13180
Low energy X-ray spectrometer [DE81-025824] N82-13407
MISSILE CONFIGURATIONS
Consolidation of data base for Army generalized missile model [NASA-CR-166273] N82-13046
MISSILE TESTS
Consolidation of data base for Army generalized missile model [NASA-CR-166273] N82-13046
Pressure distributions on three different cruciform aft-tail control surfaces of a wingless missile at Mach 1.60, 2.36, and 3.70. Volume 1: Trapezoidal tail [NASA-TM-80097] N82-13110
MISSILE TRACKING
Modeling human tracking error in several different anti-tank systems N82-13699
On the internal target model in a tracking task N82-13700
MISSION PLANNING
Anticipated results from dust experiments on cometary missions N82-13993
Plans for Comet Halley --- ESA's Giotto mission, Japan's Planet-A mission, and the U.S.S.R. Venera-Halley mission N82-14024
The ESA mission to Comet Halley N82-14025
MISSOURI
An investigation of the nickel-cobalt occurrence in the southeast Missouri mining district N82-13613
MIST
Numerical experiments on two-phase liquid-vapor mist transport N82-13402
MODAL RESPONSE
Study of corrugated plates N82-13426
MODELS
AC harmonic filtering using controlled current injection N82-13348
MODULATION
Modulation/demodulation techniques for satellite communications. Part 1: Background [NASA-CR-165020] N82-13301
Investigation of modulation methods and system aspects for regenerative satellite-repeater [BMFT-FB-W-80-024] N82-13342
MODULUS OF ELASTICITY
Optical polishing of metals [DE81-028690] N82-13225
MOISTURE
Effects of hygrothermal conditioning on the dynamic behavior of resin matrix composites N82-13172
MOISTURE CONTENT
An apparatus and procedure for calibrating a water vapor analyzer in the 0.1- to 15-ppm range [PB81-231165] N82-13413
MOLECULAR BEAMS
A study of the formation and structure of small clusters of noble gases and sulfur hexafluoride formed in Laval Nozzle molecular beams N82-13201
MOLECULAR CLOUDS
Radiation-hydrodynamics of HII regions and molecular clouds [DE81-028696] N82-14032
MOLECULAR DIFFUSION
Analysis of coupled translational and rotational diffusion using operator calculus N82-13849
MOLECULAR EXCITATION
Experimental and theorectical studies of excited state transport N82-13967
MOLECULAR INTERACTIONS
Molecular interactions in amphiphilic association structures N82-13206
Electrostatic and hydrodynamic interactions of charged macromolecular systems N82-13242
Formulas for one-dimensional local properties for molecular-dynamics simulations of shock waves [DE82-000906] N82-13395
Role of molecular dynamics on descriptions of shock front processes [DE81-028687] N82-13657
Infrared vibrational predissociation spectroscopy of small molecular clusters [DE81-028648] N82-13867
MOLECULAR SPECTRA
Ground-based cometary spectroscopy N82-14007

MOLECULAR SPECTROSCOPY

Studies of sample introduction for inductively coupled plasma emission spectrometry N82-13209

Radio observations of comets N82-14002

The spectroscopy of comets: Introductory remarks N82-14004

MOLECULAR STRUCTURE

Resonance Raman spectroscopic investigations of the active site structures of hemoglobin and hemerythrin N82-13176

Strengthening phases and deformation mechanisms in dispersion strengthened solid solutions and pure metals N82-13229

Defect studies of molecular and rare-gas crystals down to 50mK and up to 150 MPa
[DE81-028617] N82-13849

MOLECULES

Molecular dynamics calculations for sodium using pseudopotential theory
[DE81-029022] N82-13853

MOLLUSKS

Evaluation of reef shell embankment
[PB81-232761] N82-13266

MOLTEN SALT ELECTROLYTES

Spectroelectrochemical investigations in molten salt and aqueous media N82-13183

MOMENT DISTRIBUTION

Inelastic overload analysis of continuous steel multi-girder highway bridges by the finite-element method N82-13440

Analysis of steel beam-to-column moment connections N82-13444

MOMENTUM TRANSFER

Turbulent transfers in the atmospheric surface layer under varied stability conditions. A laboratory study N82-13586

MONITORS

Two-channel telemeter for use in a 3-inch spin air gun
[AD-A102566] N82-13165

Examination of early wear detection in diesel engines by energy dispersive radioisotope X ray fluorescence analysis
[BMVG-FBWT-79-19] N82-13432

Computer-automated controls for superconducting magnetic energy storage
[DE81-028697] N82-13521

A monitor for noninvasive estimation of pulmonary blood flow N82-13656

MONOCHROMATORS

Construction and maintenance of SUNY facilities at the National Synchrotron Light Source
[DE81-027865] N82-13152

MONOCULAR VISION

Monocular vision and tactical flight on the helicopter N82-13059

MONOMERS

Polymers with mesomorphic organization in the side chains from vinyl monomers with mesogenic or potentially mesogenic elements N82-13234

MONTANA

Environmental effects of pollutants from coal combustion. 2: The Colstrip, Montana Power Plant
[PB81-234114] N82-13573

MONTE CARLO METHOD

Modeling human tracking error in several different anti-tank systems N82-13699

On the internal target model in a tracking task N82-13700

A stochastic extension of the structural properties of compartment models via a Kronecker algebra N82-13810

MONTEREY BAY (CA)

Ecology and distribution of the Benthic community on the Monterey Breakwater, Monterey, California
[AD-A102047] N82-13555

MORPHOLOGY

A quantitative study of factors influencing lamellar eutectic morphology during solidification
[NASA-TM-82451] N82-13218

Structure-property relationships in segmented elastomers: Small angle X-ray scattering, thermal, and mechanical studies N82-13240

MOTION SIMULATORS

The influence of motion cues on driver-vehicle performance in a simulator N82-13681

The influence of ship motion of manual control skills N82-13703

MOTIVATION

Using rewards and penalties to obtain desired subject performance N82-13684

MRCA AIRCRAFT

The design and development of the Tornado engine air intake N82-13074

The subsonic performance of practical military variable area convergent nozzles N82-13076

MULTIPATH TRANSMISSION

Large volume multiple-path nuclear pumped laser
[NASA-CASE-LAR-12592-1] N82-13415

MULTIPHOTON ABSORPTION

Analytical detection of organic species by means of laser-induced multiphoton ionization N82-13646

MULTIPLEXING

Techniques for interfacing multiplex systems
[AD-A101457] N82-13135

Millimeter wave alternate route study
[AD-A102303] N82-13339

MULTIPLIERS

Design and fabricate a CCD analog multiplier
[AD-A105557] N82-13364

MULTIPROCESSING (COMPUTERS)

An analytical study of multiprocessor system reliability N82-13728

Preemptive scheduling of a multiprocessor system with memories to minimize L sub max
[AD-A103795] N82-13734

Beyond mere automation
[AD-A103838] N82-13736

Distributed and decentralized control in fully distributed processing systems
[AD-A104379] N82-13739

Direct execution string processor N82-13753

MUONS

Inelastic scattering of high energy muons from nuclear targets N82-13874

MUSCULAR FUNCTION

Benefits of detailed models of muscle activation and mechanics N82-13713

MYOCARDIUM

Algorithms for imaging myocardial blood flow using X-ray computed tomography N82-13661

N

NACELLES

Aerodynamics of Power Plant Installation
[AGARD-CP-301] N82-13065

Model testing techniques for measuring inlet drag N82-13084

The role and implementation of different nacelle/engine simulation concepts for wind-tunnel testing in research and development work on transport aircraft N82-13086

Wind tunnel tests of powered models: A comparison of two methods of simulating the jets of jet engines N82-13087

Wind tunnel test and analysis techniques using powered simulators for civil nacelle installation drag assessment N82-13088

Establishment of an experimental technique to provide accurate measurement of the installed drag of close coupled civil nacelle/airframe configurations, using a full span model with turbine powered engine simulators N82-13089

Evaluation of an experimental technique to investigate the effects of the engine position on engine/pylon/wing interference N82-13090

The influence of closed-coupled, rear fuselage mounted nacelles on the design of an advanced high speed wing N82-13092

Aerodynamic aspects of a high bypass ratio engine installation on a fuselage afterbody N82-13093

A numerical method for studying nacelle-jet-airfoil interaction in inviscid three-dimensional flow N82-13094

Airframe-propulsion system aerodynamic interference predictions at high transonic Mach numbers including off-design engine airflow effects N82-13096

Thrust modulation methods for a subsonic V/STOL aircraft
[NASA-TM-82747] N82-13112

NASA PROGRAMS

Reports of Planetary Geology Program, 1981
[NASA-TM-84211] N82-14041

Report on research and technology-FY 1981
[NASA-TM-81367] N82-14047

NATURAL GAS

Natural gas plan needed to provide greater protection for high-priority and critical uses
[PB81-228486] N82-13256

NATURAL LANGUAGE (COMPUTERS)

Preliminary analysis of a breadth-first parsing algorithm: Theoretical and experimental results
[AD-A101852] N82-13787

NAVIER-STOKES EQUATION

Prediction of subsonic aircraft flows with jet exhaust interactions N82-13098

Navier-Stokes solutions for a supersonic coflowing axisymmetric nozzle with a thick annulus N82-13101

Numerical analysis of the scramjet-inlet flow field by using two-dimensional Navier-Stokes equations
[NASA-TP-1940] N82-13142

A solution of the Navier-Stokes equations by a mixed finite element method
[ONERA-NT-1981-1] N82-13398

NAVIGATION AIDS

Horizontal conflict resolution maneuvers with a cockpit display of traffic information N82-13671

NAVY

Future directions in Navy electronic system reliability and survivability
[AD-A102460] N82-13438

A summary of the Naval Postgraduate School Research Program
[AD-A104112] N82-13975

NEAR INFRARED RADIATION

Laboratory measurements of physical, chemical, and optical characteristics of Lake Chicot sediment waters
[NASA-TP-1941] N82-13466

NEAR WAKES

Some observations of surface pressures and the near wake of a blunt trailing edge airfoil N82-13100

NEGATIVE IONS

Trapped ion research
[AD-A098648] N82-13188

NEODYMIUM

Composition dependence of neodymium optical homogeneous linewidths in glasses N82-13945

NERVOUS SYSTEM

Functional structure and dynamics of the human nervous system N82-13692

NETWORK ANALYSIS

Flow control and routing in an integrated voice and data communication network
[AD-A103342] N82-13337

NETWORK SYNTHESIS

Computer implementation of optimal multivariable controller design in the frequency domain N82-13765

NEUROMUSCULAR TRANSMISSION

Computational problems in autoregressive moving average (ARMA) models N82-13698

Model simulation studies to clarify the effect on saccadic eye movements of initial condition velocities set by the Vestibular Ocular Reflex (VOR) N82-13712

Benefits of detailed models of muscle activation and mechanics N82-13713

NEUROTRANSMITTERS

Neurotransmitter function in the basal ganglia after acute and chronic ethanol treatment
[AD-A103744] N82-13649

NEUTRINOS

Pattern of neutrino mixing in grand unified theories
[DE81-029034] N82-13872

NEUTRON CROSS SECTIONS

Double differential continuum neutron scattering cross sections in iron and nickel for incident energies of 7.5, 10 and 12 MeV N82-13847

NEUTRON IRRADIATION

Effect of low-temperature irradiation with (n, alpha) helium production on tensile properties of 12 Cr-1 Mo VW-type steels
[DE81-028578] N82-13222

Positron lifetime and Doppler broadening techniques applied to irradiation damaged silver
[DE81-028688] N82-13854

NEUTRON SOURCES

Gas target neutron generator studies
[UTIAS-251] N82-13850

NEW MEXICO
Environmental effects of pollutants from coal combustion. 1: The Four Corners Power Plant, Farmington, N.M.
[PB81-230427] N82-13572

NEW YORK
Preliminary investigation of a shallow ground-water flow system associated with Connetquot Brook, Long Island, New York
[PB81-228751] N82-13481

NEWTON-RAPHSON METHOD
A quasi-Newton procedure for identifying pilot-related parameters of the optimal control model N82-13694

NICKEL
Effect of low-temperature irradiation with (n, alpha) helium production on tensile properties of 12 Cr-1 Mo VW-type steels
[DE81-028578] N82-13222
The trace metal stratigraphy and recent sedimentary history of anthrogenous particulates on the San Pedro Shelf, California N82-13579
An investigation of the nickel-cobalt occurrence in the southeast Missouri mining district N82-13613
Double differential continuum neutron scattering cross sections in iron and nickel for incident energies of 7.5, 10 and 12 MeV N82-13847

NICKEL ALLOYS
Cyclic deformation and fatigue crack initiation of a coherently precipitating Ni-14.4 at % Al alloy N82-13212
Workshop proceedings: U-bend tube cracking in steam generators
[DE81-903765] N82-13515

NICKEL COATINGS
Development of technique for AR coating and nickel and copper metallization of solar cells: FPS project, product development
[NASA-CR-165033] N82-13499

NIGHT VISION
Experimental investigation of a helmet mounted sight/display for helicopter N82-13060

NIOBIUM
Spectroelectrochemical investigations in molten salt and aqueous media N82-13183
Ultrasonic attenuation and velocity studies in the alpha-alpha' solid solution phases of the Nb-H system
[DE81-026618] N82-13836
Upper critical fields and span states in A-15 superconductors, part 1. Vortices in two-dimensional superconductors, part 2 N82-13942
Electron beam evaporation of superconducting, A15 niobium-silicon N82-13944

NIOBIUM ALLOYS
Superconductivity of the A15 compound niobium aluminum N82-13932

NIOBIUM OXIDES
Local density studies of electronic structure and bonding in transition metal compounds N82-13936

NITRIC OXIDE
Reduction of nitric oxide in a fluidized bed
[DE81-030488] N82-13198

NITRIDES
Metal ion modification of polymeric sulfur nitride, (SN) subx, electrodes and electrochemical reduction of acetylene at a molybdenum modified (SN)sub x electrode N82-13185

NITROGEN OXIDES
Effect of fuel-air-ratio nonuniformity on emissions of nitrogen oxides
[NASA-TP-1798] N82-13143
Pilot-scale development of a low-NOx coal-fired tangential system
[PB81-242513] N82-13270
Testing and evaluation of MHD materials and substructures
[DE81-024331] N82-13926

NITROUS OXIDES
Catalytic combustion of residual fuels
[NASA-TM-82731] N82-13504
The nitrogen cycle and heat budget of a subtropical lagoon, Devils Hole, Harrington Sound, Bermuda: Implications for nitrous oxide production and consumption in marine environments N82-13611

NOCTURNAL VARIATIONS
Investigation of fluctuation phenomena in dye lasers N82-13419

NOISE MEASUREMENT
Determination of two-stroke engine exhaust noise by the method of characteristics
[NASA-TM-84061] N82-13827
The influence of pressure waves on measurements of high speed train noise --- high pass filtering of pressure waves
[DFVLR-FB-81-06] N82-13837

NOISE SPECTRA
Transport noise arising from diffusion and bulk or surface generation recombination in semiconductors N82-13963

NOISE TEMPERATURE
Microwave attenuation and brightness temperature due to the gaseous atmosphere: A comparison of JPL and CCIR values
[NASA-CR-165027] N82-13300

NOISE THRESHOLD
Some experimental design techniques in image processing problems N82-13782

NONDESTRUCTIVE TESTS
A preliminary analysis of the data from experiment 77-13 and final report on glass fining experiments in zero gravity
[NASA-CR-161884] N82-13154
Acoustic nondestructive evaluation of microstructure --- pure copper and plain carbon and low alloy steels N82-13211
Optical scanner system for internal inspection of steam-generator tubes
[EPRI-NP-1944] N82-13884

NONLINEAR EQUATIONS
A method for accelerating convergence to the solution of nonlinear structural equations by reducing residual work N82-13439
Inelastic overload analysis of continuous steel multi-girder highway bridges by the finite-element method N82-13440
An extension to N dimensions of the Von Karman equations N82-13441
Algorithms for the geometry of semi-algebraic sets N82-13763

NONLINEAR OPTICS
Three laser experiments in gases N82-13416
Nonlinear optical effects in liquid crystals N82-13937

NONLINEAR SYSTEMS
MAGNA: A finite element program for the materially and geometrically nonlinear analysis of three-dimensional structures subjected to static and transient loading
[AD-A099454] N82-13446
A nonlinear conservation law with memory --- history boundary value problems in viscoelastic motion
[AD-A103882] N82-13791
Ultraviolet structure of supersymmetric non-linear sigma-models N82-13843

NONLINEARITY
Nonlinear waves in rods
[AD-A101333] N82-13447

NONPARAMETRIC STATISTICS
New optimization research
[AD-A104864] N82-13793
Error bounds for reconstruction of a function f from a finite sequence (SGN(ft sub i) + x sub i))
[AD-A104477] N82-13795

NONUNIFORM FLOW
Effect of fuel-air-ratio nonuniformity on emissions of nitrogen oxides
[NASA-TP-1798] N82-13143

NONUNIFORM PLASMAS
Energy and momentum deposition to plasmas due to the lower hybrid wave by a finite source
[IPPJ-546] N82-13899

NORTH CAROLINA
Aircraft data summaries of the SURE intensives, volume 4
[DE82-900311] N82-13569

NORWAY
High latitude measurements of the Total Electron Content (TEC) using the Faraday technique and comparisons with TEC estimates from NAVSTAR-GPS data
[AD-A103042] N82-13603

NOSE CONES
The transonic flow field for a fluidic-generator fuze assembly
[AD-A099616] N82-13388

NOSE INLETS
Thrust modulation methods for a subsonic V/STOL aircraft
[NASA-TM-82747] N82-13112

NOTCH STRENGTH
An investigation of notch low cycle fatigue life behavior of Rene' 80 at high temperature N82-13214

NOTCH TESTS
Cyclic strain approach to fatigue in metals N82-13285

NOVA LASER SYSTEM
Beam propagation in the frequency-converted subsystems of Nova and Novette
[DE81-028253] N82-13862

NOZZLE DESIGN
Integration of advanced exhaust nozzles N82-13075
The subsonic performance of practical military variable area convergent nozzles N82-13076
Advanced exhaust nozzle technology N82-13078
A numerical investigation of exhaust plume temperature effects on nonaxisymmetric nozzle/afterbody performance N82-13079
Controlled overspray spray nozzle
[NASA-CASE-MFS-25139-1] N82-13376

NOZZLE EFFICIENCY
Comparison of different nozzle concepts for a reheated turbofan N82-13077
Advanced exhaust nozzle technology N82-13078
A numerical investigation of exhaust plume temperature effects on nonaxisymmetric nozzle/afterbody performance N82-13079

NOZZLE FLOW
Navier-Stokes solutions for a supersonic coflowing axisymmetric nozzle with a thick annulus N82-13101
A study of the formation and structure of small clusters of noble gases and sulfur hexafluoride formed in Laval Nozzle molecular beams N82-13201
Experimental and analytical investigation of a fluidic power generator
[JPL-PUB-81-100] N82-13386
Flow characteristics of a multiple nozzle exhaust gas eductor system
[AD-A104072] N82-13387

NOZZLE GEOMETRY
The subsonic performance of practical military variable area convergent nozzles N82-13076

NOZZLE THRUST COEFFICIENTS
Thrust modulation methods for a subsonic V/STOL aircraft
[NASA-TM-82747] N82-13112

NUCLEAR BINDING ENERGY
A correlated treatment of bound-continuum transitions within the electron propagator formalism N82-13869

NUCLEAR EXPLOSIONS
Time domain waveform inversion of short-period p-waves for nuclear explosion source time functions
[AD-A101123] N82-13596

NUCLEAR INTERACTIONS
Inclusive charged particle spectrum from the interaction of nuclei with intermediate energy proton N82-13848

NUCLEAR MAGNETIC RESONANCE
Synthetic fuel aromaticity and staged combustion
[DE81-024205] N82-13246

NUCLEAR MODELS
Ultraviolet structure of supersymmetric non-linear sigma-models N82-13843

NUCLEAR PHYSICS
Nuclear slab collision in a relativistic quantum field theory
[DE81-028132] N82-13972

NUCLEAR PUMPING
Large volume multiple-path nuclear pumped laser
[NASA-CASE-LAR-12592-1] N82-13415

NUCLEAR RADIATION
Titanium response to a nuclear radiation environment
[AD-A102516] N82-13220

NUCLEAR REACTIONS
Study of the neutron-proton interaction in the 300-700 MeV energy region
[DE81-026733] N82-13859
Driving force of the ballooning instability
[DE81-023099] N82-13923

NUCLEAR RESEARCH
Fiber optic quality assurance at the Nevada Test Site
[DE81-028740] N82-13890
NUCLEAR SCATTERING
Inelastic scattering of high energy muons from nuclear targets N82-13874
NUCLEATION
Strain-induced crystallization of polymers N82-13239
NUCLEON-NUCLEON INTERACTIONS
Study of the neutron-proton interaction in the 300-700 MeV energy region
[DE81-026733] N82-13859
NUCLIDES
Specific gamma-ray dose constants for nuclides important to dosimetry and radiological assessment
[DE81-031980] N82-13863
NUMERICAL ANALYSIS
A numerical study of laminar unsteady compressible flow over airfoils N82-13099
A simplified two-dimensional numerical analysis of MOS devices including transient penomena N82-13372
Separate numerical treatment of attached and detached flow regions in general viscous flows N82-13375
Numerical methods for the analysis of fluid-structure interaction problems N82-13381
Computation of unsteady two-dimensional inviscid flow in turbomachinery cascades N82-13401
Mixing of a passive scalar in isotropic and sheared homogeneous turbulence N82-13405
Proceedings of the 1981 Army Numerical Analysis and Computers Conference
[AD-A103175] N82-13727
Algorithms for the geometry of semi-algebraic sets N82-13763
Generation of orthogonal and nearly orthogonal boundary-fitted coordinates with direct control of grid spacing
[LOG-J12610] N82-13790
NUMERICAL CONTROL
An approach for numerical database management N82-13731
NUMERICAL WEATHER FORECASTING
National Weather Service public forecast verification
[PB81-231714] N82-13632
Some mean characteristics of Central North Pacific tropical cyclones
[PB81-230492] N82-13634
Atmospheric dispersion forecasts at selected locations in the United States
[PB81-230443] N82-13635
NUSSELT NUMBER
Energetics and dynamics of droplet evaporation in high temperature intermediate Reynolds number flows N82-13379

O

OBSERVATORIES
Observing facilities at the European Southern Observatory (ESO) in Chile for cometary observations N82-14006
OCCURRENCES
Recurrence intervals and recency of faulting along the San Gregorio fault zone, San Mateo County, California N82-13561
OCEAN BOTTOM
Acoustical properties of sediments
[AD-A103726] N82-13638
OCEAN DATA ACQUISITIONS SYSTEMS
The SACLANTCEN oceanographic data base. Volume 1: Design criteria and data structure and content
[AD-A103277] N82-13639
ICAPS oceanographic data for the Indian Ocean
[AD-A103173] N82-13641
OCEAN MODELS
A review of one-dimensional oceanic mixed-layer models
[AD-A103279] N82-13640
On the inadequacy of one dimensional ocean models for the global carbon cycle
[CM-51] N82-13643
OCEAN SURFACE
Biological and physical oceanographic observations pertaining to the trawl fishery in a region of persistent coastal upwelling
[NASA-TM-81332] N82-13637
Surface signs of internal ocean dynamics
[AD-A101380] N82-13642
Acoustic boundary wave generation and shadowing at a seamount
[AD-A104594] N82-13832
OCEAN TEMPERATURE
Biological and physical oceanographic observations pertaining to the trawl fishery in a region of persistent coastal upwelling
[NASA-TM-81332] N82-13637
ICAPS oceanographic data for the Indian Ocean
[AD-A103173] N82-13641
OCEAN THERMAL ENERGY CONVERSION
Numerical experiments on two-phase liquid-vapor mist transport N82-13402
OCEANOGRAPHY
A summary of the Naval Postgraduate School Research Program
[AD-A104112] N82-13975
OFF-ON CONTROL
Development, analysis and control of the inductor-converter bridge N82-13349
OFFSHORE ENERGY SOURCES
Environmental assessment of the Alaskan Continental Shelf: Annual reports of principal investigators for the year ending March 1980. Volume 5: Hazards
[PB81-225732] N82-13607
OFFSHORE REACTOR SITES
Alternate hybrid power sources for remote site applications
[AD-A099471] N82-13512
OGIVES
Crossflow effects on steady and fluctuating pressures on an ogive-cylinder cone-frustum model in supersonic separated flow
[NASA-TP-1951] N82-13108
OHIO
Aircraft data summaries of the SURE intensives, volume 4
[DE82-900311] N82-13569
OIL RECOVERY
Microemulsions, emulsions and related systems: Energy applications N82-13545
OMNIDIRECTIONAL ANTENNAS
Some properties of the radiating aperture superdirectionality N82-13312
ON-LINE PROGRAMMING
On-line computers in fatigue testing N82-13279
ONBOARD DATA PROCESSING
On-board data recorder for hard-target weapons
[DE81-028645] N82-13408
OPENINGS
An integral equation method for cutout problems in shells N82-13459
OPERATING COSTS
A new approach to modeling the cost of ownership for aircraft systems
[AD-A104434] N82-13979
OPERATING SYSTEMS (COMPUTERS)
Computer-automated controls for superconducting magnetic energy storage
[DE81-028697] N82-13521
OPERATIONAL PROBLEMS
Issues related to line-oriented flight training N82-13124
Low-Btu gasification of coal for electric power generation, phase 1, 2, and 3
[DE81-029482] N82-13248
The message processing and distribution system development
[AD-A104585] N82-13333
OPERATIONS RESEARCH
Solving multiactivity multifacility capacity-constrained 0-1 assignment problems
[AD-A102583] N82-13796
Measures of effectiveness of transportation systems management
[PB81-233884] N82-13984
OPERATOR PERFORMANCE
Group 3: Performance evaluation and assessment N82-13133
A study on task difficulty and acceleration stress N82-13668
Research issues in implementing remote presence in teleoperator control N82-13676
Two-D results on human operator perception N82-13697
Modeling human tracking error in several different anti-tank systems N82-13699
On the internal target model in a tracking task N82-13700
Experimental results with a six-degree-of-freedom force-reflecting hand controller N82-13707
Manual control analysis of drug effects on driving performance N82-13709
Human supervision and microprocessor control of an optical tracking system N82-13715
A theory of human error N82-13716
Stability analysis of automobile driver steering control N82-13717
Detecting human operator impairment with a psychomotor task N82-13718
A comparison of head and manual control for a position-control pursuit tracking task N82-13720
Interruption as a test of the user-computer interface N82-13721
A model for the control mode man-computer interface dialogue N82-13722
An information processing model for predicting error detection and correction: An analysis of operator performance
[AD-A105079] N82-13733
OPTICAL COMMUNICATION
Fiber optics (optical waveguides) technology: Potential application in the DCS
[AD-A104740] N82-13303
Antenna (selected articles)
[AD-A106474] N82-13311
Solution of the problem of the synthesis of antennas with the aid of a coherent optical system N82-13313
Three-5 heterostructure avalanche photodiode modules for fiber optic communication links in the 1.0 to 1.3 micrometer spectral range
[AD-A099506] N82-13334
Short-range communications using diffusely scattered infrared radiation N82-13344
Atmospheric 222Rn measurements at San Nicolas Island during 1980
[AD-A104802] N82-13602
Time dependent recording of images transmitted over optical fibers
[DE81-026599] N82-13889
OPTICAL HETERODYNING
Experimental study of heterodyne photodetection. Perspectives for applications to optical transmission
[ENST-E-80013] N82-13892
OPTICAL MEASUREMENT
Evaluation of HALO deconvolution schemes
[AD-A105125] N82-13878
OPTICAL MEASURING INSTRUMENTS
New ways of looking for phase transitions at multi-megabar dynamic pressures
[DE81-028771] N82-13223
OPTICAL PATHS
Antenna (selected articles)
[AD-A106499] N82-13323
A statistical analysis of irregular quasi-optical lines (beam guides) with the aid of computer(s) N82-13324
Large volume multiple-path nuclear pumped laser
[NASA-CASE-LAR-12592-1] N82-13415
OPTICAL PROPERTIES
Laboratory measurements of physical, chemical, and optical characteristics of Lake Chicot sediment waters
[NASA-TP-1941] N82-13468
OPTICAL RESONANCE
Theory and calculation of Raman line shapes and excitation profiles near a one photon resonance N82-13866
OPTICAL RESONATORS
Open resonators, formed by confocal mirrors with the variable reflection coefficient and the generalized hyper-spheroidal functions N82-13315
OPTICAL SCANNERS
Optical scanner system for internal inspection of steam-generator tubes
[EPRI-NP-1944] N82-13884
OPTICAL TRACKING
Experimental investigation of a helmet mounted sight/display for helicopter N82-13080

Results and experience with a small multipurpose tracking simulator N82-13153

The cognitive demands of second order manual control: Applications of the event related brain potential N82-13667

A study on task difficulty and acceleration stress N82-13668

Subjective rating scales as a workload N82-13669

Physiological assessment of operator workload during manual tracking. 1: Pupillary responses N82-13670

Some effects of Field Of View (FOV) and target size on lateral tracking at hover N82-13672

Using rewards and penalties to obtain desired subject performance N82-13684

Two-D results on human operator perception N82-13697

Computer aided manual tracking N82-13705

Human supervision and microprocessor control of an optical tracking system N82-13715

OPTICAL WAVEGUIDES

Fiber optics (optical waveguides) technology: Potential application in the DCS
[AD-A104740] N82-13303

Long-term operation of a sealed waveguide CO sub 2 laser
[AD-A105261] N82-13420

Single mode optical waveguide design investigation
[AD-A098979] N82-13881

OPTIMAL CONTROL

An analytical approach for predicting pilot induced oscillations N82-13688

A model for the submarine depthkeeping team N82-13689

On the use of the OCM's quadratic objective function as a pilot rating metric N82-13693

A quasi-Newton procedure for identifying pilot-related parameters of the optimal control model N82-13694

Information and display requirements for aircraft terrain following N82-13695

On the internal target model in a tracking task N82-13700

A model of the human observer and decision maker N82-13714

A comparison of head and manual control for a position-control pursuit tracking task N82-13720

Computer implementation of optimal multivariable controller design in the frequency domain N82-13785

OPTIMIZATION

Optimum Design of Static, Earthquake, and Wind Steel Structures (ODSEWS-2D)
[PB81-232738] N82-13271

Geometric programming for engineering design optimization N82-13288

Synthesis of nonequidistant line-source antenna by the statistical methods of search N82-13329

Query optimization by semantic reasoning N82-13762

New optimization research
[AD-A104864] N82-13793

Solving multiactivity multifacility capacity-constrained 0-1 assignment problems
[AD-A102583] N82-13796

Transforming contingency tables
[AD-A104182] N82-13821

Fiber optic time domain reflectometers: Approaches to performance improvement N82-13893

Enhanced-confinement class of stellarators
[DE81-028727] N82-13924

ORBIT SPECTRUM UTILIZATION

Technical basis for efficient management of geostationary satellite orbit/spectrum N82-13159

ORBIT TRANSFER VEHICLES

Low-thrust chemical propulsion system pump technology
[NASA-CR-165219] N82-13427

ORBITAL LAUNCHING

Concept and feasibility study (phase A) for the X-ray satellite ROBISAT. Executive summary
[BMFT-FB-W-80-027] N82-13164

ORBITAL POSITION ESTIMATION

Astrometric observations of comets and asteroids and subsequent orbital investigations
[NASA-CR-165004] N82-14039

OREGON

Infiltration and indoor air quality in energy efficient houses in Eugene, Oregon
[DE82-000971] N82-13561

ORGANIC COMPOUNDS

A study of the surface reactivity of silver: An acid base characterization of oxidation reactions N82-13233

Concentration of organic compounds in water: A literature survey
[DE81-026517] N82-13556

Analytical detection of organic species by means of laser-induced multiphoton ionization N82-13646

Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update
[PB81-232811] N82-13655

ORGANIC WASTES (FUEL CONVERSION)

Biomass energy systems: Descriptions and employment requirements for typical operations
[DE82-000236] N82-13536

ORIFICE FLOW

The relationship between the acoustic impedance and unsteady flow field near the orifice of a two dimensional Helmholtz resonator in grazing flow N82-13378

ORTHOGONAL FUNCTIONS

The formation of radiation patterns of arc antennas N82-13305

Two-D results on human operator perception N82-13697

ORTHOGONALITY

Generation of orthogonal and nearly orthogonal boundary-fitted coordinates with direct control of grid spacing
[LOG-J12610] N82-13790

OSCILLATING FLOW

Experimental and analytical investigation of a fluidic power generator
[JPL-PUB-81-100] N82-13366

OSCILLATIONS

Analysis of a longitudinal pilot-induced oscillation experienced on the approach and landing test of the space shuttle
[NASA-TM-81366] N82-13149

An analytical approach for predicting pilot induced oscillations N82-13688

Pattern of neutrino mixing in grand unified theories
[DE81-029034] N82-13872

OVERPRESSURE

Soviet UCG experience specifically related to field experiments in the United States
[DE81-026642] N82-13244

Electronic measurement of airblast overpressure
[AD-A105379] N82-13389

OVERVOLTAGE

Distributed photovoltaic systems: Utility interface issues and their present status
[NASA-CR-165019] N82-13492

OXIDATION

Quantitative investigations of mixed oxidation states of some first row transition metals in insulator matrices by photoelectron spectroscopy N82-13184

A study of the surface reactivity of silver: An acid base characterization of oxidation reactions N82-13233

OXIDATION-REDUCTION REACTIONS

Electrochemical and spectroscopic studies of some less stable oxidation states of selected lanthanide and actinide elements N82-13182

Spectroelectrochemical investigations in molten salt and aqueous media N82-13183

Treatment of biomass-gasification wastewaters by wet-air oxidation
[DE82-000935] N82-13567

OXIDE FILMS

Energy levels in and on an oxide film as measured by electrochemical methods
[AD-A103704] N82-13187

Mathematical model of differential reflectometry for use in the investigation of thin film corrosion products N82-13232

OXIDES

Investigation into the role of NaCl deposited on oxide and metal substrates in the initiation of hot corrosion
[NASA-CR-165029] N82-13217

OXYGEN

Solubilities of dissolved gases in sea water
[AD-A100675] N82-13189

Oxygen transport and line emissions in a tokamak plasma
[IPPJ-544] N82-13900

OXYHEMOGLOBIN

Resonance Raman spectroscopic investigations of the active site structures of hemoglobin and hemerythrin N82-13176

OZONE

An automated system for global atmospheric sampling using B-747 airliners
[NASA-CR-165264] N82-13554

SAM 2 measurements of the polar stratospheric aerosol, volume 1: October to April 1979
[NASA-RP-1081] N82-13592

P

P WAVES

Time domain waveform inversion of short-period p-waves for nuclear explosion source time functions
[AD-A101123] N82-13598

PACIFIC NORTHWEST (US)

Wind Power: Research on network wind power over the Pacific northwest. Executive summary
[DE81-029360] N82-13519

PACIFIC OCEAN

Deep Ocean Mining Environmental Study. Environmental effects of commercial-scale mining
[PB81-227753] N82-13484

Some mean characteristics of Central North Pacific tropical cyclones
[PB81-230492] N82-13634

Annual data and verification tabulation, eastern North Pacific tropical storms and hurricanes 1980
[PB81-230336] N82-13636

PACKETS (COMMUNICATION)

Flow control and routing in an integrated voice and data communication network
[AD-A103342] N82-13337

PAIR PRODUCTION

The hadronic decay rate of the Higgs boson: An application of the running mass N82-13842

PANEL METHOD (FLUID DYNAMICS)

A numerical method for studying nacelle-jet-airfoil interaction in inviscid three-dimensional flow N82-13094

PARABOLIC ANTENNAS

Two-mirror antenna for radio relay communication N82-13306

Use of principle of regularization in direct and mixed problems of the theory of the synthesis of radiating systems N82-13309

Synthesis of a plane system of discrete emitters N82-13310

PARALLEL COMPUTERS

Introduction to the configurable highly parallel computer, revision
[AD-A099776] N82-13735

Parallel scheduling algorithms
[AD-A103796] N82-13820

PARALLEL PROCESSING (COMPUTERS)

Distributed and decentralized control in fully distributed processing systems
[AD-A104379] N82-13739

A difference in efficiency between synchronous and asynchronous systems
[AD-A102260] N82-13742

Complexity of communication among asynchronous parallel processes N82-13760

Design of a real time, interactive, parallel simulation computer N82-13761

Parallel scheduling algorithms
[AD-A103796] N82-13820

PARAMETER IDENTIFICATION

System identification helicopter parameters. Determination from flight tests, phase 2
[BMVG-FBWT-80-12] N82-13137

Rapid cycle casting of steel
[AD-A103567] N82-13260

Time domain waveform inversion of short-period p-waves for nuclear explosion source time functions
[AD-A101123] N82-13598

A quasi-Newton procedure for identifying pilot-related parameters of the optimal control model N82-13694

A data collection scheme for identification of parameters in a driver model N82-13696

Confidence intervals for the reliability of a future system configuration
[AD-A105031] N82-13814
An upper asymptote for the three-parameter logistic item-response model
[AD-A103013] N82-13816
Molecular beam electric resonance studies of weakly bound complexes N82-13867
PARAMETERIZATION
Spectrometric properties of crystals for low-energy X-ray diagnostics
[DE81-028763] N82-13954
PARSING ALGORITHMS
Preliminary analysis of a breadth-first parsing algorithm: Theoretical and experimental results
[AD-A101862] N82-13797
PARTICLE ACCELERATION
Two-satellite study of proton drift on quiet days
[AD-A104736] N82-13601
PARTICLE COLLISIONS
Two-photon physics as a probe of hadron dynamics
[DE81-026757] N82-13858
HETFIS: High-energy nucleon-meson transport code with fission
[DE81-027674] N82-13873
PARTICLE DENSITY (CONCENTRATION)
Bipolar conduction with AC excitation N82-13373
Results to be expected from light scattering dust analyzer during a rendezvous mission N82-13999
PARTICLE DIFFUSION
A comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture N82-13868
PARTICLE INTERACTIONS
Pattern of neutrino mixing in grand unified theories
[DE81-029034] N82-13872
PARTICLE MASS
The hadronic decay rate of the Higgs boson: An application of the running mass N82-13842
Pattern of neutrino mixing in grand unified theories
[DE81-029034] N82-13872
PARTICLE PRODUCTION
HETFIS: High-energy nucleon-meson transport code with fission
[DE81-027674] N82-13873
Problems in quantum mechanics and gravitation N82-13970
PARTICLE SIZE DISTRIBUTION
Deposition of aerosol particles in the human respiratory tract N82-13659
PARTICLE THEORY
The hadronic decay rate of the Higgs boson: An application of the running mass N82-13842
Ultraviolet structure of supersymmetric non-linear sigma-models N82-13843
PARTICLE TRAJECTORIES
Regularized integration of gravity-perturbed trajectories: A numerical efficiency study N82-13155
PARTICULATE SAMPLING
The trace metal stratigraphy and recent sedimentary history of anthrogenous particulates on the San Pedro Shelf, California N82-13579
PASCAL (PROGRAMMING LANGUAGE)
Software design and documentation language: User's guide for SDDL release 4
[NASA-CR-165025] N82-13767
PASSIVITY
Fundamental studies of grain-boundary passivation in polycrystalline silicon with application to improved photovoltaic devices
[DE82-000625] N82-13956
PATTERN RECOGNITION
Structure of the knowledge base for an expert labeling system N82-13723
Symbolic reasoning among 3-D models and 2-D images N82-13761
Computer vision
[NASA-CR-165012] N82-13768
Some experimental design techniques in image processing problems N82-13782
PATTERN REGISTRATION
Multi-sensor image registration N82-13755
PAVEMENTS
Construction of a recycled Portland cement concrete pavement — Connecticut expressway
[PB81-233553] N82-13267
Measured pavement response to transient aircraft loadings N82-13442
PDP COMPUTERS
Playbk-routines to drive a digital-to-analog converter
[AD-A102049] N82-13741
Digital Equation Corporation PDP-11 COBOL, version 4.1
[PB81-232423] N82-13746
Digital equipment corporation, PDP-11 COBOL version, 4.1 indexed 1-0 module
[PB81-232415] N82-13747
PEARLITE
Cyclic deformation and fatigue microcrack initiation in pearlitic eutectoid steel N82-13230
PEAT
Development of peatlands in northern Minnesota
[DE82-000673] N82-13475
PECLET NUMBER
Thermoelastic instability in a seal-like configuration N82-13436
PENNSYLVANIA
Aircraft data summaries of the SURE intensives, volume 5
[DE82-900310] N82-13570
PERCEPTUAL ERRORS
A theory of human error N82-13716
PERFORMANCE PREDICTION
Application of a gravity-driven wickless heat pipe for ice production in a cold energy storage system N82-13377
PERFORMANCE TESTS
Performance of chemical analogs of the explosive CP
[DE81-025836] N82-13251
AC harmonic filtering using controlled current injection N82-13348
Validation, modeling, and computer assisted design program for power converters — confirmation of dc/dc converters predicted performance
[ESTEC/DERA-8/7208] N82-13370
Passive/hybrid solar components: An approach to standard thermal test methods
[PB81-227886] N82-13549
Concurrent testing and checking in computer systems N82-13751
PERIODIC FUNCTIONS
Energy characteristics of periodic systems of radiators: Efficiency and output coefficient of power, directive gain, and gain factor N82-13306
PERIODIC VARIATIONS
Network wind power over the Pacific northwest. Appendix 1: Wind statistics summaries for the wind power data stations
[DE81-029291] N82-13518
PERMEABILITY
Studies of natural fractures, fault zone permeability, and a pore space-permeability model N82-13616
PERMITTIVITY
Conductivity and permittivity measurements of fast ion conductors in the microwave region N82-13351
PERSONNEL MANAGEMENT
Eastern Airlines LOFT program N82-13127
Group 3: Performance evaluation and assessment N82-13133
PERSONNEL SELECTION
Weighting of aptitude components based on differences in technical school difficulty
[AD-A102045] N82-13725
PERTURBATION
Rayleigh-Taylor stability for a shock wave-density discontinuity interaction
[DE81-028707] N82-13394
PERTURBATION THEORY
Ultraviolet structure of supersymmetric non-linear sigma-models N82-13843
Relativistic many-body perturbation theory of parity-violation in atoms N82-13845
Compton scattering in a uniform, constant magnetic field N82-13968
PETROLOGY
Petrology and geochemistry of ophiolite fragments in a tectonic melange, Kodiak Islands, Alaska N82-13610
PHASE CHANGE MATERIALS
New ways of looking for phase transitions at multi-megabar dynamic pressures
[DE81-028771] N82-13223
PHASE CONTRAST
Phase measurments in the focal region of an aberrated lens N82-13875
PHASE ERROR
Possibilities of phase correction on the small reflector in a two-reflector antenna N82-13322
PHASE MODULATION
Beam propagation in the frequency-converted subsystems of Nova and Novette
[DE81-028253] N82-13862
PHASE SHIFT
Schwinger's variational principle for electron-ion scattering N82-13844
PHASE TRANSFORMATIONS
Properties of matter at ultra-high pressures
[DE81-026504] N82-13190
Strengthening phases and deformation mechanisms in dispersion strengthened solid solutions and pure metals N82-13229
Role of molecular dynamics on descriptions of shock front processes
[DE81-028667] N82-13857
Defect studies of molecular and rare-gas crystals down to 50mK and up to 150 MPa
[DE81-026617] N82-13949
PHASED ARRAYS
Experimental and theoretical investigations with laboratory models of phased array antenna
[BMVG-FBWT-79-21] N82-13341
PHENYLS
Grafting of 2 (2-hydroxy-5-vinylphenyl) 2H-benzotriazole onto polymers with aliphatic groups. Synthesis and polymerization of 2 (2-hydroxy-5-isopropenylphenyl) 2H-benzotriazole and a new synthesis of 2 (2-hydroxy-5-vinylphenyl) 2H-benzotriazole
[NASA-CR-165016] N82-13171
PHILOSOPHY
Language, computation, and reality N82-13757
PHONONS
Raman probe of equilibrium and laser modulated populations of electrons and phonons in GaAs N82-13934
PHOSPHORIC ACID FUEL CELLS
Cell module and fuel conditioner development
[NASA-CR-165462] N82-13511
PHOSPHORUS
The structural and vibrational properties of amorphous and crystalline group V elements N82-13933
PHOTOACOUSTIC SPECTROSCOPY
Double beam-in-time photoacoustic spectroscopy N82-13160
PHOTOCHEMICAL REACTIONS
Rate coefficients of combustion/fuel conversion reactions by high-temperature photochemistry
[DE81-027965] N82-13192
Spectroelectrochemistry, flash photolysis and photogalvanic effect of methylene blue and safranin-0 N82-13206
Laboratory Research — spectroscopic analysis, photochemical reactions, and proton irradiation of ice N82-14022
PHOTOCONDUCTORS
Imaging systems for fast electrophotographic processes
[BMFT-FB-T-80-183] N82-13411
PHOTODIODES
Three-5 heterostructure avalanche photodiode modules for fiber optic communication links in the 1.0 to 1.3 micrometer spectral range
[AD-A099506] N82-13334
PHOTODISSOCIATION
Laboratory measurements of the cometary photochemical phenomena N82-14023
PHOTOELECTRIC EMISSION
Deformation-enhanced photoemission from metals N82-13231
Investigation of photoacoustorefractive effect in LiNbO sub 3 SAW devices
[AD-A103705] N82-13880
PHOTOELECTRON SPECTROSCOPY
Quantitative investigations of mixed oxidation states of some first row transition metals in insulator matrices by photoelectron spectroscopy N82-13184
PHOTOGRAPHIC FILM
Antenna (selected articles)
[AD-A106499] N82-13323
One use of methods of the statistical theory of antennas N82-13325
PHOTOGRAPHS
Photographic observations of comets at Lowell Observatory — Halley's comet N82-14016

Existing cometary data and future needs N82-14017

Catalog of lunar mare basalts greater than 40 grams. Part 1: Major and trace chemistry, with megascopic descriptions and rock and thin section photographs [NASA-TM-84065] N82-14040

PHOTOIONIZATION

Studies of photoionization in liquids using a laser two-photon ionization conductivity technique [DE81-026514] N82-13194

PHOTOLYSIS

Rate coefficients of combustion/fuel conversion reactions by high-temperature photochemistry [DE81-027965] N82-13192

Spectroelectrochemistry, flash photolysis and photogalvanic effect of methylene blue and safranin-0 N82-13208

Laboratory measurements of the cometary photochemical phenomena N82-14023

PHOTOMETERS

Experimental study of heterodyne photodetection. Perspectives for applications to optical transmission [ENST-E-80013] N82-13892

PHOTOMETRY

Introductory remarks: Photometry section N82-13996

Results to be expected from light scattering dust analyzer during a rendezvous mission N82-13999

Observing facilities at the European Southern Observatory (ESO) in Chile for cometary observations N82-14006

Intermediate band surface photometry of elliptical galaxies N82-14035

PHOTON BEAMS

Double beam-in-time photoacoustic spectroscopy N82-13180

Theory and calculation of Raman line shapes and excitation profiles near a one photon resonance N82-13866

PHOTON DENSITY

Investigation of fluctuation phenomena in dye lasers N82-13419

PHOTONS

Studies of photoionization in liquids using a laser two-photon ionization conductivity technique [DE81-026514] N82-13194

Camelot: A novel concept for a multiterawatt pulse power generator for single pulse burst or repetition rate operation [AD-A103024] N82-13513

Two-photon physics as a probe of hadron dynamics [DE81-028757] N82-13858

PHOTOSYNTHESIS

Response of the oceans to increasing atmospheric carbon dioxide [DE81-028178] N82-13556

PHOTOVOLTAIC CELLS

Space applicable DOE photovoltaic technology: An update [NASA-CR-165021] N82-13491

Distributed photovoltaic systems: Utility interface issues and their present status [NASA-CR-165019] N82-13492

A Module Experimental Process System Development Unit (MEPSDU) [NASA-CR-165014] N82-13496

Intermediate photovoltaic system application experiment operational performance report. Volume 2 for Beverly High School, Beverly, Mass. [[illegible] 000611] N82-13532

Experimental and analytical systems studies of a combined thermal-photovoltaic residential solar system [DE81-029539] N82-13534

PHOTOVOLTAIC CONVERSION

Data report for the northeast residential experiment station, June 1981 — photovoltaic systems [DE82-000066] N82-13533

PHOTOVOLTAIC EFFECT

Fundamental studies of grain-boundary passivation in polycrystalline silicon with application to improved photovoltaic devices [DE82-000825] N82-13956

PHYSIOLOGICAL RESPONSES

Influence of sine, and random, whole-body vibration on visual acuity [BMVG-FBWT-79-17] N82-13653

PIGMENTS

Resonance Raman spectroscopic investigations of the active site structures of hemoglobin and hemerythrin N82-13176

PILOT PERFORMANCE

Monocular vision and tactical flight on the helicopter N82-13059

Evaluation of a pilot workload assessment device to test alternate display formats and control handling qualities N82-13062

An investigation into pilot and system response to critical in-flight events, volume 1 [NASA-CR-166243-VOL-1] N82-13662

An investigation into pilot and system response to critical in-flight events, volume 2 [NASA-CR-166243-VOL-2] N82-13663

Visual/motion cue mismatch in a coordinated roll maneuver [NASA-CR-166259] N82-13664

Multiple man-machine interfaces N82-13682

Decision aids for airborne intercept operations in advanced aircrafts N82-13683

A comparison of landing maneuver piloting technique based on measurements made in an airline training simulator and in actual flight N82-13685

Identification of multiloop pilot describing functions obtained from simulated approaches to an aircraft carrier N82-13686

An analytical approach for predicting pilot induced oscillations N82-13688

Comparison of closed loop model with flight test results N82-13691

A quasi-Newton procedure for identifying pilot-related parameters of the optimal control model N82-13694

Theoretical linear approach to the combined man-manipulator system in manual control of an aircraft N82-13702

The influence of ship motion of manual control skills N82-13703

The role of manipulator characteristics in selecting the ideal effective vehicle N82-13704

Computer aided manual tracking N82-13705

Pilot scanning patterns while viewing cockpit displays of traffic information N82-13710

PILOT PLANTS

Controlled-flash pyrolysis [DE82-000284] N82-13196

Low-Btu gasification of coal for electric power generation, phase 1, 2, and 3 [DE81-029482] N82-13248

Pilot-scale development of a low-NOx coal-fired tangential system [PB81-242513] N82-13270

PILOT TRAINING

Texas International Airlines LOFT program N82-13128

Delta Airlines LOFT training N82-13129

American Airlines LOFT evaluation program N82-13130

Group 2: Real time LOFT operations N82-13132

Results and experience with a small multipurpose tracking simulator N82-13153

PIPE FLOW

An initial study of the application of the numerical method of characteristics to unsteady flow analysis in partially filled gravity drainage sized pipes [PB81-229189] N82-13399

PIPES (TUBES)

Substructure of 316 stainless steel pipe weldments — liquid metal fast breeder reactor materials N82-13215

Workshop proceedings: Corrosion of Inconel 600 Steam Generator Tubing in the Tubesheet Crevice [DE81-903554] N82-13226

Hydrodynamic computations of pressures generated by steam pipe rupture [AD-A102046] N82-13449

Residual stress and deformation in circumferential pipe-joint welds [PB81-232464] N82-13458

Optical scanner system for internal inspection of steam-generator tubes [EPRI-NP-1944] N82-13884

PITCHING MOMENTS

A calculation method for slender wing-body configurations in supersonic flow at high angles of attack — nonlinear force and pitching moment characteristics [BMVG-FBWT-79-15] N82-13115

PITOT TUBES

Effects of intake geometry on circular pitot intake performance at zero and low forward speeds N82-13070

Influence of wall roughness, adverse pressure gradient and heat transfer on wall shear stress measurements with Preston tubes [ILR-50] N82-13396

PLANE WAVES

Pressure measurements of non-planar stress waves — dual element strain gage [DE81-028729] N82-13454

PLANETARY ATMOSPHERES

Infrared experiments for spaceborne planetary atmospheres research. Full report [NASA-TM-84414] N82-13876

Infrared experiments for spaceborne planetary atmospheres research. Executive summary [NASA-TM-84413] N82-13877

PLANETARY GEOLOGY

Reports of Planetary Geology Program, 1981 [NASA-TM-84211] N82-14041

PLANETARY RADIATION

Planetary radio astronomy observations from Voyager-2 near Saturn [NASA-TM-83856] N82-14037

Saturnian kilometric radiation: Source locations [NASA-TM-83846] N82-14038

PLANETOLOGY

Papers presented to the Conference on the Processes of Planetary Rifting [LPI-CONTRIB-457] N82-13595

PLANETS

Astrometric observations of comets and asteroids and subsequent orbital investigations [NASA-CR-165004] N82-14039

PLANFORMS

Pressure distributions on three different cruciform aft-tail control surfaces of a wingless missile at Mach 1.60, 2.36, and 3.70. Volume 1: Trapezoidal tail [NASA-TM-80097] N82-13110

PLANT DESIGN

Low/medium Btu coal gasification assessment program for potential users in New Jersey: Executive summary [DE81-025475] N82-13247

Low-Btu gasification of coal for electric power generation, phase 1, 2, and 3 [DE81-029482] N82-13248

Residual-energy-application program: EAST facility requirements document, volume 1 [DE81-027536] N82-13526

Design procedures for a commercial scale thermal evaporation system to deposit CdS for solar cell manufacture N82-13551

PLASMA COMPRESSION

Review of recent EBT coupled ring-core stability theory N82-13911

Hot-electron ring stability at the University of Tennessee N82-13914

Analytical theory of interchange and compressional Alfven instabilities in EBT N82-13918

PLASMA CONTROL

Ion cyclotron resonance heating and its effect on confinement in Tokamaks N82-13896

The reverse-field rigid rotor model, calculation and simulation N82-13898

Toroidal plasma current sustainment by lower hybrid waves in the WT-2 Tokamak [IPPJ-545] N82-13901

Plasma focus breeder [IPPJ-541] N82-13904

Feedback plasma control in hybrid poloidal coil system [IPPJ-542] N82-13905

EBT Stability Theory: Proceedings of the workshop [DE81-030635] N82-13909

Review of recent EBT coupled ring-core stability theory N82-13911

Numerical solutions of the EBT Radial eigenmode problem N82-13916

Driving force of the ballooning instability [DE81-023099] N82-13923

Enhanced-confinement class of stellarators [DE81-028727] N82-13924

PLASMA CORE REACTORS

Numerical solutions of the EBT Radial eigenmode problem N82-13916

Effect of Beta limits on reactor performance in EBT N82-13922

PLASMA CURRENTS

The reverse-field rigid rotor model, calculation and simulation N82-13898

Soft and hard major disruptions in the profile control experiment of the JIPP T-2 Tokamak
[IPPJ-547] N82-13902

Feedback plasma control in hybrid poloidal coil system
[IPPJ-542] N82-13905

PLASMA DENSITY

EBT Stability Theory: Proceedings of the workshop
[DE81-030635] N82-13909

PLASMA DIAGNOSTICS

Spectrometric properties of crystals for low-energy X-ray diagnostics
[DE81-028763] N82-13954

PLASMA DRIFT

Microstability of the EBT boundary N82-13919

PLASMA EQUILIBRIUM

On high beta equilibria of plasmas in the quasi-uniform current model: Influence of shaping the plasma cross section and of the second order in the inverse aspect ratio
[REPT-81-131] N82-13927

PLASMA FLUX MEASUREMENTS

Fluctuation measurements in EBT N82-13913

PLASMA FOCUS

Plasma focus breeder
[IPPJ-541] N82-13904

PLASMA FREQUENCIES

Eigenmode stability analysis for a bumpy torus N82-13915

PLASMA HEATING

Ion cyclotron resonance heating and its effect on confinement in Tokamaks N82-13896

Energy and momentum deposition to plasmas due to the lower hybrid wave by a finite source
[IPPJ-548] N82-13899

Electromagnetic cyclotron harmonic waves --- plasma heating
[IPPJ-536] N82-13903

Rudimentary theories of the stability of microwave-heated plasmas N82-13910

Brief survey of experimental investigation of instabilities in microwave-heated plasmas N82-13912

PLASMA INTERACTIONS

Numerical study on the interaction between a modulated electron beam and a plasma
[IPPJ-543] N82-13906

PLASMA PHYSICS

A triggering of solar flare by magnetosonic waves in a neutral sheet plasma
[IPPJ-540] N82-14042

PLASMA PINCH

Plasma focus breeder
[IPPJ-541] N82-13904

PLASMA SHEATHS

Fluctuation measurements in EBT N82-13913

PLASMA WAVES

Pulse propagation in dispersive media with applications to plasmas N82-13897

Numerical study on the interaction between a modulated electron beam and a plasma
[IPPJ-543] N82-13906

PLASMA-ELECTROMAGNETIC INTERACTION

Data on the backscattering coefficients of light ions from solids
[IPPJ-AM-18] N82-13907

PLASMAS (PHYSICS)

Studies of sample introduction for inductively coupled plasma emission spectrometry N82-13209

Fundamental studies of direct current plasmas N82-13895

EBT Stability Theory: Proceedings of the workshop
[DE81-030635] N82-13909

Observational data needs for plasma phenomena N82-13992

Anticipated results from dust experiments on cometary missions N82-13993

PLASMONS

Raman probe of equilibrium and laser modulated populations of electrons and phonons in GaAs N82-13934

PLASTIC DEFORMATION

Cyclic deformation and fatigue crack initiation of a coherently precipitating Ni-14.4 at % Al alloy N82-13212

Deformation-enhanced photoemission from metals N82-13231

Moment-strain relationships in elastic-plastic bending of beams
[AD-A101722] N82-13446

Elastic-plastic-fracture analysis of concrete structures N82-13462

User's manuals for DYNA3D and DYNAP: Nonlinear dynamic analysis of solids in three dimensions
[DE81-026360] N82-13772

PLASTIC FLOW

Plastic flow and unstable deformation of geological materials N82-13587

PLASTIC MEMORY

A nonlinear conservation law with memory — history boundary value problems in viscoelastic motion
[AD-A103882] N82-13791

PLASTIC PROPELLANTS

Evaluation of low-chlorine TATB from a production source
[DE81-025474] N82-13249

PLASTIC PROPERTIES

H-Coal product physical properties measurement
[DE81-029095] N82-13245

A continuum model for friction with applications in metal forming plasticity N82-13445

Plastic flow and unstable deformation of geological materials N82-13587

PLATE THEORY

Investigation of the acoustic emission and deformation response of finite ice plates
[AD-A103731] N82-13471

PLATING

Wear properties of electrodeposited titanium diboride coatings
[PB81-233314] N82-13199

PLATINUM

Surface characterization of dispersed supported metal catalysts using a 'time lapse' dynamic pulse technique N82-13177

Preparation, characterization and performance of non-uniform metal catalysts N82-13204

PLENUM CHAMBERS

Wind tunnel tests of powered models: A comparison of two methods of simulating the jets of jet engines N82-13087

PLETHYSMOGRAPHY

The measurements of fluid shifts and of the tissue compliance along body axis in man
[BMFT-FB-W-80-011] N82-13654

PLOTTERS

PLOT2K: A graphics interface of system 2000
[DE81-028706] N82-13774

PLOTTING

PLOT2K: A graphics interface of system 2000
[DE81-028706] N82-13774

Mesh generating and plotting facilities of the LAMCAL program
[EUR-7099-EN] N82-13778

PLUMES

Proton-induced X-ray emission analysis: A complement to analytical methods used in environmental studies
[DE81-029012] N82-13557

Environmental effects of pollutants from coal combustion. 1: The Four Corners Power Plant, Farmington, N.M.
[PB81-230427] N82-13572

Environmental effects of pollutants from coal combustion. 2: The Colstrip, Montana Power Plant
[PB81-234114] N82-13573

POINTS (MATHEMATICS)

Open resonators, formed by confocal mirrors with the variable reflection coefficient and the generalized hyper-spheroidal functions N82-13315

POISSON EQUATION

Generation of orthogonal and nearly orthogonal boundary-fitted coordinates with direct control of grid spacing
[LOG-J12610] N82-13790

POLAR REGIONS

High latitude measurements of the Total Electron Content (TEC) using the Faraday technique and comparisons with TEC estimates from NAVSTAR-GPS data
[AD-A103042] N82-13603

POLARIMETERS

Spectral imagery: Recent results with the SPIFI and their implications for cometary atmospheric studies -- servocontrolled polarimetric imaging Fabry-Perot interferometer N82-14011

POLARIMETRY

Introductory remarks: Photometry section N82-13996

Observing facilities at the European Southern Observatory (ESO) in Chile for cometary observations N82-14006

POLARIZATION (CHARGE SEPARATION)

Insoluble anodes for electrowinning zinc and other metals
[PB81-227365] N82-13227

POLARIZED RADIATION

The transfer of polarized radiation in spectral lines from rotationally distorted stars N82-14031

POLITICS

Building a consensus about energy technologies
[DE82-000501] N82-13536

POLLUTION CONTROL

Sulfur in the air in the capital (Helsinki) metropolitan area: ITASAT-project
[RR-614.71] N82-13553

Concentration of organic compounds in water: A literature survey
[DE81-026517] N82-13556

Environmental hazard rankings of pollutants generated in coal gasification processes
[PB81-231698] N82-13576

Aircraft measurements and mathematical modeling of the removal of gaseous air pollutants at natural air-land and air-water interfaces N82-13577

POLLUTION MONITORING

Rate coefficients of combustion/fuel conversion reactions by high-temperature photochemistry
[DE81-027965] N82-13192

Aircraft data summaries for the SURE intensives, volume 6
[DE82-900355] N82-13563

Tables of statistical summaries for the SURE aircraft measurements
[DE82-900317] N82-13564

National Research and Development Program: Environmental air. Summary --- air pollution monitoring and modeling: effects on people and their environment N82-13571

Geophysical monitoring for climatic change, number 8: Summary Report, 1979
[PB81-233355] N82-13631

On the inadequacy of one dimensional ocean models for the global carbon cycle
[CM-51] N82-13643

Detection of trace gases using high resolution spectroscopy
[AD-A104841] N82-13863

POLYATOMIC MOLECULES

On the vibrational energy transfer processes of polyatomic molecules in the gas and solid phases N82-13865

POLYCRYSTALS

Fundamental studies of grain-boundary passivation in polycrystalline silicon with application to improved photovoltaic devices
[DE82-000825] N82-13956

The physical and electrical properties of polycrystalline-silicon N82-13964

POLYGONS

Sequential stochastic construction of random polygons N82-13812

POLYMER PHYSICS

Studies of polymer compatibility by nonradiative energy transfer N82-13235

Strain-induced crystallization of polymers N82-13239

A study of the dynamic and transient properties of polymer solutions N82-13241

POLYMERIC FILMS

Studies of polymer compatibility by nonradiative energy transfer N82-13235

Thermal performance of windows having high solar transmittance
[DE81-028872] N82-13524

POLYMERIZATION

Polymers with mesomorphic organization in the side chains from vinyl monomers with mesogenic or potentially mesogenic elements N82-13234

Effect of solvents on the radiation-induced polymerization of ethyl and isopropyl vinyl ethers
N82-13236

POLYNOMIALS

Algorithms for the geometry of semi-algebraic sets
N82-13763

POLYTETRAFLUOROETHYLENE

Study of methods for applying and enhancing transfer film coatings of polytetrafluoroethylene (PTEE) to Space Shuttle Main Engine (SSME) High Pressure Oxygen Turbo Pump (HPOTP) bearings
[NASA-CR-161916] N82-13428

POROSITY

Reduction of nitric oxide in a fluidized bed
[DE81-030486] N82-13198

Simultaneous heat and mass transfer in a porous medium N82-13404

Studies of natural fractures, fault zone permeability, and a pore space-permeability model N82-13616

PORTABLE EQUIPMENT

Theoretical analysis of the effects of turbulence on a mobile parametric receiver
[AD-A101418] N82-13833

POSITION (LOCATION)

SEASAT equator crossing program
[AD-A099442] N82-13156

Interpolating for the location of remote sensor data
[NASA-TM-82169] N82-13469

Cometary ephemerides - needs and concerns
N82-13995

POSITRONS

Monte Carlo calculations of channeling radiation
[DE81-027655] N82-13818

Positron lifetime and Doppler broadening techniques applied to irradiation damaged silver
[DE81-026666] N82-13854

POSTLAUNCH REPORTS

Launch mission summary: Intelsat 5 (F3) Atlas/Centaur-55
[NASA-TM-84068] N82-13161

POTASSIUM

High-temperature measurements of alkali levels in an experimental 6-inch AFBC
[DE81-023632] N82-13193

POTENTIAL ENERGY

Interatomic potential energy hypersurfaces for molecules N82-13841

POTENTIAL THEORY

Molecular dynamics calculations for sodium using pseudopotential theory
[DE81-029022] N82-13853

POTTING COMPOUNDS

Investigation of test methods, material properties, and processes for solar cell encapsulants
[NASA-CR-165031] N82-13503

POWDER (PARTICLES)

Evaluation of low-chlorine TATB from a production source
[DE81-025474] N82-13249

Review of low-voltage CP detonators
[DE81-025637] N82-13250

POWER CONDITIONING

Development, analysis and control of the inductor-converter bridge N82-13349

POWER EFFICIENCY

Antenna (selected articles)
[AD-A106523] N82-13304

Energy characteristics of periodic systems of radiators: Efficiency and output coefficient of power, directive gain, and gain factor N82-13306

Intermediate photovoltaic system application experiment operational performance report. Volume 2 for Beverly High School, Beverly, Mass.
[DE82-000611] N82-13532

POWER GAIN

Antenna (selected articles)
[AD-A106523] N82-13304

Energy characteristics of periodic systems of radiators: Efficiency and output coefficient of power, directive gain, and gain factor N82-13306

POWER LINES

Cryogenic testing of 100-m superconducting power transmission test facility
[DE81-026331] N82-13517

POWER SUPPLIES

Alternate hybrid power sources for remote site applications
[AD-A099471] N82-13512

POWER SUPPLY CIRCUITS

High voltage DC switchgear development for multi-kW space power system: Aerospace technology development of three types of solid state power controllers for 200-1100VDC with current ratings of 25, 50, and 80 amperes with one type utilizing an electromechanical device
[NASA-CR-165413] N82-13357

PRECIPITATION

Five-year water resources research plan, 1982-1987
[PB81-231936] N82-13479

PRECIPITATION (METEOROLOGY)

The Sierra Cooperative Pilot Project: Precipitation management research in the Sierra Nevada
[PB81-234452] N82-13630

PRECIPITATION HARDENING

Strengthening phases and deformation mechanisms in dispersion strengthened solid solutions and pure metals N82-13229

PREDICTION ANALYSIS TECHNIQUES

Creep and creep rupture of laminated graphite/epoxy composites N82-13173

Statistical energy analysis computer program, user's guide
[NASA-CR-161913] N82-13764

Prediction of aerodynamic loads on aircrafts with external stores at transonic speeds N82-13813

PREDICTIONS

An information processing model for predicting error detection and correction: An analysis of operator performance
[AD-A105079] N82-13733

PREEMPTING

Preemptive scheduling of a multiprocessor system with memories to minimize L sub max
[AD-A103795] N82-13734

PREFOCUSING

Open resonators, formed by confocal mirrors with the variable reflection coefficient and the generalized hyper-spheroidal functions N82-13315

PRELAUNCH SUMMARIES

Mission operation report: INTELSAT V-C(F-3)
[NASA-TM-84072] N82-13162

PREMIXING

Effect of fuel-air-ratio nonuniformity on emissions of nitrogen oxides
[NASA-TP-1798] N82-13143

PRESSURE DISTRIBUTION

Some observations of surface pressures and the near wake of a blunt trailing edge airfoil N82-13100

Pressure distributions on three different cruciform aft-tail control surfaces of a wingless missile at Mach 1.60, 2.36, and 3.70. Volume 1: Trapezoidal tail
[NASA-TM-80097] N82-13110

Unsteady aeroelastic modeling and trailing-edge flap control of an experimental wing in a two dimensional wind tunnel N82-13122

PRESSURE EFFECTS

New ways of looking for phase transitions at multi-megabar dynamic pressures
[DE81-026771] N82-13223

Hydrodynamic computations of pressures generated by steam pipe rupture
[AD-A102046] N82-13449

Effect of vacuum exhaust pressure on the performance of MHD ducts at high D-field
[NASA-TM-82750] N82-13908

Effects of pressure on the mixed valent properties of Ce and its intermetallic compounds
[DE81-028572] N82-13953

Electron band theory and high pressure equation of state
[DE81-027436] N82-13955

PRESSURE GRADIENTS

Crossflow effects on steady and fluctuating pressures on an ogive-cylinder cone-frustum model in supersonic separated flow
[NASA-TP-1951] N82-13108

Application of the methorl of weighted residuals to the boundary layer momentum and turbulent stress transport equations N82-13374

PRESSURE MEASUREMENTS

Pressure measurements of non-planar stress waves — dual element strain gage
[DE81-028729] N82-13454

PRESSURE SENSORS

Electronic measurement of airblast overpressure
[AD-A105379] N82-13389

PRESSURE VESSELS

Hydrodynamic computations of pressures generated by steam pipe rupture
[AD-A102046] N82-13449

PROBABILITY DISTRIBUTION FUNCTIONS

Probabilistic error analysis of floating point and CRD arithmetics N82-13798

Assessing probability assessors: Calibration and refinement
[AD-A104174] N82-13815

PROBABILITY THEORY

A stochastic extension of the structural properties of compartment models via a Kronecker algebra
N82-13810

Assessing probability assessors: Calibration and refinement
[AD-A104174] N82-13815

An upper asymptote for the three-parameter logistic item-response model
[AD-A103013] N82-13816

Calibration of probabilities: The state of the art to 1980
[AD-A101986] N82-13817

PROBLEM SOLVING

Soviet UCG experience specifically related to field experiments in the United States
[DE81-028642] N82-13244

A method for accelerating convergence to the solution of nonlinear structural equations by reducing residual work N82-13439

Solution of single linear tridiagonal systems and vectorization of the ICCG algorithm on the Cray 1 — laser fusion
[DE81-025461] N82-13773

A control canonical form for a class of linear hyperbolic systems N82-13786

A nonlinear conservation law with memory — history boundary value problems in viscoelastic motion
[AD-A103682] N82-13791

The missing boundary problem for smooth manifolds of dimension greater than or equal to six
N82-13806

Solution of initial-value problems for some infinite eventually periodic chains of harmonic oscillators
N82-13807

An upper asymptote for the three-parameter logistic item-response model
[AD-A103013] N82-13816

On the relationship between analytical regularization and regularization by surgery N82-13823

PROCEEDINGS

Proceedings of the 1981 Army Numerical Analysis and Computers Conference
[AD-A103175] N82-13727

PRODUCTION ENGINEERING

Insoluble anodes for electrowinning zinc and other metals
[PB81-227365] N82-13227

Soviet UCG experience specifically related to field experiments in the United States
[DE81-028642] N82-13244

Further developments in integrated circuit assembling technology
[BMFT-FB-T-80-179] N82-13369

A Module Experimental Process System Development Unit (MEPSDU)
[NASA-CR-165014] N82-13496

Multifunctions - liquid crystal displays
[BMFT-FB-T-80-181] N82-13957

PROFILOMETERS

Acoustical properties of sediments
[AD-A103726] N82-13638

PROGRAM VERIFICATION (COMPUTERS)

Digital Equipment Corporation VAX-11 FORTRAN, version 2
[PB81-232431] N82-13745

Digital Equation Corporation PDP-11 COBOL, version 4.1
[PB81-232423] N82-13746

Sperry Univac ASCII COBOL level 5R2
[PB81-228892] N82-13748

COBOL compiler: Northern Telecom, Inc. NTI COBOL/3
[PB81-226417] N82-13749

A specification and proof technique for message-based systems and its application to distributed database algorithms N82-13756

Study on the implementation of a program for quality control of computer programs, phase 1 — European Space Agency
[ESA-CR(P)-1444] N82-13780

PROGRAMMING LANGUAGES
Compiler generation from lambda calculus definitions of programming languages N82-13759
Survey of standards applicable to a database management system
[NASA-CR-165009] N82-13766
Problems with the multitasking facilities in the ADA programming language
[AD-A105229] N82-13769
Methods of verification of digital logic N82-13783

PROJECT MANAGEMENT
Line-oriented flight training: Northwest Airlines N82-13125
Natural gas plan needed to provide greater protection for high-priority and critical uses
[PB81-228466] N82-13255

PROJECT PLANNING
Program planner's guide to geothermal development in California
[DE82-000700] N82-13527
LLNL 1981: Technical horizons
[DE81-028265] N82-14048

PROJECTILES
Two-channel telemeter for use in a 3-inch spin air gun
[AD-A102566] N82-13165

PROPAGATION VELOCITY
Two detailed seismic studies in Central California. Part 1: Earthquake clustering and crustal structure studies of the San Andreas fault near San Juan Bautista. Part 2: Seismic velocity structure along the Sierra foothills near Oroville, California N82-13617

PROPELLANT GRAINS
Investigations towards the understanding of surface treatment of propellant grains by means of trace elements
[BMVG-FBWT-79-14] N82-13253

PROPELLANT TESTS
Test number 2 of propellants for rocket motor E573
[FOA-C-20411-D1] N82-13254

PROPELLER FANS
Prop-fan integration at cruise speeds N82-13097

PROPULSION SYSTEM CONFIGURATIONS
The role and implementation of different nacelle/engine simulation concepts for wind-tunnel testing in research and development work on transport aircraft N82-13066
Computational methods for internal flows with emphasis on turbomachinery
[NASA-TM-82764] N82-13113
NASA research in aircraft propulsion
[NASA-TM-82771] N82-13146

PROPULSION SYSTEM PERFORMANCE
The ac propulsion system for an electric vehicle, phase 1
[NASA-CR-165460] N82-13506

PROTECTIVE CLOTHING
Anthropometric sizing systems for Army women's field clothing
[AD-A102104] N82-13724

PROTECTIVE COATINGS
Development of technique for AR coating and nickel and copper metallization of solar cells: FPS project, product development
[NASA-CR-165035] N82-13499
Mitigation of biofouling using coatings
[DE81-027900] N82-13647

PROTON ENERGY
Investigation of photoacoustorefractive effect in LiNbO sub 3 SAW devices
[AD-A103705] N82-13880

PROTON IRRADIATION
Laboratory Research — spectroscopic analysis, photochemical reactions, and proton irradiation of ice N82-14022

PROTONS
Proton-induced X-ray emission analysis: A complement to analytical methods used in environmental studies
[DE81-029012] N82-13557
Two-satellite study of proton drift on quiet days
[AD-A104736] N82-13801

PROVING
Proving total correctness of nondeterministic programs in infinitary logic
[MC-IW-150/80] N82-13799

PSYCHOLOGICAL FACTORS
Forecasting skill — weather forecasting
[AD-A099778] N82-13626

PSYCHOMOTOR PERFORMANCE
Results and experience with a small multipurpose tracking simulator N82-13153
Using rewards and penalties to obtain desired subject performance N82-13684
Detecting human operator impairment with a psychomotor task N82-13718

PUBLIC HEALTH
National Research and Development Program: Environmental air. Summary — air pollution monitoring and modeling; effects on people and their environment N82-13571

PULMONARY CIRCULATION
A monitor for noninvasive estimation of pulmonary blood flow N82-13656

PULSE COMMUNICATION
Synthesis of a plane system of discrete emitters N82-13310
Pulse propagation in dispersive media with applications in plasmas N82-13897

PULSE DURATION
Fiber optic analog and timing monitoring system for the Antares laser fusion program
[DE81-026799] N82-13925

PULSE GENERATORS
Camelot: A novel concept for a multiterawatt pulse power generator for single pulse burst or repetition rate operation
[AD-A103024] N82-13513

PULSE MODULATION
Beam propagation in the frequency-converted subsystems of Nova and Novette
[DE81-028253] N82-13862

PULSE RADAR
Method for measuring brash ice thickness with impulse radar
[AD-A103738] N82-13597

PUMPS
Low-thrust chemical propulsion system pump technology
[NASA-CR-165219] N82-13427

PUPILLOMETRY
Pupillometric measurement of operator workload N82-13666
Physiological assessment of operator workload during manual tracking. 1: Pupillary responses N82-13670
Pupillometry, a bioengineering overview N82-13711

PYLONS
Evaluation of an experimental technique to investigate the effects of the engine position on engine/pylon/wing interference N82-13090
Aerodynamic aspects of a high bypass ratio engine installation on a fuselage afterbody N82-13093

PYROLYSIS
Controlled-flash pyrolysis
[DE82-000284] N82-13196
Synthetic fuel aromaticity and staged combustion
[DE81-024205] N82-13246
Solar-central-receiver fuels and chemicals
[DE82-000941] N82-13530
Pyrolytic characterization of the organic matter in selected coals and in the Devonian shales of southern West Virginia N82-13578

PYROMETERS
New ways of looking for phase transitions at multi-megabar dynamic pressures
[DE81-028771] N82-13223

PYROTECHNICS
Review of low-voltage CP detonators
[DE81-025837] N82-13250

Q

QUALIFICATIONS
Group 4: Instructor training and qualifications N82-13134

QUALITY CONTROL
Study on the implementation of a program for quality control of computer programs, phase 1 — European Space Agency
[ESA-CR(P)-1444] N82-13780
Fiber optic quality assurance at the Nevada Test Site
[DE81-028740] N82-13890

QUANTITATIVE ANALYSIS
Infiltration and indoor air quality in energy efficient houses in Eugene, Oregon
[DE82-000971] N82-13561

QUANTUM CHROMODYNAMICS
The hadronic decay rate of the Higgs boson: An application of the running mass N82-13842
Spectral functions in quantum chromodynamics and applications N82-13969

QUANTUM MECHANICS
Quantum frames of reference N82-13822
Mechanistic studies of electron exchange kinetics using ab initio
[DE81-026096] N82-13856
A comparative study of classical and quantal approaches to thermal and diffusive transport in a dilute atom-diatom binary mixture N82-13868
Problems in quantum mechanics and gravitation N82-13970

QUANTUM THEORY
Quantum frames of reference N82-13822
Physical adsorption of quantum atomic and molecular systems N82-13846
Long-range interactions in lattice field theory N82-13941
Nuclear slab collision in a relativistic quantum field theory
[DE81-028132] N82-13972

QUARKS
The hadronic decay rate of the Higgs boson: An application of the running mass N82-13842
Pattern of neutrino mixing in grand unified theories
[DE81-029034] N82-13872
Spectral functions in quantum chromodynamics and applications N82-13969

QUASARS
Optical brightness variations in a sample of nineteen radio-quiet quasi-stellar objects N82-14030

R

RADAR IMAGERY
SEASAT equator crossing program
[AD-A099442] N82-13156

RADAR MEASUREMENT
Method for measuring brash ice thickness with impulse radar
[AD-A103738] N82-13597

RADAR TRACKING
Decision aids for airborne intercept operations in advanced aircrafts N82-13683

RADIANCE
DMSP water vapor radiances: A preliminary evaluation
[AD-A099305] N82-13625

RADIANT FLUX DENSITY
Gas turbine combustor soot and radiation N82-13174
Comparison of data inversion techniques for remotely sensed wide-angle observations of Earth emitted radiation
[NASA-TP-1924] N82-13620

RADIANT HEATING
Development of an infrared radiative heating model
[NASA-CR-166272] N82-13622

RADIATION COUNTERS
Three Bureau of Mines optical dust probes
[PB81-231441] N82-13412

RADIATION DAMAGE
Positron lifetime and Doppler broadening techniques applied to irradiation damaged silver
[DE81-026688] N82-13854

RADIATION DOSAGE
Absorbed dose to active red bone marrow from diagnostic and therapeutic uses of radiation
[ARL-TR-021] N82-13651
Specific gamma-ray dose constants for nuclides important to dosimetry and radiological assessment
[DE81-031960] N82-13863

RADIATION EFFECTS
Titanium response to a nuclear radiation environment
[AD-A102516] N82-13220
Effect of solvents on the radiation-induced polymerization of ethyl and isopropyl vinyl ethers N82-13238

RADIATION HARDENING
Photon-electron correlation in the laboratory testing of electronic components. Part 2: Beam conditioning and diagnostics
[DE81-026606] N82-13365
Effect of gate oxide thickness on the radiation hardness of silicon-gate CMOS
[DE81-027202] N82-13366

RADIATION HAZARDS
Environmental and radiological safety studies: Interaction of (238) PuO2 heat sources with terrestrial and aquatic environments
[DE81-032019] N82-13565

RADIATION MEASUREMENT
Requirements for an effective National Nonionizing Radiation Measurement System
[PB81-223455] N82-13414

RADIATION PRESSURE
Radiatively cooled stellar winds N82-14034

RADIATION SHIELDING
Gamma ray buildup factors in lead-iron and iron-lead shields
[EUR-7066-EN] N82-13864

RADIATION SOURCES
A vacuum ultraviolet radiation source using Cerenkov radiation N82-13894
Saturnian kilometric radiation: Source locations
[NASA-TM-83846] N82-14038

RADIATION SPECTRA
Monte Carlo calculations of channeling radiation
[DE81-027655] N82-13818

RADIATION THERAPY
Absorbed dose to active red bone marrow from diagnostic and therapeutic uses of radiation
[ARL-TR-021] N82-13651

RADIATION TRANSPORT
The transfer of polarized radiation in spectral lines from rotationally distorted stars N82-14031

RADIATIVE HEAT TRANSFER
Radiatively cooled stellar winds N82-14034

RADIATIVE TRANSFER
Microwave attenuation and brightness temperature due to the gaseous atmosphere: A comparison of JPL and CCIR values
[NASA-CR-165027] N82-13300
Development of an infrared radiative heating model
[NASA-CR-166272] N82-13622

RADICALS
Preparation, characterization and performance of non-uniform metal catalysts N82-13204
Laboratory measurements of the cometary photochemical phenomena N82-14023

RADIO ASTRONOMY
Antenna (Selected Articles)
[AD-A106522] N82-13297
Radio astronomical antennas of meter wavelengths N82-13298
Report of survey for McDonald Observatory, Harvard Radio Astronomy Station, and vicinity
[PB81-234338] N82-13606
Radio observations of comets N82-14002
Planetary radio astronomy observations from Voyager-2 near Saturn
[NASA-TM-83856] N82-14037
Saturnian kilometric radiation: Source locations
[NASA-TM-83846]. N82-14038

RADIO EQUIPMENT
Standard Bit Error Rate (BER) versus received signal level testing
[AD-A104573] N82-13338

RADIO FREQUENCIES
Conductivity and permittivity measurements of fast ion conductors in the microwave region N82-13351

RADIO FREQUENCY HEATING
Rudimentary theories of the stability of microwave-heated plasmas N82-13910
Brief survey of experimental investigation of instabilities in microwave-heated plasmas N82-13912

RADIO FREQUENCY IMPEDANCE PROBES
JASPIC-DIP: The digital impedance probe in the JASPIC project
[BMFT-FB-W-80-034] N82-13169
Thin magnetic impedance antennas N82-13314

RADIO FREQUENCY INTERFERENCE
Technical basis for efficient management of geostationary satellite orbit/spectrum N82-13159
Microwave attenuation and brightness temperature due to the gaseous atmosphere: A comparison of JPL and CCIR values
[NASA-CR-165027] N82-13300

RADIO RELAY SYSTEMS
Antenna (selected articles)
[AD-B060598] N82-13307
Two-mirror antenna for radio relay communication N82-13308
Use of principle of regularization in direct and mixed problems of the theory of the synthesis of radiating systems N82-13309

RADIO SOURCES (ASTRONOMY)
Saturnian kilometric radiation: Source locations
[NASA-TM-83846] N82-14038

RADIO SPECTRA
Spectral efficiency of amplitude companded sideband systems N82-13345

RADIO SPECTROSCOPY
Radio observations of comets N82-14002

RADIO STARS
An investigation of warm carbon stars N82-14033

RADIO TRANSMISSION
Spectral efficiency of amplitude companded sideband systems N82-13345

RADIO WAVES
Planetary radio astronomy observations from Voyager-2 near Saturn
[NASA-TM-83856] N82-14037

RADIOACTIVE AGE DETERMINATION
Potassium-argon and iodine-xenon gas retention ages of enstatite chondrite meteorites N82-14036

RADIOACTIVE ISOTOPES
Determination of radionuclide species by on-line radiochromatography using high resolution gamma ray spectroscopy N82-13181

RADIOCHEMICAL SEPARATION
Determination of radionuclide species by on-line radiochromatography using high resolution gamma ray spectroscopy N82-13181

RADIOGRAPHY
Energy spectral analysis in projection radiography N82-13293
Absorbed dose to active red bone marrow from diagnostic and therapeutic uses of radiation
[ARL-TR-021] N82-13651

RADIOLOGY
Specific gamma-ray dose constants for nuclides important to dosimetry and radiological assessment
[DE81-031980] N82-13863

RADON ISOTOPES
Atmospheric 222Rn measurements at San Nicolas Island during 1980
[AD-A104802] N82-13602

RAIL TRANSPORTATION
Environmental impacts of energy transportation
[DE82-900316] N82-13559

RAIN
Millimeter wave alternate route study
[AD-A102303] N82-13339

RAMAN SPECTRA
Study of the physics of insulating films as related to the reliability of metal-oxide semiconductor devices
[AD-A105030] N82-13359
Raman probe of equilibrium and laser modulated populations of electrons and phonons in GaAs N82-13934

RAMAN SPECTROSCOPY
Surface enhanced Raman spectroscopy for interfacial characterization N82-13175
Theory and calculation of Raman line shapes and excitation profiles near a one photon resonance N82-13866

RAMPS (STRUCTURES)
Pedestrian movement characteristics on building ramps
[PB81-229163] N82-13966

RANDOM NOISE
Some experimental design techniques in image processing problems N82-13782

RANDOM SAMPLING
Sequential stochastic construction of random polygons N82-13812

RANDOM VARIABLES
Strong convergence of nearest neighbor regression estimators
[AD-A104479] N82-13794

RANDOM VIBRATION
Influence of sine, and random, whole-body vibration on visual acuity
[BMVG-FBWT-79-17] N82-13653
Statistical energy analysis computer program, user's guide
[NASA-CR-161913] N82-13764

RANKINE CYCLE
Manual for the program CASLE: Cycle analysis and second-life evaluation
[DE81-027487] N82-13971

RARE EARTH ELEMENTS
Electrochemical and spectroscopic studies of some less stable oxidation states of selected lanthanide and actinide elements N82-13182

RARE GASES
Coexistence of non-registered monolayer and bilayer solid films N82-13931

REACTION KINETICS
Reduction of nitric oxide in a fluidized bed
[DE81-030488] N82-13198
Investigation into the role of NaCl deposited on oxide and metal substrates in the initiation of hot corrosion
[NASA-CR-165029] N82-13217
Rates and mechanisms of chemical weathering in an organic environment at Panola Mountain, Georgia N82-13615

REACTION TIME
Rates and mechanisms of chemical weathering in an organic environment at Panola Mountain, Georgia N82-13615
Using rewards and penalties to obtain desired subject performance N82-13684
Load compensating reactions to perturbations at wrist joint in normal man N82-13708

REACTOR CORES
Assessment of the computer code COBRA/CFTL — for thermal-hydraulic analysis of simulated gas-cooled fast breeder reactor cores
[DE81-027933] N82-13771

REACTOR DESIGN
High-temperature gas-cooled reactor technology development program
[DE81-029096] N82-13871
Effect of Beta limits on reactor performance in EBT N82-13922

REACTOR MATERIALS
Effect of low-temperature irradiation with (n, alpha) helium production on tensile properties of 12 Cr-1 Mo VW-type steels
[DE81-028578] N82-13222

REACTOR PHYSICS
High-temperature gas-cooled reactor technology development program
[DE81-029096] N82-13871

READOUT
Two-channel telemeter for use in a 3-inch spin air gun
[AD-A102566] N82-13165

REAL TIME OPERATION
Group 1: Scenario design and development issues N82-13131
Group 2: Real time LOFT operations N82-13132
A real time Pegasus propulsion system model for VSTOL piloted simulation evaluation
[NASA-TM-82770] N82-13144
Simple geometric algorithms to aid in clearance management for robotic mechanisms N82-13680
Decision aids for airborne intercept operations in advanced aircrafts N82-13683
Problems with the multitasking facilities in the ADA programming language
[AD-A105229] N82-13769

RECOMBINATION REACTIONS
Measurement of surface recombination velocity for silicon solar cells using a scanning electron microscope with pulsed beam
[JPL-PUB-81-64] N82-13494

RECTANGULAR WINGS
Investigation of the vortex field generated by an airfoil model in a wind tunnel, using ultrasonic pulses
[MPIS-MITT-69] N82-13118

RECURSIVE FUNCTIONS
Some experimental design techniques in image processing problems N82-13782
RECYCLING
Construction of a recycled Portland cement concrete pavement — Connecticut expressway
[PB81-233553] N82-13267
Beneficiation with magnetic fluids
[PB81-227126] N82-13485
REEFS
Artificial Reefs: Proceedings of a Conference
[PB81-227779] N82-13644
REENTRY SHIELDING
Air Force technical objective document FY 1982
[AD-A099741] N82-13982
REFINING
Feasibility study report for the Imperial Valley Ethanol Refinery: A 14.9-million-gallon-per-year ethanol synfuel refinery utilizing geothermal energy
[DE82-000286] N82-13252
REFLECTANCE
Spectrophotometry of faint comets: The asteroid approach N82-13998
REFLECTED WAVES
Open resonators, formed by confocal mirrors with the variable reflection coefficient and the generalized hyper-spheroidal functions N82-13315
Laboratory study of sound propagation into a fast bottom medium
[AD-A104596] N82-13831
REFLECTOMETERS
Mathematical model of differential reflectometry for use in the investigation of thin film corrosion products N82-13232
Fiber optic time domain reflectometers: Approaches to performance improvement N82-13893
REFLEXES
Model simulation studies to clarify the effect on saccadic eye movements of initial condition velocities set by the Vestibular Ocular Reflex (VOR)
N82-13712
REFRACTIVITY
Inverse cerenkov interaction between relativistic electrons and laser light N82-13425
Critically evaluated data on optical and transport properties of solids (refractive index and absorption coefficient of selected optical materials)
[AD-A105069] N82-13879
Investigation of photoacoustorefractive effect in LiNbO sub 3 SAW devices
[AD-A103705] N82-13880
REFRIGERATING
Design and development of a reciprocating low-temperature freon expander
[DE81-029609] N82-13392
REFRIGERATING MACHINERY
Design and development of a reciprocating low-temperature freon expander
[DE81-029609] N82-13392
REFRIGERATORS
Appliance efficiency and the solar building
[DE81-029073] N82-13265
REGRESSION ANALYSIS
Analysis of soil moisture extraction algorithm using data from aircraft experiments
[NASA-CR-166719] N82-13470
New optimization research
[AD-A104984] N82-13793
Strong convergence of nearest neighbor regression estimators
[AD-A104479] N82-13794
REINFORCED PLATES
An experimental study of a reinforced concrete folded plate structure with edge beams N82-13443
REINFORCEMENT (STRUCTURES)
Optimum Design of Static, Earthquake, and Wind Steel Structures (ODSEWS-2D)
[PB81-232738] N82-13271
An experimental study of a reinforced concrete folded plate structure with edge beams N82-13443
RELATIVISTIC EFFECTS
A relativistic magnetron with a thermionic cathode
N82-13353
Nuclear slab collision in a relativistic quantum field theory
[DE81-029122] N82-13972
RELATIVISTIC ELECTRON BEAMS
Inverse cerenkov interaction between relativistic electrons and laser light N82-13425
A vacuum ultraviolet radiation source using Cerenkov radiation N82-13894
RELATIVISTIC PARTICLES
Monte Carlo calculations of channeling radiation
[DE81-027655] N82-13818
RELATIVISTIC THEORY
Quantum frames of reference N82-13822
RELIABILITY
Future directions in Navy electronic system reliability and survivability
[AD-A102460] N82-13438
RELIABILITY ANALYSIS
Fiber optics (optical waveguides) technology: Potential application in the DCS
[AD-A104740] N82-13303
Confidence intervals for the reliability of a future system configuration
[AD-A105031] N82-13814
Statistical analysis of accelerated temperature aging of semiconductor devices
[AD-A099439] N82-13946
RELIABILITY ENGINEERING
Distributed photovoltaic systems: Utility interface issues and their present status
[NASA-CR-165019] N82-13492
REMOTE CONTROL
Video framerate, resolution and grayscale tradeoffs for undersea telemanipulator N82-13673
Man/machine interface development for the REMOTEX concept N82-13678
Identification of cognitive factors related to remote work performance using closed circuit TV displays
N82-13679
REMOTE HANDLING
Research issues in implementing remote presence in teleoperator control N82-13676
Man/machine interface development for the REMOTEX concept N82-13678
Identification of cognitive factors related to remote work performance using closed circuit TV displays
N82-13679
Multi-axis manual controllers: A state-of-the-art report N82-13701
Design and development of a six degree of freedom hand controller N82-13706
REMOTE SENSING
Laboratory measurements of physical, chemical, and optical characteristics of Lake Chicot sediment waters
[NASA-TP-1941] N82-13468
Interpolating for the location of remote sensor data
[NASA-TM-82169] N82-13469
SAM 2 measurements of the polar stratospheric aerosol, volume 1: October to April 1979
[NASA-RP-1081] N82-13592
DMSP water vapor radiances: A preliminary evaluation
[AD-A099305] N82-13625
REPEATERS
Investigation of modulation methods and system aspects for regenerative satellite-repeater
[BMFT-FB-W-80-024] N82-13342
REPRODUCTION (COPYING)
Imaging systems for fast electrophotographic processes
[BMFT-FB-T-80-163] N82-13411
REQUIREMENTS
Requirements for an effective National Nonionizing Radiation Measurement System
[PB81-223455] N82-13414
RESEARCH
A summary of the Naval Postgraduate School Research Program
[AD-A104112] N82-13975
Report on research and technology-FY 1981
[NASA-TM-81367] N82-14047
RESEARCH AND DEVELOPMENT
LLNL 1981: Technical horizons
[DE81-028265] N82-14048
RESEARCH FACILITIES
Fiber optic quality assurance at the Nevada Test Site
[DE81-029740] N82-13890
RESEARCH MANAGEMENT
The International Halley Watch: A program of coordination, cooperation and advocacy N82-14026
RESIDENTIAL ENERGY
Ultimate in building energy analysis: DOE-2 and BLAST
[DE81-028703] N82-13263
Appliance efficiency and the solar building
[DE81-029073] N82-13265
Annual cycle energy system experimental performance and national applicability
[DE81-028570] N82-13523
Data report for the northeast residential experiment station, June 1981 — photovoltaic systems
[DE82-000068] N82-13533
Experimental and analytical systems studies of a combined thermal-photovoltaic residential solar system
[DE81-029539] N82-13534
Infiltration and indoor air quality in energy efficient houses in Eugene, Oregon
[DE82-000971] N82-13561
High altitude testing of residential wood-fired combustion equipment
[PB81-226151] N82-13575
RESIDUAL GAS
Dynamic mass spectrometry: A residual gas analysis method and some applications
[DE81-026230] N82-13195
RESIDUAL STRESS
Behavior of plane panels in ship structures with local initial deflections
[BMVG-FBWT-80-18] N82-13455
Residual stress and deformation in circumferential pipe-joint welds
[PB81-232464] N82-13458
RESIN MATRIX COMPOSITES
Effects of hygrothermal conditioning on the dynamic behavior of resin matrix composites N82-13172
RESISTORS
Two-dimensional effects in power take-off region
[DE82-000091] N82-13367
RESOLUTION
Optical scanner system for internal inspection of steam-generator tubes
[EPRI-NP-1944] N82-13884
RESONANCE FLUORESCENCE
Composition dependence of neodymium optical homogeneous linewidths in glasses N82-13945
RESONANT FREQUENCIES
Study of corrugated plates N82-13426
Structural dynamics: Modified calculations — natural and harmonically excited vibrations of modified structures; increased computation efficiency
[BMVG-FBWT-81-1] N82-13457
RESONATORS
Excitation of radial resonator with annular slot
N82-13328
RESOURCE ALLOCATION
Natural gas plan needed to provide greater protection for high-priority and critical uses
[PB81-228486] N82-13255
RESOURCES MANAGEMENT
Development of peatlands in northern Minnesota
[DE82-000673] N82-13475
Managing information technology change in the decade of the 80's
[AD-A099441] N82-13976
RESPIRATORY SYSTEM
Deposition of aerosol particles in the human respiratory tract N82-13859
RESPONSE BIAS
„Modeling human tracking error in several different anti-tank systems N82-13699
RETORT PROCESSING
Design and test of two-step solar oil shale retort
[DE82-000864] N82-13543
REUSABLE SPACECRAFT
Concept and feasibility study (phase A) for the X-ray satellite ROSISAT. Executive summary
[BMFT-FB-W-80-027] N82-13164
REVERSE FIELD PINCH
The reverse-field rigid rotor model, calculation and simulation N82-13896
REVERSE OSMOSIS
Treatment of biomass gasification wastewaters using reverse osmosis
[DE82-000696] N82-13566
REYNOLDS NUMBER
A review of the effect of Reynolds number on afterbody drag N82-13080

Studies of air inlets at Reynolds numbers comparable to flight in ONERA's F1 and S1MA wind tunnels
N82-13091

An experimental investigation of the flow past a finite circular cylinder at a low subcritical Reynolds number
N82-13105

Force and moment, flow-visualization, and boundary-layer tests on a shuttle orbiter model at Mach 6
[NASA-TP-1952] N82-13106

Energetics and dynamics of droplet evaporation in high temperature intermediate Reynolds number flows N82-13379

RHEOLOGY

A study of the dynamic and transient properties of polymer solutions N82-13241

H-Coal product physical properties measurement
[DE81-029095] N82-13245

RHYTHM (BIOLOGY)

A systems analysis of the maturation of sleep using a semi-Markov model N82-13658

RIGID ROTORS

System identification helicopter parameters. Determination from flight tests, phase 2
[BMVG-FBWT-80-12] N82-13137

RIGID STRUCTURES

User's manuals for DYNA3D and DYNAP: Nonlinear dynamic analysis of solids in three dimensions
[DE81-028360] N82-13772

RING LASERS

Investigation of fluctuation phenomena in dye lasers N82-13419

RINGS (MATHEMATICS)

The existence of nonzero maps from injectives to projectives N82-13808

ROBOTS

Dynamic analysis of flexible spatial mechanisms and robotic manipulators N82-13460

ROBUSTNESS (MATHEMATICS)

A contribution to robust detection and estimation
N82-13809

ROCKET EXHAUST

Consolidation of data base for Army generalized missile model
[NASA-CR-166273] N82-13046

ROCKET FLIGHT

A preliminary analysis of the data from experiment 77-13 and final report on glass fining experiments in zero gravity
[NASA-CR-161884] N82-13154

ROCKET-BORNE INSTRUMENTS

Temperature and density of geocoronal helium derived from a rocket-borne He resonance cell experiment
[BMFT-FB-W-80-015] N82-13605

RODS

Nonlinear waves in rods
[AD-A101333] N82-13447

ROOM TEMPERATURE

Electric coheating experiment to determine the heat-loss coefficient of a double-envelope house
[DE81-027937] N82-13264

ROOT-MEAN-SQUARE ERRORS

A synthesis method for estimating maximum instantaneous inlet distortion based on measured inlet steady state and RMS pressures N82-13083

ROTARY WINGS

Wind-tunnel investigation of the effects of blade tip geometry on the interaction of torsional loads and performance for an articulated helicopter rotor
[NASA-TP-1926] N82-13107

ROTATING BODIES

The transfer of polarized radiation in spectral lines from rotationally distorted stars N82-14031

ROTOR AERODYNAMICS

Wind-tunnel investigation of the effects of blade tip geometry on the interaction of torsional loads and performance for an articulated helicopter rotor
[NASA-TP-1926] N82-13107

An aerodynamic design and the overall stage performance of an air-cooled axial-flow turbine
[NAL-TR-321T] N82-13109

ROTOR BLADES (TURBOMACHINERY)

Thrust modulation methods for a subsonic V/STOL aircraft
[NASA-TM-82747] N82-13112

Computational methods for internal flows with emphasis on turbomachinery
[NASA-TM-82764] N82-13113

ROTORS

Development of advanced rotor-bearing systems for feedwater pumps, phase 2
[DE82-900376] N82-13431

RUDDERS

Limited evaluation of an F-14A airplane utilizing an aileron-rudder interconnect control system in the landing configuration
[NASA-TM-81972] N82-13148

RUNNING

A digital TV system for the detection of high speed human motion N82-13289

RUNWAYS

Measured pavement response to transient aircraft loadings N82-13442

RUPTURING

Hydrodynamic computations of pressures generated by steam pipe rupture
[AD-A102046] N82-13449

S

S MATRIX THEORY

Ultraviolet structure of supersymmetric non-linear sigma-models N82-13843

S WAVES

Large amplitude compression and shear wave propagation in impact-loaded PMMA
[AD-A105953] N82-13450

S-N DIAGRAMS

An investigation of notch low cycle fatigue life behavior of Rene' 80 at high temperature
N82-13214

SABOT PROJECTILES

Transitional ballistics of hypervelocity projectiles
[BMVG-FBWT-80-1] N82-13163

SACCADIC EYE MOVEMENTS

Pilot scanning patterns while viewing cockpit displays of traffic information N82-13710

Model simulation studies to clarify the effect on saccadic eye movements of initial condition velocities set by the Vestibular Ocular Reflex (VOR)
N82-13712

SADDLE POINTS

Zeros of successive derivatives of some entire functions of infinite order N82-13788

SAFETY DEVICES

Practical aspects of instrumentation system installation, volume 13
[NASA-TM-84067] N82-13140

SAFETY MANAGEMENT

Review of fire test methods and incident data for portable electric cables in underground coal mines
[PB81-227878] N82-13272

Control of methane by ventilation of shafts during raise drilling
[PB81-234502] N82-13487

SAGE SATELLITE

SAM 2 measurements of the polar stratospheric aerosol, volume 1: October to April 1979
[NASA-RP-1081] N82-13592

SALINITY

The chemistry of saline water chlorination
N82-13178

ICAPS oceanographic data for the Indian Ocean
[AD-A103173] N82-13641

SAMPLING

Studies of sample introduction for inductively coupled plasma emission spectrometry N82-13209

SAN ANDREAS FAULT

Two detailed seismic studies in Central California. Part 1: Earthquake clustering and crustal structure studies of the San Andrea fault near San Juan Bautista. Part 2: Seismic velocity structure along the Sierra foothills near Oroville, California N82-13617

SAN JOAQUIN VALLEY (CA)

The occurrence and control of land subsidence due to ground water withdrawal with special reference to the San Joaquin and Santa Clara Valleys, California
N82-13466

SANDS

Effective stress-strain-strength behavior of silicate-grouted sand N82-13257

A laboratory evaluation of modified asphalt
[PB81-231615] N82-13269

Injection and distribution of silicate grout in sand
N82-13287

Laboratory study of sound propagation into a fast bottom medium
[AD-A104596] N82-13631

SATELLITE ATTITUDE CONTROL

Satellite attitude control with decomposed controller
[LOG-G666] N82-13160

SATELLITE CONFIGURATIONS

Mission operation report: INTELSAT V-C(F-3)
[NASA-TM-84072] N82-13162

Concept and feasibility study (phase A) for the X-ray satellite ROBISAT. Executive summary
[BMFT-FB-W-80-027] N82-13164

SATELLITE NETWORKS

Effects of the Satellite Power System on low Earth orbit and geosynchronous satellites
[PB81-232019] N82-13157

SATELLITE OBSERVATION

Correlated ground-based and the observations
N82-14006

SATELLITE ORBITS

SEASAT equator crossing program
[AD-A099442] N82-13156

SATELLITE POWER TRANSMISSION (TO EARTH)

Effects of the Satellite Power System on low Earth orbit and geosynchronous satellites
[PB81-232019] N82-13157

SATELLITE SOLAR ENERGY CONVERSION

Silicon solar cell optimization
[AD-A106005] N82-13514

SATELLITE-BORNE PHOTOGRAPHY

Scanner — photography from a spin stabilized synchronous satellite
[NASA-CASE-GSC-12032-2] N82-13465

SATURN (PLANET)

Planetary radio astronomy observations from Voyager-2 near Saturn
[NASA-TM-83856] N82-14037

Saturnian kilometric radiation: Source locations
[NASA-TM-83846] N82-14038

SCALARS

Mixing of a passive scalar in isotropic and sheared homogeneous turbulence N82-13405

A control canonical form for a class of linear hyperbolic systems N82-13786

SCALE (RATIO)

Impacts of vertical scale distortion on turbulent mixing in hydraulic models N82-13382

SCALE MODELS

Impacts of vertical scale distortion on turbulent mixing in hydraulic models N82-13382

Theory and application of experimental model analysis in earthquake engineering N82-13586

SCALING LAWS

Two-D results on human operator perception
N82-13697

SCANNERS

Scanner --- photography from a spin stabilized synchronous satellite
[NASA-CASE-GSC-12032-2] N82-13465

SCANNING

Pilot scanning patterns while viewing cockpit displays of traffic information N82-13710

SCATTERING CROSS SECTIONS

Double differential continuum neutron scattering cross sections in iron and nickel for incident energies of 7.5, 10 and 12 MeV N82-13847

Compton scattering in a uniform, constant magnetic field N82-13966

SCENE ANALYSIS

Computer vision
[NASA-CR-165012] N82-13769

SCHEDULING

Preemptive scheduling of a multiprocessor system with memories to minimize L sub max
[AD-A103795] N82-13734

Parallel scheduling algorithms
[AD-A103796] N82-13620

SCHMIDT CAMERAS

The JOCR program — Joint Observatory for Cometary research N82-14013

SCINTILLATION

Ionospheric scintillation N82-13585

High latitude measurements of the Total Electron Content (TEC) using the Faraday technique and comparisons with TEC estimates from NAVSTAR-GPS data
[AD-A103042] N82-13603

SEA ICE
Compensation for use of monthly-averaged winds in numerical modeling
[NASA-TM-83856] N82-13623
SEA ROUGHNESS
Surface signs of internal ocean dynamics
[AD-A101360] N82-13642
SEA STATES
Biological and physical oceanographic observations pertaining to the trawl fishery in a region of persistent coastal upwelling
[NASA-TM-81332] N82-13637
SEA WATER
The chemistry of saline water chlorination
N82-13178
Solubilities of dissolved gases in sea water
[AD-A100675] N82-13189
Salt removal from brackish water by continuous processes with amphoteric, thermally regenerable ion-exchange resins N82-13202
Response of the oceans to increasing atmospheric carbon dioxide
[DE81-028178] N82-13558
Mixed layer depth distributions from SVSTD data
[AD-A105669] N82-13834
SEALS (STOPPERS)
Thermoelastic instability in a seal-like configuration
N82-13436
SEAMOUNTS
Acoustic boundary wave generation and shadowing at a seamount
[AD-A104594] N82-13832
SEARCH PROFILES
Query optimization by semantic reasoning
N82-13762
SEASAT PROGRAM
SEASAT equator crossing program
[AD-A099442] N82-13156
SEDIMENTS
Energy generation and the sulfur-carbon cycle
[DE81-030949] N82-13562
The trace metal stratigraphy and recent sedimentary history of anthrogenous particulates on the San Pedro Shelf, California N82-13579
Acoustical properties of sediments
[AD-A103726] N82-13638
SEISMIC WAVES
The crustal structure of Kilauea and Mauna Loa volcanoes, Hawaii, from seismic refraction and gravity data N82-13583
Surface waves in strong ground motion with application to offshore environments N82-13584
Two detailed seismic studies in Central California. Part 1: Earthquake clustering and crustal structure studies of the San Andrea fault near San Juan Bautista. Part 2: Seismic velocity structure along the Sierra foothills near Oroville, California N82-13617
SEISMOLOGY
Surface waves in strong ground motion with application to offshore environments N82-13584
International seismological data center. Input data for an experimental data base
[FOA-C-20380-T1] N82-13804
SELECTIVE DISSEMINATION OF INFORMATION
Information resources in the USA on new and renewable energy, a description and directory
[DE81-028867] N82-13522
SELF STIMULATION
Multiple man-machine interfaces N82-13682
SEMANTICS
Compiler generation from lambda calculus definitions of programming languages N82-13759
Query optimization by semantic reasoning
N82-13762
Preliminary analysis of a breadth-first parsing algorithm: Theoretical and experimental results
[AD-A101852] N82-13797
SEMICONDUCTING FILMS
Study of the physics of insulating films as related to the reliability of metal-oxide semiconductor devices
[AD-A105030] N82-13359
Transport noise arising from diffusion and bulk or surface generation recombination in semiconductors
N82-13963
The growth and carrier transport properties of sputter deposited GaAs thin films doped with silicon and magnesium N82-13965
SEMICONDUCTOR DEVICES
Direct digital simulation of power semiconductor-controlled electrical machines
N82-13355
Techniques for energy conservation in ac motor-driven systems
[DE82-900356] N82-13537
Statistical analysis of accelerated temperature aging of semiconductor devices
[AD-A099439] N82-13946
SEMICONDUCTOR JUNCTIONS
Development of high-efficiency cascade solar cells
[DE81-029633] N82-13540
SEMICONDUCTORS (MATERIALS)
Flat-plate solar array project: Experimental process system development unit for producing semiconductor-grade silicon using the silane-to-silicon process
[NASA-CR-165022] N82-13498
CW laser annealing and CW laser assisted diffusion in gallium arsenide N82-13943
SENSORY FEEDBACK
The persistence of a visual dominance effect in a telemanipulator task: A comparison between visual and electrotactile feedback N82-13677
SENTENCES
Preliminary analysis of a breadth-first parsing algorithm: Theoretical and experimental results
[AD-A101852] N82-13797
SEPARATED FLOW
Crossflow effects on steady and fluctuating pressures on an ogive-cylinder cone-frustum model in supersonic separated flow
[NASA-TP-1951] N82-13108
SEQUENTIAL ANALYSIS
Sequential stochastic construction of random polygons N82-13812
SERIES (MATHEMATICS)
On general 1 exp p summability methods
[CTH-MATH-1981-07] N82-13803
SERVICE LIFE
Long-term operation of a sealed waveguide CO sub 2 laser
[AD-A105261] N82-13420
SERVOMECHANISMS
Fatigue test machines N82-13277
Variable amplitude fatigue testing N82-13278
Man/machine interface development for the REMOTEX concept N82-13678
SET THEORY
The least fixed point property for omega chain continuous functions N82-13787
Zeros of successive derivatives of some entire functions of infinite order N82-13788
On the dependence of the growth of an entire function of the distribution of the zeros of its derivatives and a conjecture of G. Polya N82-13805
SEWAGE
The trace metal stratigraphy and recent sedimentary history of anthrogenous particulates on the San Pedro Shelf, California N82-13579
SEWAGE TREATMENT
Nitrogen and phosphorus reactions in overland flow of wastewater
[PB81-239311] N82-13574
SEX FACTOR
Determination of efficient methods of lift by comparing trained and untrained male and female lifters
[AD-A100349] N82-13850
SHADES
Minimum/constant voltage PLZT electrooptic shutters — lead lanthanum zirconate titanate wafers for flash protective goggles
[DE81-028646] N82-13888
SHAFTS (MACHINE ELEMENTS)
Analysis of multicylinder IC-Engine crankshafts with hydrodynamic bearings using a finite element-transfer matrix approach N82-13437
SHALE OIL
Solar-central-receiver fuels and chemicals
[DE82-000941] N82-13530
Design and test of two-step solar oil shale retort
[DE82-000964] N82-13543
SHALES
Pyrolytic characterization of the organic matter in selected coals and in the Devonian shales of southern West Virginia N82-13578
SHALLOW SHELLS
An integral equation method for cutout problems in shells N82-13459
SHAPE CONTROL
Shape determination and control for large space structures
[JPL-PUB-81-71] N82-13166
SHEAR STRAIN
Strain-induced crystallization of polymers
N82-13239
SHEAR STRESS
Influence of wall roughness, adverse pressure gradient and heat transfer on wall shear stress measurements with Preston tubes
[ILR-50] N82-13396
SHELLS (STRUCTURAL FORMS)
Electric coheating experiment to determine the heat-loss coefficient of a double-envelope house
[DE81-027937] N82-13264
An integral equation method for cutout problems in shells N82-13459
SHIELDING
Some RAE research on shielded and unshielded fuselage mounted air intakes at subsonic and supersonic speeds N82-13068
SHIPS
Behavior of plane panels in ship structures with local initial deflections
[BMVG-FBWT-80-18] N82-13455
The influence of ship motion of manual control skills N82-13703
SHOCK FRONTS
Role of molecular dynamics on descriptions of shock front processes
[DE81-028687] N82-13857
SHOCK LOADS
Role of molecular dynamics on descriptions of shock front processes
[DE81-028687] N82-13857
SHOCK TUBES
On a dusty-gas shock tube
[UTIAS-250] N82-13151
SHOCK WAVE GENERATORS
On a dusty-gas shock tube
[UTIAS-250] N82-13151
SHOCK WAVE INTERACTION
Rayleigh-Taylor stability for a shock wave-density discontinuity interaction
[DE81-028707] N82-13394
SHOCK WAVE PROFILES
Rayleigh-Taylor stability for a shock wave-density discontinuity interaction
[DE81-028707] N82-13394
SHOCK WAVES
Properties of matter at ultra-high pressures
[DE81-026504] N82-13190
New ways of looking for phase transitions at multi-megabar dynamic pressures
[DE81-028771] N82-13223
Rayleigh-Taylor stability for a shock wave-density discontinuity interaction
[DE81-028707] N82-13394
Formulas for one-dimensional local properties for molecular-dynamics simulations of shock waves
[DE82-000906] N82-13395
Impedance-match experiments using high intensity lasers
[DE81-025802] N82-13422
Impedance-matching experiments using high-pressure, laser-driven shock waves
[DE81-028732] N82-13423
SHORELINES
Surface waves in strong ground motion with application to offshore environments N82-13584
SHORT TAKEOFF AIRCRAFT
Integration of advanced exhaust nozzles
N82-13075
SHORT WAVE RADIO TRANSMISSION
Three-stage commutation field of the system of the repeated use of short-wave receiving antennas
N82-13317
SHROUDED NOZZLES
The subsonic performance of practical military variable area convergent nozzles N82-13076
High-pressure shrouded water sprays for dust control
[PB81-231458] N82-13483

SIDEBANDS

Theoretical analysis of the effects of turbulence on a mobile parametric receiver [AD-A101418] N82-13833

SIERRA NEVADA MOUNTAINS (CA)

The Sierra Cooperative Pilot Project: Precipitation management research in the Sierra Nevada [PB81-234452] N82-13830

SIGMA-MESONS

Ultraviolet structure of supersymmetric non-linear sigma-models N82-13843

SIGNAL DETECTION

Estimation of variable latency signals via unwrapped phase averaging with application to visual evoked potentials N82-13347

Error bounds for reconstruction of a function f from a finite sequence (SGN(ft sub i) + x sub i)) [AD-A104477] N82-13795

SIGNAL DISTORTION

Detection of infrasound generated by Clear Air Turbulence (CAT) N82-13830

SIGNAL ENCODING

Trellis data compression N82-13784

SIGNAL FADING

Two-path model of fading in a high data rate communication channel N82-13292

SIGNAL MEASUREMENT

Three laser experiments in gases N82-13416

SIGNAL PROCESSING

Topics in digital signal processing N82-13346

FOA 27 control instruments data system. Control instruments and their functions [FOA-C-20394-D3] N82-13410

Digital data compression algorithm performance comparisions: Proposed NATO standard algorithm provides better facsimile in a noisy communications environment than present Tactical Digital Facsimile algorithm [AD-A103159] N82-13737

Fiber optic time domain reflectometers: Approaches to performance improvement N82-13893

SIGNAL RECEPTION

Principles of the construction of systems, which possess potential frequency independence — antenna design N82-13330

SIGNAL TO NOISE RATIOS

Standard Bit Error Rate (BER) versus received signal level testing [AD-A104573] N82-13338

Short-range communications using diffusely scattered infrared radiation N82-13344

Estimation of variable latency signals via unwrapped phase averaging with application to visual evoked potentials N82-13347

SILANES

Flat-plate solar array project: Experimental process system development unit for producing semiconductor-grade silicon using the silane-to-silicon process [NASA-CR-165022] N82-13498

SILICATES

Constitution of silicate anions in tetraethyl-ammonium silicates and their aqueous solutions [NRC/CNR-TT-2004] N82-13170

Effective stress-strain-strength behavior of silicate-grouted sand N82-13257

Injection and distribution of silicate grout in sand N82-13287

SILICON

Energy levels in and on an oxide film as measured by electrochemical methods [AD-A103704] N82-13187

Measurement of surface recombination velocity for silicon solar cells using a scanning electron microscope with pulsed beam [JPL-PUB-81-84] N82-13494

A Module Experimental Process System Development Unit (MEPSDU) [NASA-CR-165014] N82-13496

Large area sheet task: Advanced dendritic web growth development [NASA-CR-165013] N82-13497

Flat-plate solar array project: Experimental process system development unit for producing semiconductor-grade silicon using the silane-to-silicon process [NASA-CR-165022] N82-13498

Continuous Czochralski growth: Silicon sheet growth development of the large area sheet task of the low cost silicon solar array project [NASA-CR-165030] N82-13500

Monte Carlo calculations of channeling radiation [DE81-027655] N82-13818

Critically evaluated data on optical and transport properties of solids (refractive index and absorption coefficient of selected optical materials) [AD-A105059] N82-13879

Current transient spectroscopy of deep levels in silicon N82-13929

Upper critical fields and span states in A-15 superconductions, part 1. Vortices in two-dimensional superconductions, part 2 N82-13942

CW laser annealing and CW laser assisted diffusion in gallium arsenide N82-13943

Electron beam evaporation of superconducting, A15 niobium-silicon N82-13944

SILICON DIOXIDE

Energy levels in and on an oxide film as measured by electrochemical methods [AD-A103704] N82-13187

Advanced indium antimonide monolithic charge coupled infrared imaging arrays [NASA-CR-165799] N82-13356

Energy losses and mean free paths of electrons in silicon dioxide [DE81-026353] N82-13860

SILICON FILMS

Preparation and characterization of hydrogenated amorphous silicon [DE81-030973] N82-13197

The physical and electrical properties of polycrystalline-silicon N82-13964

SILICON NITRIDES

Development of technique for AR coating and nickel and copper metallization of solar cells: FPS project, product development [NASA-CR-165033] N82-13499

SILVER

Surface enhanced Raman spectroscopy for interfacial characterization N82-13175

Insoluble anodes for electrowinning zinc and other metals [PB81-227365] N82-13227

A study of the surface reactivity of silver: An acid base characterization of oxidation reactions N82-13233

Positron lifetime and Doppler broadening techniques applied to irradiation damaged silver [DE81-028688] N82-13854

SIMULATION

Wind tunnel tests of powered models: A comparison of two methods of simulating the jets of jet engines N82-13087

Two-channel telemeter for use in a 3-inch spin air gun [AD-A102566] N82-13165

Photon-electron correlation in the laboratory testing of electronic components. Part 2: Beam conditioning and diagnostics [DE81-026606] N82-13365

SIMULATORS

A device for simulating at a compressor bench an air inlet with large incidence N82-13081

Proceedings of the Seventeenth Annual Conference on Manual Control [NASA-CR-165005] N82-13665

SINE WAVES

Influence of sine, and random, whole-body vibration on visual acuity [BMVG-FBWT-79-17] N82-13653

SINGLE CRYSTALS

Deformation-enhanced photoemission from metals N82-13231

Continuous Czochralski growth: Silicon sheet growth development of the large area sheet task of the low cost silicon solar array project [NASA-CR-165030] N82-13500

Boron implanted strontium titanate N82-13939

HgCdTe fabrication using directed energy techniques [AD-A105626] N82-13947

Push-pull fatigue of LiF and MgO single crystals N82-13960

SINGULARITY (MATHEMATICS)

Curvature singularities in certain space-times N82-13824

SITE SELECTION

Residual-energy-applications program environmental analysis report — industrial scale waste heat recovery equipment and utilization [DE81-027538] N82-13525

Application of Bayesian analysis for wind energy site evaluation N82-13619

SKIN FRICTION

Influence of wall roughness, adverse pressure gradient and heat transfer on wall shear stress measurements with Preston tubes [ILR-50] N82-13396

SLABS

Computer program for optimum nonlinear dynamic design of reinforced concrete slabs under blast loading (CBARCS) [AD-A104253] N82-13262

Nuclear slab collision in a relativistic quantum field theory [DE81-028132] N82-13972

SLAGS

Electrical effects of slag in a diffuse mode magnetohydrodynamic generator N82-13550

SLEEP

A systems analysis of the maturation of sleep using a semi-Markov model N82-13658

SLENDER BODIES

A calculation method for slender wing-body configurations in supersonic flow at high angles of attack — nonlinear force and pitching moment characteristics [BMVG-FBWT-79-15] N82-13115

SLENDER WINGS

An approximate analytical method for vortex-lift and center of pressure on the slender wing [NASA-TM-83198] N82-13045

A calculation method for slender wing-body configurations in supersonic flow at high angles of attack — nonlinear force and pitching moment characteristics [BMVG-FBWT-79-15] N82-13115

SLIDING FRICTION

Thermoelastic instability in a seal-like configuration N82-13436

A continuum model for friction with applications in metal forming plasticity N82-13445

SLOT ANTENNAS

Excitation of radial resonator with annular slot N82-13328

Natural and mutual conductivities of half-wave slots, arbitrarily oriented on the conducting surface of circular cylinder — slot antennas N82-13331

SLURRIES

H-Coal product physical properties measurement [DE81-029095] N82-13245

SOCIAL FACTORS

The evaluation of technology R&D: A continuing Dilemma [RAND/P-6655] N82-13980

SODIUM

High-temperature measurements of alkali levels in an experimental 6-inch AFBC [DE81-023632] N82-13193

Molecular dynamics calculations for sodium using pseudopotential theory [DE81-029022] N82-13853

SODIUM CHLORIDES

An improved stress corrosion test medium for aluminum alloys [NASA-TM-82452] N82-13216

Investigation into the role of NaCl deposited on oxide and metal substrates in the initiation of hot corrosion [NASA-CR-165029] N82-13217

SOFTENING

The effects of added softening agents upon the behavior of cold recycled asphalt mixtures [PB81-231417] N82-13268

SOIL MECHANICS

Injection and distribution of silicate grout in sand N82-13287

SOIL MOISTURE

Analysis of soil moisture extraction algorithm using data from aircraft experiments [NASA-CR-166719] N82-13470

SOLAR ARRAYS

Space applicable DOE photovoltaic technology: An update [NASA-CR-165021] N82-13491

Large area sheet task: Advanced dendritic web growth development
[NASA-CR-165013] N82-13497

Flat-plate solar array project: Experimental process system development unit for producing semiconductor-grade silicon using the silane-to-silicon process
[NASA-CR-165022] N82-13498

Continuous Czochralski growth: Silicon sheet growth development of the large area sheet task of the low cost silicon solar array project
[NASA-CR-165030] N82-13500

Design, fabrication, test, qualification, and price analysis of third generation design solar cell modules
[NASA-CR-165007] N82-13502

Inexpensive thermographic techniques for determining reliable solar-collector-array performance
[DE82-001151] N82-13528

Data report for the northeast residential experiment station, June 1981 — photovoltaic systems
[DE82-000066] N82-13533

SOLAR CELLS

Distributed photovoltaic systems: Utility interface issues and their present status
[NASA-CR-165019] N82-13492

Measurement of surface recombination velocity for silicon solar cells using a scanning electron microscope with pulsed beam
[JPL-PUB-81-64] N82-13494

Large area sheet task: Advanced dendritic web growth development
[NASA-CR-165013] N82-13497

Development of technique for AR coating and nickel and copper metallization of solar cells: FPS project, product development
[NASA-CR-165033] N82-13499

High resolution, low cost solar cell contact development
[NASA-CR-165032] N82-13501

Design, fabrication, test, qualification, and price analysis of third generation design solar cell modules
[NASA-CR-165007] N82-13502

Investigation of test methods, material properties, and processes for solar cell encapsulants
[NASA-CR-165031] N82-13503

Silicon solar cell optimization
[AD-A106005] N82-13514

Development of high-efficiency cascade solar cells
[DE81-029693] N82-13540

Design procedures for a commercial scale thermal evaporation system to deposit CdS for solar cell manufacture N82-13551

Electron Beam-induced Current (EBIC) measurements of heat treated polycrystalline cuprous sulfide/cadimum sulfide solar cells N82-13552

Fundamental studies of grain-boundary passivation in polycrystalline silicon with application to improved photovoltaic devices
[DE82-000625] N82-13956

SOLAR COLLECTORS

Dish stirling solar receiver combustor test program
[NASA-CR-165017] N82-13495

Inexpensive thermographic techniques for determining reliable solar-collector-array performance
[DE82-001151] N82-13526

Solar-central-receiver fuels and chemicals
[DE82-000941] N82-13530

SOLAR ECLIPSES

Submillimeter observations of solar limb-brightening in the total solar eclipse of 31 July 1981
N82-14043

SOLAR ENERGY

Inexpensive thermographic techniques for determining reliable solar-collector-array performance
[DE82-001151] N82-13528

Solar-central-receiver fuels and chemicals
[DE82-000941] N82-13530

Intermediate photovoltaic system application experiment operational performance report. Volume 2 for Beverly High School, Beverly, Mass.
[DE82-000611] N82-13532

Passive/hybrid solar components: An approach to standard thermal test methods
[PB81-227886] N82-13549

SOLAR ENERGY ABSORBERS

Aging and corrosion problems with flat solar energy absorbers. Study based upon literature and experiment exchanges
[SP-RAPP-1979/4] N82-13548

SOLAR ENERGY CONVERSION

New and renewable energy in the United States of America
[DE81-030667] N82-13539

SOLAR FLARES

A triggering of solar flare by magnetosonic waves in a neutral sheet plasma
[IPPJ-540] N82-14042

SOLAR FURNACES

Design and test of two-step solar oil shale retort
[DE82-000964] N82-13543

SOLAR HEATING

Ultimate in building energy analysis: DOE-2 and BLAST
[DE81-028703] N82-13263

Thermal performance of windows having high solar transmittance
[DE81-028672] N82-13524

SOLAR HOUSES

Appliance efficiency and the solar building
[DE81-029073] N82-13265

Experimental and analytical systems studies of a combined thermal-photovoltaic residential solar system
[DE81-029539] N82-13534

SOLAR OBSERVATORIES

Submillimeter observations of solar limb-brightening in the total solar eclipse of 31 July 1981
N82-14043

SOLAR ORBITS

A systematic program of cometary spectroscopy
N82-14005

SOLAR PHYSICS

Solar-geophysical data. Prompt report, part 1
[PB81-221178] N82-14044

Solar-geophysical data. Comprehensive reports, part 2
[PB81-221186] N82-14045

Solar-geophysical data. Explanation of data reports
[PB81-221194] N82-14046

SOLAR REFLECTORS

Evaluation of creep-fatigue life-prediction models for the solar central receiver
[DE82-000942] N82-13529

SOLAR SYSTEM

Reports of Planetary Geology Program, 1981
[NASA-TM-84211] N82-14041

SOLAR THERMAL PROPULSION

Solar thermal energy systems
[DE81-029295] N82-13531

SOLAR TOTAL ENERGY SYSTEMS

Solar thermal energy systems
[DE81-029295] N82-13531

SOLAR WIND

Magnetic clouds between 2-4 AU: Voyager observations
[NASA-TM-83849] N82-13593

The JOCR program — Joint Observatory for Cometary research N82-14013

Solar-geophysical data. Prompt report, part 1
[PB81-221178] N82-14044

Solar-geophysical data. Comprehensive reports, part 2
[PB81-221186] N82-14045

Solar-geophysical data. Explanation of data reports
[PB81-221194] N82-14046

SOLID LUBRICANTS

Study of methods for applying and enhancing transfer film coatings of polytetrafluoroethylene (PTEE) to Space Shuttle Main Engine (SSME) High Pressure Oxygen Turbo Pump (HPOTP) bearings
[NASA-CR-161916] N82-13428

SOLID SOLUTIONS

Ultrasonic attenuation and velocity studies in the alpha-alpha' solid solution phases of the Nb-H system
[DE81-026618] N82-13836

SOLID STATE DEVICES

High voltage DC switchgear development for multi-kW space power system: Aerospace technology development of three types of solid state power controllers for 200-1100VDC with current ratings of 25, 50, and 80 amperes with one type utilizing an electromechanical device
[NASA-CR-165413] N82-13357

Transport noise arising from diffusion and bulk or surface generation recombination in semiconductors
N82-13963

SOLID WASTES

Power-plant fly-ash utilization: A chemical-processing perspective
[DE81-025452] N82-13191

SOLIDIFICATION

A quantitative study of factors influencing lamellar eutectic morphology during solidification
[NASA-TM-82451] N82-13218

Rapid cycle casting of steel
[AD-A103567] N82-13260

SOLIDIFIED GASES

Observational data needs useful for modeling the coma N82-13991

SOLIDS

Numerical methods for the analysis of fluid-structure interaction problems N82-13381

On the vibrational energy transfer processes of polyatomic molecules in the gas and solid phases
N82-13865

Data on the backscattering coefficients of light ions from solids
[IPPJ-AM-18] N82-13907

SOLIDS FLOW

Laboratory measurements of physical, chemical, and optical characteristics of Lake Chicot sediment waters
[NASA-TP-1941] N82-13468

SOLUBILITY

Solubilities of dissolved gases in sea water
[AD-A100675] N82-13189

Solubilities in multicomponent systems of nonspecific interactions N82-13205

Insoluble anodes for electrowinning zinc and other metals
[PB81-227365] N82-13227

SOLUTES

Studies of photoionization in liquids using a laser two-photon ionization conductivity technique
[DE81-026514] N82-13194

SOLUTIONS

A study of the dynamic and transient properties of polymer solutions N82-13241

SOLVENT REFINED COAL

Synthetic fuel aromaticity and staged combustion
[DE81-024205] N82-13246

SOLVENTS

Effect of solvents on the radiation-induced polymerization of ethyl and isopropyl vinyl ethers
N82-13236

SOOT

Gas turbine combustor soot and radiation
N82-13174

SOUND PROPAGATION

Propagation of sound through the Earth's atmosphere
[NASA-CR-165006] N82-13828

Laboratory study of sound propagation into a fast bottom medium
[AD-A104596] N82-13831

SOUMD TRANSDUCERS

Thin magnetic impedance antennas N82-13314

SOUND TRANSMISSION

Measurement of sound absorption in the air — data processing N82-13829

Detection of infrasound generated by Clear Air Turbulence (CAT) N82-13830

Transmission of sound across a vortex layer enclosing a cylindrical column of jet N82-13838

SOUND WAVES

Investigation of acoustic interactions in jet thrust augmenting ejectors
[AD-A106083] N82-13835

SPACE COMMUNICATION

Technical basis for efficient management of geostationary satellite orbit/spectrum N82-13159

Microwave attenuation and brightness temperature due to the gaseous atmosphere: A comparison of JPL and CCIR values
[NASA-CR-165027] N82-13300

SPACE COOLING (BUILDINGS)
Annual cycle energy system experimental performance and national applicability
[DE81-028570] N82-13523
SPACE ERECTABLE STRUCTURES
Shape determination and control for large space structures
[JPL-PUB-81-71] N82-13166
SPACE HEATING (BUILDINGS)
Electric coheating experiment to determine the heat-loss coefficient of a double-envelope house
[DE81-027937] N82-13264
Annual cycle energy system experimental performance and national applicability
[DE81-028570] N82-13523
Intermediate photovoltaic system application experiment operational performance report. Volume 2 for Beverly High School, Beverly, Mass.
[DE82-000811] N82-13532
High altitude testing of residential wood-fired combustion equipment
[PB81-226151] N82-13575
SPACE LABORATORIES
SEPAC software configuration control plan and procedures, revision 1
[NASA-CR-161915] N82-13765
SPACE MISSIONS
Anticipated results from dust experiments on cometary missions N82-13993
The ESA mission to Comet Halley N82-14025
SPACE PROBES
Anticipated results from dust experiments on cometary missions N82-13993
SPACE PROCESSING
A preliminary analysis of the data from experiment 77-13 and final report on glass fining experiments in zero gravity
[NASA-CR-161884] N82-13154
SPACE SHUTTLE MAIN ENGINE
Study of methods for applying and enhancing transfer film coatings of polytetrafluoroethylene (PTEE) to Space Shuttle Main Engine (SSME) High Pressure Oxygen Turbo Pump (HPOTP) bearings
[NASA-CR-161916] N82-13428
SPACE SHUTTLE ORBITERS
Force and moment, flow-visualization, and boundary-layer tests on a shuttle orbiter model at Mach 6
[NASA-TP-1952] N82-13106
Analysis of a longitudinal pilot-induced oscillation experienced on the approach and landing test of the space shuttle
[NASA-TM-81366] N82-13149
Near perihelion observations of Comet Halley from Shuttle orbiter N82-14021
SPACE SHUTTLE PAYLOADS
Concept and feasibility study (phase A) for the X-ray satellite ROBISAT. Executive summary
[BMFT-FB-W-80-027] N82-13164
Voice control of the space shuttle video system N82-13719
SPACE TRANSPORTATION SYSTEM
Report on research and technology-FY 1981
[NASA-TM-81367] N82-14047
SPACE-TIME FUNCTIONS
Curvature singularities in certain space-times N82-13824
New exact and asymptotic solutions of the stationary vacuum Einstein equations N82-13973
SPACEBORNE ASTRONOMY
Infrared experiments for spaceborne planetary atmospheres research. Full report
[NASA-TM-84414] N82-13876
Infrared experiments for spaceborne planetary atmospheres research. Executive summary
[NASA-TM-84413] N82-13877
Ultraviolet spectroscopy of comets using sounding rockets, IUE and Spacelab N82-14009
SPACECRAFT COMMUNICATION
Modulation/demodulation techniques for satellite communications. Part 1: Background
[NASA-CR-165020] N82-13301
Investigation of modulation methods and system aspects for regenerative satellite-repeater
[BMFT-FB-W-80-024] N82-13342
SPACECRAFT CONTROL
Design and development of a six degree of freedom hand controller N82-13706
SPACECRAFT DESIGN
Statistical energy analysis computer program, user's guide
[NASA-CR-161913] N82-13764
SPACECRAFT LAUNCHING
Launch mission summary: Intelsat 5 (F3) Atlas/Centaur-55
[NASA-TM-84068] N82-13161
Mission operation report: INTELSAT V-C(F-3)
[NASA-TM-84072] N82-13162
SPACECRAFT ORBITS
Regularized integration of gravity-perturbed trajectories: A numerical efficiency study N82-13155
SPACECRAFT POWER SUPPLIES
Space applicable DOE photovoltaic technology: An update
[NASA-CR-165021] N82-13491
SPACECRAFT PROPULSION
Space applicable DOE photovoltaic technology: An update
[NASA-CR-165021] N82-13491
SPACECRAFT TRAJECTORIES
Regularized integration of gravity-perturbed trajectories: A numerical efficiency study N82-13155
Launch mission summary: Intelsat 5 (F3) Atlas/Centaur-55
[NASA-TM-84068] N82-13161
SPACELAB
Ultraviolet spectroscopy of comets using sounding rockets, IUE and Spacelab N82-14009
SPATIAL RESOLUTION
Detection of trace gases using high resolution spectroscopy
[AD-A104641] N82-13683
SPECKLE PATTERNS
Acoustical speckle interferometry and applications in experimental mechanics N82-13626
SPECTRAL BANDS
An investigation of warm carbon stars N82-14033
SPECTRAL LINE WIDTH
Composition dependence of neodymium optical homogeneous linewidths in glasses N82-13945
SPECTRAL REFLECTANCE
DMSP water vapor radiances: A preliminary evaluation
[AD-A099305] N82-13625
SPECTRAL RESOLUTION
A possible technique for cometary studies with high angular and spectral resolution N82-14012
SPECTRAL SIGNATURES
Laboratory measurements of physical, chemical, and optical characteristics of Lake Chicot sediment waters
[NASA-TP-1941] N82-13466
Spectral imagery: Recent results with the SPIFI and their implications for cometary atmospheric studies — servocontrolled polarimetric imaging Fabry-Perot interferometer N82-14011
SPECTRAL THEORY
Theory and calculation of Raman line shapes and excitation profiles near a one photon resonance N82-13866
SPECTROMETERS
Double beam-in-time photoacoustic spectroscopy N82-13180
High-temperature measurements of alkali levels in an experimental 6-inch AFBC
[DE81-023632] N82-13193
SPECTROPHOTOMETRY
Ground-based photometry of comets in the spectral interval 3000 to 3500 angstrom N82-13997
Spectrophotometry of faint comets: The asteroid approach N82-13998
Infrared observations of comets N82-14000
Infrared observations of faint comets N82-14001
A systematic program of cometary spectroscopy N82-14005
Observations of faint comets at McDonald Observatory: 1978-1980 N82-14010
Narrow passband imagery of comets — Comet West N82-14014
SPECTROSCOPIC ANALYSIS
Background fitting for electron energy-loss spectra
[DE81-027117] N82-13655
Laboratory Research — spectroscopic analysis, photochemical reactions, and proton irradiation of ice N82-14022
SPECTROSCOPIC TELESCOPES
Observing facilities at the European Southern Observatory (ESO) in Chile for cometary observations N82-14006
SPECTROSCOPY
Current transient spectroscopy of deep levels in silicon N82-13929
Introductory remarks: Photometry section N82-13996
SPECTRUM ANALYSIS
Energy spectral analysis in projection radiography N82-13293
Spectra over complex terrain
[DE81-028734] N82-13473
Steenrod operations in spectral cohomology theories
[CTH-MATH-1981-06] N82-13802
Inclusive charged particle spectrum from the interaction of nuclei with intermediate energy proton N82-13848
Theory and calculation of Raman line shapes and excitation profiles near a one photon resonance N82-13866
Determination of optical constants from extinction measurements
[AD-A099494] N82-13882
Spectral functions in quantum chromodynamics and applications N82-13969
Observations of faint comets at McDonald Observatory: 1978-1980 N82-14010
SPEECH RECOGNITION
Using voice control onboard combat aircraft N82-13056
Voice control of the space shuttle video system N82-13719
Application of computer voice input/output
[DE81-028769] N82-13743
SPEED CONTROL
Controlled Speed Accessory Drive demonstration program
[NASA-CR-165010] N82-13981
SPHERICAL COORDINATES
Generation of orthogonal and nearly orthogonal boundary-fitted coordinates with direct control of grid spacing
[LOG-J12610] N82-13790
SPIN STABILIZATION
Scanner --- photography from a spin stabilized synchronous satellite
[NASA-CASE-GSC-12032-2] N82-13465
SPIN TESTS
Two-channel telemeter for use in a 3-inch spin air gun
[AD-A102566] N82-13165
SPOILERS
Wind-tunnel investigation of the tail-spoiler concept for stall-prevention on general aviation airplanes
[NASA-TM-83206] N82-13047
SPORADIC E LAYER
JASPIC-DIP: The digital impedance probe in the JASPIC project
[BMFT-FB-W-80-034] N82-13169
SPRAY NOZZLES
Controlled overspray spray nozzle
[NASA-CASE-MFS-25139-1] N82-13376
High-pressure shrouded water sprays for dust control
[PB81-231458] N82-13483
SPUTTERING
Outer-shell excitation in sputtered atoms N82-13839
SQUID (DETECTORS)
Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering N82-13648
STABILITY
Thermoelastic instability in a seal-like configuration N82-13436
STABILITY DERIVATIVES
Interactive aircraft flight control and aeroelastic stabilization — forward swept wing flight vehicles
[NASA-CR-165036] N82-13150
STABILITY TESTS
Wind-tunnel investigation of the tail-spoiler concept for stall-prevention on general aviation airplanes
[NASA-TM-83206] N82-13047
STACKS
Flow characteristics of a multiple nozzle exhaust gas eductor system
[AD-A104072] N82-13387

Cell module and fuel conditioner development
[NASA-CR-165462] N82-13511

STAGNATION FLOW
Effects of intake geometry on circular pitot intake performance at zero and low forward speeds
N82-13070

STAGNATION PRESSURE
Pressure distributions on three different cruciform aft-tail control surfaces of a wingless missile at Mach 1.60, 2.36, and 3.70. Volume 1: Trapezoidal tail
[NASA-TM-80097] N82-13110

STAINLESS STEELS
Fatigue crack initiation and electrochemical behavior of 403 stainless steel in aqueous environments
N82-13210
Substructure of 316 stainless steel pipe weldments — liquid metal fast breeder reactor materials
N82-13215
Stress corrosion cracking of type 304 stainless steel in high temperature dilute chloride solution
N82-13228
Materials studies for magnetic fusion energy applications at low temperatures -4
[PB81-222507] N82-13928

STANDARDIZATION
A standard control display unit for multi-aircraft application N82-13054
Passive/hybrid solar components: An approach to standard thermal test methods
[PB81-227666] N82-13549
Progress in the global standardization of gravity: An analysis of the Woollard and Rose international gravity values
[AD-A099459] N82-13599
Computer science and technology: NBS Programming Environment Workshop report
[PB81-237869] N82-13744
Survey of standards applicable to a database management system
[NASA-CR-165009] N82-13766

STANDARDS
Digital Equipment Corporation VAX-11 FORTRAN, version 2
[PB81-232431] N82-13745
Digital Equation Corporation PDP-11 COBOL, version 4.1
[PB81-232423] N82-13746
COBOL compiler: Northern Telecom, Inc. NTI COBOL/3
[PB81-226417] N82-13749

STARS
Optical brightness variations in a sample of nineteen radio-quiet quasi-stellar objects N82-14030

STARTING
Heat pipe startup from the supercritical state
N82-13400

STATIC LOADS
MAGNA: A finite element program for the materially and geometrically nonlinear analysis of three-dimensional structures subjected to static and transient loading
[AD-A099454] N82-13446
Endurance test and evaluation of alkaline water electrolysis cells
[NASA-CR-165424] N82-13506

STATISTICAL ANALYSIS
Ionospheric scintillation N82-13585
Project Skywater: Fiscal year 1979 report. Atmospheric Resources Research Program
[PB81-234494] N82-13629
An investigation into pilot and system response to critical in-flight events, volume 1
[NASA-CR-166243-VOL-1] N82-13662
An investigation into pilot and system response to critical in-flight events, volume 2
[NASA-CR-166243-VOL-2] N82-13663
Statistical energy analysis computer program, user's guide
[NASA-CR-161913] N82-13764
The relationship between the number of factors and size of an experiment — a medical diagnostics case
[AD-A103877] N82-13792
A contribution to robust detection and estimation
N82-13809
Transforming contingency tables
[AD-A104182] N82-13821

STATISTICAL DECISION THEORY
Detecting human operator impairment with a psychomotor task N82-13718

STATISTICAL DISTRIBUTIONS
Lagrangian fluid dynamics using the Voronoi-Delaunay mesh
[LA-UR-81-1421] N82-13393
Some small sample non-parametric space-time clustering tests N82-13811
Sequential stochastic construction of random polygons N82-13812

STATISTICAL TESTS
Some small sample non-parametric space-time clustering tests N82-13811

STATISTICAL WEATHER FORECASTING
National Weather Service public forecast verification
[PB81-231714] N82-13632

STEADY STATE
A synthesis method for estimating maximum instantaneous inlet distortion based on measured inlet steady state and RMS pressures N82-13063
A simplified two-dimensional numerical analysis of MOS devices including transient penomena
N82-13372
Transient catalytic combustor model
[NASA-CR-165324] N82-13507
Radiatively cooled stellar winds N82-14034

STEAM FLOW
Hydrodynamic computations of pressures generated by steam pipe rupture
[AD-A102046] N82-13449

STEAM TURBINES
Assessment of rotor-bearing dynamics: A planning study for the utility industry
[DE82-900378] N82-13430

STEEL STRUCTURES
Optimum Design of Static, Earthquake, and Wind Steel Structures (ODSEWS-2D)
[PB81-232738] N82-13271
Welding of austenitic stainless steels for liquid-helium service
[DE81-025802] N82-13429
Analysis of steel beam-to-column moment connections N82-13444
Load and resistance factor design of cold-formed steel structural members N82-13464
Theory and application of experimental model analysis in earthquake engineering N82-13588

STEELS
Acoustic nondestructive evaluation of microstructure — pure copper and plain carbon and low alloy steels
N82-13211
Cyclic deformation and fatigue microcrack initiation in pearlitic eutectoid steel N82-13230
Anamolous loss in transformer steels N82-13371

STEERING
A data collection scheme for identification of parameters in a driver model N82-13696
Manual control analysis of drug effects on driving performance N82-13709
Stability analysis of automobile driver steering control N82-13717

STELLAR ATMOSPHERES
X-ray and ultraviolet observations of stellar atmospheres N82-14029

STELLAR EVOLUTION
Evolution of close binary systems: Observational aspects
[NASA-CR-165039] N82-14027
Radiation-hydrodynamics of HII regions and molecular clouds
[DE81-026696] N82-14032

STELLAR LUMINOSITY
Optical brightness variations in a sample of nineteen radio-quiet quasi-stellar objects N82-14030

STELLAR MASS
Problems in quantum mechanics and gravitation
N82-13970

STELLAR ROTATION
The transfer of polarized radiation in spectral lines from rotationally distorted stars N82-14031

STELLAR SPECTROPHOTOMETRY
Astronomical activities report
[ISSN-0531-4496] N82-14028

STELLAR WINDS
Radiatively cooled stellar winds N82-14034

STELLARATORS
Enhanced-confinement class of stellarators
[DE81-026727] N82-13924

STEPPING MOTORS
Scanner — photography from a spin stabilized synchronous satellite
[NASA-CASE-GSC-12032-2] N82-13466

STIFFNESS
Optimum Design of Static, Earthquake, and Wind Steel Structures (ODSEWS-2D)
[PB81-232738] N82-13271

STIRLING CYCLE
Dish stirling solar receiver combustor test program
[NASA-CR-165017] N82-13495

STOCHASTIC PROCESSES
A stochastic extension of the structural properties of compartment models via a Kronecker algebra
N82-13810
Sequential stochastic construction of random polygons N82-13812
A stochastic Langevin dynamics study of correlated ionic motion in one-dimensonal framework solid electrolytes N82-13966

STOICHIOMETRY
Testing and evaluation of MHD materials and substructures
[DE81-024331] N82-13926

STOKES LAW (FLUID MECHANICS)
On a dusty-gas shock tube
[UTIAS-250] N82-13151

STORAGE RINGS (PARTICLE ACCELERATORS)
Construction and maintenance of SUNY facilities at the National Synchrotron Light Source
[DE81-027655] N82-13152

STORAGE STABILITY
Test number 2 of propellants for rocket motor E573
[FOA-C-20411-D1] N82-13254

STORAGE TANKS
Parametric study of silo-material interaction
N82-13259

STORMS (METEOROLOGY)
Spring program summary, 1980
[PB81-234940] N82-13626

STRAIN ENERGY METHODS
Study of corrugated plates N82-13426

STRAIN GAGES
Moment-strain relationships in elastic-plastic bending of beams
[AD-A101722] N82-13448
Pressure measurements of non-planar stress waves — dual element strain gage
[DE81-028729] N82-13454

STRAIN RATE
Large amplitude compression and shear wave propagation in impact-loaded PMMA
[AD-A105953] N82-13450
Analysis of stress drop in multistage creep experiments: Predictions of exponential creep law
[DE81-029279] N82-13453

STRATIFICATION
Mixed layer depth distributions from SVSTD data
[AD-A105669] N82-13834

STRATIGRAPHY
The trace metal stratigraphy and recent sedimentary history of anthrogenous particulates on the San Pedro Shelf, California N82-13579
Structural and stratigraphic analysis of the paleozoic Murzuk and Ghadames basins, western Libya
N82-13614

STRATOSPHERE RADIATION
SAM 2 measurements of the polar stratospheric aerosol, volume 1: October to April 1979
[NASA-RP-1081] N82-13592

STREAM FUNCTIONS (FLUIDS)
An experimental investigation of the turbulent flow in the junction of a flat plate and a body of constant thickness N82-13102
Computational methods for internal flows with emphasis on turbomachinery
[NASA-TM-82764] N82-13113

STREAMLINED BODIES
Turbulent wake development behind streamlined bodies N82-13104

STREAMS
Preliminary investigation of a shallow ground-water flow system associated with Connetquot Brook, Long Island, New York
[PB81-228751] N82-13481
A depositional model for major coal seams in the Rock Springs Formation, Upper Cretaceous, southwest Wyoming N82-13580

STRESS (PHYSIOLOGY)
Determination of efficient methods of lift by comparing trained and untrained male and female lifters
[AD-A100349] N82-13650

STRESS ANALYSIS
Effective stress-strain-strength behavior of silicate-grouted sand N82-13257
Asymmetric stress and failure analysis
[DE81-026842] N82-13451
Behavior of plane panels in ship structures with local initial deflections
[BMVG-FBWT-80-18] N82-13455
Thin-walled structures. Trapezoidal sheet bending and under shear stresses
[VTT-11] N82-13456
Residual stress and deformation in circumferential pipe-joint welds
[PB81-232464] N82-13458
An integral equation method for cutout problems in shells N82-13459
Single mode optical waveguide design investigation
[AD-A098979] N82-13881

STRESS CONCENTRATION
Planning and analysis of a fatigue test programme N82-13276
Elevated temperature fatigue testing of metals N82-13281
Phase separation of a two component electron-hole liquid in (111) stressed Ge N82-13938

STRESS CORROSION
An improved stress corrosion test medium for aluminum alloys
[NASA-TM-82452] N82-13216

STRESS CORROSION CRACKING
Stress corrosion cracking of type 304 stainless steel in high temperature dilute chloride solution N82-13228
Fatigue tests with a corrosive environment N82-13282

STRESS CYCLES
Cyclic deformation and fatigue crack initiation of a coherently precipitating Ni-14.4 at % Al alloy N82-13212
An investigation of notch low cycle fatigue life behavior of Rene' 80 at high temperature N82-13214

STRESS INTENSITY FACTORS
Fatigue crack propagation studies in two cryogenic steels N82-13213

STRESS RELAXATION
Analysis of stress drop in multistage creep experiments: Predictions of exponential creep law
[DE81-029279] N82-13453

STRESS WAVES
Pressure measurements of non-planar stress waves — dual element strain gage
[DE81-026729] N82-13454

STRESS-STRAIN DIAGRAMS
Dynamic effects on fracture of elastic - plastic materials N82-13463

STRESS-STRAIN RELATIONSHIPS
Effective stress-strain-strength behavior of silicate-grouted sand N82-13257

STRESS-STRAIN-TIME RELATIONS
Analysis of stress drop in multistage creep experiments: Predictions of exponential creep law
[DE81-029279] N82-13453

STRONG INTERACTIONS (FIELD THEORY)
Long-range interactions in lattice field theory N82-13941

STRONTIUM TITANATES
Boron implanted strontium titanate N82-13939

STRUCTURAL ANALYSIS
Parametric study of silo-material interaction N82-13259
A method for accelerating convergence to the solution of nonlinear structural equations by reducing residual work N82-13439
Analysis of steel beam-to-column moment connections N82-13444
Load and resistance factor design of cold-formed steel structural members N82-13464
A stochastic extension of the structural properties of compartment models via a Kronecker algebra N82-13810

STRUCTURAL BASINS
Thermal contraction and flexure of intracratonic basins: A three dimensional study of the Michigan Basin N82-13582
Basement rocks of the main interior basins of the midcontinent
[NASA-CR-164935] N82-13596
Structural and stratigraphic analysis of the paleozoic Murzuk and Ghadames basins, western Libya N82-13614

STRUCTURAL DESIGN
Optimum Design of Static, Earthquake, and Wind Steel Structures (ODSEWS-2D)
[PB81-232738] N82-13271
Design, fabrication, test, qualification, and price analysis of third generation design solar cell modules
[NASA-CR-165007] N82-13502

STRUCTURAL DESIGN CRITERIA
Shape determination and control for large space structures
[JPL-PUB-81-71] N82-13166
Antenna (selected articles)
[AD-B060598] N82-13307
Load and resistance factor design of cold-formed steel structural members N82-13464

STRUCTURAL ENGINEERING
Computer program for optimum nonlinear dynamic design of reinforced concrete slabs under blast loading (CBARCS)
[AD-A104253] N82-13262
Analysis and behavior of structures on discrete tensionless foundations N82-13286
Evaluation of advanced technologies for power transformers
[DE82-000793] N82-13368

STRUCTURAL FAILURE
Asymmetric stress and failure analysis
[DE81-026842] N82-13451

STRUCTURAL MEMBERS
Shape determination and control for large space structures
[JPL-PUB-81-71] N82-13166
On the modeling and control of flexible space structures N82-13168
Laser heat treatment of track components in combat vehicles, phase 1
[AD-A102761] N82-13219

STRUCTURAL PROPERTIES (GEOLOGY)
The crustal structure of Kilauea and Mauna Loa volcanoes, Hawaii, from seismic refraction and gravity data N82-13583
Surface waves in strong ground motion with application to offshore environments N82-13584
Structural and stratigraphic analysis of the paleozoic Murzuk and Ghadames basins, western Libya N82-13614
Two detailed seismic studies in Central California. Part 1: Earthquake clustering and crustal structure studies of the San Andreas fault near San Juan Bautista. Part 2: Seismic velocity structure along the Sierra foothills near Oroville, California N82-13617
Reports of Planetary Geology Program, 1981
[NASA-TM-84211] N82-14041

STRUCTURAL STRAIN
Planning and analysis of a fatigue test programme N82-13276

STRUCTURAL VIBRATION
Analysis of a longitudinal pilot-induced oscillation experienced on the approach and landing test of the space shuttle
[NASA-TM-81366] N82-13149
Shape determination and control for large space structures
[JPL-PUB-81-71] N82-13166
On the modeling and control of flexible space structures N82-13168
Structural dynamics: Modified calculations — natural and harmonically excited vibrations of modified structures; increased computation efficiency
[BMVG-FBWT-81-1] N82-13457

STRUCTURAL WEIGHT
Weight reduction potential of automobiles and light trucks: 1980 summary source document
[PB81-235756] N82-13987

STURM-LIOUVILLE THEORY
High order approximations to Eigensolutions of Sturm-Liouville problems by deferred corrections
[TRITA-NA-8104] N82-13800

SUBMARINES
A model for the submarine depthkeeping team N82-13669

SUBMILLIMETER WAVES
Antenna (selected articles)
[AD-A106499] N82-13323
A statistical analysis of irregular quasi-optical lines (beam guides) with the aid of computer(s) N82-13324
Directed dividers on the metal-dielectric waveguides N82-13326

SUBROUTINES
Digital equipment corporation, PDP-11 COBOL version, 4.1 indexed 1-0 module
[PB81-232415] N82-13747

SUBSIDENCE
Evaluation of reef shell embankment
[PB81-232761] N82-13266
The occurrence and control of land subsidence due to ground water withdrawal with special reference to the San Joaquin and Santa Clara Valleys, California N82-13466

SUBSONIC FLOW
Calculation of wing-body-nacelle interference in subsonic and transonic potential flow N82-13095
Prediction of subsonic aircraft flows with jet exhaust interactions N82-13096

SUBSONIC SPEED
Thrust modulation methods for a subsonic V/STOL aircraft
[NASA-TM-82747] N82-13112

SUBSONIC WIND TUNNELS
Studies of air inlets at Reynolds numbers comparable to flight in ONERA's F1 and S1MA wind tunnels N82-13091

SUBSTRATES
Transient catalytic combustor model
[NASA-CR-165324] N82-13507
Laboratory study of sound propagation into a fast bottom medium
[AD-A104596] N82-13831

SULFATES
Energy generation and the sulfur-carbon cycle
[DE81-030949] N82-13562
Aircraft data summaries for the SURE intensives, volume 6
[DE82-900355] N82-13563

SULFIDES
Resonance Raman spectroscopic investigations of the active site structures of hemoglobin and hemerythrin N82-13176
Energy generation and the sulfur-carbon cycle
[DE81-030949] N82-13562

SULFONIC ACID
Gas-solid chromatography on cation forms of lightly sulfonated porous polymers N82-13237

SULFUR
Spectroelectrochemical investigations in molten salt and aqueous media N82-13183

SULFUR COMPOUNDS
Metal ion modification of polymeric sulfur nitride, (SN) subx, electrodes and electrochemical reduction of acetylene at a molybdenum modified (SN)sub x electrode N82-13185

SULFUR FLUORIDES
A study of the formation and structure of small clusters of noble gases and sulfur hexafluoride formed in Laval Nozzle molecular beams N82-13201

SULFUR ISOTOPES
Trapped ion research
[AD-A098648] N82-13188

SULFUR OXIDES
Sulfur in the air in the capital (Helsinki) metropolitan area: ITASAT-project
[RR-614.71] N82-13553

SULFURIC ACID
Insoluble anodes for electrowinning zinc and other metals
[PB81-227365] N82-13227

SUM RULES
On general 1 exp p summability methods
[CTH-MATH-1981-07] N82-13803

SUPERCONDUCTING MAGNETS
Welding of austenitic stainless steels for liquid-helium service
[DE81-025602] N82-13429
Computer-automated controls for superconducting magnetic energy storage
[DE81-026697] N82-13521

Materials studies for magnetic fusion energy applications at low temperatures -4
[PB81-222607] N82-13928

SUPERCONDUCTING POWER TRANSMISSION
Cryogenic testing of 100-m superconducting power transmission test facility
[DE81-028331] N82-13517

SUPERCONDUCTIVITY
Superconductivity of the A15 compound niobium aluminum N82-13932
Observation of high field DHVA effect and induced magnetism in single crystal TiBe sub 2
[DE81-025282] N82-13950

SUPERCONDUCTORS
Upper critical fields and span states in A-15 superconductors, part 1. Vortices in two-dimensional superconductors, part 2 N82-13942
Electron beam evaporation of superconducting, A15 niobium-silicon N82-13944

SUPERCRITICAL FLOW
The influence of closed-coupled, rear fuselage mounted nacelles on the design of an advanced high speed wing N82-13092

SUPERCRITICAL WINGS
The influence of closed-coupled, rear fuselage mounted nacelles on the design of an advanced high speed wing N82-13092

SUPERGIANT STARS
Evolution of close binary systems: Observational aspects
[NASA-CR-166039] N82-14027

SUPERSONIC AIRCRAFT
Aerodynamics of Power Plant Installation
[AGARD-CP-301] N82-13065
Performance of highly integrated inlets for supersonic aircraft N82-13066
Top-mounted inlet system feasibility for transonic-subsonic fighter aircraft applications N82-13067

SUPERSONIC COMBUSTION
Effect of vacuum exhaust pressure on the performance of MHD ducts at high D-field
[NASA-TM-82750] N82-13906

SUPERSONIC COMBUSTION RAMJET ENGINES
Numerical analysis of the scramjet-inlet flow field by using two-dimensional Navier-Stokes equations
[NASA-TP-1940] N82-13142

SUPERSONIC FLOW
Crossflow effects on steady and fluctuating pressures on an ogive-cylinder cone-frustum model in supersonic separated flow
[NASA-TP-1951] N82-13108
A calculation method for slender wing-body configurations in supersonic flow at high angles of attack -- nonlinear force and pitching moment characteristics
[BMVG-FBWT-79-15] N82-13115

SUPERSONIC INLETS
Performance of highly integrated inlets for supersonic aircraft N82-13066
Calculation of transonic air-intakes using a computer package for inviscid and boundary layer flows N82-13072
The design and development of the Tornado engine air intake N82-13074

SUPERSONIC NOZZLES
Navier-Stokes solutions for a supersonic coflowing axisymmetric nozzle with a thick annulus N82-13101

SUPERSONIC SPEEDS
Pressure distributions on three different cruciform aft-tail control surfaces of a wingless missile at Mach 1.60, 2.36, and 3.70. Volume 1: Trapezoidal tail
[NASA-TM-80097] N82-13110

SURFACE ACOUSTIC WAVE DEVICES
Investigation of photoacoustorefractive effect in LiNbO sub 3 SAW devices
[AD-A103706] N82-13880

SURFACE DEFECTS
Methods of obtaining crack growth data in metals N82-13283

SURFACE FINISHING
Investigations towards the understanding of surface treatment of propellant grains by means of trace elements
[BMVG-FBWT-79-14] N82-13253
Preliminary evaluation of ion implantation as a surface treatment to reduce wear of tool bits
[AD-A105053] N82-13261

Mitigation of biofouling using coatings
[DE81-027800] N82-13847

SURFACE LAYERS
Reduction of nitric oxide in a fluidized bed
[DE81-030486] N82-13196
The nitrogen cycle and heat budget of a subtropical lagoon, Devils Hole, Harrington Sound, Bermuda: Implications for nitrous oxide production and consumption in marine environments N82-13611
A review of one-dimensional oceanic mixed-layer models
[illegible] N82-13640

SURFACE PROPERTIES
Conduction and charge storage in electron irradiated spacecraft insulators
[AD-A104796] N82-13167
Spectra over complex terrain
[DE81-028734] N82-13473
Intermediate band surface photometry of elliptical galaxies N82-14035

SURFACE REACTIONS
Surface characterization of dispersed supported metal catalysts using a 'time lapse' dynamic pulse technique N82-13177
A study of the surface reactivity of silver: An acid base characterization of oxidation reactions N82-13233
Measurement of surface recombination velocity for silicon solar cells using a scanning electron microscope with pulsed beam
[JPL-PUB-81-84] N82-13494
Electric field-enhanced diffusion and electron stimulated desorption of alkali elements from glass surfaces during electron bombardment and Auger electron analysis N82-13961

SURFACE ROUGHNESS
The effect of rotor blade thickness and surface finish on the performance of a small axial flow turbine
[NASA-TM-82726] N82-13114
An experimental study of turbulence in an urban environment N82-13618
Acoustic boundary wave generation and shadowing at a seamount
[AD-A104594] N82-13632

SURFACE ROUGHNESS EFFECTS
Optical polishing of metals
[DE81-028690] N82-13225
Influence of wall roughness, adverse pressure gradient and heat transfer on wall shear stress measurements with Preston tubes
[ILR-50] N82-13396

SURFACE TEMPERATURE
Analysis of soil moisture extraction algorithm using data from aircraft experiments
[NASA-CR-166719] N82-13470
Millimeter wave radiometry as a means of determining cometary surface and subsurface temperature N82-14003

SURFACE VEHICLES
Laser heat treatment of track components in combat vehicles, phase 1
[AD-A102761] N82-13219

SURFACE WATER
Spectra over complex terrain
[DE81-028734] N82-13473
The District of Columbia Five-Year Water Resources Research Program Plan, 1982-1987
[PB81-234882] N82-13482

SURFACE WAVES
Surface waves in strong ground motion with application to offshore environments N82-13584

SURFACTANTS
Molecular interactions in amphiphilic association structures N82-13206
Microemulsions, emulsions and related systems: Energy applications N82-13545

SURGES
Current transient spectroscopy of deep levels in silicon N82-13929

SUSPENDING (MIXING)
Colloidal properties of coagulated calcium-montmorillonite suspensions N82-13609

SWEPT FORWARD WINGS
Interactive aircraft flight control and aeroelastic stabilization -- forward swept wing flight vehicles
[NASA-CR-165006] N82-13150

SWITCHING CIRCUITS
Electronic master monitor and advisory display system test and demonstration report
[AD-A105317] N82-13141

SWITCHING THEORY
Three-stage commutation field of the system of the repeated use of short-wave receiving antennas N82-13317

SYMMETRICAL BODIES
Turbulent wake development behind streamlined bodies N82-13104

SYNAPSES
Neurotransmitter function in the basal ganglia after acute and chronic ethanol treatment
[AD-A103744] N82-13649

SYNCHRONISM
A difference in efficiency between synchronous and asynchronous systems
[AD-A102280] N82-13742
Complexity of communication among asynchronous parallel processes N82-13760

SYNCHRONOUS SATELLITES
Effects of the Satellite Power System on low Earth orbit and geosynchronous satellites
[PB81-232019] N82-13157

SYNCHROTRON RADIATION
Construction and maintenance of SUNY facilities at the National Synchrotron Light Source
[DE81-027855] N82-13152

SYNTAX
Language, computation, and reality N82-13757
Preliminary analysis of a breadth-first parsing algorithm: Theoretical and experimental results
[AD-A101852] N82-13797

SYNTHESIS (CHEMISTRY)
Grafting of 2 (2-hydroxy-5-vinylphenyl) 2H-benzotriazole onto polymers with aliphatic groups. Synthesis and polymerization of 2 (2-hydroxy-5-isopropenylphenyl) 2H-benzotriazole and a new synthesis of 2 (2-hydroxy-5-vinylphenyl) 2H-benzotriazole
[NASA-CR-165016] N82-13171

SYNTHETIC ARRAYS
Solution of the problem of the synthesis of antennas with the aid of a coherent optical system N82-13313

SYNTHETIC FUELS
Barriers to the utilization of synthetic fuels for transportation
[NASA-CR-165517] N82-13243
Feasibility study report for the Imperial Valley Ethanol Refinery: A 14.9-million-gallon-per-year ethanol synfuel refinery utilizing geothermal energy
[DE82-000288] N82-13252

SYSTEM FAILURES
Electronic master monitor and advisory display system test and demonstration report
[AD-A105317] N82-13141
Sensor failure detection system -- for the F100 turbofan engine
[NASA-CR-165515] N82-13145

SYSTEMS ANALYSIS
Development, analysis and control of the inductor-converter bridge N82-13349
Supervisory control of remote manipulation: A preliminary evaluation N82-13675
An analytical study of multiprocessor system reliability N82-13728

SYSTEMS ENGINEERING
The intelligent use of intelligent systems: Problems in engineering man/machine symbiosis N82-13058
Design for active and passive flutter suppression and gust alleviation
[NASA-CR-3482] N82-13147
Control design for parameter sensitivity reduction in linear regulators: Application to large flexible space structures N82-13158
Antenna (selected articles)
[AD-B060598] N82-13307
The message processing and distribution system development
[AD-A104585] N82-13333
Frequency sampling filters, design and applications N82-13354
Evaluation of advanced technologies for power transformers
[DE82-000793] N82-13388
An integrated approach for the specification and the design of the conceptual level in database systems N82-13730
Transition radiation as an X-ray source N82-13840
Report on research and technology-FY 1981
[NASA-TM-81367] N82-14047

SYSTEMS INTEGRATION

Integration of advanced exhaust nozzles N82-13075

Techniques for interfacing multiplex systems [AD-A101457] N82-13135

Future directions in Navy electronic system reliability and survivability [AD-A102460] N82-13438

SYSTEMS MANAGEMENT

Command-response data transmision to mechanical systems management effect on the crew/system interface N82-13057

Simple geometric algorithms to aid in clearance management for robotic mechanisms N82-13680

SYSTEMS STABILITY

Distributed photovoltaic systems: Utility interface issues and their present status [NASA-CR-165019] N82-13492

T

TABLES (DATA)

Specific gamma-ray dose constants for nuclides important to dosimetry and radiological assessment [DE81-031980] N82-13663

TAIL ASSEMBLIES

Wind-tunnel investigation of the tail-spoiler concept for stall-prevention on general aviation airplanes [NASA-TM-83206] N82-13047

Pressure distributions on three different cruciform aft-tail control surfaces of a wingless missile at Mach 1.60, 2.36, and 3 70. Volume 1: Trapezoidal tail [NASA-TM-80097] N82-13110

TANKER AIRCRAFT

Tanker avionics and aircrew complement evaluation N82-13063

TARGET RECOGNITION

SEASAT equator crossing program [AD-A099442] N82-13156

Decision aids for airborne intercept operations in advanced aircrafts N82-13683

Modeling human tracking error in several different anti-tank systems N82-13699

TARGETS

Some effects of Field Of View (FOV) and target size on lateral tracking at hover N82-13672

A comparison of three programs for the calculation of surface-ratio [FOA-C-20392-D8] N82-13779

Gas target neutron generator studies [UTIAS-251] N82-13650

TASK COMPLEXITY

Evaluation of a pilot workload assessment device to test alternate display formats and control handling qualities N82-13062

Two-D results on human operator perception N82-13697

Dynamic decision-making in multi-task environments: Theory and experimental results [AD-A102055] N82-13740

TAXONOMY

Taxonomy of the human factors in man machine systems N82-13726

TAYLOR INSTABILITY

Rayleigh-Taylor stability for a shock wave-density discontinuity interaction [DE81-028707] N82-13394

TEARING MODE (PLASMAS)

Soft and hard major disruptions in the profile control experiment of the JIPP T-2 Tokamak [IPPJ-547] N82-13902

TECHNOLOGICAL FORECASTING

Air Force technical objective document FY 1982 [AD-A099741] N82-13982

TECHNOLOGY ASSESSMENT

Soviet UCG experience specifically related to field experiments in the United States [DE81-028642] N82-13244

Distributed photovoltaic systems: Utility interface issues and their present status [NASA-CR-165019] N82-13492

Health and safety research division [DE81-026088] N82-13652

Multi-axis manual controllers: A state-of-the-art report N82-13701

Computer science and technology: NBS Programming Environment Workshop report [PB81-237889] N82-13744

The evaluation of technology R&D: A continuing Dilemma [RAND/P-6655] N82-13980

Air Force technical objective document FY 1982 [AD-A099741] N82-13982

TECTONICS

Papers presented to the Conference on the Processes of Planetary Rifting [LPI-CONTRIB-457] N82-13595

TELECOMMUNICATION

Mission operation report: INTELSAT V-C(F-3) [NASA-TM-84072] N82-13162

Two-path model of fading in a high data rate communication channel N82-13292

Digital data compression algorithm performance comparisions: Proposed NATO standard algorithm provides better facsimile in a noisy communications environment than present Tactical Digital Facsimile algorithm [AD-A103159] N82-13737

Error bounds for reconstruction of a function f from a finite sequence (SGN(ft sub i) + x sub i)) [AD-A104477] N82-13795

TELEMETRY

Two-channel telemeter for use in a 3-inch spin air gun [AD-A102566] N82-13165

TELEOPERATORS

Proceedings of the Seventeenth Annual Conference on Manual Control [NASA-CR-165005] N82-13665

Research issues in implementing remote presence in teleoperator control N82-13676

Man/machine interface development for the REMOTEX concept N82-13678

Identification of cognitive factors related to remote work performance using closed circuit TV displays N82-13679

Simple geometric algorithms to aid in clearance management for robotic mechanisms N82-13680

TELEVISION RECEIVERS

Appliance efficiency and the solar building [DE81-029073] N82-13265

TELEVISION SYSTEMS

A digital TV system for the detection of high speed human motion N82-13289

Voice control of the space shuttle video system N82-13719

TELEVISION TRANSMISSION

The development of domestic technology for television transmitting antennas N82-13319

TEMPERATURE DEPENDENCE

A numerical investigation of exhaust plume temperature effects on nonaxisymmetric nozzle/afterbody performance N82-13079

The influence of high temperature on braking — wheel brakes N82-13433

TEMPERATURE DISTRIBUTION

Effects of restrained thermal movement in a continuous, prestressed concrete bridge without interior expansion joints N82-13461

TEMPERATURE EFFECTS

Effects of hygrothermal conditioning on the dynamic behavior of resin matrix composites N82-13172

Effects of restrained thermal movement in a continuous, prestressed concrete bridge without interior expansion joints N82-13461

TEMPERATURE GRADIENTS

Aircraft data summaries of the SURE intensives, volume 5 [DE82-900310] N82-13570

TEMPERATURE INVERSIONS

Analysis of stress drop in multistage creep experiments: Predictions of exponential creep law [DE81-029279] N82-13453

TEMPERATURE MEASUREMENT

New ways of looking for phase transitions at multi-megabar dynamic pressures [DE81-028771] N82-13223

Electric coheating experiment to determine the heat-loss coefficient of a double-envelope house [DE81-027937] N82-13264

Inexpensive thermographic techniques for determining reliable solar-collector-array performance [DE82-001151] N82-13528

TEMPERATURE MEASURING INSTRUMENTS

Inexpensive thermographic techniques for determining reliable solar-collector-array performance [DE82-001151] N82-13528

TEMPERATURE PROFILES

SAM 2 measurements of the polar stratospheric aerosol, volume 1: October to April 1979 [NASA-RP-1081] N82-13592

TENSILE DEFORMATION

Strengthening phases and deformation mechanisms in dispersion strengthened solid solutions and pure metals N82-13229

Cyclic deformation and fatigue microcrack initiation in pearlitic eutectoid steel N82-13230

Residual stress and deformation in circumferential pipe-joint welds [PB81-232464] N82-13458

TENSILE STRENGTH

Effect of low-temperature irradiation with (n, alpha) helium production on tensile properties of 12 Cr-1 Mo VW-type steels [DE81-028578] N82-13222

TENSILE TESTS

Test number 2 of propellants for rocket motor E573 [FOA-C-20411-D1] N82-13254

TENSOR ANALYSIS

New exact and asymptotic solutions of the stationary vacuum Einstein equations N82-13973

TERMINAL BALLISTICS

On-board data recorder for hard-target weapons [DE81-028645] N82-13408

TERRAIN ANALYSIS

Spectra over complex terrain [DE81-028734] N82-13473

TERRAIN FOLLOWING AIRCRAFT

Information and display requirements for aircraft terrain following N82-13695

TERRESTRIAL RADIATION

Comparison of data inversion techniques for remotely sensed wide-angle observations of Earth emitted radiation [NASA-TP-1924] N82-13620

TEST FACILITIES

Testing of a work bench for handling of explosives in the laboratory [FOA-C-20393-D1] N82-13397

Residual-energy-application program: EAST facility requirements document, volume 1 [DE81-027536] N82-13526

Testing and evaluation of MHD materials and substructures [DE81-024331] N82-13926

TEST FIRING

Two-channel telemeter for use in a 3-inch spin air gun [AD-A102566] N82-13165

TEXAS

Report of survey for McDonald Observatory, Harvard Radio Astronomy Station, and vicinity [PB81-234338] N82-13606

THEORETICAL PHYSICS

Have we found Asymptopia: The ultimate form of physical laws? [DE81-028853] N82-13825

THERMAL CONDUCTIVITY

Gas-turbine critical research and advanced technology support project [NASA-TM-81708] N82-13509

THERMAL CONDUCTIVITY GAGES

A miniature, thin-film thermal conductivity detector for an integrated gas chromatograph N82-13200

THERMAL DECOMPOSITION

Pyrolytic characterization of the organic matter in selected coals and in the Devonian shales of southern West Virginia N82-13578

THERMAL DIFFUSION

A preliminary analysis of the data from experiment 77-13 and final report on glass fining experiments in zero gravity [NASA-CR-161884] N82-13154

THERMAL ENERGY

Geothermal-resource verification for Air Force Bases [DE81-027482] N82-13520

Residual-energy-application program: EAST facility requirements document, volume 1 [DE81-027536] N82-13526

Experimental and analytical systems studies of a combined thermal-photovoltaic residential solar system
[DE81-029839] N82-13534

THERMAL POLLUTION
Deep Ocean Mining Environmental Study. Environmental effects of commercial-scale mining
[PB81-227753] N82-13484

THERMAL PROTECTION
Aerodynamic heating on the corrugated surface of a 10.2 deg half-angle blunted cone at Mach 6.7
[NASA-TP-1926] N82-13083
Air Force technical objective document FY 1982
[AD-A099741] N82-13982

THERMAL STRESSES
Analysis of stress drop in multistage creep experiments: Predictions of exponential creep law
[DE81-029279] N82-13453
Effects of restrained thermal movement in a continuous, prestressed concrete bridge without interior expansion joints N82-13461
Workshop proceedings: U-bend tube cracking in steam generators
[DE81-903765] N82-13515
Statistical analysis of accelerated temperature aging of semiconductor devices
[AD-A099439] N82-13946

THERMIONIC CATHODES
A relativistic magnetron with a thermionic cathode N82-13353

THERMOCLINES
The nitrogen cycle and heat budget of a subtropical lagoon, Devils Hole, Harrington Sound, Bermuda: Implications for nitrous oxide production and consumption in marine environments N82-13611
A review of one-dimensional oceanic mixed-layer models
[AD-A103279] N82-13640

THERMODYNAMIC PROPERTIES
A preliminary analysis of the data from experiment 77-13 and final report on glass fining experiments in zero gravity
[NASA-CR-161864] N82-13154
Solubilities in multicomponent systems of nonspecific interactions N82-13205
Flammability and photo-stability of selected polymer systems N82-13236
Structure-property relationships in segmented elastomers: Small angle X-ray scattering, thermal, and mechanical studies N82-13240
Molecular dynamics calculations for sodium using pseudopotential theory
[DE81-029022] N82-13853

THERMODYNAMICS
Computational methods for internal flows with emphasis on turbomachinery
[NASA-TM-82764] N82-13113
Coexistence of non-registered monolayer and bilayer solid films N82-13931

THERMOELASTICITY
Thermoelastic instability in a seal-like configuration N82-13436

THERMOELECTRIC GENERATORS
Environmental and radiological safety studies: Interaction of (238) PuO2 heat sources with terrestrial and aquatic environments
[DE81-032019] , N82-13585

THERMOHYDRAULICS
Assessment of the computer code COBRA/CFTL — for thermal-hydraulic analysis of simulated gas-cooled fast breeder reactor cores
[DE81-027933] N82-13771

THERMOSETTING RESINS
Thermal performance of windows having high solar transmittance
[DE81-029872] N82-13524

THESES
Compilation of abstracts of dissertations theses, and research papers submitted by candidates for degrees, 1 October 1979 - 30 September 1980
[AD-A104124] N82-13974

THICKNESS
The effect of rotor blade thickness and surface finish on the performance of a small axial flow turbine
[NASA-TM-82726] N82-13114
A depositional model for major coal seams in the Rock Springs Formation, Upper Cretaceous, southwest Wyoming N82-13580

THICKNESS RATIO
An experimental investigation of the turbulent flow in the junction of a flat plate and a body of constant thickness N82-13102

THIN FILMS
Mathematical model of differential reflectometry for use in the investigation of thin film corrosion products N82-13232
Nonlinear optical effects in liquid crystals N82-13937
Fluorescent guest-host effect in scattering liquid crystals and new physical phengmena in thin liquid crystal films N82-13940
Electron beam evaporation of superconducting, A15 niobium-silicon N82-13944
HgCdTe fabrication using directed energy techniques
[AD-A105626] N82-13947
Computer programs for line shape analysis of X-ray diffraction peaks — thin film analysis
[PB81-227787] N82-13958
The growth and carrier transport properties of sputter deposited GaAs thin films doped with silicon and magnesium N82-13965

THIN PLATES
Thin-walled structures. Trapezoidal sheet bending and under shear stresses
[VTT-11] N82-13456

THREE DIMENSIONAL FLOW
Prediction and measurement of time-variant, three-dimensional flows in military aircraft intakes N82-13069
A numerical method for studying nacelle-jet-airfoil interaction in inviscid three-dimensional flow N82-13094
Numerical methods for the analysis of fluid-structure interaction problems N82-13381
Radiatively cooled stellar winds N82-14034

THREE DIMENSIONAL MOTION
An extension to N dimensions of the Von Karman equations N82-13441
Feasibility study of a procedure to detect and warn of low level wind shear
[NASA-CR-3480] N82-13621

THRUST
Integration of advanced exhaust nozzles N82-13075
Establishment of an experimental technique to provide accurate measurement of the installed drag of close coupled civil nacelle/airframe configurations, using a full span model with turbine powered engine simulators N82-13089

THRUST CONTROL
Development of a miniaturised digital thrust demand unit N82-13055
Thrust modulation methods for a subsonic V/STOL aircraft
[NASA-TM-82747] N82-13112

THRUST REVERSAL
Advanced exhaust nozzle technology N82-13078

THRUST VECTOR CONTROL
Advanced exhaust nozzle technology N82-13078
A real time Pegasus propulsion system model for VSTOL piloted simulation evaluation
[NASA-TM-82770] N82-13144

TIME DIVISION MULTIPLEXING
Short-range communications using diffusely scattered infrared radiation N82-13344
Time dependent recording of images transmitted over optical fibers
[DE81-026599] N82-13869

TIME FUNCTIONS
Time domain waveform inversion of short-period p-waves for nuclear explosion source time functions
[AD-A101123] N82-13598

TIME MEASUREMENT
Fiber optic analog and timing monitoring system for the Antares laser fusion program
·[DE81-026799] N82-13925

TIME OPTIMAL CONTROL
Modeling human tracking error in several different anti-tank systems N82-13899

TIME SERIES ANALYSIS
Computational problems in autoregressive moving average (ARMA) models N82-13696

TIME SHARING
Information storage in a decentralized computer system N82-13732

TIN
Upper critical fields and open states in A-15 superconductors, part 1. Vortices in two-dimensional superconductors, part 2 N82-13942

TISSUES (BIOLOGY)
The measurements of fluid shifts and of the tissue compliance along body axis in man
[BMFT-FB-W-80-011] N82-13654

TITANIUM
Titanium response to a nuclear radiation environment
[AD-A102516] N82-13220
Preliminary evaluation of ion implantation as a surface treatment to reduce wear of tool bits
[AD-A105063] N82-13261

TITANIUM BORIDES
Wear properties of electrodeposited titanium diboride coatings
[PB81-233314] N82-13199

TITANIUM COMPOUNDS
Local density studies of electronic structure and bonding in transition metal compounds N82-13936
Observation of high field DHVA effect and induced magnetism in single crystal TiBe sub 2
[DE81-025292] N82-13950

TITANIUM OXIDES
Quantitative investigations of mixed oxidation states of some first row transition metals in insulator matrices by photoelectron spectroscopy N82-13184

TOKAMAK DEVICES
Ion cyclotron resonance heating and its effect on confinement in Tokamaks N82-13896
Energy and momentum deposition to plasmas due to the lower hybrid wave by a finite source
[IPPJ-546] N82-13899
Oxygen transport and line emissions in a tokamak plasma
[IPPJ-544] N82-13900
Toroidal plasma current sustainment by lower hybrid waves in the WT-2 Tokamak
[IPPJ-545] N82-13901
Soft and hard major disruptions in the profile control experiment of the JIPP T-2 Tokamak
[IPPJ-547] N82-13902
Feedback plasma control in hybrid poloidal coil system
[IPPJ-542] N82-13905
Driving force of the ballooning instability
[DE81-023099] N82-13923

TOLLMEIN-SCHLICHTING WAVES
An experimental study of Tollmien-Schlichting wave cancellation — friction drag reduction N82-13120

TOLUENE
Evaluation of low-chlorine TATB from a production source
[DE81-025474] N82-13249

TOMOGRAPHY
Algorithms for imaging myocardial blood flow using X-ray computed tomography N82-13661

TOPOLOGY
Lagrangian fluid dynamics using the Voronoi-Delaunay mesh
[LA-UR-81-1421] N82-13393
The existence of nonzero maps from injectives to projectives N82-13606
On the relationship between analytical regularization and regularization by surgery N82-13823

TOROIDAL DISCHARGE
Toroidal plasma current sustainment by lower hybrid waves in the WT-2 Tokamak
[IPPJ-545] N82-13901

TOROIDAL PLASMAS
Toroidal plasma current sustainment by lower hybrid waves in the WT-2 Tokamak
[IPPJ-545] N82-13901
Review of recent EBT coupled ring-core stability theory N82-13911
Hot-electron ring stability at the University of Tennessee N82-13914
Numerical solutions of the EBT Radial eigenmode problem N82-13916
Analytical theory of interchange and compressional Alfven instabilities in EBT N82-13918
Kinetic stability analyses in a bumpy cylinder N82-13921
Effect of Beta limits on reactor performance in EBT N82-13922

On high beta equilibria of plasmas in the quasi-uniform current model: Influence of shaping the plasma cross section and of the second order in the inverse aspect ratio
[REPT-81-131] N82-13927
TORQUE
Computational problems in autoregressive moving average (ARMA) models N82-13698
TORQUERS
Experimental results with a six-degree-of-freedom force-reflecting hand controller N82-13707
TORSION
Wind-tunnel investigation of the effects of blade tip geometry on the interaction of torsional loads and performance for an articulated helicopter rotor
[NASA-TP-1926] N82-13107
TOTAL ENERGY SYSTEMS
Develop and test fuel cell powered on-site integrated total energy system. Phase 3: Full-scale power plant development
[NASA-CR-165328] N82-13490
TOXIC HAZARDS
Environmental hazard rankings of pollutants generated in coal gasification processes
[PB81-231696] N82-13576
Metabolism summaries of selected halogenated organic compounds in human and environmental media, a literature survey: First update
[PB81-232811] N82-13655
TRACE CONTAMINANTS
An automated system for global atmospheric sampling using B-747 airliners
[NASA-CR-165264] N82-13554
Detection of trace gases using high resolution spectroscopy
[AD-A104841] N82-13883
TRACE ELEMENTS
Investigations towards the understanding of surface treatment of propellant grains by means of trace elements
[BMVG-FBWT-79-14] N82-13253
Catalog of lunar mare basalts greater than 40 grams. Part 1: Major and trace chemistry, with megascopic descriptions and rock and thin section photographs
[NASA-TM-84065] N82-14040
TRACKING (POSITION)
A comparison of head and manual control for a position-control pursuit tracking task N82-13720
TRACKING FILTERS
AC harmonic filtering using controlled current injection N82-13348
TRAFFIC CONTROL
Measures of effectiveness of transportation systems management
[PB81-233884] N82-13984
TRAILING-EDGE FLAPS
An analytical and experimental study of the steady and unsteady airloads on a wing with oscillating control including a streamlined gap — wind tunnel test
[DFVLR-FB-81-18] N82-13119
Unsteady aeroelastic modeling and trailing-edge flap control of an experimental wing in a two dimensional wind tunnel N82-13122
TRAINING EVALUATION
American Airlines LOFT evaluation program N82-13130
Group 3: Performance evaluation and assessment N82-13133
TRAINING SIMULATORS
Guidelines for line-oriented flight training, volume 2
[NASA-CP-2184-VOL-2] N82-13123
Issues related to line-oriented flight training N82-13124
Line-oriented flight training: Northwest Airlines N82-13125
United Airlines LOFT training N82-13126
Eastern Airlines LOFT program N82-13127
Texas International Airlines LOFT program N82-13128
Delta Airlines LOFT training N82-13129
American Airlines LOFT evaluation program N82-13130
Group 1: Scenario design and development issues N82-13131
Group 2: Real time LOFT operations N82-13132
Results and experience with a small multipurpose tracking simulator N82-13153
A comparison of landing maneuver piloting technique based on measurements made in an airline training simulator and in actual flight N82-13685
TRAJECTORY ANALYSIS
Transitional ballistics of hypervelocity projectiles
[BMVG-FBWT-80-1] N82-13163
Optics of mass separator 1
[DE81-028242] N82-13886
TRANSFER FUNCTIONS
The persistence of a visual dominance effect in a telemanipulator task: A comparison between visual and electrotactile feedback N82-13677
Computer implementation of optimal multivariable controller design in the frequency domain N82-13785
TRANSFORMERS
Evaluation of advanced technologies for power transformers
[DE82-000793] N82-13368
TRANSIENT LOADS
MAGNA: A finite element program for the materially and geometrically nonlinear analysis of three-dimensional structures subjected to static and transient loading
[AD-A099454] N82-13448
TRANSIENT RESPONSE
Transient catalytic combustor model
[NASA-CR-165324] N82-13507
TRANSISTOR CIRCUITS
Charge-based modeling of capacitance in MOS transistors N82-13350
TRANSISTORS
Charge-based modeling of capacitance in MOS transistors N82-13350
TRANSITION FLOW
On a dusty-gas shock tube
[UTIAS-250] N82-13151
TRANSITION TEMPERATURE
Superconductivity of the A15 compound niobium aluminum N82-13932
TRANSMISSION LINES
The 30/20 GHz communications satellite trunking network study
[NASA-CR-165467] N82-13302
Bounding signal levels at terminations of multiconductor transmission line behind an aperture
[AD-A102031] N82-13362
TRANSMISSION LOSS
A statistical analysis of irregular quasi-optical lines (beam guides) with the aid of computer(s) N82-13324
TRANSMITTANCE
Thermal performance of windows having high solar transmittance
[DE81-028872] N82-13524
The effects of atmospheric turbulence on the atmospheric transmittance at optical frequencies N82-13606
TRANSMUTATION
Effect of low-temperature irradiation with (n alpha) helium production on tensile properties of 12 Cr-1 Mo VW-type steels
[DE81-028576] N82-13222
TRANSONIC FLOW
Transonic flows in an air inlet with large incidence and the effect of a blowing trap N82-13071
Model testing techniques for measuring inlet drag N82-13084
Calculation of wing-body-nacelle interference in subsonic and transonic potential flow N82-13095
Airframe-propulsion system aerodynamic interference predictions at high transonic Mach numbers including off-design engine airflow effects N82-13096
The transonic flow field for a fluidic-generator fuze assembly
[AD-A099616] N82-13398
Prediction of aerodynamic loads on aircrafts with external stores at transonic speeds N82-13813
TRANSPORT AIRCRAFT
Electronic flight deck displays for military transport aircraft N82-13050
Aerodynamics of Power Plant Installation
[AGARD-CP-301] N82-13085
Aerodynamic aspects of a high bypass ratio engine installation on a fuselage afterbody N82-13093
Further tests of a model-based scheme for predicting pilot opinion ratings for large commercial transports N82-13687
TRANSPORT PROPERTIES
Enhanced energy deposition symmetry by hot electron transport
[DE81-028774] N82-13861
Experimental and theorectical studies of excited state transport N82-13967
TRANSPORT THEORY
Transport properties of gaseous ions N82-13870
TRANSPORTATION
Barriers to the utilization of synthetic fuels for transportation
[NASA-CR-165517] N82-13243
Measures of effectiveness of transportation systems management
[PB81-233884] N82-13984
TRANSPORTATION ENERGY
Measures of effectiveness of transportation systems management
[PB81-233884] N82-13984
TRAPEZOIDAL TAIL SURFACES
Pressure distributions on three different cruciform aft-tail control surfaces of a wingless missile at Mach 1.60, 2.36, and 3.70. Volume 1: Trapezoidal tail
[NASA-TM-80097] N82-13110
TRAPPED PARTICLES
Trapped ion research
[AD-A098648] N82-13188
TRAPPING
Study of the physics of insulating films as related to the reliability of metal-oxide semiconductor devices
[AD-A105030] N82-13359
Charge trapping in interface doped MNOS structures N82-13930
TREES (MATHEMATICS)
Trellis data compression N82-13784
TRIAXIAL STRESSES
Effective stress-strain-strength behavior of silicate-grouted sand N82-13257
Elastic-plastic-fracture analysis of concrete structures N82-13462
Plastic flow and unstable deformation of geological materials N82-13587
TROPICAL METEOROLOGY
Annual data and verification tabulation, eastern North Pacific tropical storms and hurricanes 1980
[PB81-230336] N82-13636
TROPICAL STORMS
Some mean characteristics of Central North Pacific tropical cyclones
[PB81-230492] N82-13634
TRUCKS
Weight reduction potential of automobiles and light trucks: 1980 summary source document
[PB81-235756] N82-13987
TUBE HEAT EXCHANGERS
Dish stirling solar receiver combustor test program
[NASA-CR-165017] N82-13496
TURBIDITY
Laboratory measurements of physical, chemical, and optical characteristics of Lake Chicot sediment waters
[NASA-TP-1941] N82-13466
TURBINE BLADES
The effect of rotor blade thickness and surface finish on the performance of a small axial flow turbine
[NASA-TM-82726] N82-13114
Update on Specified European R and D Efforts. Part 1: Appendices
[DE81-026404] N82-13983
TURBINE PUMPS
Study of methods for applying and enhancing transfer film coatings of polytetrafluoroethylene (PTEE) to Space Shuttle Main Engine (SSME) High Pressure Oxygen Turbo Pump (HPOTP) bearings
[NASA-CR-161916] N82-13428
TURBINES
Wind tunnel tests of powered models: A comparison of two methods of simulating the jets of jet engines N82-13067
TURBOCOMPRESSORS
The effect of rotor blade thickness and surface finish on the performance of a small axial flow turbine
[NASA-TM-82726] N82-13114
TURBOFAN ENGINES
Sensor failure detection system — for the F100 turbofan engine
[NASA-CR-165515] N82-13145
TURBOGENERATORS
Development of advanced rotor-bearing systems for feedwater pumps, phase 2
[DE82-900376] N82-13431

TURBOJET ENGINE CONTROL
Compressor stall inducing installation effects of an engine control parameter for the CF-5 aircraft
N82-13085

TURBOMACHINERY
The role and implementation of different nacelle/engine simulation concepts for wind-tunnel testing in research and development work on transport aircraft N82-13086
Computation of unsteady two-dimensional inviscid flow in turbomachinery cascades N82-13401

TURBULENCE
An experimental study of turbulence in an urban environment N82-13618

TURBULENCE EFFECTS
Theoretical analysis of the effects of turbulence on a mobile parametric receiver
[AD-A101418] N82-13833

TURBULENT BOUNDARY LAYER
Calculation of transonic air-intakes using a computer package for inviscid and boundary layer flows
N82-13072
Application of the method of weighted residuals to the boundary layer momentum and turbulent stress transport equations N82-13374
Turbulent transfers in the atmospheric surface layer under varied stability conditions. A laboratory study
N82-13586

TURBULENT FLOW
An experimental investigation of the turbulent flow in the junction of a flat plate and a body of constant thickness N82-13102
Turbulent wake development behind streamlined bodies N82-13104
An experimental study of Tollmien-Schlichting wave cancellation — friction drag reduction N82-13120
Mixing of a passive scalar in isotropic and sheared homogeneous turbulence N82-13405

TURBULENT MIXING
Impacts of vertical scale distortion on turbulent mixing in hydraulic models N82-13382
Modeling of turbulent mixing at density discontinuities in nonsteady compressible flows
[AD-A105564] N82-13391

TURBULENT WAKES
Turbulent wake development behind streamlined bodies N82-13104

TWO DIMENSIONAL FLOW
Numerical methods for the analysis of fluid-structure interaction problems N82-13381
Computation of unsteady two-dimensional inviscid flow in turbomachinery cascades N82-13401

TWO PHASE FLOW
Numerical experiments on two-phase liquid-vapor mist transport N82-13402
Hydrodynamic computations of pressures generated by steam pipe rupture
[AD-A102046] N82-13449

TWO REFLECTOR ANTENNAS
Antenna (selected articles)
[AD-B060596] N82-13307
Two-mirror antenna for radio relay communication
N82-13308
Use of principle of regularization in direct and mixed problems of the theory of the synthesis of radiating systems N82-13309
Synthesis of a plane system of discrete emitters
N82-13310
Open resonators, formed by confocal mirrors with the variable reflection coefficient and the generalized hyper-spheroidal functions N82-13315
Antenna (selected articles)
[AD-B060573] N82-13318
Possibilities of phase correction on the small reflector in a two-reflector antenna N82-13322

U

U.S.S.R.
The development of domestic technology for television transmitting antennas N82-13319

U.S.S.R. SPACE PROGRAM
Plans for Comet Halley — ESA's Giotto mission, Japan's Planet-A mission, and the U.S.S.R. Venera-Halley mission N82-14024

ULTRASONIC RADIATION
Investigation of the vortex field generated by an airfoil model in a wind tunnel, using ultrasonic pulses
[MPIS-MITT-69] N82-13118
Ultrasonic attenuation and velocity studies in the alpha-alpha' solid solution phases of the Nb-H system
[DE81-026616] N82-13836

ULTRASONIC TESTS
The measurements of fluid shifts and of the tissue compliance along body axis in man
[BMFT-FB-W-80-011] N82-13654

ULTRASONICS
Acoustical speckle interferometry and applications in experimental mechanics N82-13626

ULTRAVIOLET SPECTRA
Ultraviolet structure of supersymmetric non-linear sigma-models N82-13843

ULTRAVIOLET SPECTROMETERS
X-ray and ultraviolet observations of stellar atmospheres N82-14029

ULTRAVIOLET SPECTROSCOPY
Temperature and density of geocoronal helium derived from a rocket-borne He resonance cell experiment
[BMFT-FB-W-80-015] N82-13605
Ultraviolet spectroscopy of comets using sounding rockets, IUE and Spacelab N82-14009

UNDERGROUND EXPLOSIONS
Suppression of coal dust explosion by water barrier in a conveyor belt entry
[PB81-233306] N82-13489
Time domain waveform inversion of short-period p-waves for nuclear explosion source time functions
[AD-A101123] N82-13596

UNDERGROUND STRUCTURES
Soviet UCG experience specifically related to field experiments in the United States
[DE81-026642] N82-13244

UNDERGROUND TRANSMISSION LINES
Review of fire test methods and incident data for portable electric cables in underground coal mines
[PB81-227878] N82-13272

UNDERWATER ACOUSTICS
Acoustical properties of sediments
[AD-A103726] N82-13638
Theoretical analysis of the effects of turbulence on a mobile parametric receiver
[AD-A101418] N82-13833
Mixed layer depth distributions from SVSTD data
[AD-A105669] N82-13834

UNDERWATER PHOTOGRAPHY
Video framerate, resolution and grayscale tradeoffs for undersea telemanipulator N82-13673

UNDERWATER TESTS
Acoustical properties of sediments
[AD-A103726] N82-13638

UNIVAC 1100 SERIES COMPUTERS
Sperry Univac ASCII COBOL level 5R2
[PB81-226692] N82-13748

UNSTEADY FLOW
An acquisition and analysis system for dynamic tests of air inlets N82-13062
A numerical study of laminar unsteady compressible flow over airfoils N82-13099
An initial study of the application of the numerical method of characteristics to unsteady flow analysis in partially filled gravity drainage sized pipes
[PB81-229189] N82-13399
Computation of unsteady two-dimensional inviscid flow in turbomachinery cascades N82-13401

UNSTEADY STATE
Unsteady aeroelastic modeling and trailing-edge flap control of an experimental wing in a two dimensional wind tunnel N82-13122

UPWELLING WATER
Biological and physical oceanographic observations pertaining to the trawl fishery in a region of persistent coastal upwelling
[NASA-TM-81332] N82-13637
The propagation of inertial-internal waves in coastal upwelling regions N82-13645

URBAN PLANNING
The evaluation of technology R&D: A continuing Dilemma
[RAND/P-6655] N82-13960

URBAN RESEARCH
The evaluation of technology R&D: A continuing Dilemma
[RAND/P-6655] N82-13960

URINALYSIS
Application of electrochemistry to biochemical problems — immunoassay technique using differential pulse anodic stripping voltammetry N82-13179

USER MANUALS (COMPUTER PROGRAMS)
Computer program for optimum nonlinear dynamic design of reinforced concrete slabs under blast loading (CBARCS)
[AD-A104253] N82-13262
MAGNA: A finite element program for the materially and geometrically nonlinear analysis of three-dimensional structures subjected to static and transient loading
[AD-A099454] N82-13448
On the formal specification of computer communication protocols
[AD-A100189] N82-13738
Playbk-routines to drive a digital-to-analog converter
[AD-A102049] N82-13741
Software design and documentation language: User's guide for SDDL release 4
[NASA-CR-165025] N82-13767
User's manuals for DYNA3D and DYNAP: Nonlinear dynamic analysis of solids in three dimensions
[DE81-026360] N82-13772
Mesh generating and plotting facilities of the LAMCAL program
[EUR-7099-EN] N82-13778
Manual for the program CASLE: Cycle analysis and second-life evaluation
[DE81-027487] N82-13971

V

V/STOL AIRCRAFT
Thrust modulation methods for a subsonic V/STOL aircraft
[NASA-TM-82747] N82-13112
A real time Pegasus propulsion system model for VSTOL piloted simulation evaluation
[NASA-TM-82770] N82-13144

VACUUM
New exact and asymptotic solutions of the stationary vacuum Einstein equations N82-13973

VACUUM APPARATUS
Dynamic mass spectrometry: A residual gas analysis method and some applications
[DE81-026230] N82-13195

VACUUM EFFECTS
Effect of vacuum exhaust pressure on the performance of MHD ducts at high D-field
[NASA-TM-82750] N82-13906

VALENCE
Interatomic potential energy hypersurfaces for molecules N82-13841
Effects of pressure on the mixed valent properties of Ce and its intermetallic compounds
[DE81-026572] N82-13953

VAN DER WAAL FORCES
Mechanistic studies of electron exchange kinetics using ab initio
[DE81-026096] N82-13856
Molecular beam electric resonance studies of weakly bound complexes N82-13867

VANADIUM
Upper critical fields and span states in A-15 superconductors, part 1. Vortices in two-dimensional superconductors, part 2 N82-13942

VAPOR DEPOSITION
Advanced indium antimonide monolithic charge coupled infrared imaging arrays
[NASA-CR-165799] N82-13356
The chemical vapor deposition of iridium
[AD-A104582] N82-13360
Design procedures for a commercial scale thermal evaporation system to deposit CdS for solar cell manufacture N82-13551
The physical and electrical properties of polycrystalline-silicon N82-13964

VAPOR PHASES
Surface characterization of dispersed supported metal catalysts using a 'time lapse' dynamic pulse technique N82-13177
Controlled-flash pyrolysis
[DE82-000284] N82-13196
Transient catalytic combustor model
[NASA-CR-165324] N82-13507

VAPORIZING
Properties of matter at ultra-high pressures
[DE81-026504] N82-13190

High-pressure shrouded water sprays for dust control
[PB81-231458] N82-13483

VARIABLE GEOMETRY STRUCTURES
The subsonic performance of practical military variable area convergent nozzles N82-13076

VARIATIONAL PRINCIPLES
A mixed variational principle for finite element analysis N82-13789

VARIATIONS
Optical brightness variations in a sample of nineteen radio-quiet quasi-stellar objects N82-14030

VECTOR ANALYSIS
Simulation studies on the computation of the gravity vector in space from surface data considering the topography of the Earth N82-13612
Solution of single linear tridiagonal systems and vectorization of the ICCG algorithm on the Cray 1 — laser fusion
[DE81-025461] N82-13773

VECTOR CURRENTS
Spectral functions in quantum chromodynamics and applications N82-13869

VECTORCARDIOGRAPHY
Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering N82-13648

VEGETATION
Development of peatlands in northern Minnesota
[DE82-000673] N82-13475

VEGETATION GROWTH
Ecology and distribution of the Benthic community on the Monterey Breakwater, Monterey, California
[AD-A102047] N82-13555

VELOCITY DISTRIBUTION
An experimental investigation of the flow past a finite circular cylinder at a low subcritical Reynolds number N82-13105
Rayleigh-Taylor stability for a shock wave-density discontinuity interaction
[DE81-028707] N82-13394

VELOCITY MEASUREMENT
Measurement of surface recombination velocity for silicon solar cells using a scanning electron microscope with pulsed beam
[JPL-PUB-81-64] N82-13494

VENTILATION
Control of methane by ventilation of shafts during raise drilling
[PB81-234502] N82-13487

VERBAL COMMUNICATION
Application of computer voice input/output
[DE81-028769] N82-13743

VERTICAL AIR CURRENTS
Numerical study of multicellular natural convection in vertical cavities N82-13403

VERTICAL PERCEPTION
Dynamic measurement of human vertical fusional response N82-13660

VIBRATION
On the vibrational energy transfer processes of polyatomic molecules in the gas and solid phases N82-13865

VIBRATION DAMPING
On the modeling and control of flexible space structures N82-13168
Development of advanced rotor-bearing systems for feedwater pumps, phase 2
[DE82-900376] N82-13431

VIBRATION EFFECTS
Influence of sine, and random, whole-body vibration on visual acuity
[BMVG-FBWT-79-17] N82-13653

VIBRATIONAL SPECTRA
Statistical energy analysis computer program, user's guide
[NASA-CR-161913] N82-13764

VIBRATIONAL STRESS
Assessment of rotor-bearing dynamics: A planning study for the utility industry
[DE82-900378] N82-13430

VIDEO DATA
Digital video bandwidth compression systems employing block truncation coding N82-13290
Video framerate, resolution and grayscale tradeoffs for undersea telemanipulator N82-13673

VINYL COPOLYMERS
Polymers with mesomorphic organization in the side chains from vinyl monomers with mesogenic or potentially mesogenic elements N82-13234
Gas-solid chromatography on cation forms of lightly sulfonated porous polymers N82-13237

VINYL POLYMERS
Grafting of 2 (2-hydroxy-5-vinylphenyl) 2H-benzotriazole onto polymers with aliphatic groups. Synthesis and polymerization of 2 (2-hydroxy-5-isopropenylphenyl) 2H-benzotriazole and a new synthesis of 2 (2-hydroxy-5-vinylphenyl) 2H-benzotriazole
[NASA-CR-165016] N82-13171

VISCOELASTICITY
A nonlinear conservation law with memory — history boundary value problems in viscoelastic motion
[AD-A103882] N82-13791

VISCOSITY
Experimental determination of the effect of physical properties on the drag of liquid drops N82-13380

VISCOUS FLOW
Computational methods for internal flows with emphasis on turbomachinery
[NASA-TM-82764] N82-13113
Separate numerical treatment of attached and detached flow regions in general viscous flows N82-13375
Technical evaluation report on the Fluid Dynamics Panel Symposium on Computation of Viscous-Inviscid Interactions
[AGARD-AR-171] N82-13384
Underexpanded free jets and their interaction with adjacent surfaces
[LOG-J12276] N82-13385

VISIBILITY
Use of a helmet-mounted matrix display for presenting energy-maneuverability information during simulated close combat N82-13061

VISUAL ACUITY
Influence of sine, and random, whole-body vibration on visual acuity
[BMVG-FBWT-79-17] N82-13653

VISUAL AIDS
Group 1: Scenario design and development issues N82-13131

VISUAL FIELDS
Monocular vision and tactical flight on the helicopter N82-13059

VISUAL OBSERVATION
On observing comets for nuclear rotation N82-14015

VISUAL SIGNALS
Visual/motion cue mismatch in a coordinated roll maneuver
[NASA-CR-166259] N82-13664

VOICE
Application of computer voice input/output
[DE81-028769] N82-13743

VOICE COMMUNICATION
Voice control of the space shuttle video system N82-13719

VOICE DATA PROCESSING
Application of computer voice input/output
[DE81-028769] N82-13743

VOIDS
Application of the theory of linear elastic materials with voids
[DE81-027903] N82-13452

VOLCANOES
The crustal structure of Kilauea and Mauna Loa volcanoes, Hawaii, from seismic refraction and gravity data N82-13583

VOLTAGE CONVERTERS (DC TO DC)
Validation, modeling, and computer assisted design program for power converters — confirmation of dc/dc converters predicted performance
[ESTEC/DERA-8/7206] N82-13370

VOLTAGE REGULATORS
Distributed photovoltaic systems: Utility interface issues and their present status
[NASA-CR-165019] N82-13492

VORTEX GENERATORS
A device for simulating at a compressor bench an air inlet with large incidence N82-13081

VORTICES
An approximate analytical method for vortex-lift and center of pressure on the slender wing
[NASA-TM-83198] N82-13045
Transmission of sound across a vortex layer enclosing a cylindrical column of jet N82-13838
Upper critical fields and span states in A-15 superconductors, part 1. Vortices in two-dimensional superconductors, part 2 N82-13942

VORTICITY
Separate numerical treatment of attached and detached flow regions in general viscous flows N82-13375

VOYAGER 2 SPACECRAFT
Planetary radio astronomy observations from Voyager-2 near Saturn
[NASA-TM-83856] N82-14037

W

WAKES
Underexpanded free jets and their interaction with adjacent surfaces
[LOG-J12276] N82-13385

WALKING
Pedestrian movement characteristics on building ramps
[PB81-229163] N82-13988

WALL FLOW
Influence of wall roughness, adverse pressure gradient and heat transfer on wall shear stress measurements with Preston tubes
[ILR-50] N82-13398

WARHEADS
On-board data recorder for hard-target weapons
[DE81-028645] N82-13408

WARNING SYSTEMS
Environment simulator for radar signals on the digital level
[FOA-A-30025-E4] N82-13343

WASTE DISPOSAL
Technology assessment of solar energy systems: Availability and impacts of woody biomass utilization in the Pacific Northwest
[DE82-000705] N82-13535
Nitrogen and phosphorus reactions in overland flow of wastewater
[PB81-238311] N82-13574

WASTE ENERGY UTILIZATION
Power-plant fly-ash utilization: A chemical-processing perspective
[DE81-025452] N82-13191
Flow distribution control characteristics in marine gas turbine waste-heat recovery systems. Phase 1: Flow distribution characteristics and control in diffusers
[AD-A104580] N82-13390
Design and development of a reciprocating low-temperature freon expander
[DE81-028609] N82-13392
Residual-energy-applications program environmental analysis report — industrial scale waste heat recovery equipment and utilization
[DE81-027538] N82-13525
Residual-energy-application program: EAST facility requirements document, volume 1
[DE81-027536] N82-13526
Biomass energy systems: Descriptions and employment requirements for typical operations
[DE82-000236] N82-13536
New and renewable energy in the United States of America
[DE81-030887] N82-13539

WASTE TREATMENT
Treatment of biomass gasification wastewaters using reverse osmosis
[DE82-000896] N82-13566
Treatment of biomass-gasification wastewaters by wet-air oxidation
[DE82-000935] N82-13567

WASTE UTILIZATION
Treatment of biomass gasification wastewaters using reverse osmosis
[DE82-000896] N82-13566
Treatment of biomass-gasification wastewaters by wet-air oxidation
[DE82-000935] N82-13567

WASTES
Beneficiation with magnetic fluids
[PB81-227126] N82-13485

WATER
Molecular interactions in amphiphilic association structures N82-13206

WATER CONSUMPTION
Five-year Hawaii water research agenda, 1982-1987
[PB81-231912] N82-13479
Water and energy usage in coal preparation
[PB81-238248] N82-13186

WATER DEPTH
ICAPS oceanographic data for the Indian Ocean
[AD-A103173] N82-13641
WATER HEATING
Appliance efficiency and the solar building
[DE81-029073] N82-13265
WATER INJECTION
The occurrence and control of land subsidence due to ground water withdrawal with special reference to the San Joaquin and Santa Clara Valleys, California
N82-13466
WATER MANAGEMENT
Five-year water resources research plan, 1982-1987
[PB81-231938] N82-13479
Massachusetts' five-year water resources research needs, 1982-1987
[PB81-231961] N82-13480
WATER POLLUTION
Transport and reaction of heavy metals in Alaskan fjord estuaries
[DE81-028319] N82-13474
Massachusetts' five-year water resources research needs, 1982-1987
[PB81-231961] N82-13480
Deep Ocean Mining Environmental Study. Environmental effects of commercial-scale mining
[PB81-227753] N82-13484
WATER QUALITY
Five-year Hawaii water research agenda, 1982-1987
[PB81-231912] N82-13478
Nitrogen and phosphorus reactions in overland flow of wastewater
[PB81-239311] N82-13574
WATER RESOURCES
Alaska's Water resources problems and research needs: Institute of Water Resources, five-year research plan
[PB81-231920] N82-13477
Five-year Hawaii water research agenda, 1982-1987
[PB81-231912] N82-13478
Five-year water resources research plan, 1982-1987
[PB81-231938] N82-13479
Massachusetts' five-year water resources research needs, 1982-1987
[PB81-231961] N82-13480
The District of Columbia Five-Year Water Resources Research Program Plan, 1982-1987
[PB81-234882] N82-13482
WATER RUNOFF
Regional hydrologic models for climatology: An application to three Wisconsin watersheds
N82-13467
Analysis of the development of shallow groundwater supplies by pumping from ponds
[PB81-231904] N82-13476
WATER TABLES
Preliminary investigation of a shallow ground-water flow system associated with Connetquot Brook, Long Island, New York
[PB81-229751] N82-13481
WATER TREATMENT
The chemistry of saline water chlorination
N82-13178
Salt removal from brackish water by continuous processes with amphoteric, thermally regenerable ion-exchange resins N82-13202
Concentration of organic compounds in water: A literature survey
[DE81-026517] N82-13556
WATER VAPOR
Effects of hygrothermal conditioning on the dynamic behavior of resin matrix composites N82-13172
An apparatus and procedure for calibrating a water vapor analyzer in the 0.1- to 15-ppm range
[PB81-231185] N82-13413
DMSP water vapor radiances: A preliminary evaluation
[AD-A099305] N82-13625
WATER WAVES
Surface signs of internal ocean dynamics
[AD-A101380] N82-13642
WATERPROOFING
Suppression of coal dust explosion by water barrier in a conveyor belt entry
[PB81-233306] N82-13489
WATERSHEDS
Regional hydrologic models for climatology: An application to three Wisconsin watersheds
N82-13467
WAVE AMPLIFICATION
Energy characteristics of periodic systems of radiators: Efficiency and output coefficient of power, directive gain, and gain factor N82-13306
WAVE ATTENUATION
Three Bureau of Mines optical dust probes
[PB81-231441] N82-13412
WAVE DIFFRACTION
Antenna (selected articles)
[AD-A106476] N82-13294
The use of the Kirchoff method for asymptotic solution of a problem of the diffraction of a plane wave on dielectric bodies of revolution N82-13295
Acoustic boundary wave generation and shadowing at a seamount
[AD-A104594] N82-13832
WAVE DISPERSION
Method of the study of complex waveguide junctions with one or several regions of communication
N82-13316
A statistical analysis of irregular quasi-optical lines (beam guides) with the aid of computer(s)
N82-13324
Pulse propagation in dispersive media with applications to plasmas N82-13897
WAVE EXCITATION
Thin magnetic impedance antennas N82-13314
Energy and momentum deposition to plasmas due to the lower hybrid wave by a finite source
[IPPJ-546] N82-13899
WAVE FRONT DEFORMATION
The influence of pressure waves on measurements of high speed train noise --- high pass filtering of pressure waves
[DFVLR-FB-81-06] N82-13837
WAVE FRONTS
Evaluation of HALO deconvolution schemes
[AD-A105125] N82-13878
WAVE FUNCTIONS
Schwinger's variational principle for electron-ion scattering N82-13844
Compton scattering in a uniform, constant magnetic field N82-13968
WAVE GENERATION
An experimental study of Tollmien-Schlichting wave cancellation --- friction drag reduction N82-13120
WAVE PACKETS
Pulse propagation in dispersive media with applications to plasmas N82-13897
WAVE PROPAGATION
Antenna (selected articles)
[AD-A106476] N82-13294
The use of the Kirchoff method for asymptotic solution of a problem of the diffraction of a plane wave on dielectric bodies of revolution N82-13295
Millimeter wave alternate route study
[AD-A102303] N82-13339
The relationship between the acoustic impedance and unsteady flow field near the orifice of a two dimensional Helmholtz resonator in grazing flow
N82-13378
Large amplitude compression and shear wave propagation in impact-loaded PMMA
[AD-A105953] N82-13450
Surface waves in strong ground motion with application to offshore environments N82-13584
The effects of atmospheric turbulence on the atmospheric transmittance at optical frequencies
N82-13608
Surface signs of internal ocean dynamics
[AD-A101380] N82-13642
The propagation of inertial-internal waves in coastal upwelling regions N82-13645
Theoretical analysis of the effects of turbulence on a mobile parametric receiver
[AD-A101418] N82-13833
Beam propagation in the frequency-converted subsystems of Nova and Novette
[DE81-028253] N82-13862
WAVE RESISTANCE
Optimum Design of Static, Earthquake, and Wind Steel Structures (ODSEWS-2D)
[PB81-232736] N82-13271
WAVE SCATTERING
Energy characteristics of periodic systems of radiators: Efficiency and output coefficient of power, directive gain, and gain factor N82-13306
Method of the study of complex waveguide junctions with one or several regions of communication
N82-13316
WAVEFORMS
Time domain waveform inversion of short-period p-waves for nuclear explosion source time functions
[AD-A101123] N82-13596
WAVEGUIDE ANTENNAS
Method of the study of complex waveguide junctions with one or several regions of communication
N82-13316
Experimental and theoretical investigations with laboratory models of phased array antenna
[BMVG-FBWT-79-21] N82-13341
WAVEGUIDE LASERS
Long-term operation of a sealed waveguide CO sub 2 laser
[AD-A105261] N82-13420
WAVEGUIDES
Antenna (selected articles)
[AD-A106476] N82-13294
Cophased directed surface wave splitters using dielectric waveguides N82-13296
Directed dividers on the metal-dielectric waveguides N82-13326
WAVELENGTH DIVISION MULTIPLEXING
Time dependent recording of images transmitted over optical fibers
[DE81-026599] N82-13889
WEAK ENERGY INTERACTIONS
Adaptation of the TH Epsilon Mu formalism for the analysis of the equivalence principle in the presence of the weak and electroweak interaction
[NASA-TM-82450] N82-13851
WEAK INTERACTIONS (FIELD THEORY)
Relativistic many-body perturbation theory of parity-violation in atoms N82-13845
Long-range interactions in lattice field theory
N82-13941
WEAPON SYSTEMS
Performance of chemical analogs of the explosive CP
[DE81-025836] N82-13251
WEAR
Examination of early wear detection in diesel engines by energy dispersive radioisotope X ray fluorescence analysis
[BMVG-FBWT-79-19] N82-13432
WEAR TESTS
Wear properties of electrodeposited titanium diboride coatings
[PB81-233314] N82-13199
WEATHER FORECASTING
Forecasting skill --- weather forecasting
[AD-A099778] N82-13626
WEATHER MODIFICATION
The Sierra Cooperative Pilot Project: Precipitation management research in the Sierra Nevada
[PB81-234452] N82-13630
WEATHERING
Practical aspects of instrumentation system installation, volume 13
[NASA-TM-84067] N82-13140
Rates and mechanisms of chemical weathering in an organic environment at Panolo Mountain, Georgia
N82-13615
WEIBULL DENSITY FUNCTIONS
Confidence intervals for the reliability of a future system configuration
[AD-A105031] N82-13614
WEIGHTING FUNCTIONS
Weighting of aptitude components based on differences in technical school difficulty
[AD-A102045] N82-13725
WEIGHTLESSNESS
A preliminary analysis of the data from experiment 77-13 and final report on glass fining experiments in zero gravity
[NASA-CR-161884] N82-13154
WELDED JOINTS
Residual stress and deformation in circumferential pipe-joint welds
[PB81-232464] N82-13458

WELDED STRUCTURES
Substructure of 316 stainless steel pipe weldments — liquid metal fast breeder reactor materials
N82-13215

WELDING
Behavior of plane panels in ship structures with local initial deflections
[BMVG-FBWT-80-18] N82-13455

WEST COMET
Narrow passband imagery of comets — Comet West N82-14014

WEST VIRGINIA
Pyrolytic characterization of the organic matter in selected coals and in the Devonian shales of southern West Virginia N82-13578

WHEEL BRAKES
The influence of high temperature on braking — wheel brakes N82-13433

WIND DIRECTION
Atmospheric dispersion forecasts at selected locations in the United States
[PB81-230443] N82-13635

WIND MEASUREMENT
Biological and physical oceanographic observations pertaining to the trawl fishery in a region of persistent coastal upwelling
[NASA-TM-81332] N82-13637

WIND PROFILES
Network wind power over the Pacific northwest. Appendix 1: Wind statistics summaries for the wind power data stations
[DE81-029291] N82-13518

WIND SHEAR
Feasibility study of a procedure to detect and warn of low level wind shear
[NASA-CR-3480] N82-13621

WIND TUNNEL MODELS
Wind tunnel test and analysis techniques using powered simulators for civil nacelle installation drag assessment N82-13088
Establishment of an experimental technique to provide accurate measurement of the installed drag of close coupled civil nacelle/airframe configurations, using a full span model with turbine powered engine simulators N82-13089
Pressure distributions on three different cruciform aft-tail control surfaces of a wingless missile at Mach 1.60, 2.36, and 3.70. Volume 1: Trapezoidal tail
[NASA-TM-80097] N82-13110
Thrust modulation methods for a subsonic V/STOL aircraft
[NASA-TM-82747] N82-13112

WIND TUNNEL TESTS
Performance of highly integrated inlets for supersonic aircraft N82-13066
A device for simulating at a compressor bench an air inlet with large incidence N82-13081
Wind tunnel tests of powered models: A comparison of two methods of simulating the jets of jet engines
N82-13087
Wind tunnel test and analysis techniques using powered simulators for civil nacelle installation drag assessment N82-13088
Studies of air inlets at Reynolds numbers comparable to flight in ONERA's F1 and S1MA wind tunnels
N82-13091
The influence of closed-coupled, rear fuselage mounted nacelles on the design of an advanced high speed wing N82-13092
Some observations of surface pressures and the near wake of a blunt trailing edge airfoil N82-13100
Wind-tunnel investigation of the effects of blade tip geometry on the interaction of torsional loads and performance for an articulated helicopter rotor
[NASA-TP-1926] N82-13107
Crossflow effects on steady and fluctuating pressures on an ogive-cylinder cone-frustum model in supersonic separated flow
[NASA-TP-1961] N82-13108
Pressure distributions on three different cruciform aft-tail control surfaces of a wingless missile at Mach 1.60, 2.36, and 3.70. Volume 1: Trapezoidal tail
[NASA-TM-80097] N82-13110
Force measurements on a reflex cambered delta wing
[LOG-C4073] N82-13111
Final report on the FueFo-4 major theme: Interference drag with airframe/engine integration on fighter aircraft
[BMVG-FBWT-79-20] N82-13116
Investigation of the vortex field generated by an airfoil model in a wind tunnel, using ultrasonic pulses
[MPIS-MITT-69] N82-13118
An analytical and experimental study of the steady and unsteady airloads on a wing with oscillating control including a streamlined gap — wind tunnel test
[DFVLR-FB-81-18] N82-13119
Unsteady aeroelastic modeling and trailing-edge flap control of an experimental wing in a two dimensional wind tunnel N82-13122
The transonic flow field for a fluidic-generator fuze assembly
[AD-A099616] N82-13386

WIND VELOCITY
Network wind power over the Pacific northwest. Appendix 1: Wind statistics summaries for the wind power data stations
[DE81-029291] N82-13518
Numerical wind-speed simulation model
[DE82-000958] N82-13627

WIND VELOCITY MEASUREMENT
Compensation for use of monthly-averaged winds in numerical modeling
[NASA-TM-83855] N82-13623

WINDOWS (APERTURES)
Thermal performance of windows having high solar transmittance
[DE81-028872] N82-13524

WINDPOWER UTILIZATION
Spectra over complex terrain
[DE81-028734] N82-13473
Network wind power over the Pacific northwest. Appendix 1: Wind statistics summaries for the wind power data stations
[DE81-029291] N82-13518
Wind Power: Research on network wind power over the Pacific northwest. Executive summary
[DE81-029360] N82-13519
Application of Bayesian analysis for wind energy site evaluation N82-13619
Numerical wind-speed simulation model
[DE82-000958] N82-13627

WING FLAPS
Unsteady aeroelastic modeling and trailing-edge flap control of an experimental wing in a two dimensional wind tunnel N82-13122

WING LOADING
An analytical and experimental study of the steady and unsteady airloads on a wing with oscillating control including a streamlined gap — wind tunnel test
[DFVLR-FB-81-18] N82-13119

WING NACELLE CONFIGURATIONS
Establishment of an experimental technique to provide accurate measurement of the installed drag of close coupled civil nacelle/airframe configurations, using a full span model with turbine powered engine simulators N82-13089
Evaluation of an experimental technique to investigate the effects of the engine position on engine/pylon/wing interference N82-13090
A numerical method for studying nacelle-jet-airfoil interaction in inviscid three-dimensional flow
N82-13094
Aerodynamics of an airfoil with a jet issuing from its surface N82-13121

WING PROFILES
Refinement of a method for determining the induced and profile drag of a finite wing from detailed wake measurements N82-13103

WING TIP VORTICES
Refinement of a method for determining the induced and profile drag of a finite wing from detailed wake measurements N82-13103
Investigation of the vortex field generated by an airfoil model in a wind tunnel, using ultrasonic pulses
[MPIS-MITT-69] N82-13118

WINGS
Calculation of wing-body-nacelle interference in subsonic and transonic potential flow N82-13095
Aerodynamics of an airfoil with a jet issuing from its surface N82-13121
Prediction of aerodynamic loads on aircrafts with external stores at transonic speeds N82-13813

WISCONSIN
Regional hydrologic models for climatology: An application to three Wisconsin watersheds
N82-13467

WOOD
High altitude testing of residential wood-fired combustion equipment
[PB81-226151] N82-13575

WORKLOADS (PSYCHOPHYSIOLOGY)
Evaluation of a pilot workload assessment device to test alternate display formats and control handling qualities N82-13082
Proceedings of the Seventeenth Annual Conference on Manual Control
[NASA-CR-165005] N82-13665
Pupillometric measurement of operator workload
N82-13666
Subjective rating scales as a workload
N82-13669
Physiological assessment of operator workload during manual tracking. 1: Pupillary responses
N82-13670
Further tests of a model-based scheme for predicting pilot opinion ratings for large commercial transports
N82-13687
Load compensating reactions to perturbations at wrist joint in normal man N82-13708

WRIST
Load compensating reactions to perturbations at wrist joint in normal man N82-13708

X

X RAY ANALYSIS
Examination of early wear detection in diesel engines by energy dispersive radioisotope X ray fluorescence analysis
[BMVG-FBWT-79-19] N82-13432
Proton-induced X-ray emission analysis: A complement to analytical methods used in environmental studies
[DE81-029012] N82-13557
Algorithms for imaging myocardial blood flow using X-ray computed tomography N82-13661
Defect structure and properties of intermetallic compound beta-LiAl N82-13959

X RAY ASTRONOMY
Concept and feasibility study (phase A) for the X-ray satellite ROBISAT. Executive summary
[BMFT-FB-W-80-027] N82-13164

X RAY DIFFRACTION
Computer programs for line shape analysis of X-ray diffraction peaks — thin film analysis
[PB81-227787] N82-13958

X RAY FLUORESCENCE
Proton-induced X-ray emission analysis: A complement to analytical methods used in environmental studies
[DE81-029012] N82-13557

X RAY SOURCES
Transition radiation as an X-ray source
N82-13840

X RAY SPECTROSCOPY
Low energy X-ray spectrometer
[DE81-025824] N82-13407
Spectrometric properties of crystals for low-energy X-ray diagnostics
[DE81-028763] N82-13954

X RAY TELESCOPES
X-ray and ultraviolet observations of stellar atmospheres N82-14029

XENON
A study of the formation and structure of small clusters of noble gases and sulfur hexafluoride formed in Laval Nozzle molecular beams N82-13201
Theoretical equations of state for metals
[DE81-028743] N82-13224
Coexistence of non-registered monolayer and bilayer solid films N82-13931

Z

ZENER EFFECT
Laser induced charge transfer collisions
N82-13418

ZETA PINCH
Numerical solutions of the EBT Radial eigenmode problem N82-13918

ZINC
Insoluble anodes for electrowinning zinc and other metals
[PB81-227365] N82-13227

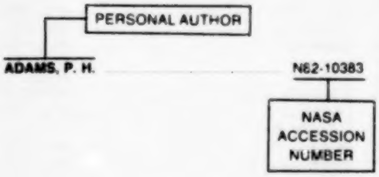
The trace metal stratigraphy and recent sedimentary history of anthropogenous particulates on the San Pedro Shelf, California N82-13579

ZIRCONIUM TITANATES

Minimum/constant voltage PLZT electrooptic shutters -- lead lanthanum zirconate titanate wafers for flash protective goggles
[DE81-029846] N82-13888

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



Listings in this index are arranged alphabetically by personal author. The NASA accession number denotes the number by which the citation is identified.

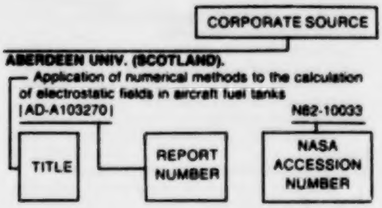
CORPORATE SOURCE INDEX

Typical Corporate Source Index Listing



CORPORATE SOURCE
ABERDEEN UNIV. (SCOTLAND).
Application of numerical methods to the calculation of electrostatic fields in aircraft fuel tanks
[AD-A103270]
N82-10033
TITLE
REPORT NUMBER
NASA ACCESSION NUMBER

Listings in this index are arranged alphabetically by corporate source. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The NASA accession number denotes the number by which the citation is identified. The titles are arranged under each corporate source in ascending accession number order.

A

ABERDEEN PROVING GROUND, MD.
Electronic measurement of airblast overpressure
[AD-A105379] N82-13389

ACADEMIA SINICA, PEKING (CHINA).
Satellite attitude control with decomposed controller
[LOG-G666] N82-13160

ACADEMY OF SCIENCES (USSR), DUSHANBE.
New problems of cometary observations from space N82-13994

ACUREX CORP., MOUNTAIN VIEW, CALIF.
Titanium response to a nuclear radiation environment
[AD-A102516] N82-13220
Pilot-scale development of a low-NOx coal-fired tangential system
[PB81-242513] N82-13270
Development of a high-temperature durable catalyst for use in catalytic combustors for advanced automotive gas turbine engines
[NASA-CR-165396] N82-13510

ADELAIDE UNIV. (AUSTRALIA).
Determination of two-stroke engine exhaust noise by the method of characteristics
[NASA-TM-84061] N82-13827

ADVISORY GROUP FOR AEROSPACE RESEARCH AND DEVELOPMENT, NEUILLY-SUR-SEINE (FRANCE).
The impact of new guidance and control systems on military aircraft cockpit design
[AGARD-CP-312] N82-13046
Aerodynamics of Power Plant Installation
[AGARD-CP-301] N82-13065
Practical aspects of instrumentation system installation, volume 13
[NASA-TM-84067] N82-13140
Fatigue Test Methodology
[AGARD-LS-118] N82-13274
Technical evaluation report on the Fluid Dynamics Panel Symposium on Computation of Viscous-Inviscid Interactions
[AGARD-AR-171] N82-13384

AEG-TELEFUNKEN, BACKNANG (WEST GERMANY).
Investigation of modulation methods and system aspects for regenerative satellite-repeater
[BMFT-FB-W-80-024] N82-13342

AEG-TELEFUNKEN, WARSTEIN (WEST GERMANY).
Imaging systems for fast electrophotographic processes
[BMFT-FB-T-80-183] N82-13411

AERITALIA S.P.A., TORINO (ITALY).
Subsonic military aircraft engine intake: An integrated theoretical experiment design
N82-13073

AEROCHEM RESEARCH LABS., INC., PRINCETON, N. J.
Rate coefficients of combustion/fuel conversion reactions by high-temperature photochemistry
[DE81-027965] N82-13192

AEROJET NUCLEAR SYSTEMS CO., SACRAMENTO, CALIF.
Low-thrust chemical propulsion system pump technology
[NASA-CR-165219] N82-13427

AERONAUTICAL SYSTEMS DIV., WRIGHT-PATTERSON AFB, OHIO.
Color CRT displays for the cockpit N82-13051

AEROSPACE CORP., EL SEGUNDO, CALIF.
Measurements of heavy ions in the low altitude regions of the outer zone
[AD-A099453] N82-13600
Two-satellite study of proton drift on quiet days
[AD-A104736] N82-13601
Statistical analysis of accelerated temperature aging of semiconductor devices
[AD-A099439] N82-13946
Evaluation of techniques for reducing in-use automotive fuel consumption
[PB81-233296] N82-13985

AEROSPACE MEDICAL DIV. AEROSPACE MEDICAL RESEARCH LABS. (6570TH), WRIGHT-PATTERSON AFB, OHIO.
A comparison of head and manual control for a position-control pursuit tracking task N82-13720

AEROSPACE MEDICAL RESEARCH LABS., WRIGHT-PATTERSON AFB, OHIO.
A study on task difficulty and acceleration stress
N82-13688

AIR FORCE GEOPHYSICS LAB., HANSCOM AFB, MASS.
Joint agency Doppler technology tests
[AD-A100206] N82-13335
Field tests of a surface ice accretion measurement system
[AD-A100282] N82-13624
DMSP water vapor radiances: A preliminary evaluation
[AD-A099305] N82-13625

AIR FORCE HUMAN RESOURCES LAB., BROOKS AFB, TEX.
Weighting of aptitude components based on differences in technical school difficulty
[AD-A102045] N82-13725

AIR FORCE INST. OF TECH., WRIGHT-PATTERSON AFB, OHIO.
Navier-Stokes solutions for a supersonic coflowing axisymmetric nozzle with a thick annulus
N82-13101
Charge trapping in interface doped MNOS structures N82-13930

Studies of photoionization in liquids using a laser two-photon ionization conductivity technique
[DE81-026514] N82-13194

Effect of low-temperature irradiation with (n, alpha) helium production on tensile properties of 12 Cr-1 Mo VW-type steels
[DE81-028578] N82-13222

H-Coal product physical properties measurement
[DE81-029095] N82-13245

DC dielectric strengths of fluorinated benzenes and the stored-energy theory
[DE81-026315] N82-13516

Annual cycle energy system experimental performance and national applicability
[DE81-028570] N82-13523

Building a consensus about energy technologies
[DE82-000501] N82-13536

Concentration of organic compounds in water: A literature survey
[DE81-026517] N82-13556

Control of hydrocarbons and carbon monoxide via catalytic incineration
[DE82-000506] N82-13580

Health and safety research division
[DE81-028088] N82-13652

Men/machine interface development for the REMOTEX concept N82-13678

Assessment of the computer code COBRA/CFTL
[DE81-027933] N82-13771

Background fitting for electron energy-loss spectra
[DE81-027117] N82-13855

Energy losses and mean free paths of electrons in silicon dioxide
[DE81-026353] N82-13860

Specific gamma-ray dose constants for nuclides important to dosimetry and radiological assessment
[DE81-031980] N82-13863

High-temperature gas-cooled reactor technology development program
[DE81-029096] N82-13871

HETFIS: High-energy nucleon-meson transport code with fission
[DE81-027674] N82-13873

EBT Stability Theory: Proceedings of the workshop
[DE81-030635] N82-13909

Review of recent EBT coupled ring-core stability theory N82-13911

Brief survey of experimental investigation c. instabilities in microwave-heated plasmas
N82-13912

Fluctuation measurements in EBT N82-13913

Numerical solutions of the EBT Radial eigenmode problem N82-13916

Stability of hot electron plasma in the ELMO bumpy torus N82-13917

Effect of Beta limits on reactor performance in EBT N82-13922

Role of electron swarm studies in the development of gaseous dielectrics
[DE81-026349] N82-13952

Effects of pressure on the mixed valent properties of Ce and its intermetallic compounds
[DE81-028572] N82-13953

Separations Science data base: An abstractor's manual
[DE81-029101] N82-13977

OBSERVATOIRE DE PARIS-MEUDON (FRANCE).

Planetary radio astronomy observations from Voyager-2 near Saturn
[NASA-TM-83856] N82-14037

OCCIDENTAL RESEARCH CORP., IRVINE, CALIF.

Controlled-flash pyrolysis

OFFICE NATIONAL D'ETUDES ET DE RECHERCHES AEROSPATIALES, PARIS (FRANCE).

Wind tunnel tests of powered models: A comparison of two methods of simulating the jets of jet engines
N82-13067

Studies of air inlets at Reynolds numbers comparable to flight in ONERA's F1 and S1MA wind tunnels
N82-13091

A solution of the Navier-Stokes equations by a mixed finite element method
[ONERA-NT-1981-1] N82-13398

OHIO STATE UNIV., CLEVELAND.

A digital TV system for the detection of high speed human motion N82-13289

High frequency scattering from multiple finite elliptic cylinders N82-13291

Numerical study of multicellular natural convection in vertical cavities N82-13403

System design of the distributed Loop Data Base System (BLDBS) N82-13729

An investigation of some magnetic properties of calcium substituted yttrium iron garnet films
N82-13935

OHIO STATE UNIV., COLUMBUS.

Fatigue crack initiation and electrochemical behavior of 403 stainless steel in aqueous environments
N82-13210

Stress corrosion cracking of type 304 stainless steel in high temperature dilute chloride solution
N82-13228

Geometric programming for engineering design optimization N82-13288

A hybrid method which combines a moment method current with an asymptotic current
[AD-A102199] N82-13340

Simulation studies on the computation of the gravity vector in space from surface data considering the topography of the Earth N82-13612

An investigation into pilot and system response to critical in-flight events, volume 1
[NASA-CR-166243-VOL-1] N82-13662

An investigation into pilot and system response to critical in-flight events, volume 2
[NASA-CR-166243-VOL-2] N82-13663

Design of a real time, interactive, parallel simulation computer N82-13781

Pattern of neutrino mixing in grand unified theories
[DE81-029034] N82-13872

The transfer of polarized radiation in spectral lines from rotationally distorted stars N82-14031

An investigation of warm carbon stars
N82-14033

OKLAHOMA STATE UNIV., STILLWATER.

A method for accelerating convergence to the solution of nonlinear structural equations by reducing residual work N82-13439

Computer implementation of optimal multivariable controller design in the frequency domain
N82-13785

A stochastic extension of the structural properties of compartment models via a Kronecker algebra
N82-13810

OLD DOMINION UNIV., NORFOLK, VA.

Propagation of sound through the Earth's atmosphere
[NASA-CR-165008] N82-13828

Measurement of sound absorption in the air
N82-13829

Detection of infrasound generated by Clear Air Turbulence (CAT) N82-13830

OPERATIONS RESEARCH, INC., BETHESDA, MD.

A model for the submarine depthkeeping team
N82-13689

OREGON STATE UNIV., CORVALLIS.

An experimental study of heat transfer to a horizontal tube in a large particle fluidized bed at elevated temperature N82-13406

Network wind power over the Pacific northwest. Appendix 1: Wind statistics summaries for the wind power data stations
[DE81-029291] N82-13518

Wind Power: Research on network wind power over the Pacific northwest. Executive summary
[DE81-029360] N82-13519

P

PACIFIC NORTHWEST LAB., RICHLAND, WASH.

Development of the high-temperature redox electrode and improved corrosion rate meter
[DE82-000933] N82-13409

Technology assessment of solar energy systems: Availability and impacts of woody biomass utilization in the Pacific Northwest
[DE82-000705] N82-13535

Treatment of biomass gasification wastewaters using reverse osmosis
[DE82-000698] N82-13566

Treatment of biomass-gasification wastewaters by wet-air oxidation
[DE82-000935] N82-13567

Numerical wind-speed simulation model
[DE82-000956] N82-13627

Impacts of vertical scale distortion on turbulent mixing in hydraulic models N82-13382

Mixing of a passive scalar in isotropic and sheared homogeneous turbulence N82-13405

Atomic pair processes and laser applications N82-13417

Laser induced charge transfer collisions N82-13418

Inverse cerenkov interaction between relativistic electrons and laser light N82-13425

A continuum model for friction with applications in metal forming plasticity N82-13445

The occurrence and control of land subsidence due to ground water withdrawal with special reference to the San Joaquin and Santa Clara Valleys, California N82-13466

Electrical effects of slag in a diffuse mode magnetohydrodynamic generator N82-13550

The crustal structure of Kilauea and Mauna Loa volcanoes, Hawaii, from seismic refraction and gravity data N82-13583

Surface waves in strong ground motion with application to offshore environments N82-13584

Theory and application of experimental model analysis in earthquake engineering N82-13586

Studies of natural fractures, fault zone permeability, and a pore space-permeability model N82-13616

Two detailed seismic studies in Central California. Part 1: Earthquake clustering and crustal structure studies of the San Andrea fault near San Juan Bautista. Part 2: Seismic velocity structure along the Sierra foothills near Oroville, California N82-13617

Superconducting magnetometry for cardiovascular studies and an application of adaptive filtering N82-13648

A systems analysis of the maturation of sleep using a semi-Markov model N82-13658

Algorithms for imaging myocardial blood flow using X-ray computed tomography N82-13661

Information storage in a decentralized computer system N82-13732

Capacity and coding for computer memory with defects N82-13750

Concurrent testing and checking in computer systems N82-13751

Automated partitioning of hierarchically specified digital systems N82-13752

Symbolic reasoning among 3-D models and 2-D images N82-13761

Query optimization by semantic reasoning N82-13762

Trellis data compression N82-13784

Sequential stochastic construction of random polygons N82-13812

Acoustical speckle interferometry and applications in experimental mechanics N82-13826

Transmission of sound across a vortex layer enclosing a cylindrical column of jet N82-13838

Fiber optic time domain reflectometers: Approaches to performance improvement N82-13893

A vacuum ultraviolet radiation source using Cerenkov radiation N82-13894

Pulse propagation in dispersive media with applications to plasmas N82-13897

The reverse-field rigid rotor model, calculation and simulation N82-13898

Current transient spectroscopy of deep levels in silicon N82-13929

Superconductivity of the A15 compound niobium aluminum N82-13932

Long-range interactions in lattice field theory N82-13941

Upper critical fields and span states in A-15 superconductors, part 1. Vortices in two-dimensional supercondectors, part 2 N82-13942

CW laser annealing and CW laser assisted diffusion in gallium arsenide N82-13943

Electron beam evaporation of superconducting, A15 niobium-silicon N82-13944

The physical and electrical properties of polycrystalline-silicon N82-13964

Experimental and theorectical studies of excited state transport N82-13967

X-ray and ultraviolet observations of stellar atmospheres N82-14029

STATE UNIV. OF NEW YORK, ALBANY.

Construction and maintenance of SUNY facilities at the National Synchrotron Light Source [DE81-027855] N82-13152

STATE UNIV. OF NEW YORK, STONY BROOK.

Ultraviolet structure of supersymmetric non-linear sigma-models N82-13843

STATE UNIV. OF NEW YORK AT ALBANY.

Relativistic many-body perturbation theory of parity-violation in atoms N82-13845

STATE UNIV. OF NEW YORK AT BINGHAMTON.

The missing boundary problem for smooth manifolds of dimension greater than or equal to six
N82-13806

STICHTING MATHEMATISCH CENTRUM, AMSTERDAM (NETHERLANDS).

Proving total correctness of nondeterministic programs in infinitary logic
[MC-IW-150/80] N82-13799

STOCKHOLM UNIV. (SWEDEN).

On the inadequacy of one dimensional ocean models for the global carbon cycle
[CM-51] N82-13643

SWEDISH INST. FOR MATERIALS TESTING, BORAS.

Aging and corrosion problems with flat solar energy absorbers. Study based upon literature and experiment exchanges
[SP-RAPP-1979/4] N82-13548

SYRACUSE UNIV., N. Y.

Deposition of aerosol particles in the human respiratory tract N82-13659

Direct execution string processor N82-13753

Methods of verification of digital logic N82-13783

Zeros of successive derivatives of some entire functions of infinite order N82-13788

SYSTEMS APPLICATIONS, INC., SAN RAFAEL, CALIF.

Development of an infrared radiative heating model
[NASA-CR-166272] N82-13622

SYSTEMS CONTROL, INC., PALO ALTO, CALIF.

Sensor failure detection system
[NASA-CR-165515] N82-13145

Research on knowledge based programming and algorithm design
[AD-A105681] N82-13770

SYSTEMS TECHNOLOGY, INC., HAWTHORNE, CALIF.

Using rewards and penalties to obtain desired subject performance N82-13684

A theory of human error N82-13716

Stability analysis of automobile driver steering control N82-13717

Detecting human operator impairment with a psychomotor task N82-13718

SYSTEMS TECHNOLOGY, INC., MOUNTAIN VIEW, CALIF.

A comparison of landing maneuver piloting technique based on measurements made in an airline training simulator and in actual flight N82-13685

Identification of multiloop pilot describing functions obtained from simulated approaches to an aircraft carrier N82-13686

T

TECHNICAL RESEARCH CENTRE OF FINLAND, ESPOO.

Thin-walled structures. Trapezoidal sheet bending and under shear stresses
[VTT-11] N82-13456

TECHNION - ISRAEL INST. OF TECH., HAIFA.

Predictor symbology in computer-generated perspective displays N82-13674

TECHNISCHE UNIVERSITAET, MUNICH (WEST GERMANY).

Influence of wall roughness, adverse pressure gradient and heat transfer on wall shear stress measurements with Preston tubes
[ILR-50] N82-13396

TEKTRONIX, INC., BEAVERTON, OREG.

Computer programs for line shape analysis of X-ray diffraction peaks
[PB81-227787] N82-13958

TEMPLE UNIV., PHILADELPHIA, PA.

Fluorescent guest-host effect in scattering liquid crystals and new physical phenomena in thin liquid crystal films N82-13940

TENNESSEE UNIV., KNOXVILLE.

The chemistry of saline water chlorination
N82-13178

Electrochemical and spectroscopic studies of some less stable oxidation states of selected lanthanide and actinide elements N82-13182

Spectroelectrochemical investigations in molten salt and aqueous media N82-13183

Effects of restrained thermal movement in a continuous, prestressed concrete bridge without interior expansion joints N82-13461

Prediction of aerodynamic loads on aircrafts with external stores at transonic speeds N82-13813

Hot-electron ring stability at the University of Tennessee N82-13914

TENNESSEE UNIV. SPACE INST., TULLAHOMA.

Two-dimensional effects in power take-off region
[DE82-000091] N82-13367

TEXAS A&M UNIV., COLLEGE STATION.

A data collection scheme for identification of parameters in a driver model N82-13696

New optimization research
[AD-A104864] N82-13793

Study of the neutron-proton interaction in the 300-700 MeV energy region
[DE81-026733] N82-13859

TEXAS UNIV., AUSTIN.

Eigenmode stability analysis for a bumpy torus
N82-13915

Numerical solutions of the EBT Radial eigenmode problem N82-13916

TEXAS UNIV. AT ARLINGTON.

The transonic flow field for a fluidic-generator fuze assembly
[AD-A099616] N82-13388

Acoustical properties of sediments
[AD-A103726] N82-13638

Theoretical analysis of the effects of turbulence on a mobile parametric receiver
[AD-A101418] N82-13833

TEXAS UNIV. AT AUSTIN.

Observations of faint comets at McDonald Observatory: 1978-1980 N82-14010

TEXTRON BELL HELICOPTER, FORT WORTH, TEX.

How the helicopter cockpit designer uses digital avionics N82-13049

THOMSON-CSF, PARIS (FRANCE).

Head up displays N82-13052

TOLEDO UNIV., OHIO.

Observing chemical abundances in comets
N82-13990

The spectroscopy of comets: Introductory remarks N82-14004

TORONTO UNIV., DOWNSVIEW (ONTARIO).

On a dusty-gas shock tube
[UTIAS-250] N82-13151

Gas target neutron generator studies
[UTIAS-251] N82-13850

TRANSPORTATION SYSTEMS CENTER, CAMBRIDGE, MASS.

Evaluation of techniques for reducing in-use automotive fuel consumption
[PB81-233298] N82-13985

Highway fuel economy study
[PB81-233850] N82-13986

Weight reduction potential of automobiles and light trucks: 1980 summary source document
[PB81-235756] N82-13987

TRI-STATE REGIONAL PLANNING COMMISSION, NEW YORK.

Measures of effectiveness of transportation systems management
[PB81-233864] N82-13984

TUFTS UNIV., MEDFORD, MASS.

Interruption as a test of the user-computer interface N82-13721

U

ULTRASYSTEMS, INC., IRVINE, CALIF.

Feasibility study report for the Imperial Valley Ethanol Refinery: A 14.9-million-gallon-per-year ethanol synfuel refinery utilizing geothermal energy
[DE82-000268] N82-13252

UNIDYNAMICS/PHOENIX, ARIZ.

Review of low-voltage CP detonators
[DE81-025[illegible]37] N82-13250

Performance of chemical analogs of the explosive CP
[DE81-025836] N82-13251

UNION CARBIDE CORP., OAK RIDGE, TENN.

Flat-plate solar array project: Experimental process system development unit for producing semiconductor-grade silicon using the silane-to-silicon process
[NASA-CR-165022] N82-13496

UNITED AIR LINES, INC., SAN FRANCISCO, CALIF.

An automated system for global atmospheric sampling using B-747 airliners
[NASA-CR-165264] N82-13554

UNITED TECHNOLOGIES RESEARCH CENTER, EAST HARTFORD, CONN.

Flow distribution control characteristics in marine gas turbine waste-heat recovery systems. Phase 1: Flow distribution characteristics and control in diffusers
[AD-A104560] N82-13390

US ALCOHOL FUELS, EAST MESA, CALIF.

Feasibility study report for the Imperial Valley Ethanol Refinery: A 14.9-million-gallon-per-year ethanol synfuel refinery utilizing geothermal energy
[DE82-000268] N82-13252

UTAH STATE UNIV., LOGAN.

Detection of trace gases using high resolution spectroscopy
[AD-A104841] N82-13883

V

VALEO/SOCIETE ANONYME FRANCAISE DU FERODO (FRANCE).

The influence of high temperature on braking
N82-13433

VARIAN ASSOCIATES, PALO ALTO, CALIF.

Three-5 heterostructure avalanche photodiode modules for fiber optic communication links in the 1.0 to 1.3 micrometer spectral range
[AD-A099506] N82-13334

VEREINIGTE FLUGTECHNISCHE WERKE G.M.B.H., BREMEN (WEST GERMANY).

The role and implementation of different nacelle/engine simulation concepts for wind-tunnel testing in research and development work on transport aircraft N82-13086

Calculation of wing-body-nacelle interference in subsonic and transonic potential flow N82-13095

Maneuver load control for the reduction of design loads and improvement of the maneuverability of modern fighter aircraft
[BMVG-FBWT-81-2] N82-13138

VIRGINIA POLYTECHNIC INST. AND STATE UNIV., BLACKSBURG.

Regularized integration of gravity-perturbed trajectories: A numerical efficiency study
N82-13155

Creep and creep rupture of laminated graphite/epoxy composites N82-13173

Bounding signal levels at terminations of multiconductor transmission line behind an aperture
[AD-A102031] N82-13362

Computer programs for line shape analysis of X-ray diffraction peaks
[PB81-227787] N82-13958

VIRGINIA UNIV., CHARLOTTESVILLE.

Trapped ion research
[AD-A098648] N82-13166

VOLVO FLYGMOTOR A.B., TROLLHAETTAN (SWEDEN).

A synthesis method for estimating maximum instantaneous inlet distortion based on measured inlet steady state and RMS pressures N82-13083

W

WASHINGTON STATE UNIV., PULLMAN.

Determination of radionuclide species by on-line radiochromatography using high resolution gamma ray spectroscopy N82-13181

WASHINGTON UNIV., ST. LOUIS, MO.

Spectral imagery: Recent results with the SPIFI and their implications for cometary atmospheric studies
N82-14011

Potassium-argon and iodine-xenon gas retention ages of enstatite chondrite meteorites N82-14036

WATER AND POWER RESOURCES SERVICE, DENVER, COLO.

Project Skywater: Fiscal year 1979 report. Atmospheric Resources Research Program
[PB81-234494] N82-13629

The Sierra Cooperative Pilot Project: Precipitation management research in the Sierra Nevada
[PB81-234452] N82-13630

WATERLOO UNIV. (ONTARIO).

Cyclic strain approach to fatigue in metals
N82-13285

WEST VIRGINIA UNIV., MORGANTOWN.

Reduction of nitric oxide in a fluidized bed [DE81-030468] N82-13198

Pyrolytic characterization of the organic matter in selected coals and in the Devonian shales of southern West Virginia N82-13578

WESTINGHOUSE ELECTRIC CORP., LIMA, OHIO.

High voltage DC switchgear development for multi-kW space power system: Aerospace technology development of three types of solid state power controllers for 200-1100VDC with current ratings of 25, 50, and 80 amperes with one type utilizing an electromechanical device [NASA-CR-165413] N82-13357

WESTINGHOUSE RESEARCH AND DEVELOPMENT CENTER, PITTSBURGH, PA.

A preliminary analysis of the data from experiment 77-13 and final report on glass fining experiments in zero gravity [NASA-CR-161884] N82-13154

Large area sheet task: Advanced dendritic web growth development [NASA-CR-165013] N82-13497

Cell module and fuel conditioner development [NASA-CR-165462] N82-13511

WIEN UNIV. (AUSTRIA).

Outburst and nuclear breakup of Comet Halley - 1910 N82-14018

WISCONSIN UNIV. - MADISON.

Quantitative investigations of mixed oxidation states of some first row transition metals in insulator matrices by photoelectron spectroscopy N82-13184

Structure-property relationships in segmented elastomers: Small angle X-ray scattering, thermal, and mechanical studies N82-13240

Electrostatic and hydrodynamic interactions of charged macromolecular systems N82-13242

AC harmonic filtering using controlled current injection N82-13348

Development, analysis and control of the inductor-converter bridge N82-13349

Direct digital simulation of power semiconductor-controlled electrical machines N82-13355

Analysis of multicylinder IC-Engine crankshafts with hydrodynamic bearings using a finite element-transfer matrix approach N82-13437

Regional hydrologic models for climatology: An application to three Wisconsin watersheds N82-13487

Algorithms for the geometry of semi-algebraic sets N82-13763

A control canonical form for a class of linear hyperbolic systems N82-13786

A nonlinear conservation law with memory [AD-A103882] N82-13791

The relationship between the number of factors and size of an experiment [AD-A103877] N82-13792

On the dependence of the growth of an entire function of the distribution of the zeros of its derivatives and a conjecture of G. Polya N82-13805

The hadronic decay rate of the Higgs boson: An application of the running mass N82-13842

Coexistence of non-registered monolayer and bilayer solid films N82-13931

Composition dependence of neodymium optical homogeneous linewidths in glasses N82-13945

WISCONSIN UNIV., MADISON.

Energy generation and the sulfur-carbon cycle [DE81-030849] N82-13562

Driving force of the ballooning instability [DE81-023099] N82-13923

Y

YALE UNIV., NEW HAVEN, CONN.

Intermediate band surface photometry of elliptical galaxies N82-14035

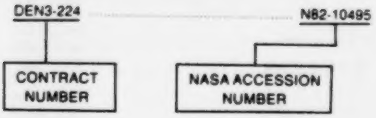
YOUNG (ARTHUR) AND CO., WASHINGTON, D. C.

Managing information technology change in the decade of the 80's [AD-A099441] N82-13976

CONTRACT NUMBER INDEX

SCIENTIFIC AND TECHNICAL AEROSPACE REPORTS VOLUME 20 NUMBER 4

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number the NASA accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order. The NASA accession number denotes the number by which the citation is identified.

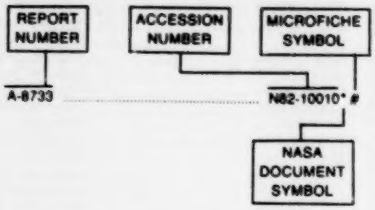
REPORT / ACCESSION NUMBER INDEX

Typical Report / Accession Number Index Listing



Listings in this index are arranged alphanumerically by report number. The NASA accession number denotes the number by which the citation is identified. An asterisk (*) indicates that the item is a NASA report. A pound sign (#) indicates that the item is available on microfiche.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago

MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an '*' following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library and Information Center
NEW JERSEY
Trenton Public Library

NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in *STAR*. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols '#' and '*', from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

INFORMATION
BRANCH

NASA

WHAT YOU CAN DO FOR *STAR*

All users of this abstract service are urged to forward reports to be considered for announcement in *STAR*. This will aid NASA in its efforts to provide the fullest possible coverage of all scientific and technical publications that might support aeronautics and space research and development. If you have prepared relevant reports (other than those that you will transmit to NASA, DoD, or DOE through the usual contract- or grant-reporting channels), please send them for consideration to the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

Reprints of journal articles, book chapters, and conference papers are also welcome. These will be considered for announcement in *STAR's* companion journal, *International Aerospace Abstracts*.

You may specify a particular source to be included in a report announcement if you wish; otherwise the report will be placed on public sale at the National Technical Information Service. Copyrighted publications will be announced but not distributed or sold.

PURCHASE OF *STAR*

The semimonthly issues are available postpaid on subscription and in single copy from the Superintendent of Documents, United States Government Printing Office, Washington, D.C. 20402, United States of America.

Semimonthly issues...

Annual subscription rates: $90.00 domestic; $112.00 foreign. Price per single copy: $4.75 domestic; $5.95 foreign.

Annual index issues...

Pricing based upon pagination.

Domestic subscription rates...

Apply to the United States, Canada, Mexico, and all Central and South American countries, except as noted below.

Foreign subscription rates...

Apply to Argentina, Brazil, French Guiana, Guyana, Surinam, Belize, and all other countries throughout the world.

Payment should be by check, money order, or document coupons, and must accompany order. Remittances from foreign countries should be made by international money order or draft on an American bank, payable to the Superintendent of Documents, or by UNESCO book coupons.

UNITED STATES GOVERNMENT
NATIONAL AERONAUTICS AND SPACE ADMINISTRATION
SCIENTIFIC AND TECHNICAL INFORMATION BRANCH

Scientific and Technical Aerospace Reports, Volume 20, is prepared by the NASA Scientific and Technical Information Facility operated for the National Aeronautics and Space Administration by PRC Government Information Systems.

The Administrator of the National Aeronautics and Space Administration has determined that the publication of this periodical is necessary in the transaction of the public business required by law of this Agency. Use of funds for printing this periodical has been approved by the Director of the Office of Management and Budget through March 31, 1982.

US ISSN 0036-8741

INTRODUCTION

Scientific and Technical Aerospace Reports (STAR) is a major component of a comprehensive National Aeronautics and Space Administration information system covering aeronautics, space, and supporting disciplines. *STAR* is issued on the 8th and 23rd of each month and announces current publications of the following types:

- NASA, NASA contractor, and NASA grantee reports
- Reports issued by other U.S. Government agencies, domestic and foreign institutions, universities, and private firms
- Translations in report form
- NASA-owned patents and patent applications
- Dissertations and theses

Cumulative index volumes are published annually.

Journal, book, and conference literature, cover-to-cover journal translations, and certain foreign dissertations are announced in a companion journal, *International Aerospace Abstracts (IAA)*, available on subscription from the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

SUBJECT SCOPE

Subject scope of *STAR*, and *IAA* includes all aspects of aeronautics and space research and development, supporting basic and applied research, and applications. Aerospace aspects of earth resources, energy development, conservation, oceanography, environmental protection, urban transportation, and other topics of high national priority are also covered.

OTHER NASA PUBLICATIONS

Other NASA publications and information services are described in the publication, *The NASA Scientific and Technical Information System ... and How to Use It*, available without charge from the NASA Scientific and Technical Information Facility, P.O. Box 8757, B.W.I. Airport, Maryland 21240.

HOW TO USE *STAR* SUBJECT CATEGORIES

STAR is categorized by 10 major subject divisions divided into 74 specific subject categories and one general category/division. The major subject divisions are listed in the Table of Contents, together with a note for each that defines its scope and provides any cross-references. For example:

> **AERONAUTICS**
>
> Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).
>
> For related information see also *Astronautics*.

Each major division is further divided into as many as nine specific categories, which are identified by category numbers.

Abstracts in *STAR* are grouped by specific category, the categories appearing in sequential order. Category breaks in the abstract section are identified by the category number and title, and a scope note. Cross-references to other categories are provided as appropriate. For example:

> **02 AERODYNAMICS**
>
> Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.
>
> For related information see also *34 Fluid Mechanics and Heat Transfer*.

CROSS-REFERENCES

Individual *STAR* abstracts are not ordinarily cross-referenced, except for certain conference reports or book translations that have had separate abstracts written for their component papers or chapters. Citations and abstracts of the components follow immediately after those of the parent document. When the subject content of a component differs sufficiently from the general content of the parent, a cross-reference citation also is printed at the end of the category to which it normally would have been assigned if it were independent.

DOCUMENTS ON MICROFICHE

Documents on microfiche(1) are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

AVAILABILITIES

One or more sources from which a document announced in *STAR* is available to the public is given in each citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code following the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page vii.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Adminstration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its' Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this Introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free. (See discussion of patents and patent applications below.)

NASA PATENTS AND PATENT APPLICATIONS

Patents and patent applications owned by NASA are announced in *STAR* under appropriate subject categories and are referenced in the *STAR* indexes. In the Report/Accession Number Index, patents are indexed by the NASA Case Number (which appears in lieu of the report number in other indexes), the U.S. Patent Number, the U.S. Patent Application Serial Number, and the U.S. Patent Class. Patent applications for which patents have not yet been issued are indexed by the NASA Case Number and the U.S. Patent Application Serial Number.

NASA *patent application specifications* are sold in paper copy by the National Technical Information Service at price code A02 ($6.00 domestic; $12.00 foreign). Microfiche are sold at price code A01 ($4.00 domestic; $8.00 foreign). The US-Patent-Appl-SN- number should be used in ordering either paper copy or microfiche from NTIS. Printed copies of *patents* (which are not microfiched) are available for purchase at 50 cents per copy from:

Commissioner of Patents and Trademarks
U.S. Patent and Trademark Office
Washington, D.C. 20231

When ordering patents, the U.S. Patent Number should be used, and payment must be remitted in advance, preferably by money order or check payable to the Commissioner of Patents and Trademarks. Prepaid purchase coupons for ordering are also available from the Patent and Trademark Office. The patents and patent applications announced in *STAR* are owned by NASA and are available for royalty-free licensing. Requests for licensing terms and further information should be addressed to:

Assistant General Counsel for Patent Matters/Code GP-1
National Aeronautics and Space Administration
Washington, D.C. 20546

ELIGIBILITY AND REGISTRATION FOR NASA INFORMATION PRODUCTS AND SERVICES

A variety of services, in addition to the distribution of NASA scientific and technical reports and of *STAR* and its cumulative indexes, is available to organizations of the following types that have registered with NASA to receive specific services or products:

1. NASA offices, research centers, contractors, subcontractors, grantees, and consultants;
2. Other U.S. Government agencies and their contractors;
3. Libraries in the United States that have arrangements with NASA to maintain collections of NASA documents for public reference;
4. Other organizations in the United States having a need for NASA documents in work related to aeronautics and space research;
5. Organizations abroad that have established reciprocal document exchange arrangements with NASA.

Only the central service points or central points of document acquisition and control within qualified organizations are eligible to register for NASA products and services. Domestic organizations that may be eligible to receive various classes of NASA publications and services should address their requests for registration or for further information to:

NASA Scientific and Technical Information Facility
Attn.: Registration Activity
P.O. Box 8757
B.W.I. Airport, Maryland 21240

Organizations abroad should direct requests to the same address, but to the attention of: International Exchange Program.

AVAILABILITY OF *STAR* ABSTRACTS ON MICROFICHE

Microfiche of the abstract sections of this issue and other issues of *STAR* are available on annual subscription from NTIS, Attn: Subscriptions, 5285 Port Royal Road, Springfield, Virginia 22161. Annual subscription rates are $50.00 North America; $100.00 foreign. Abstract sections for previous years retroactive to 1964 are available at the current rates. Microfiche for individual *STAR* issue abstract sections are not available.

VOLUME 20 NUMBER 5/MARCH 8, 1982

TABLE OF CONTENTS

AERONAUTICS

Includes aeronautics (general); aerodynamics; air transportation and safety; aircraft communications and navigation; aircraft design, testing and performance; aircraft instrumentation; aircraft propulsion and power; aircraft stability and control; and research and support facilities (air).

For related information see also *Astronautics*.

01 AERONAUTICS (GENERAL) 575

02 AERODYNAMICS 575

Includes aerodynamics of bodies, combinations, wings, rotors, and control surfaces; and internal flow in ducts and turbomachinery.

For related information see also *34 Fluid Mechanics and Heat Transfer*

03 AIR TRANSPORTATION AND SAFETY 578

Includes passenger and cargo air transport operations; and aircraft accidents.

For related information see also *16 Space Transportation* and *85 Urban Technology and Transportation*.

04 AIRCRAFT COMMUNICATIONS AND NAVIGATION 578

Includes digital and voice communication with aircraft; air navigation systems (satellite and ground based); and air traffic control.

For related information see also *17 Spacecraft Communications, Command and Tracking* and *32 Communications*.

05 AIRCRAFT DESIGN, TESTING AND PERFORMANCE 580

Includes aircraft simulation technology.

For related information see also *18 Spacecraft Design, Testing and Performance* and *39 Structural Mechanics*.

06 AIRCRAFT INSTRUMENTATION 580

Includes cockpit and cabin display devices; and flight instruments.

For related information see also *19 Spacecraft Instrumentation* and *35 Instrumentation and Photography*.

07 AIRCRAFT PROPULSION AND POWER 581

Includes prime propulsion systems and systems components, e.g., gas turbine engines and compressors; and on-board auxiliary power plants for aircraft.

For related information see also *20 Spacecraft Propulsion and Power, 28 Propellants and Fuels*, and *44 Energy Production and Conversion*.

08 AIRCRAFT STABILITY AND CONTROL 582

Includes aircraft handling qualities; piloting; flight controls; and autopilots.

09 RESEARCH AND SUPPORT FACILITIES (AIR) 583

Includes airports, hangars and runways; aircraft repair and overhaul facilities; wind tunnels; shock tube facilities; and engine test blocks.

For related information see also *14 Ground Support Systems and Facilities (Space)*.

ASTRONAUTICS

Includes astronautics (general); astrodynamics; ground support systems and facilities (space); launch vehicles and space vehicles; space transportation; spacecraft communications, command and tracking; spacecraft design, testing and performance; spacecraft instrumentation; and spacecraft propulsion and power.

For related information see also *Aeronautics*

12 ASTRONAUTICS (GENERAL) 583

For extraterrestrial exploration see *91 Lunar and Planetary Exploration*.

13 ASTRODYNAMICS N.A.

Includes powered and free-flight trajectories; and orbit and launching dynamics.

14 GROUND SUPPORT SYSTEMS AND FACILITIES (SPACE) 597

Includes launch complexes, research and production facilities; ground support equipment, e.g., mobile transporters; and simulators.

For related information see also *09 Research and Support Facilities (Air)*.

15 LAUNCH VEHICLES AND SPACE VEHICLES 598

Includes boosters; manned orbital laboratories; reusable vehicles; and space stations.

16 SPACE TRANSPORTATION 599

Includes passenger and cargo space transportation, e.g., shuttle operations; and rescue techniques.

For related information see also *03 Air Transportation and Safety* and *85 Urban Technology and Transportation*.

17 SPACECRAFT COMMUNICATION, COMMAND AND TRACKING N.A.

Includes telemetry; space communications networks; astronavigation; and radio blackout.

For related information see also *04 Aircraft Communications and Navigation* and *32 Communications*.

18 SPACECRAFT DESIGN, TESTING AND PERFORMANCE 600

Includes spacecraft thermal and environmental control; and attitude control.

For life support systems see *54 Man/System Technology and Life Support*. For related information see also *05 Aircraft Design, Testing and Performance* and *39 Structural Mechanics*.

19 SPACECRAFT INSTRUMENTATION 610

For related information see also *06 Aircraft Instrumentation* and *35 Instrumentation and Photography*.

20 SPACECRAFT PROPULSION AND POWER 611

Includes main propulsion systems and components, e.g., rocket engines; and spacecraft auxiliary power sources.

For related information see also *07 Aircraft Propulsion and Power, 28 Propellants and Fuels*, and *44 Energy Production and Conversion*.

CHEMISTRY AND MATERIALS

Includes chemistry and materials (general); composite materials; inorganic and physical chemistry; metallic materials; nonmetallic materials; and propellants and fuels.

23 CHEMISTRY AND MATERIALS (GENERAL) 612
Includes biochemistry and organic chemistry.

24 COMPOSITE MATERIALS 612
Includes laminates.

25 INORGANIC AND PHYSICAL CHEMISTRY 615
Includes chemical analysis, e.g., chromatography; combustion theory; electrochemistry; and photochemistry.

For related information see also *77 Thermodynamics and Statistical Physics.*

26 METALLIC MATERIALS 619
Includes physical, chemical, and mechanical properties of metals, e.g., corrosion; and metallurgy.

27 NONMETALLIC MATERIALS 622
Includes physical, chemical, and mechanical properties of plastics, elastomers, lubricants, polymers, textiles, adhesives, and ceramic materials.

28 PROPELLANTS AND FUELS 625
Includes rocket propellants, igniters, and oxidizers; storage and handling; and aircraft fuels.

For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power,* and *44 Energy Production and Conversion.*

ENGINEERING

Includes engineering (general); communications; electronics and electrical engineering; fluid mechanics and heat transfer; instrumentation and photography; lasers and masers; mechanical engineering; quality assurance and reliability; and structural mechanics.

For related information see also *Physics.*

31 ENGINEERING (GENERAL) 627
Includes vacuum technology; control engineering; display engineering; and cryogenics.

32 COMMUNICATIONS 630
Includes land and global communications; communications theory; and optical communications.

For related information see also *04 Aircraft Communications and Navigation* and *17 Spacecraft Communications, Command and Tracking.*

33 ELECTRONICS AND ELECTRICAL ENGINEERING 635
Includes test equipment and maintainability; components, e.g., tunnel diodes and transistors; microminiaturization; and integrated circuity.

For related information see also *60 Computer Operations and Hardware* and *76 Solid-State Physics.*

34 FLUID MECHANICS AND HEAT TRANSFER 639
Includes boundary layers; hydrodynamics; fluidics; mass transfer; and ablation cooling.

For related information see also *02 Aerodynamics* and *77 Thermodynamics and Statistical Physics.*

35 INSTRUMENTATION AND PHOTOGRAPHY 642
Includes remote sensors; measuring instruments and gages; detectors; cameras and photographic supplies; and holography.

For aerial photography see *43 Earth Resources.* For related information see also *06 Aircraft Instrumentation* and *19 Spacecraft Instrumentation.*

36 LASERS AND MASERS 644
Includes parametric amplifiers.

37 MECHANICAL ENGINEERING 646
Includes auxiliary systems (non-power); machine elements and processes; and mechanical equipment.

38 QUALITY ASSURANCE AND RELIABILITY 647
Includes product sampling procedures and techniques; and quality control.

39 STRUCTURAL MECHANICS 648
Includes structural element design and weight analysis; fatigue; and thermal stress.

For applications see *05 Aircraft Design, Testing and Performance* and *18 Spacecraft Design, Testing and Performance.*

GEOSCIENCES

Includes geosciences (general); earth resources; energy production and conversion; environment pollution; geophysics; meteorology and climatology; and oceanography.

For related information see also *Space Sciences.*

42 GEOSCIENCES (GENERAL) N.A.

43 EARTH RESOURCES 651
Includes remote sensing of earth resources by aircraft and spacecraft; photogrammetry; and aerial photography.

For instrumentation see *35 Instrumentation and Photography.*

44 ENERGY PRODUCTION AND CONVERSION 661
Includes specific energy conversion systems, e.g., fuel cells and batteries; global sources of energy; fossil fuels; geophysical conversion; hydroelectric power; and wind power.

For related information see also *07 Aircraft Propulsion and Power, 20 Spacecraft Propulsion and Power, 28 Propellants and Fuels,* and *85 Urban Technology and Transportation.*

45 ENVIRONMENT POLLUTION 667
Includes air, noise, thermal and water pollution; environment monitoring; and contamination control.

46 GEOPHYSICS 670
Includes aeronomy; upper and lower atmosphere studies; ionospheric and magnetospheric physics; and geomagnetism.

For space radiation see *93 Space Radiation.*

47 METEOROLOGY AND CLIMATOLOGY 673
Includes weather forecasting and modification.

48 OCEANOGRAPHY 683
Includes biological, dynamic and physical oceanography; and marine resources.

LIFE SCIENCES

Includes sciences (general); aerospace medicine; behavioral sciences; man/system technology and life support; and planetary biology.

51 LIFE SCIENCES (GENERAL) **684**
Includes genetics.

52 AEROSPACE MEDICINE **684**
Includes physiological factors; biological effects of radiation; and weightlessness.

53 BEHAVIORAL SCIENCES **685**
Includes psychological factors; individual and group behavior; crew training and evaluation; and psychiatric research.

54 MAN/SYSTEM TECHNOLOGY AND LIFE SUPPORT **686**
Includes human engineering; biotechnology; and space suits and protective clothing.

55 PLANETARY BIOLOGY **N.A.**
Includes exobiology; and extraterrestrial life.

MATHEMATICAL AND COMPUTER SCIENCES

Includes mathematical and computer sciences (general); computer operations and hardware; computer programming and software; computer systems; cybernetics; numerical analysis; statistics and probability; systems analysis; and theoretical mathematics.

59 MATHEMATICAL AND COMPUTER SCIENCES (GENERAL) **686**

60 COMPUTER OPERATIONS AND HARDWARE **686**
Includes computer graphics and data processing.
For components see *33 Electronics and Electrical Engineering.*

61 COMPUTER PROGRAMMING AND SOFTWARE **687**
Includes computer programs, routines, and algorithms.

62 COMPUTER SYSTEMS **689**
Includes computer networks.

63 CYBERNETICS **692**
Includes feedback and control theory.
For related information see also *54 Man/System Technology and Life Support.*

64 NUMERICAL ANALYSIS **692**
Includes iteration, difference equations, and numerical approximation.

65 STATISTICS AND PROBABILITY **694**
Includes data sampling and smoothing; Monte Carlo method; and stochastic processes.

66 SYSTEMS ANALYSIS **696**
Includes mathematical modeling; network analysis; and operations research.

67 THEORETICAL MATHEMATICS **N.A.**
Includes topology and number theory.

PHYSICS

Includes physics (general); acoustics; atomic and molecular physics; nuclear and high-energy physics; optics; plasma physics; solid-state physics; and thermodynamics and statistical physics.
For related information see also *Engineering.*

70 PHYSICS (GENERAL) **N.A.**
For geophysics see *46 Geophysics.* For astrophysics see *90 Astrophysics.* For solar physics see *92 Solar Physics.*

71 ACOUSTICS **696**
Includes sound generation, transmission, and attenuation.
For noise pollution see *45 Environment Pollution.*

72 ATOMIC AND MOLECULAR PHYSICS **696**
Includes atomic structure and molecular spectra.

73 NUCLEAR AND HIGH-ENERGY PHYSICS **700**
Includes elementary and nuclear particles; and reactor theory.
For space radiation see *93 Space Radiation.*

74 OPTICS **701**
Includes light phenomena.

75 PLASMA PHYSICS **703**
Includes magnetohydrodynamics and plasma fusion.
For ionospheric plasmas see *46 Geophysics.* For space plasmas see *90 Astrophysics.*

76 SOLID-STATE PHYSICS **705**
Includes superconductivity.
For related information see also *33 Electronics and Electrical Engineering* and *36 Lasers and Masers.*

77 THERMODYNAMICS AND STATISTICAL PHYSICS **707**
Includes quantum mechanics; and Bose and Fermi statistics.
For related information see also *25 Inorganic and Physical Chemistry* and *34 Fluid Mechanics and Heat Transfer.*

SOCIAL SCIENCES

Includes social sciences (general); administration and management; documentation and information science; economics and cost analysis; law and political science; and urban technology and transportation.

80 SOCIAL SCIENCES (GENERAL) **708**
Includes educational matters.

81 ADMINISTRATION AND MANAGEMENT **708**
Includes management planning and research.

82 DOCUMENTATION AND INFORMATION SCIENCE **709**

Includes information storage and retrieval technology; micrography; and library science.

For computer documentation see *61 Computer Programming and Software.*

83 ECONOMICS AND COST ANALYSIS **711**

Includes cost effectiveness studies.

84 LAW AND POLITICAL SCIENCE **N.A.**

Includes space law; international law; international cooperation; and patent policy.

85 URBAN TECHNOLOGY AND TRANSPORTATION **712**

Includes applications of space technology to urban problems; technology transfer; technology assessment; and surface and mass transportation.

For related information see *03 Air Transportation and Safety, 16 Space Transportation,* and *44 Energy Production and Conversion.*

SPACE SCIENCES

Includes space sciences (general); astronomy; astrophysics; lunar and planetary exploration; solar physics; and space radiation.

For related information see also *Geosciences.*

88 SPACE SCIENCES (GENERAL) **713**

89 ASTRONOMY **714**

Includes radio and gamma-ray astronomy; celestial mechanics; and astrometry.

90 ASTROPHYSICS **714**

Includes cosmology; and interstellar and interplanetary gases and dust.

91 LUNAR AND PLANETARY EXPLORATION **715**

Includes planetology; and manned and unmanned flights.

For spacecraft design see *18 Spacecraft Design, Testing and Performance.* For space stations see *15 Launch Vehicles and Space Vehicles.*

92 SOLAR PHYSICS **N.A.**

Includes solar activity, solar flares, solar radiation and sunspots.

93 SPACE RADIATION **N.A.**

Includes cosmic radiation; and inner and outer earth's radiation belts.

For biological effects of radiation see *52 Aerospace Medicine.* For theory see *73 Nuclear and High-Energy Physics.*

Automatic flare and decrab control laws were developed for NASA's experimental Twin Otter. This light wing loading STOL aircraft was equipped with direct lift control (DLC) wing spoilers to enhance flight path control. Automatic landing control laws that made use of the spoilers were developed, evaluated in a simulation and the results compared with these obtained for configurations that did not use DLC. The spoilers produced a significant improvement in performance. A simulation that could be operated faster than real time in order to provide statistical landing data for a large number of landings over a wide spectrum of disturbances in a short time was constructed and used in the evaluation and refinement of control law configurations. A longitudinal control law that had been previously developed and evaluated in flight was also simulated and its performance compared with that of the control laws developed. Runway alignment control laws were also defined, evaluated, and refined to result in a final recommended configuration. Good landing performance, compatible with Category 3 operation into STOL runways, was obtained. Author

OPTIMIZATION AND PERFORMANCE CALCULATION OF DUAL-ROTATION PROPELLERS
Robert E. Davidson Dec. 1981 48 p refs
(NASA-TP-1948; L-14678) Avail: NTIS HC A03/MF A01 CSCL 01A

An analysis is given which enables the design of dual-rotation propellers. It relies on the use of a new tip loss factor deduced from T. Theodorsen's measurements coupled with the general methodology of C. N. H. Lock. In addition, it includes the effect of drag in optimizing. Some values for the tip loss factor are calculated for one advance ratio. Author

COMPUTATION OF SUBSONIC FLOW AROUND AIRFOIL SYSTEMS WITH MULTIPLE SEPARATION
Klaus Jacob 1981 63 p refs In GERMAN
(DFVLR-FB-81-24) Avail: NTIS HC A04/MF A01

A numerical method for computing the subsonic flow around multielement airfoil systems was developed, allowing for flow separation at one or more elements. Besides multiple rear separation, short bubbles on the upper surface and cove bubbles are taken into account. Compressibility effects for pure subsonic flow are approximately accounted for. S.L.

ANALYTIC INVESTIGATION OF EFFECT OF END-WALL CONTOURING ON STATOR PERFORMANCE
Robert J. Boyle, Harold E. Rholik, and Louis J. Goldman Nov. 1981 12 p refs
(NASA-TP-1943; E-719) Avail: NTIS HC A02/MF A01 CSCL 01A

Calculations show improved stator performance when the tip end wall was contoured so that the inlet area was greater than the exit area. Comparisons are made with previously published experimental data. The results of a parametric analysis of the effect contour geometry on the efficiency of a highly loaded axial stator are given. The maximum stator efficiency gain is about 0.8 percentage point, and this represents a 22 percent reduction in stator losses. The degree to which endwall contouring reduces the forces driving secondary flows was also examined. The driving forces for both cross channel and radial secondary flow were reduced. T.M.

EXPERIMENTAL AND ANALYTICAL INVESTIGATION OF AXISYMMETRIC SUPERSONIC CRUISE NOZZLE GEOMETRY AT MACH NUMBERS FROM 0.60 TO 1.30
George T. Carson, Jr. and Edwin E. Lee, Jr. Dec. 1981 89 p refs
(NASA-TP-1953; L-14661) Avail: NTIS HC A04/MF A01 CSCL 01A

Quantitative pressure and force data for five axisymmetric boattail nozzle configurations were examined. These configurations simulate the variable-geometry feature of a single nozzle design operating over a range of engine operating conditions. Five nozzles were tested in the Langley 16-Foot Transonic Tunnel at Mach numbers from 0.60 to 1.30. The experimental data were also compared with theoretical predictions. B.W.

STABILITY AND CONTROL CHARACTERISTICS OF A MONOPLANAR MISSILE CONFIGURATION WITH TRI-FORM-TAIL-FIN ARRANGEMENTS AT MACH NUMBERS FROM 1.70 TO 2.86
Milton Lamb Dec. 1981 119 p refs
(NASA-TM-83223; L-14724) Avail: NTIS HC A06/MF A01 CSCL 01A

A wind-tunnel missile model with either a lower vertical tail fin with a pair of horizontal fins having 0 deg, 22.5 deg, or 30 deg dihedral or an upper vertical tail fin with horizontal fins having 0 deg, -22.5 deg, or -30 deg dihedral was investigated. The results indicated that those configurations with horizontal fins at or below the horizontal plane had nearly linear pitching-moment characteristics, while those with the horizontal fins above the horizontal plane experienced pitch-up which increased with increasing horizontal-fin-dihedral angle. At zero angle of attack, the configurations were directionally stable at most test Mach numbers. Generally, those configurations with the upper vertical fin had positive effective dihedral at zero angle of attack, while those with he lower vertical fin had negative effective dihedral. For roll control, three deflected tail fins produced more total roll control than two horizontal fins. For yaw control, three tail fins deflected equally or differentially produced more total yaw control than the single vertical fin. B.W.

PRESSURE DISTRIBUTIONS AND SHOCK SHAPES FOR 12.84 DEG/7 DEG ON-AXIS AND BENT-NOSE BICONICS IN AIR AT MACH 6
Charles G. Miller, III and Peter A. Gnoff Dec. 1981 127 p refs
(NASA-TM-83222; L-14896) Avail: NTIS HC A07/MF A01 CSCL 01A

Pressure distributions and shock shapes on a spherically

blunted, 12.84 deg /7 deg on axis biconic and a spherically blunted, 12.84 deg/7 deg bent nose biconic at Mach 6 in air were measured. The angle of attack, referenced to the axis of aft cone, was varied from 0 deg to 25 deg in nominal 5 deg increments. Two values of free stream Reynolds number based on model length were tested. Predictions from simple, theories and from a supersonic, three dimensional, external inviscid code (STEIN) are compared with measured values. Predicted STEIN shock shapes and windward pressures are in agreement with measured values for both biconics over the present range of angle of attack.

COMPARISON OF EXPERIMENTAL AND THEORETICAL TURBULENCE REDUCTION CHARACTERISTICS FOR SCREENS, HONEYCOMB, AND HONEYCOMB-SCREEN COMBINATIONS

James Scheiman Dec. 1981 55 p refs
(NASA-TP-1958; L-14628) Avail: NTIS HC A04/MF A01 CSCL 01A

Turbulence reduction research using screens, honeycomb, and combinations thereof was conducted in a half-scale model of a portion of the Langley 8-foot transonic pressure tunnel. It was found that screens alone reduce axial turbulence more than lateral turbulence; whereas, honeycomb alone reduces laterial turbulence more than axial turbulence. Because of this difference, the physical mechanism for decreasing turbulence for screens and honeycomb must be completely different. It is concluded that honeycomb with a downstream screen is an excellent combination for reducing turbulences.

A FLIGHT INVESTIGATION OF BLADE-SECTION AERODYNAMICS FOR A HELICOPTER MAIN ROTOR HAVING 10-64C AIRFOIL SECTIONS

Charles E. K. Morris, Jr. Nov. 1981 181 p refs
(NASA-TM-83226) Avail: NTIS HC A09/MF A01 CSCL 01A

Pressure data at 90 percent blade radius were obtained for a helicopter main rotor with 10-64C blade sections during flight. Concurrent measurements were made of vehicle flight state, performance and some rotor loads. The test envelope included hover, level flight from about 65 to 162 knots, climb and descent, and collective fixed maneuvers. Good agreement is shown between some sets of airfoil pressure distributions obtained in flight and those from two-dimensional wind-tunnel tests or theoretical calculations.

LOW REYNOLDS NUMBER AIRFOIL SURVEY, VOLUME 1 Final Report

B. H. Carmichael Nov. 1981 106 p refs
(NASA Order L-40596)
(NASA-CR-165803-Vol-1) Avail: NTIS HC A06/MF A01 CSCL 10A

The differences in flow behavior two dimensional airfoils in the critical chordlength Reynolds number compared with lower and higher Reynolds number are discussed. The large laminar separation bubble is discussed in view of its important influence on critical Reynolds number airfoil behavior. The shortcomings of application of theoretical boundary layer computations which are successful at higher Reynolds numbers to the critical regime are discussed. The large variation in experimental aerodynamic characteristic measurement due to small changes in ambient turbulence, vibration, and sound level is illustrated. The difficulties in obtaining accurate detailed measurements in free flight and dramatic performance improvements at critical Reynolds number, achieved with various types of boundary layer tripping devices are discussed.

LIFTING SURFACE THEORY FOR WINGS IN LOW FREQUENCY SMALL AMPLITUDE YAWING AND SIDE SLIPPING OSCILLATING MOTIONS AT LOW SPEEDS

Huang Mingke *In its* Acta Mech. Sinica (Selected Articles) (FTD-ID(RS)T-0709-81) 20 Oct. 1981 p 1-15 refs Transl. into ENGLISH from Acta Mech. Sinica (Communist China), no. 3, 1980 p 217-231, 302-310 (For primary document see N82-14060 05-02)
Avail: NTIS HC A03/MF A01 CSCL 01/1

The mathematical problem of flow at low speeds past a yawing oscillating wing set up by using a coordinate system fixed in the wing is discussed. The snake-like tail vortices behind the wing are investigated in detail. In the case of low frequency oscillations, numerical solution is obtained by the non-steady vortex-lattice method which can be used to calculate the rolling moment aerodynamic derivatives of the wing due to yaw and side slip. Some of the computed results are compared with the experimental results.

EQUATIONS OF FLIGHT MECHANICS CONSIDERING ATMOSPHERIC TURBULENCE

Jiang Yu-xian *In its* Acta Mech. Sinica (Selected Articles) (FTD-ID(RS)T-0708-81) 20 Oct. 1981 p 28-34 refs Transl. into ENGLISH from Acta Mech. Sinica (Communist China), no. 3, 1980 p 217-231, 302-310 (For primary document see N82-14060 05-02)
Avail: NTIS HC A03/MF A01 CSCL 01/1

The effect of wind on the flight performance, starting from the difference between the relative motion and the absolute motion, is discussed. The general form of the flight mechanics equations with wind are derived. The vector forms of the weight, air speed, ground speed, wind speed, aerodynamic force, thrust, aerodynamic moment, angular velocity relative to the air, angular velocity relative to the ground of the flying vehicle and the angular velocity of the air are simplified for fflight mechanics equations. The body coordinate system is Oxyz and the inertial coordinate system is O sub g x sub g y sub g z sub g. It is concluded that the relative motion and the absolute motion of the equations of flight mechanics with wind should be distinguished. M.D.K.

EVALUATION OF USSAERO AND HABP COMPUTER CODES FOR AERODYNAMIC PREDICTIONS FOR SLENDER BODIES Final Report, Oct. 1979 - Jul. 1980

Jack I. Flaherty Sep. 1981 105 p refs
(AF Proj. 2404)
(AD-A106065; AFWAL-TR-81-3035) Avail: NTIS
HC A06/MF A01 CSCL 20/4

This study has been conducted to evaluate the merits and limitations of a subsonic and a supersonic analysis method used frequently in Government and Industry for predicting aerodynamic characteristics. Specifically the Unified Subsonic-Supersonic Aerodynamic Computer Program (USSAERO) was evaluated at Mach 0.4 for the subsonic case. The Supersonic-Hypersonic Arbitrary Body Program (HABP) was evaluated for the supersonic case beginning at a low Mach number of 1.50 and systematically increasing to Mach 4.63. Model geometries have been restricted to simple axisymmetric ogive forebody cylindrical afterbody combinations to aid in the relative comparison of the method capabilities. For the supersonic comparisons a data base was selected that featured a wide variety of nose bluntness and fineness ratios to determine their impact on the analysis capabilities. Specific limitations of the methods are identified from comparisons with detailed body pressure coefficient data. Author (GRA)

NUMERICAL SIMULATION OF STEADY SUPERSONIC FLOW OVER AN OGIVE CYLINDER BOATTAIL BODY Final Report

Lewis B. Schiff and Walter B. Sturek Sep. 1981 50 p refs
(DA Proj. 1L1-61102-AH-43)
(AD-A106060; ARBRL-TR-02363) Avail: NTIS
HC A03/MF A01 CSCL 20/4

A recently reported Parabolized Navier-Stokes code has been employed to compute the supersonic flow field surrounding an ogive-cylinder-boattail body at incidence. The computations were performed for flow conditions where an extensive series of experimental surface pressure and turbulent boundary-layer profile measurements had been obtained. Comparison between the computational results and experimental measurements for angles of attack up to 6 deg. show excellent agreement. At angles greater than 6 deg. discrepancies are observed which are tentatively attributed to three-dimensional turbulence modeling errors. Author (GRA)

HC A03/MF A01 CSCL 20/4

Three dimensional finite-difference flow field computation techniques have been employed to generate a parametric aerodynamic study at supersonic speeds. Computations for viscous turbulent and inviscid flow have been performed for cone-cylinder, secant-ogive-cylinder, and tangent-ogive-cylinder bodies for a Mach number range of 1.75 < or = M < or = 5. The aerodynamic coefficients computed are pitching moment, normal force, center of pressure, Magnus moment, Magnus force, Magnus center of pressure, form drag, viscous drag, roll damping and pitch damping. All aerodynamic coefficients are computed in a conceptually exact manner. The only empirical input is that required for turbulence modeling. Computed results are compared to experimental data from free flight aerodynamic ranges and wind tunnels in order to validate the computational techniques. parametric comparisons illustrate the effects of body configuration and Mach number for the ten aerodynamic coefficients. The results for Magnus and pitch damping are of particular interest. Author (GRA)

HYPERSONIC SLIP-FLOW AROUND SLENDER ELLIPTICAL CONES AT A SLIGHT ANGLE OF ATTACK Ph.D. Thesis - Rheinisch-Westfaelischen Technischen Hochschule, West Germany

Panajotis Evangelou Sep. 1981 122 p refs Transl. into ENGLISH of "Hypersonische Gleitstroemung um schwach angestellte schlanke elliptische Kegel", DFVLR-FB-79-21 DFVLR, Goettingen, West Germany, May 1979 Original report in GERMAN previously announced as N80-25301
(ESA-TT-644; DFVLR-FB-7921) Avail: NTIS HC A06/MF A01; DFVLR, Cologne DM 19.20

A method is developed for calculating the hypersonic slip flow around elliptical cones at low angles of incidence. Using orders of magnitude a system of partial nonlinear differential equations of second order and parabolic character is derived from the Navier-Stokes equations and the energy equation; this system describes the flow in the shock formation region. The system of differential equations is integrated using an explicit finite difference procedure. The results obtained are compared with test results and the results of other theoretical flow field investigations. The influence of the axis ratio of the elliptical cone section and of the angle of incidence on the development of the flow field in the shock formation region is investigated. For small angles of incidence, to an elliptical cone, the cross flow appears only slowly, or not at all, whereas at moderate incidences, because of the large expansion, a marked cross flow occurs around the ridge line. This expansion and cross flow become more marked with increasing ellipticity of the conical section and with increasing incidence. Author (ESA)

TIME LINEARIZED CALCULATION OF TWO DIMENSIONAL UNSTEADY TRANSONIC POTENTIAL FLOW AT SMALL DISTURBANCES

Ralph Voss Oct. 1980 68 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-728)
(DFVLR-FB-81-01) Avail: NTIS HC A05/MF A01; DFVLR, Cologne DM 20

An integral equation method for calculating unsteady transonic flow fields around oscillating airfoils at small disturbances was investigated. The procedure is based on separating the velocity potential into steady and unsteady parts and linearizing the resulting unsteady differential equation under the assumption of harmonic oscillations of small amplitudes. Use of Green's theorem results in two coupled integral equations for a doublet distribution at the profile and a source distribution in the whole flow field. Neglecting far field influences, the equations are discretized in a finite area and solved by iteration. The influences of discretization and limitation of the field are shown by results for a NACA 64A 006 profile. Author (ESA)

ADVANCED CRASH SURVIVABLE FLIGHT DATA RECORDER AND ACCIDENT INFORMATION RETRIEVAL SYSTEM (AIRS) Final Report, Oct. 1978 - Dec. 1980

Henry R. Ask, Donald L. White, and Kent E. Berwick Fort Eustis, Va. Army Research and Technology Labs. Aug. 1981 166 p refs
(Contract DAAK51-78-C-0025; DA Proj. 1L1-62209-AH-76)
(AD-A105510; ESP-8109; USAAVRADCOM-TR-81-D-20) Avail: NTIS HC A08/MF A01 CSCL 01/3

The Accident Information Retrieval System, (AIRS) development program consisted of four phases. Design concepts were formulated based on selection and definition of aircraft parameters to be monitored by the AIRS, selection of memory technology, circuit definitions for aircraft interfacing, and studies and tests related to the development of an armored module to protect the memory device. Brassboard electronics were fabricated and tested and software which proved the feasibility of data collection and storage in a solid-state memory device utilizing unique data compression techniques to reproduce critical aircraft flight information was developed and tested. Flight-worthiness assurance tests were performed on the AIRS brassbroad. The hardware was installed in a Sikorsky UH-60A BLACK HAWK helicopter. The system was reviewed for final configuration, risk areas, final size (207 cu. in. or less), weight (less than 9.3 lbs.), and life cost (greater than 10,000 hours MTBF). GRA

IN-SERVICE TESTING OF THE PRECISION APPROACH PATH INDICATOR (PAPI) AT NEWARK INTERNATIONAL AIRPORT, NEW JERSEY Interim Report, Dec. 8, 1980 - Apr. 8, 1981

Bret B. Castle Dec. 1981 11 p
(DOT-081-502-510)
(DOT/FAA/RD-81/95; DOT/FAA/CT-81/79) Avail: NTIS HC A02/MF A01

The Precision Approach Path Indicator (PAPI) tests involving four months of inservice testing at Newark International Airport, New Jersey are presented. Basically, the PAPI was compared against the standard red/white Visual Approach Slope Indicator (VASI) system at a large airport and on a runway with an Instrument Landing System (ILS). The PAPI system was installed in a manner to take care of aircraft of all sizes; that is, different wheel to eye distances. Information was obtained from pilots of large commercial aircraft. Results show that under these conditions about 60 percent of the pilots prefer the PAPI over the VASI system. S.L.

COMMUTATED AUTOMATIC GAIN CONTROL SYSTEM

Stephen R. Yost [1981] 25 p refs
(Grant NGR-36-009-017)
(NASA-CR-164798; TM-81) Avail: NTIS HC A02/MF A01 CSCL 17G

A commutated automatic gain control system (AGC) was designed and constructed for the prototype Loran C receiver. The AGC is designed to improve the signal-to-signal ratio of the received Loran signals. The AGC design does not require any analog to digital conversion and it utilizes commonly available components. The AGC consists of: (1) a circuit which samples the peak of the envelope of the Loran signal to obtain an AGC voltage for each of three Loran stations, (2) a dc gain circuit to control the overall gain of the AGC system, and (3) an AGC amplification of the input RF signal. The performance of the AGC system was observed in bench and flight tests; it has improved the overall accuracy of the receiver. Improvements in the accuracy of the time difference calculations to within approx. + or - 1.5 microseconds of the observed time differnces for a given position are reported. N.W.

REQUIREMENTS FOR INSTRUMENT APPROACHES TO TRIPLE PARALLEL RUNWAYS

T. N. Shimi, W. J. Swedish, and L. C. Newman Jul. 1981 146 p refs
(Contract DTFA01-81-C-10001)
(AD-A105622; MTR-81W145; FAA-EM-81-12) Avail: NTIS HC A07/MF A01 CSCL 01/2

Current ATC procedures do not consider instrument approaches to more than two parallel runways. This document discusses the engineering results of an analysis that examined the technical feasibility of conducting triple parallel instrument approaches as a means of increasing the aircraft flow at congested airports. The technical criteria that were subjected to analysis include the physical characteristics of the airfield, airspace and aircraft mix, surveillance (the radar and display systems), and control (procedures for normal and abnormal operations. The expected performance in safety and capacity was estimated for alternative landing concepts. An analysis was conducted of blunders and evasion strategies. It was found that, for a given configuration, a single blunder recovery strategy could be specified that would produce acceptable separations between aircraft. Missed approaches on triple parallels and pilot acceptance of triple approaches are also discussed. Lastly, recommended requirements and control procedures for triple parallel instrument approaches are presented. Author (GRA)

REQUIREMENTS FOR INDEPENDENT AND DEPENDENT PARALLEL INSTRUMENT APPROACHES AT REDUCED RUNWAY SPACING

A. L. Haines and W. J. Swedish Washington FAA May 1981 182 p refs
(Contract DTFA01-81-C-10001)
(AD-A105673; MTR-81W15; FAA-EM-81-8) Avail: NTIS HC A09/MF A01 CSCL 01/2

Independent parallel instrument approaches are conducted today only if the runway centerlines are 4300 ft apart or more. The rationale behind this criterion is reviewed, and the requirements for reducing the criterion to 3000 ft are evaluated. Although some benefit is derived from improvements in navigational accuracy, the performance of the surveillance system has the greatest impact on the required runway spacing. Dependent alternating instrument approaches to parallel runways are also evaluated. Currently such approaches require a runway spacing of 3000 ft or more. The effects of reducing this runway spacing are discussed, especially with regard to blunder recovery. Reducing the runway spacing required for these approaches could increase the arrival capacity and reduce delays at certain airports and would provide increased flexibility for planning new runways. FEASIBILITY STUDY FOR AN ADVANCED LIGHTED AID TO NAVIGATION Final Report

Stephen Jaskulek, Eric J. Hoffman, and Walter E. Allen Sep. 1981 121 p refs
(Contract N00024-81-C-5301)
(AD-A105944; USCG-D-48-81) Avail: NTIS HC A06/MF A01 CSCL 17/7

This report discusses a Coast Guard advanced aid to navigation network. Various light sources, positioning systems, and radio links are investigated for suitability to solar powered marine aids. A modular microprocessor-based aid, capable of self diagnostic monitoring and differential Loran-C positioning, is described. A communication system between the aids and shore stations, using conventional or meteor burst VHF or a GOES satellite link, is examined, showing the first and last options to be most viable. Inter-aid flash synchronization schemes, and data transmission formats, polling methods, and system performance analysis are discussed. Having established the technical feasibility of the advanced aid concept, cost and reliability estimates are performed on the proposed systems. Finally, recommendations on areas requiring further study are presented. Author (GRA)

C-5A OPERATIONAL UTILITY EVALUATION SOIL TESTS AND ANALYSIS Final Report, Jun. - Aug. 1980
Robert W. Grau Aug. 1981 74 p refs
(Contract MIPR-F7813001430001)
(AD-A105555; WES-TR-GL-81-7) Avail: NTIS HC A04/MF A01 CSCL 08/13

The purpose of this report is to present the data collected concerning the ground flotation characteristics of the C-5A aircraft during the C-5A operational utility evaluation test program. This report gives a description of the three test sites selected for this program, a summary of all soil and surface distress measurements taken at each site during aircraft operations, and an analysis of the data. Results of this evaluation test program indicate that 3-in. ruts have little or no effect on the performance of the C-5A aircraft on unsurfaced areas. Author (GRA)

A METHOD FOR MEASURING TAKEOFF AND LANDING PERFORMANCE OF AIRCRAFT, USING AN INERTIAL SENSING SYSTEM
A. Pool, J. L. Simons, G. J. H. Wensink, and A. J. L. Willekens 25 Sep. 1980 10 p refs Presented at AGARD Flight Mech. Panel Symp. on Subsystem Testing and Flight Test Instrumentation, Geilo, Norway, 27-30 Oct. 1980
(NLR-MP-80036-U) Avail: NTIS HC A02/MF A01

An inertial sensing system, STALINS, used to provide trajectory data for takeoff and landing measurement instrument design, is presented. The system specifications based on certification requirements for civil transport aircraft are defined for continuous and rejected takeoff, minimum unstick speed, minimum control speed on the ground, and landing. Calculations are performed using a computer program supplemented by a manual check, giving horizontal distance and height measurements. Data are made available within 24 hours. The method is accurate and is suitable for tests at several airfields, since instrumentation is either onboard already, or easily transported by the aircraft.

A GENERAL AVIATION SIMULATOR EVALUATION OF A RATE-ENHANCED INSTRUMENT LANDING SYSTEM DISPLAY
David A. Hinton Dec. 1981 44 p
(NASA-TP-1960; L-13911) Avail: NTIS HC A03/MF A01 CSCL 01D

A piloted-simulation study was conducted to evaluate the effect on instrument landing system tracking performance of integrating localizer-error rate with raw localizer and glide-slope error. The display was named the pseudocommand tracking indicator (PCTI) because it provides an indication of the change of heading required to track the localizer center line. Eight instrument-rated pilots each flew five instrument approaches with the PCTI and five instrument approaches with a conventional course deviation indicator. The results show good overall pilot acceptance of the display, a significant improvement in localizer tracking error, and no significant changes in glide-slope tracking error or pilot workload.

A TRUE AIR SPEED SENSOR FOR MINIATURE UNMANNED AIRCRAFT
J. A. C. Beattie Jun. 1981 11 p refs
(RAE-TM-SPACE-287; BR80019) Copyright. Avail: Issuing Activity

A prototype sensor with digital output is described. Vortex shedding principles are exploited by using a bluff body with end-plates to produce a stable set of vortices alternately from the edges of the body. Vortex production frequency is directly proportional to the speed of the fluid past the body. A pair of printed thick film thermistors detect the vortices. Tests show excellent linearity of response, although sensor geometry, and signal processing electronics can be improved. Author (ESA)

HELICOPTER MODEL STUDIES FOR ON-BOARD ELECTROSTATIC SENSORS Final Report, 25 Sep. 1979 - 24 Jan. 1981
O. Tranbarger, B. M. Duff, and T. R. Owen Fort Eustis, Va. Army Research and Technology Labs. Sep. 1981 286 p refs
(Contract DAAK51-79-C-0060; DA Proj. 1L1-62209-AH-76)
(AD-A105511; SWRI-14-5863; USAAVRADCOM-TR-81-D-26) Avail: NTIS HC A13/MF A01 CSCL 13/12

Hovering helicopters accumulate excessive charge as a result of triboelectrification, surrounding space charge, and external electric fields that result in high electrostatic potentials on the aircraft. Electrostatic energy stored on the helicopter can cause electrical discharges to occur from the cargo hook when contact is made with the ground or ground personnel. Laboratory model studies were conducted under electrostatic conditions simulating hovering aircraft to show that on-board instrumentation capable of measuring electric field intensity and charge density can provide the basis for indirectly inferring the correct potential relative to ground of a spherical model test body. Potential of the model was inferred for three cases involving electrostatic instrumentation located (1) on the ground below the model, (2) installed at the south pole of the model, and (3) mounted at the end of the simulated cargo hook. Analysis of laboratory test data resulted in empirical derivations of unique electric field curves for each of the three cases studied. The first two cases were also studied analytically by solving Poisson's equation for a sphere between two parallel plates, and the mathematical expressions substantiated the laboratory results. Methodology for developing a full-scale helicopter electrostatic discharger system to eliminate hazardous potentials on helicopter aircraft is described.

GAS TURBINE CERAMIC-COATED-VANE CONCEPT WITH CONVECTION-COOLED POROUS METAL CORE
Albert F. Kascak (AVRADCOM Research and Technology Labs., Cleveland), Curt H. Liebert, Robert F. Handschuh, and Lawrence P. Ludwig Dec. 1981 14 p refs Sponsored in part by U.S. Army Aviation Research and Development Command, St. Louis
(NASA-TP-1942; AVRADCOM-TR-81-C-7; E-732) Avail: NTIS HC A02/MF A01 CSCL 21E

Analysis and flow experiments on a ceramic-coated-porous-metal vane concept indicated the feasibility, from a heat transfer standpoint, of operating in a high-temperature (2500 F) gas turbine cascade facility. The heat transfer and pressure drop calculations provided a basis for selecting the ceramic layer thickness (to 0.08 in.), which was found to be the dominant factor in the overall heat transfer coefficient. Also an approximate analysis of the heat transfer in the vane trailing edge revealed that with trailing-edge ejection the ceramic thickness could be reduced to (0.01 in.) in this portion of the vane. T.P. 1981-42, France, 1981 p 1-18 Presented at the AGARD/FDP Symp. Aerodynamics of Power Plant Installation, Toulouse, 11-14 May 1981 Original language document was announced as A81-39245 Transl. by Scientific Translation Service, Santa Barbara, Calif. Original doc. prep. by ONERA, Toulouse
(Contract NASw-3542)
(NASA-TM-76764; TP-1981-42) Avail: NTIS HC A03/MF A01 CSCL 21E

The optimization of performance factors in state of the art civil aircraft was studied by using powered models in wind tunnels. In cooperation with ONERA, two methods of cold simulation of jet engine washes were developed. The first, called 'blown jet', benefitted from the previously perfected test set-ups made for studies of the CONCORDE. The second, which utilized small air-turbines, were recently put into operation for the AIRBUS family of aircraft. The facilities, the measurement equipment and the methods of exploiting the results are described. The relative value of each of the methods of motorization is analyzed: complexity of equipment, duration, precision of measurements and comparison of results are also discussed. A.R.H.

CORE COMPRESSOR EXIT STAGE STUDY. VOLUME 4: DATA AND PERFORMANCE REPORT FOR THE BEST STAGE CONFIGURATION Final Report
D. C. Wisler Apr. 1981 204 p refs
(Contract NAS3-20070)
(NASA-CR-165357; R80AEG314-Vol-4) Avail: NTIS HC A10/MF A01 CSCL 21E

The core compressor exit stage study program develops rear stage blading designs that have lower losses in their endwall boundary layer regions. The test data and performance results for the best stage configuration consisting of Rotor-B running with Stator-B are described. The technical approach in this efficiency improvement program utilizes a low speed research compressor. Tests were conducted in two ways: (1) to use four identical stages of blading to obtain test data in a true multistage environment and (2) to use a single stage of blading to compare with the multistage test results. The effects of increased rotor tip clearances and circumferential groove casing treatment are evaluated. E.A.K.

THE USE OF OPTIMIZATION TECHNIQUES TO DESIGN CONTROLLED DIFFUSION COMPRESSOR BLADING
Nelson L. Sanger 1982 18 p refs Proposed for presentation at the 27th Ann. Intern. Gas Turbine Conf., London, Apr. 18-22, 1982; sponsored by ASME
(NASA-TM-82763; E-1084) Avail: NTIS HC A02/MF A01 CSCL 21E

A method for automating compressor blade design using numerical optimization, and applied to the design of a controlled diffusion stator blade row is presented. A general purpose optimization procedure is employed, based on conjugate directions for locally unconstrained problems and on feasible directions for locally constrained problems. Coupled to the optimizer is an analysis package consisting of three analysis programs which calculate blade geometry, inviscid flow, and blade surface boundary layers. The optimizing concepts and selection of design objective and constraints are described. The procedure for automating the design of a two dimensional blade section is discussed, and design results are presented. E.A.K.

POLLUTION REDUCTION TECHNOLOGY PROGRAM SMALL JET AIRCRAFT ENGINES, PHASE 3 Final Report
T. W. Bruce, F. G. Davis, T. E. Kuhn, and H. C. Mongia Dec. 1981 180 p refs
(Contract NAS3-20819)
(NASA-CR-165386; AiResearch-21-3615) Avail: NTIS HC A09/MF A01 CSCL 21E

A series of Model TFE731-2 engine tests were conducted with the Concept 2 variable geometry airblast fuel injector combustion system installed. The engine was tested to: (1) establish the emission levels over the selected points which comprise the Environmental Protection Agency Landing-Takeoff Cycle; (2) determine engine performance with the combustion system; and (3) evaulate the engine acceleration/deceleration characteristics. The hydrocarbon (HC), carbon monoxide (CO), and smoke goals were met. Oxides of nitrogen (NOx) were above the goal for the same configuration that met the other pollutant goals. The engine and combustor performance, as well as acceleration/deceleration characteristics, were acceptable. The Concept 3 staged combustor system was refined from earlier phase development and subjected to further rig refinement testing. The concept met all of the emissions goals. E.A.K.

ERBS FUEL ADDENDUM: POLLUTION REDUCTION TECHNOLOGY PROGRAM SMALL JET AIRCRAFT ENGINES, PHASE 3 Final Report
T. W. Bruce, F. G. Davis, T. E. Kuhn, and H. C. Mongia [1982] 47 p refs
(Contract NAS3-20819)
(NASA-CR-165387; AiResearch-21-3619) Avail: NTIS HC A03/MF A01 CSCL 21E

A Model TFE731-2 engine with a low emission, variable geometry combustion system was tested to compare the effects of operating the engine on Commercial Jet-A aviation turbine fuel and experimental referee broad specification (ERBS) fuels. Low power emission levels were essentially identical while the high power NOx emission indexes were approximately 15% lower with the EBRS fuel. The exhaust smoke number was approximately 50% higher with ERBS at the takeoff thrust setting; however, both values were still below the EPA limit of 40 for the Model TFE731 engine. Primary zone liner wall temperature ran an average of 25 K higher with ERBS fuel than with Jet-A. The possible adoption of broadened proprties fuels for gas turbine applications is suggested. E.A.K.

(Contract F33615-79-C-2018; AF Proj. 2307)
(AD-A106059; PWA-FR-14487; AFWAL-TR-81-2046) Avail: NTIS HC A05/MF A01 CSCL 21/5

THis report evaluates optimization methods for their effectiveness in relating multistage axial compressor test data to the decision to vary a selected vane or bleed to reach a predetermined performance goal. Compressor simulations were used in a comparative evaluation and each method was judged on the basis of the number of tests required to achieve an optimum performance goal. The influence of measurement errors and finite vane travel were also prime considerations. Based on this evaluation, the COPES/CONMIN approximate optimization technique was chosen most suitable. CORROSION INHIBITING ENGINE OILS Final Interim Report, 4 Sep. 1979 - 1 Dec. 1980
G. C. Brown, R. J. Meehan, and P. A. Warner Wright-Patterson AFB, Ohio AFWAL Aug. 1981 73 p refs
(Contract F33615-79-C-5089)
(AD-A106127; PWA-FR-13908; AFWAL-TR-81-4028) Avail: NTIS HC A04/MF A01 CSCL 11/8

The Fluids, Lubricants, and Elastomers Branch of the Materials Laboratory, AFWAL, established the requirements for a MIL-L-7808H operational oil with corrosion inhibition characteristics at least equal to those of MIL-C-8188C. The new oil formulation is to provide corrosion inhibition under long-term storage conditions of the ALCM F107 turbine engine. During the initial fifteen-month effort, several approaches were evaluated as candidate methods for determining the effectiveness of corrosion inhibiting oil additives. A screening procedure was developed after preliminary modifications were made to the Corrosion Rate Evaluation Procedure (CREP). Using the CREP together with compatibility and miscibility screening of oil/inhibitor blends, a total of 67 candidate corrosion inhibitors (CCI) were evaluated. These included CCI obtained from Bray Oil Company, El Monte, California, as part of a subcontract to synthesize candidate corrosion inhibitors. Additional tests were completed on a preliminary physical and chemical property evaluation of the oil/inhibitor blends in regard to MIL-L-7808H and MIL-C-8188C specifications. GRA

LONG-TERM STABILITY OF FINELY CAST ALLOYS FOR GAS TURBINE BLADES UNDER HOT GAS CORROSION CONDITIONS [ZEITSTANDFESTIGKEIT VON FEINGUSSLEGIERUNGEN FUER GAS TURBINENSCHAUFELN]
K. H. Kloos, J. Granacher, and H. Denus 1980 25 p refs In GERMAN Presented at European Symp. on the Interaction between Corrosion and Mech. Stress at High Temp., Petten, Netherlands, 13-14 May 1980 Sponsored by Bundesministerium fuer Forschung und Technologie
(DECHEMA-Proj-4.2/1; DECHEMA-Proj-4.2/1F) Avail: NTIS HC A02/MF A01

Two hot gas corrosion conditions were tested: mild for aircraft and industrial turbines, and hard (by adding seasalt or S, Na, Va and Cl) for aircraft and industrial gas turbine composite materials. The longest loading times obtained before rupture are about 2000 hr at 700C and about 5000 hr at 800C. The probes were microscopically investigated after the tests. No reduction of the long-term stability due to hot gas corrosion is found as compared to the case of air at rest. Author (ESA)

MLS VERTICAL GUIDANCE AND NAVIGATION FOR A STOL AIRPLANE LANDING ON AN ELEVATED STOLPORT
David N. Warner, Jr. Nov. 1981 27 p refs
(NASA-TM-81338) Avail: NTIS HC A03/MF A01 CSCL 01C

In contrast to CTCL landing operations, STOL airplanes landing on short STOLport runways typically begin the flare maneuver before reaching the runway surface. Vertical guidance procedures were developed to allow an autoland flight control system for a STOL airplane to use Microwave Landing System (MLS) signals as altitude and sink rate references for flare initiation, with a transition to radar altimeter after the airplane is over the runway. The implementation has minimum impact on the control system and landing performance. Data are presented which show validation of the concepts in a simulator. Author

THE DESIGN OF A JET CATCHER
K. G. Winter and L. F. East Feb. 1981 11 p refs
(RAE-TM-AERO-1891; BR78582) Copyright. Avail: Issuing Activity

A device for catching and dissipating the kinetic energy of a jet used in a boundary layer tunnel to eliminate unwanted air currents is described. A dished front face and a large outlet catch the jet, avoiding spillage, and pass it through a screen set normal to the flow in order to reduce kinetic energy. The screen is inclined so as to take advantage of refraction. An additional muslin screen reduces noise. Final outlet velocity is 1/8 of the jet velocity, although there is slight spillage. Author (ESA)

N82-14103 Royal Aircraft Establishment, Farnborough (England).
AN AFTERBODY DRAG BALANCE
A. G. Kurn Mar. 1981 12 p ref
(RAE-TM-AERO-1897; BR78346) Copyright. Avail: Issuing Activity

A strain gage drag balance was made to fit into the jet blowing rig in a transonic wind tunnel. Differences in the drag of various axisymmetric boattailed afterbodies surrounding an engine exhaust nozzle were determined. Three sets of four flexures are spaced equally along the x axis, with strain gages on the middle set. The gages on the center flexures form bridges, compensated for thermal induced drift. Calibration shows that signals are linear with drag force. Output signals can be monitored from two separate strain gage circuits. The device can withstand components of force and moment that might be applied during model assembly. Drag values up to 20N can be measured. Author (ESA)

This report documents the results of an investigation to determine how fiber optic materials can be utilized to substantially increase the simulation capabilities of an Environmental Lighting Laboratory. This Laboratory must provide the capability to dynamically simulate the ambient environmental illumination conditions encountered in day, night and high threat/high risk aircraft missions. Three cockpit lighting simulator concepts were studied. Two of these concepts utilized a spherical lighting enclosure with a visual scene being projected at the inner surface via a remote projection input surface; fiber optics carry the image from input surface to output surface. In one concept, the pilot views a back-projected image on a translucent spherical screen via a spherical output surface with imbedded fiber optics. In the other concept, the pilot views the spherical fiber optic output surface directly. Both concepts were considered possible to implement, each concept having appropriate cost vs. performance tradeoffs. No useful solution was found using the third concept, a fiber optic input to mirrored ellipsoidal enclosure. It was found that the spherical enclosure concept with an internal translucent projection screen offers the best combination of illumination level and resolution; however, the cost of implementing this concept is substantial. RAIL ROUGHNESS STUDY OF THE HOLLOMAN HIGH SPEED ROCKET SLED TEST TRACK Final Report, May 1978 - Jun. 1981
Larry C. Mixon, Charles B. Evans, and Windell L. Gilliam 1 Sep. 1981 97 p refs
(AF Proj. 9993)
(AD-A105778; AD-TR-81-62) Avail: NTIS HC A05/MF A01 CSCL 14/2

Data from a first order survey of the Holloman High Speed Rocket Sled Test Track was statistically analyzed to characterize the roughness of the rails. The rail roughness is a forcing function manifested as vibration in high speed sled tests conducted on the Track. Statistical methods in the space and frequency domain were developed and discussed and further data requirements were justified. Author (GRA)

This workbook is designed for students interested in space flight planning, who after training, may serve as flight planning aides. Routine flight planning activities requiring engineering-type calculations and analysis are covered. Practice exercises and brief instructions are given for the programming and use of the hand calculator as well as the calculation of position and velocity in the orbital plane. Calculation of relative orbital position is also covered with emphasis upon celestial coordinates and time measurement. R.J.F.

GIOTTO: A MISSION TO HALLEY'S COMET

R. Reinhard *In* ESA Sci. and Exptl. Aspects of the Giotto Mission Jun. 1981 p ix-xix refs (For primary document see N82-14107 05-12)

Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

The ESA Giotto mission, a fast flyby of Halley's Comet in March 1986, is described. In situ measurements in the cometary atmosphere are planned to unravel the complex physical and chemical processes that occur in it, to provide the elemental and isotopic composition of the volatile components and dust, to investigate the solar wind/comet interaction, and to image the nucleus which is too small to be seen from Earth. Giotto is a spin stabilized spacecraft based on a GEOS design. Its main features include a dual sheet bumper shield to protect it from dust particle impacts in the innermost part of the coma and a high gain, despun antenna dish allowing high data rate transmission at 40 kbit/sec over a distance of 1 AU. The encounter in the comet environment only lasts 4 hours due to the high flyby velocity of 68 km/sec. Giotto is targeted on the comet nucleus or slightly sunward of it, the miss distance being on the order of 500 km. Together with the Soviet Venera and the Japanese Planet A missions to Halley, the Giotto in situ measurements are the first on any comet. Author (ESA)

PLASMA FLOW AND MAGNETIC FIELDS IN COMETS

c91

H. U. Schmidt and R. Wegmann *In* ESA Sci. and Exptl. Aspects of the Giotto Mission Jun. 1981 p 3-7 refs (For primary document see N82-14107 05-12)

Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

Plasma flow and field amplification, resulting from the interaction of the solar wind with a comet, are studied by model calculations for the rates G = 7 X 10 to the 26 power to 2 X 10 to the 30 power of total cometary gas production. The influence of the magnetic field is investigated, using an axisymmetric model. A three-dimensional magnetohydrodynamic calculation shows how the magnetic field induces an asymmetry. A sudden change of direction in the interplanetary field produces streamer-like structures. Author (ESA)

The Giotto magnetometer experiment for triaxial measurement of the magnetic vector field during and before the Halley encounter in March 1986 is described. In situ observations of the magnetic fields associated with the comet/solar wind interaction, including a variety of macroscopic and microscopic plasma phenomena, and a careful search for nucleus related magnetic field signatures are planned. The instrumentation, designed for minimum mass, consists of a triaxial ring-core fluxgate magnetometer sensor system mounted on the antenna mast, the magnetometer analog electronics, and a minimum digital processor inside the spacecraft proper. The experiment has a total mass of 1.5 kg and power consumption of 1.2 W. The measuring ranges per component are given. The 12 bit analog to digital conversion together with some overhead provide 40 bits per vector and a total bitrate of 1200 bit/sec. Author (ESA)

Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

The cometary plasma experiment measures the three dimensional velocity distribution of positive ions in the energy range 10 eV to 70 keV, separating the masses into six major groups. The instrument package includes a fast ion sensor to measure the energy distribution from 10 eV to 20 keV in all directions except the cone around the velocity vector once every rotation of the spacecraft without mass discrimination. An implanted ion sensor is also provided to measure the energy distribution from 100 eV to 70 keV over a 140 deg range of polar angle, with mass discrimination. Author (ESA)

Richter (Max-Planck Inst. fuer Aeronomie, Katlenburg-Lindau, West Germany), K. A. Anderson (California Univ., Berkeley), C. W. Carlson (California Univ., Berkeley), R. P. Lin (California Univ., Berkeley), A. Wekhof (California Univ., Berkeley) et al *In* ESA Sci. and Exptl. Effects of the Giotto Mission Jun. 1981 p 29-37 refs (For primary document see N82-14107 05-12)

Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

An experiment was designed to measure three-dimensional electron energy distribution from < 10 eV to 30 keV as well as the composition and distribution of thermal positive ions, with mass discrimination, including clathrate hydrates in the range 10 to < 230 amu is described. The data obtained can help in determining: (1) the nature of comet tails and the comet/solar wind interaction; (2) the chemical and physical nature of the comet atmosphere and ionosphere and (3) the chemical and physical structure of the comet nucleus. Symmetric quadrispherical electrostatic analyzer provides three-dimensional electron measurements with high sensitivity and high energy, angular, and time resolution. A light electrostatic mass analyzer detects thermal positive ions with high sensitivity, low background and good mass resolution close to the comet. The two instruments have open, flythrough apertures. Author (ESA)

AN ENERGETIC PARTICLE DETECTOR FOR GIOTTO AND ITS SCIENTIFIC OBJECTIVES

S. McKenna-Lawlor, A. Thompson (Dublin Inst. for Advanced Studies), D. OSullivan (Dublin Inst. for Advanced Studies), E. Kirsch (Max-Planck Inst. fuer Aeronomie, Katlenburg-Lindau, West Germany), D. B. Melrose (Sydney Univ.), and K.-P. Wenzel (ESTEC, Noordwijk, Netherlands) *In* ESA Sci. and Exptl. Aspects for the Giotto Mission Jun. 1981 p 39-44 refs (For primary document see N82-14107 05-12)

Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

Active and passive background shielding is provided for an energetic particle detector designed to observe energetic particles in the cometary atmosphere as well as monitor the presence of energetic solar particle fluxes. During the encounter phase, spectrum and angulr information concerning particle fluxes are provided with a time resolution of 1 sec. During the cruise phase, 1 hr average particle flux measurements are made in all channels. Sectoring of the measurement of one proton channel (0.1 to 2.1 MeV) is also planned. One hour average solar particle flux measurements together with angular information in the 0.1 to 2.1 MeV proton channel acquired during cruise, when combined with simultaneous observations made by other spacecraft located at different heliographic longitudes, provide information concerning solar particle propagation in the corona and in interplanetary space. SIZE DISTRIBUTION, STRUCTURE, AND CHEMICAL COMPOSITION OF COMETARY DUST PARTICLES c91

Hugo Fechtig *In* ESA Sci. and Exptl. Aspects of the Giotto Mission Jun. 1981 p 47-52 refs (For primary document see N82-14107 05-12)

Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

Observations of cometary dust are reviewed, both for Earthbound measurements and for space measurements. The structure of cometary dust is of low density, such as the loosely conglomerated fluffy particles collected in the atmosphere by Brownlee. Reported IR measurements show silicates to be the main constituent of cometary dust. From simulation experiments and theoretical considerations, more primitive material than previously assumed in the form of carbonaceous C 1 chondrites should be expected. The submicron sized grains may be at least partly of presolar or interstellar origin. The strongest criteria are isotopic deviations from the solar system values, for example for C12/C13 and/or Li7/Li6. Author (ESA)

THE PARTICULATE IMPACT ANALYZER, AN INSTRUMENT TO ANALYZE SMALL PARTICLES RELEASED BY HALLEY'S COMET c19

J. Kissel *In* ESA Sci. and Exptl. Aspects of the Giotto Mission Jun. 1981 p 53-60 refs (For primary document see N82-14107 05-12)

Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

The particulate impact analyzer, which is to provide time of flight mass spectra of individual dust particles released by Halley's Comet and the average composition and mass distribution of cometary matter, is described. The instrument is a redesign of the dust experiment flown on Helios 1 and 2, using commercial instrument developments (mass resolution m/Delta m = 200). It has a sensitivity as to measured particles from 3 x 10 to the minus 16 power to 5 x 10 to the minus 10 power g (0.1 to 10 microns diameter) with impact rates up to 100/sec. Depending on cometary activity, data on some 1000 to 50,000 cometary particles should be obtained. Author (ESA)

A DUST IMPACT DETECTION SYSTEM FOR THE GIOTTO HALLEY MISSION c19

J. A. M. McDonnell, E. Gruen (Max-Planck Inst. fuer Kernphysik), G. C. Evans, J. G. Firth (Science Research Council, Chilton, Engl.), W. C. Carey, H. Kuczera (Technische Univ., Munich), W. M. Alexander (Baylor Univ., Waco, Tex.), D. H. Clark (Sciene Research Council, Chilton, Engl.), R. J. L. Grard (ESTEC, Noordwijk, Netherlands), M. S. Hanner (JPL, Pasadena, Calif.) et al *In* ESA Sci. and Exptl. Aspects of the Giotto Mission Jun. 1981 p 61-75 refs (For primary document see N82-14107 05-12)

Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

A detection system which registers impacts from all significant masses of particles incident on the probe during the post perihelion encounter with Halley's Comet in 1986 is described. Instrumentation comprises three separate subsystems: an impact plasma and momentum sensor (IPM), a meteoroid shield momentum sensor (MSM), and a meteoroid shield penetration sensor which is an additional channel of the MSM system. The IPM sensor is a very high sensitivity impact plasma detector which measures the simultaneous positive and negative signals caused by a charge separation of the plasma in a lateral electric field. The MSM system deploys three 200 kHz resonant piezoelectric crystals on the periphery of the meteoroid shield, yielding a sensor area of 1.94 sq m. From the amplitude of the signals from the sensors both the impact position and impact momentum can be deduced. The system is controlled and data processed by a microprocessor yielding flexible formatting for information on the 100, 000 separate events to be transmitted during the brief encounter period. Author (ESA)

DYNAMICS AND CHEMISTRY OF COMETARY COMAS: A PRE-GIOTTO VIEW c91

W.-H. Ip *In* ESA Sci. and Exptl. Aspects of the Giotto Mission Jun. 1981 p 79-91 refs (For primary document see N82-14107 05-12)

Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

Present understanding and basic questions of cometary coma chemistry and dynamics are reviewed. Comet-solar wind interaction, the particle-and-field environment of a cometary coma, and the chemical composition for both neutral particles and ions in different regions of a coma are discussed, stressing how the Giotto mission can contribute to elucidating these phenomena. Cometary models are postulated and expected results from Giotto measurements on Halley's Comet are mentioned. Author (ESA)

THE GIOTTO ION MASS SPECTROMETER c19

H. Balsiger, J. Geiss, D. T. Young, H. Rosenbauer (Max-Planck Inst. fuer Aeronomie, Katlenburg-Lindau, West Germany), R. Schwenn (Max-Planck Inst. fuer Aeronomie, Katlenburg-Lindau, West Germany), W.-H. Ip (Max-Planck Inst. fuer Aeronomie, Katlenburg-Lindau, West Germany), E. Ungstrup (Danish Space Research Inst.), M. Neugbauer (JPL, Pasadena, Calif.), R. Goldstein (JPL, Pasadena, Calif.), B. E. Goldstein (JPL, Pasadena, Calif.) et al *In* ESA Sci. and Exptl. Aspects of the Giotto Mission Jun. 1981 p 93-98 refs (For primary document see N82-14107 05-12)

Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

An ion mass spectrometer for the Giotto mission is proposed. A wide range of ion species and velocity distributions are expected to be found in the interaction between solar wind and cometary plasmas. The resultant demands on instrument dynamic range preclude use of a single sensor for measurements of ion composition. The Giotto ion mass spectrometer consists of two sensors: one optimized for the outer and the other for the inner coma, with each obtaining complementary information in the region for which it is less than optimal. Both sensors have mass resolution m/Delta m = 20 and use two-dimensional detector arrays to improve time resolution. Considerable onboard data compression is used to reduce the four-dimensional measurements (mass, energy, elevation and azimuth) to the available data rate. Author (ESA)

NOTES ON THE P/HALLEY NUCLEUS c91

Fred L. Whipple *In* ESA Sci. and Exptl. Aspects of the Giotto Mission Jun. 1981 p 101-103 refs (For primary document see N82-14107 05-12)

(Grant NsG-7082)

Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

Indirect evidence and theory concerning the nucleus of P/Halley are summarized. Reasonable estimates place its diameter in the range 2.5 to 4.0 km, but the true value may well lie outside these bounds. The observed activity in its inner coma indicates that the nucleus is spotty and contains small activity areas as do other similar comets. Whether these active areas will show as dark or light regions on the nucleus is not known. Jets of dust will probably obscure parts of the nucleus when imaged by a nearby spacecraft. Author (ESA)

N82-14120# Max-Planck-Institut fuer Aeronomie, Katlenburg-Lindau (West Germany).

A HALLEY MULTICOLOR CAMERA c35

Bonnet (CNRS, Verrieres-le-Buisson, France), S. Cazes (CNRS, Verrieres-le-Buisson, France), G. Colombo (Padua Univ.), C. B. Cosmovici (DFVLR, Oberpfaffenhofen, West Germany), W. A. Delamere (Ball Aerospace Systems Div., Boulder, Colorado) et al *In* ESA Sci. and Exptl. Aspects of the Giotto Mission Jun. 1981 p 105-117 refs (For primary document see N82-14107 05-12)

Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

A multicolor camera is proposed which would provide high quality images of the nucleus (in four colors) and of the coma (in several filter bands) of Halley's Comet. With this experiment, the nuclear size, shape and albedo are measured while the active sublimation process of the nucleus is observed. Determination of the chemical composition (albedo variation and wavelength dependence) of the nucleus is assisted, and insight into the energy balance on the surface is gained. Observations of the inner coma provide details of the interaction of the sublimating gas with the surface and dust. A major part of the encounter is devoted to coma (gas and dust) observations in ten different wavelength (color) bands. The microcomputer of the Halley multicolor camera can also determine the trajectory parameters of the spacecraft relative to the nucleus in real time.

Aspects of the Giotto Mission Jun. 1981 p 121-126 refs (For primary document see N82-14107 05-12)

Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

The concept of the optical probe is presented; it is based on photopolarimetric measurements made parallel to the direction of motion through gas and dust coma. The measurements optically characterize the interior of the coma and provide in situ information on optical properties of the grains. They also determine spatial variations of the number densities, changes in the grains size distribution and ratio of gaseous emission/dust scattering as a function of probe position. The spectral photopolarimeter to be used is described. Since all channels are analyzed by a multi-anode microchannel photomultiplier and since polarization is determined through the spacecraft rotation, the instrument is extremely simple, light, and reliable. Avail: NTIS HC A08/MF A01; ESA, Paris FF 180 Member States, AU, CN and NO (+20% others)

The chemical nature of gases and ionized species in the coma are identified and their chemical and isotopic abundances and energy distributions measured using an instrument having two sensors. The E-analyzer is a parallel plate electrostatic analyzer, and the M-analyzer consists of a parallel plate electrostatic analyzer coupled with a magnetic analyzer in a double-focusing geometry. The M-analyzer provides mass identification even for particles that have kinetic energies up to 20 eV in the comet frame. The E-analyzer determines the energy distribution of the constituents up to 2110 eV in the probe frame which for thermal species (200 K) also gives mass information, thus expanding the instrument mass range. As both the M and E-analyzer have focal plane detectors, the full mass-energy range is measured simultaneously without scanning, providing high sensitivity and a spatial resolution of about 100 km. RESEARCH RESULTS FROM ANALYSIS OF SATELLITE ORBITS c13

D. G. King-Hele *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 3-11 refs (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The analysis of changes in satellite orbits caused by aerodynamic and gravitational forces as a tool to investigate the upper atmosphere and Earth gravitational field is assessed. While the technique is limited, being incapable of measuring rapid changes density or distinguishing between species of gases, it remains the best way of tracing long term variations in air density, particularly semiannual variations and changes during a solar cycle. Other uses include the provision of scale height for atmospheric models, information on rotation rate of the upper atmosphere, evaluation of zonal harmonics for gravitation studies, and lumped harmonic values for gravity field models.

A SIRIO 2 LASER RANGING EXPERIMENT c19

J. M. Dow and W. Flury *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 13-23 refs (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The use of tracking data from the SIRIO 2 Laser Synchronization from Stationary Orbit experiment for high precision determination of a geostationary orbit is proposed. Data of decimeter or subdecimeter accuracy collected for the basic mission can be used to investigate polar motion to determine gravity coefficients for ionospheric calibration for precise orbit determination comparison with radio tracking and to calibrate the VHF ranging network used for ESA geostationary missions. Additional ranging operations to supplement routine VHF checks are needed.

ACCURATE ORBIT DETERMINATIONS FROM LASER RANGE OBSERVATIONS BY LAGEOS, STARLETTE AND GEOS 3 c13

K. F. Wakker and B. A. C. Ambrosius *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 25-35 refs (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The effect on orbit calculation of the spatial, temporal and geographical distribution of laser data and of different perturbation models was investigated. Selected data arcs of geodetic satellites were analyzed. The data were used to determine simultaneously for the orbit the coordinates of two laser stations and the effect of atmospheric drag and gravity field models on orbit determination. The positional accuracy of the LAGEOS, Starlette, and GEOS 3 satellites is evaluated. Truncating the GEM 9 gravitational field model up to order and degree 13, yields position differences of < 15 cm for LAGEOS while GEM 103 gives position differences < 1m along track. For GEOS 3 and Starlette, position differences of of 4.5 m radial and 17 m along track are shown between the two models. Atmospheric drag modeling for GEOS 3 shows an along track position error of 30 m for an arc in which a geomagnetic storm occurred.

LUNAR GRAVITATIONAL FIELD DETERMINATION c91
W. Flury *In* ESA Spacecraft Flight Dyn. Aug 1981 p 37-45 refs (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and No (+20% others)

Lunar gravitational field determination is reviewed and the Polar Orbiting Lunar Observatory gravity experiment is discussed. The mission baseline comprises two spacecraft: the Orbiter in a low altitude near circular polar orbit and the Relay in a high altitude trajectory. The two spacecraft allow Doppler tracking on the lunar farside (via Relay) and improve coverage in the polar regions. Covariance analysis shows that processing of Relay Doppler data permits an order of magnitude improvement in the precision of the polar moment of inertia parameter. Daily tracking sessions of 2 hours over 27 days are required. Doppler data accurate from 1 to 2 mm/sec is essential. Author (ESA)

MODELING OF ORBITAL PERTURBATIONS DUE TO RADIATION PRESSURE FOR HIGH EARTH SATELLITES c13
L. Anselmo, P. Farinella, A. Milani, and A. M. Nobili *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 47-52 refs (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

By general perturbations techniques, the orbital effects of radiation pressure in the semimajor axis and in longitude are computed and divided into long and short periodic ones. Long periodic effects are excluded for constant attitude spacecraft. Even for satellites with an Earth pointing antenna, for low inclination and eccentricity and for good antenna pointing, long periodic perturbations in the semimajor axis are small. However, there are longitude perturbations of secular character. The perturbations on the orbit of the SIRIO 2 satellite are computed as an example. An accurate orbit determination is possible for high, e.g., geosynchronous, satellites if orbit and attitude are carefully chosen. Author (ESA)

Aspects of GPS research are reviewed. Navigation using radio interferometric techniques, analyses leading to more accurate orbit prediction of GPS satellites, and high precision application of GPS beyond the current 16 m spherical error probability capability are discussed. Improved ground systems are advocated in order to fully exploit the radio interferometric technique. User system signal processing and data processing capabilities for high precision applications, are needed. Author (ESA)

A system which uses an onboard 16 k byte computer to control attitude using magnetic torque and sensor data is described. Sun data is collected by crossed slit sensors. A Sun crossing time reference (signal/satellite revolution) controls a phase locked loop dividing the spin rotation into time increments. Earth sensors are pencil beam, visible light sensors 3 deg above and below the satellite equatorial plane. The computer uses Earth based, orbit based, and spacecraft spin based coordinates. Accuracy depends on sensor performance. Even with 2 deg error it is sufficient for amateur radio communication. Author (ESA)

IRREGULARITIES IN THE MOTION OF SPIN STABILIZED EARTH SATELLITES c15
L. Fraiture, N. Wiengarn, and B. Chambaz (Applications Mathematiques et Logiciel, SARL) *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 87-104 refs (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Changes in spin rate of rigid spacecraft caused by slowly moving internal parts which are periodic with the orbital period and secular spin up are analyzed using data from the radiometer of METEOSAT 1, ESRO 4, and GEOS 2. A hierarchy of relative spin variations, i.e., near Earth orbital missions with eclipse thruster leakage, thermal yearly geostationary missions, and diurnal albedo geostationary missions are shown. For missions where exact spin rate and its control are important, in-flight calibration is recommended as these are difficult to predict, especially the leaking thruster effect. Author (ESA)

HIGH PRECISION ATTITUDE DETERMINATION FOR MAGSAT c15
G. Abshire, R. McCutcheon, G. Summers, F. VanLandingham, and G. Meyers *In* ESA Spacecraft Flight Dyn. Aug 1981 p 105-116 refs Prepared in cooperation with Computer Science Corp., Silver Spring, Md. (For primary document see N82-14123 05-12)
(Contract NAS-5-24300)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others) CSCL 22A

A two phase approach to attitude determination software development is introduced. The prelaunch planning and software activities connected with the development and testing of the baseline system for processing nominal attitude data for MAGSAT are described and postlaunch analysis and modifications are outlined. Attitude data processing began 5 months after launch so that postlaunch anomalies could be accounted for. Another advantage of the two phase approach is that costs are reduced because the system is not burdened with software dealing with all possible contingencies. A definitive, continuous, time history of the three axis attitude of the spacecraft was generated to a precision of 20 arc sec (one standard deviation), in each axis. Sensor alignment determinations were done continuously because of the deletrious effects of changing alignments on attitude precision. Author (ESA)

ESTIMATES OF SPACECRAFT ATTITUDE AND SENSOR PARAMETERS USING ADAPTIVE FILTERING: METEOSAT 1 TRANSFER ORBIT APPLICATION c18
G. Moek and C. R. Traas (Technische Hogeschool, Twente, Netherlands) *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 117-131 refs (For primary document see N82-14123 05-12)
(Contract ESTEC-3319/77)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

An adaptive filtering technique which resolves filter divergence problems caused by modeling errors was developed and applied to Meteosat 1. Adaptation is applied with an intensity governed directly by the intensity of the divergence detected. Delays of IR Earth sensors spacecraft attitude were estimated. Combinations of Sun aspect angle, Earth chord, and midscan rotation angle measurements were used. Results for spacecraft attitude and Earth sensor delays are accurate to within 3 to 4 standard deviations and suggest that modeling errors are due to simple modeling of spacecraft dynamics and sensors which does not allow accurate evaluation of updated measurements.

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Analyses, operational criteria and emergency operations related to the attitude and maneuvering orbit control for Japanese geostationary satellites from injection into transfer orbit to the final station are provided. The maneuver mission analysis defines base lines for preparation of maneuver task flow, judging criteria, and emergency counter plan. Sequential task flows and judging criteria are necessary for actual maneuver planning, preparations of commanding, monitoring and evaluation in order to prevent confusion and wrong operations on actual missions. These are prepared considering not only the nominal case but also off nominal missions including emergency. The topical maneuver data of actual operation on geostationary satellites are shown.

L-SAT STATIONKEEPING c17
J. J. Pocha and A. F. Edwards *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 169-182 (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The stationkeeping strategy for L-SAT is derived. The orbit perturbations that must be counteracted arise not only from natural sources such as triaxiality, solar radiation pressure, and lunisolar gravitation, but also from the spacecraft attitude control system operating in its normal and stationkeeping modes. The strategy is designed to allow for worst case conditions on a statistical basis and includes the effects of tracking and maneuver implementation errors. It provides for stationkeeping within the specified deadband with an optimum use of propellant.

THE USEFULNESS OF AUXILIARY TRANSFER ORBIT MANEUVERS FOR A NEAR NOMINAL GEOSTATIONARY MISSION c13
F. Hechler, M. Rosengren, and M. Soop *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 183-187 (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The usefulness of apogee and perigee raising maneuvers during transfer orbit operations in correcting errors due to launcher performance is illustrated. Maneuvers suggested are at perigee to raise the apogee and improve fuel usage, at apogee to raise the perigee in order to both improve fuel usage and decrease air drag, and between perigee and apogee to raise the perigee and reduce air drag. Depending on the amount of fuel available, these maneuvers can save a mission if hydrazine burns after apogee boost firing were used. Extra orbit burns can alleviate the risk of air drag damage to an anomalously low transfer orbit perigree. Author (ESA)

MIDCOURSE NAVIGATION FOR THE EUROPEAN COMET HALLEY MISSION c17
Martin Hechler and Freidrich Hechler *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 189-195 refs (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Midcourse correction modes for the Giotto mission are analyzed and an onboard algorithm for propellant estimation is developed. Omnidirectional mode (turning the spacecraft spin axis in any direction for a low gain) cardoid, S band antenna combined mode (using a despun high gain antenna together with thermal and power conditions), and contingency modes used in case of thruster failure are used with axial continuous burn or radial pulsed burn. The use of these modes and propellant budgeting methods is investigated using the discretization method. Optimization is important for Giotto in case malfunctions in the initial stages prevent its close approach to the target.

STATION ACQUISITION AND STATIONKEEPING WITH LOW THRUST SYSTEMS c13
M. Eckstein and F. Hechler (ESOC, Darmstadt, West Germany) *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 197-208 refs (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Optimum control problems with low thrust station acquisition and stationkeeping during geostationary missions are linearized and solved by discretization of the thrust times and the thrust directions. This technique has considerable advantages in comparison to the classical methods, especially in the presence of constraints, on maneuver times and directions. A procedure applying the discretization method to a sequence of fuel-optimal minimum problems can be used to solve certain time minimum problems even in cases where classical methods fail. The rope stretching method is used to derive algorithms for the long-term strategy of correcting eccentricity perturbations. Examples of short-term and long-term optimal control problems associated with low thrust systems demonstrate the capacity of the methods. Author (ESA)

AN INVESTIGATION OF THE ANOMALOUS ATTITUDE MOTION OF THE ISEE B SPACECRAFT c13
Richard W. Longman and J. Andre Massart (ESOC, Darmstadt, West Germany) *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 211-224 refs (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

An unexpected spin rate fluctuation of ISEE B is discussed. A temporary improvement achieved by attitude maneuvers only lasted 10 days. Since spin rate data do not show persistent decay, environmental sources of perturbation were studied. As apogee altitude excludes atmospheric drag and orbital eccentricity minimizes gravitational and magnetic field effects, solar influence was investigated. The equations of motion relevant to solar radiation pressure are derived. Although the numerical results are not conclusive, they suggest that solar radiation pressure alone is not sufficient to explain the spin ripple phenomenon. Analytical isolation of any steady oscillation or limit cycles is difficult because of the nonlinear nature of the excitation and the small amount of damping in the system. Author (ESA)

The interaction between spin velocity and torque produced by a thruster on the main body of Geos 1 parallel to the spin axis was investigated, using a model consisting of a rigid body and two hinged bars. This predicted that a maneuver involving a long, continuous burst of the thruster would result in a rapid reduction in spin velocity which would destabilize the spacecraft. Theoretical investigations confirm this and the maneuver was modified. An inflight test bears out the predictions, emphasizing the need for complete models of satellite dynamic behavior.

OPTIMAL LINEAR ESTIMATION AND SUBOPTIMAL NUMERICAL SOLUTIONS OF DYNAMICAL SYSTEMS CONTROL PROBLEMS c63
Atair Rios Neto and Luiz A. Waack Bambace *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 233-237 refs (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A procedure which generates open loop suboptimal numerical solutions is proposed. The approximation of the control by a function dependent upon a finite number of parameters and the use of a linear perturbation scheme associated with a direct search criterion, reduce the problem to one of parameter optimization in each iteration. A stochastic approach to establish the search criterion and to treat the errors due to the first order approximation makes it possible to arrive at the search increment using optimal linear estimation. The procedure is applied to trajectory control and attitude maneuvers during transfer orbits.

LINEAR PROGRAMMING AND SUBOPTIMAL SOLUTIONS OF DYNAMICAL SYSTEMS CONTROL PROBLEMS c63
Decio Castilho Ceballos and Atair Rios Neto *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 239-243 refs (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Linear programming is used to obtain a direct search procedure for parameter optimization in the numerical solution of dynamical systems control problems, including those where state inequality constraints are present. The procedure applies to optimal control problems where the Rayleigh-Ritz method is used to obtain a suboptimal approximation, imposing a particular mathematical form on the control function, and making it dependent on a finite number of parameters. Due to its characteristic of reducing the problem in each iteration to one of optimization of a direct search increment vector of parameters, inherent plant parameters are easily treated. This characteristic implies having perturbations in the final states which explicity depend on the control parameters demonstrating that state inequality constraints can be included without the need of using penalty function methods.

PARTITIONING METHODS FOR IDENTIFICATION AND CONTROL OF FLEXIBLE SPACECRAFT c18
G. Campion and P. Y. Willems *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 245-251 refs (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Results obtained in the estimation of the state vector and in the parameter identification of a linear model of Geos are presented. The sequential decision technique based on a binary quantization procedure is used. This method is tested with simulated data as well as with in-flight data provided by telemetry. Numerical results show good parameter identification, although when many have to be identified simultaneously, decision criteria must not be too severe. In-flight data from accelerometers are close to predicted values, but magnetometer data are available only for spin motion, so parameter identification is limited to preliminary steps. Author (ESA)

FUTURE IN GROUND BASE ATTITUDE SUPPORT ACTIVITIES c14
R. D. Werking and L. J. Happel (Old Dominion Systems Inc.) *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 255-262 refs (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others) CSCL 22D

The history of attitude support activities is traced. Support for a conventional mission and for the Solar Maximum Mission (SMM) are compared. The trend is towards more onboard data processing, with the ground computer playing a supportive, rather than governing role. This eliminates the need for large amounts of data transfer, enabling rapid delivery of ancillary data products. In SMM, attitude is included in the telemetry stream. The need for ground support is unlikely to diminish in the near future, since onboard computations still have to be checked.

THE OBSERVATION PLANNING FACILITY FOR THE INFRARED ASTRONOMICAL SATELLITE (IFAS)

c14

E. Oord, P. J. dePagter, R. C. vanHoltz, and J. R. Mcdougall (Rutherford and Appleton Labs., Chilton, England) *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 269-280 refs (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The software that generates and schedules observations to enable IRAS to perform an all sky infrared survey and to observe other sources is described. The onboard computer consists of 2 processors, 64 K words of solid state memory and 2 455 Mbit taperecorders to allow the satellite to store an observations sequence, execute these in a time tagged manner, and store the resulting data. The planning facility correlates observation with other tasks, and provides human readable versions of observation programs. Although routine tasks are done automatically, manual intervention is possible. Author (ESA)

N82-14151# European Space Operations Center, Darmstadt (West Germany).

SOFTWARE FOR THE RESCUE OF NONNOMINAL MISSIONS

c61

Guy Janin *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 281-283 ref (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Software system for mission planning of emergency situations occuring during partial mission failures are discussed. General mission analysis software which can be quickly adapted to an unexpected situation is required. A skeleton program, corresponding to the most general task and consisting of a succession of calls to subroutines, is designed. A collection of functional modules are stored in a library for use along with dummies to fill in the program. Standard algorithms are used, decided by the function rather than give the mathematical aspect preeminence. This approach is useful for orbit computation since it allows quick verification of orbital stability, eclipse times, visibility from ground stations, and other mission constraints for the proposed orbit, if an emergency arises during a mission. PRESENT STATUS AND FUTURE TRENDS IN NEAR-EARTH SATELLITE ORBIT DETERMINATION

c13

A. J. Fuchs *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 287-292 refs (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others) CSCL 22A

The major components of an orbit determination system and the evolution of the elements making up each component are reviewed. Typical accuracies presently achievable in the orbit determination process, the factors limiting the accuracies, and improvements in the dynamic models used in the process are summarized. Models are developed for orbit determination programs which include: (1) time varying area for solar radiation pressure; (2) a time varying model for albedo radiation pressure; (3) Earth tides which account for the distortions in the Earth's body due to Sun and Moon attraction; and (4) ocean tides which affect satellite altimeter data. AN ANALYTICAL SINGULARITY-FREE ORBIT PREDICTOR FOR NEAR-EARTH SATELLITES

c13

G. Scheifele *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 299-305 refs (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A completely analytical, first order satellite theory intended for low Earth orbits is presented. Perturbations are unified under the nonsingular Poincare Similar element formulation. The theory includes: short period, long period and secular effects of J2 and all higher zonal harmonics; secular and quadratic effects of atmospheric drag; and the average mean motion considering all harmonics of the geopotential. Recursive equations are used instead of explicit formulas. In the drag theory, the density model accounts for not only changes in altitude, but also the important effects of the Sun and its location. The theory is implemented in an operational computer program. Author (ESA)

SIRIO 2 LASSO MISSION: GEOSYNCHRONOUS SATELLITE LASER STATION RANGING DATA ORBIT DETERMINATION SIMULATIONS

c13

G. Vulpetti *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 313-323 refs (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

A predicted/updated estimation procedure, equivalent to Kalman filtering driven by white noise for the LASSO mission is presented. Analyzing the root-mean-squares of the cartesian components of the estimated error in position and velocity as a function of time and the number of observations, an almost steady state can be reached. In such environments, by processing periodical sets of some hundreds of 2 to 3 m noisy range values, precision one order of magnitude better than a VHF based estimation is achieved. It is suggested that precision can be further improved by adding astronomical angle data like azimuth and elevation. Author (ESA)

An analytical orbit determination program is evaluated. During the early phase of the mission, satellite position was determined to an accuracy of 500 m, using interferometry data. An empirical method which uses times of closest approach data from a one way Doppler system reduces along track error to within 10 km is examined. Orbit decay is higher than predicted. The extended Kalman filter is used for attitude calculation data analysis, achieving 0.5 deg accuracy. It is concluded that a program which employs direct search, using simplexes, is more stable than an ordinary least square when data are limited.

Quality control requirements predominant for mission critical operations are illustrated by using Meteosat transfer orbits. Quality in flight dynamics is defined as numerical accuracy and stability, environment modeling accuracy, spacecraft subsystem compatibility, ability to cover non-nominal mission performances, and ability to cope with the environmental conditions. Mission critical operations emphasis is on: (1) software system consistency; (2) availability of tools and awareness of staff for the solving of unforeseen problems; and (3) compatibility between the mission timeline and flight dynamics operations. GLOBAL GEOMETRY TECHNIQUES FOR MISSION ANALYSIS
James R. Wertz *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 343-351 refs (For primary document see N82-14123 05-12)
Avail: NTIS HC A33/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The application of inertially fixed and spacecraft fixed global geometry plots to mission planning is discussed in relation to: (1) attitude determination and accuracy; (2) Sun, Moon and Earth interference; (3) eclipses; (4) tracking and data relay satellite system; and (5) launch windows. Spacecraft centered observations are used to obtain an understanding of spacecraft geometry which ensures that solutions to mission problems are based on engineering judgement rather than partial parametric studies, although these remain essential in the later stages. Global geometry techniques are faster and cheaper than parametric analysis. Author (ESA)

Operational software improvements to a method which uses information contained in the temporal evolution of the Earth colatitude and the Sun Earth azimuth angles, are described. The colatitudes and their derivatives are estimated by Kalman filter, using an observation model derived from a Kepler orbit. Three different attitude estimates follow directly from the Kalman estimates. A single attitude estimate is obtained by a weighted least squares combination of the Kalman filter outputs and the Sun measurements. In near colinearity of Sun and Earth vectors, the attitude estimate remains stable, whereas conventional methods diverge. Author (ESA)

THE USE OF ESA STARMAPPER MEASUREMENTS FOR SPACECRAFT ESTIMATION: ESTIMATOR DESIGN RATIONALE AND RESULTS c13
P. T. L. M. vanWoerkom, F. J. Sonnenschein, and G. Moek *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 361-372 refs (For primary document see N82-14123 05-12)
(Contracts ESTEC-2383/75/AK; ESTEC-3625/78/AK; ESOC-4133/79/D-IM)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Attitude estimation algorithms for processing starmapper data are outlined. The error in the averaged estimate is one arcminute. An operator which adjusts estimator tolerances and/or trigger levels is included. Measurements are taken over one nutation period, or less, on line estimation results are sufficient. The recursive processor uses the output from the batch processor as input. It uses a reduced sky model, monitors operation of the estimation process on line, introduces statistical adaptation when necessary, and produces more detailed information on the attitude motion of the spacecraft, misalignments of the starmapper, spacecraft mass redistribution, and external torques.

Software which meets a position accuracy requirement of + or - 4 km and attitude accuracy of + or - 3 deg for control purposes and better than 1 deg for post facto data processing was developed. An extended Kalman filter algorithm is used in near real time for attitude refinement. A geometrical method is used for initial estimation. A modified version which uses sensor and orbit data is used postfacto. Mission performance confirms predictions, even for unforeseen circumstances. The standard deviation in position determination is 500 m. Author (ESA)

SPACECRAFT TRACKING CAMPAIGNS AND THE ASSESSMENT OF ORBIT DETERMINATION ACCURACY c17
S. Pallaschke *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 385-395 (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Transfer orbit determination, based on VHF tracking and geosynchronous orbit determination with single station tracking are discussed. Analysis of VHF tracking of OTS 2 and VHF plus S band tracking of Meteosat shows that the ionospheric model performs well. A comparison test of S-band and VHF shows a difference of 200 m in semimajor axis, and an 8 km position difference. Single station tracking data for OTS shows good stability. More accurate calibration (detection of systematic offsets), by using radio stars, is needed to eliminate long-term variations. Author (ESA)

OPTIMIZATION OF APOGEE KICK MOTOR (AKM) FIRING ATTITUDE c20
M. Hirota, A. Tanaka, C. Abe (Fujitsu Ltd.), and T. Shimizu (Fujitsu Ltd.) *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 399-406 refs (For primary document see N82-14123 05-12)
Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Error propagation from the AMF parameters to the drift orbital elements is discussed. Geometrical solutions of the AMF attitude which give the typical drift orbits are presented. Optimum

AMF attitude is obtained by taking into account residuals of the AMF parameters: (1) increment velocity vector of AMF; (2) operational constraints for the stationing maneuvers; (3) effect of the attitude reorientation maneuver; and (4) post burn. Considering the effect of reorientation and post burn maneuvers, an iterative process calculates points on the error ellipsoid which give the maximum stationing fuels, and if the difference between these values is less than the tolerance the optimum point is reached. EAST-WEST STATIONKEEPING MANEUVER c18

M. Utashima, A. Tanaka, T. Tohchi (Fujitsu Ltd.), and T. Ogino (Mitsubishi Electric Corp.) *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 407-416 refs (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Perturbations of a geostationary orbit and effects of an impulsive velocity increment were analyzed. Stationkeeping maneuvers based on a sun synchronized method (SSM) are evaluated for a communications satellite (CS). The SSM uses tangenital velocity impulses at the same time each day to correct drift. Maneuvers are performed every 21 days with a velocity increment of 0.1 m/sec, consuming 0.002 kg of hydrazine. The maneuvers lean towards the left due to the error in the semimajor axis resulting from orbit determination. These account for 50 m of the error. Author (ESA)

INCLINATION CONTROL USING A PULSE MODE AXIAL THRUSTER c15

M. Suzuki and K. Yoneyama *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 417-420 (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The use of a pulse mode axial thruster for inclination control of spin stabilized satellites is discussed. Computer simulations show that if attitude is controlled along the normal attitude plane an hour before crossing over the descending node, efficiency is reduced by 3% compared with control at the descending node, and by 10% at other times, so a control within one hour of descending node was used for in-flight tests. Attitude maneuvers were carried out in two stages to prevent Sun or Earth sensors losing their objectives during a long operation. Normal attitude was regained after further maneuvers. This method is longer than continuous mode thrusting but fuel consumption is similar. Author (ESA)

N82-14167# Centre National d'Etudes Spatiales, Toulouse (France).

SKYLAB DECAY FOLLOW-UP c14

J. P. Carrou *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 421-430 ref (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

Skylab orbit decay and tracking procedures used for reentry predictions are described. Data from military and civilian radars were processed and used to compute a decay window which minimized risk to inhabited regions. Orbit control was achieved by modifying drag force to influence attitude. Semimajor axis drift was calculated and used to update predictions. The areas overflown during the final orbits were pinpointed 5 days previously. By reentry day it was possible to state that there was no danger of Skylab landing on France. Author (ESA)

ACS PERFORMANCE VERTIFICATION FOR IRAS: SOFTWARE ENGINEERING AT THE OPERATIONS CONTROL CENTRE c61

L. P. Baldwin *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 443-450 refs (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The software engineering approach to support in orbit checkout, performance verification, and maintenance of the IRAS ACS are described. For in orbit checkout, a simple set of software is used to extract attitude related data from the observations required for the on-off calibration of the ACS units. During routine operations, however, a more complex set of software is used to perform an automatic analysis of attitude related data, extracted in general from the normal observing program, for regular monitoring of the various ACS performance characteristics. Testing shows adequate performance of individual units and the system as a whole. Author (ESA)

IN ORBIT CHECKOUT OF THE IRAS GYROSCOPES c18

J. F. M. vanCasteren *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 451-459 refs (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The IRAS gyroscope package and factors which affect mission operations are described. The gyro sensor contains four gyros, one of which is redundant. A thermal control circuit and an optical cube to enable correct axes alignment at integration are included. For each satellite axis, one gyro controls and reconstructs attitude, making the gyro package a prime sensor for the mission. For control, the transfer function is assumed constant for 2 weeks. For reconstruction, a Kalman filter reestimates the transfer function parameters each second. The control and reconstruction accuracy of the primary observation modes, the survey scan, the low speed raster scan, and pointing are increased by calibrating the gyro transfer function at the applicable angular velocities about the input axis. INFRARED RADIANCE MODEL VARIATION BY SENSOR FLIGHT MEASUREMENTS c43

R. BaldassiniFontana, D. Sciacovelli (ESTEC, Noordwijk, Netherlands), and L. Fraiture (ESOC, Darmstadt, West Germany) *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 461-478 refs (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The NASA and BAC-ESR 4 IR radiance models of Earth, applied to attitude sensor calibration, are compared. The sensors are IR pencil beams on spinning satellites. Flight measurements of Geos 2 and OTS transfer orbits were compared to simulations from a model which describes the optics, detector and electronics of the beam, based on directly measured parameters and laboratory test data. The models performed equally well. It is shown that anomalies in preflight calibration can be detected. A small mismatch of the optical axis inclination of a Geos 2 IR telescope was observed. THRUSTOR PERFORMANCE MODELING AND PARAMETERS ESTIMATION c20

P. E. Bourg *In* ESA Spacecraft Flight Dyn. Aug. 1981 p 479-484 refs (For primary document see N82-14123 05-12)

Avail: NTIS HC A22/MF A01; ESA, Paris FF 160 Member States, AU, CN and NO (+20% others)

The impact of temperature, pressure, and aging on thrustor behavior in pulsed and continuous burn modes was analyzed. Flight analysis of spin and three axis stabilized cases indicates maneuvers for which telemetered data allows identification algorithms to be applied: for three axis stabilized, nutation motion in normal operational mode and fixed momentum wheel unloading and for spin stabilized cases, spin axis reorientation and north south stationkeeping. Computer programs were checked on telemetry data and it is shown that it is not necessary to vary all control parameters to explain particular aspects of control loop behavior. Author (ESA)

GENERAL DESCRIPTION OF THE ORBITAL TEST SATELLITE (OTS) c15
D. E. McLaurin and D. N. Gregory *In* ESA OTS: 3rd Year in Orbit Aug. 1981 p 12-17 (For primary document see N82-14173 05-12)
Avail: NTIS HC A10/MF A01

The OTS is a three axis stabilized vehicle designed for a minimum 5 year life in geosynchronous orbit with the individual satellite equipment designed for 7 year life operation. The modular approach adopted in the satellite design and in most equipment is identical to that used for the subsequent European Communications Satellite. The OTS consists of a service module providing all the basic service functions and a communication module carrying the payload. The configuration comprises two solar array paddles, each consisting of two hinged panels which are attached to the bearing and power transfer assemblies mounted on the north and south sides of the satellite being aligned along the satellite pitch axis. During launch and transfer orbit, the arrays are folded against the satellite sides so that half of their surface is exposed to provide power during this phase of the mission whereas in normal operation the arrays are deployed and steered to track the Sun. ATTENUATION STATISTICS OBTAINED WITH OTS c32
P. Ferrazzoli, G. Brussaard (ESTEC, Noordwijk, Netherlands), L. Piccolomini, and A. Laloux (Univ. Catholique de Louvain, Belgium) *In* ESA OTS: 3rd Year in Orbits Aug. 1981 p 18-21 refs (For primary document see N82-14173 05-12)
Avail: NTIS HC A10/MF A01

Attenuation results in the form of single strong events and cumulative values are presented. In the 14 GHz uplink experiment 10 Earth stations transmitted two circularly polarized beacons each. One beacon, polarized in the same sense at the satellite receiving antenna, is used to measure attenuation. The other one transmits in the orthogonal polarization at a frequency 5 KHz higher than the corresponding beacon and is used to measure cross polarization. Single events considered include relationships between downlink beacon attenuation and radiometric attenuation, and attenuation between pairs of beacons. Large variations in results indicate that data from a longer timespan must be collected if useful conclusions are to be drawn. Author (ESA)

N82-14178# British Telecommunications Research, Ltd., Taplow (England).
DEPOLARIZATION MEASUREMENTS AT 11 AND 14 GHz WITH OTS c32
J. Thirlwell and N. J. McEwan *In* ESA OTS: 3rd Year in Orbit Aug. 1981 p 22-32 refs Prepared in cooperation with Bradford Univ., England (For primary document see N82-14173 05-12)
Avail: NTIS HC A10/MF A01

The OTS provides a linearly polarized beacon transmitted at 11.6 GHz and a circularly polarized one at 11.8 GHz. Cross-polar discrimination (XPD) is used as the measure of depolarization. A single event is used to illustrate effects. Methods of presenting joint XPD/attenuation statistics are shown. Linear polarization is superior to circular. Frequency scaling of XPD is assumed to follow theoretical predictions, but more data are needed. Wet snow on the ground station antenna produces XPD effects more severe than those of propagation effects. For scaling ice depolarization and XPD cumulation statistics, a modified scaling curve is suggested. Author (ESA)

N82-14179# Swedish Telecommunications Administration, Farsta.
CORRELATING OTS BEACON MEASUREMENTS WITH RADIOMETER AND RAINFALL DATA c32
Lennart Hansson *In* ESA OTS: 3rd year in Orbit Aug. 1981 p 33-36 refs (For primary document see N82-14173 05-12)
Avail: NTIS HC A10/MF A01

The equivalent media temperature (EMT) used in radiometer attenuation evaluations is treated. Measured attenuation and rain rate statistical distributions are used to check an equivalent distance model. For EMT, rain attenuation was measured for two beacon frequencies, using beacon signals, and calculated from radiometer values of antenna noise temperature increase using a fixed EMT value of 270 K. Reliable data are obtained. The 5 year average statistical distribution of attenuation can be estimated to within 5% from the 5 year average rain rate distribution for any 5 year period using the same equivalent distance curve (obtained from floating 5 year average distributions over a 7 year period). The error is within 0.5 db, even at the 10 db level. Author (ESA)

PLATFORM PERFORMANCE FACTORS AFFECTING LINK BUDGETS OF GEOSYNCHRONOUS COMMUNICATION SATELLITES
c15
L. vanHoltz and S. Fagg *In its* OTS: 3rd Year in Orbit Aug. 1981 p 41-47 refs (For primary document see N82-14173 05-12)
Avail: NTIS HC A10/MF A01

Problems of maintaining the communication antennas pointed accurately and controlling the orbit parameters so that movement relative to the Earth is minimized, are treated. The OTS is used to illustrate how natural forces tend to depoint the satellite and also disturb the otherwise perfect geostationary orbit. Experiments on OTS to reduce the latitude and longitude station-keeping deadband to + or - 0.035 deg are discussed. Attitude variations of as little as 0.05 deg can be observed in signal strength measured at the Earth stations. Monitoring these variations can be used when large maneuvers are to be conducted for purposes like changing coverage, or antenna pattern mapping.

RESULTS OF TESTS ON THE SATELLITE SPOTBEAM ANTENNA
c32
N. Neale, P. Daly, and L. vanHoltz *In its* OTS: 3rd Year in Orbit Aug. 1981 p 48-52 ref (For primary document see N82-14173 05-12)
Avail: NTIS HC A10/MF A01

Antenna performance was measured for OTS, using ground station recording of received signal levels while the satellite was allowed to swing to precise locations in a rectangular grid surrounding nominal beam center. Day/night beamswing caused by thermal stress was measured at night at 50 C, and by day at -140 C. Reliable antenna contours were produced within 24 hours of test completion. Beam movement of the spotbeam agrees with prelaunch predictions. Day/night gain variations can be directly related to received power flux density. Accuracy in determining beam center position is 0.1 deg absolute, with 0.04 deg repeatability.

RESULTS AND CONCLUSIONS OF RF PERFORMANCE TESTS MADE BY ESA
c32
C. D. Hughes and R. A. Gough *In* ESA OTS: 3rd Year in Orbit Aug. 1981 p 56-64 refs (For primary document see N82-14173 05-12)
Avail: NTIS HC A10/MF A01

Results of tests on OTS antennas (gain and gain stability of repeaters, payload, flux density, and amplitude/frequency response of repeaters) are discussed. Data were collected on an intensive basis during the first months postlaunch, followed by measurements at 6 month intervals. Results indicate that measurements possible with OTS, e.g., on antennas or flux, are not practical on commercial satellites because of damage risks and different ground support systems. On-line measurements are recommended to make satellites operational as quickly as possible. The test shows that OTS equipment is suitable for inclusion in the European Communications Satellite (ECS), although one antenna appears to have suffered mechanical damage and an amplifier failed after a few months.

RESULTS AND CONCLUSIONS OF THE 60 MBIT/SEC DIGITAL TRANSMISSION TESTS
c32
D. Prouse *In* ESA OTS: 3rd Year in Orbit Aug. 1981 p 65-68 refs (For primary document see N82-14173 05-12)
Avail: NTIS HC A10/MF A01

Results from breadboard models are compared with tests carried out by ground stations for OTS digital transmission. In-band impairment, interchannel interference, and noise interference were examined for their effect on bit error rate (BER). Results show good agreement between predictions and real data. Differences between given ground stations are attributed to individual demodulators responding in different ways to an impairment. Judged by the 60 Mbit/sec standard, the 40 MHz transponders of OTS perform well, although failure of the traveling wave tube amplifier in the transponder for the orthogonal polarization signal meant that investigations were limited to the uplink.
Author (ESA)

N82-14186# Telespazio, S.p.A., Rome (Italy).
RESULTS AND CONCLUSIONS OF THE 120 AND 180 MBIT/SEC DIGITAL TRANSMISSION TESTS
c32
A. Vernucci *In* ESA OTS: 3rd Year in Orbit Aug. 1981 p 69-73 Sponsored by Interim Eutelsat (For primary document see N82-14173 05-12)
Avail: NTIS HC A10/MF A01

Single channel and cochannel interference tests were performed on the OTS transponders at 120 and 180 Mbits/sec in order to test their suitability for inclusion in the European Communications Satellite (ECS). Ground stations were used to check breadboard model predictions of systems performance. Although at 120, band-edge effects were not considered, and at 180, transponder amplitude was absent, results predict degradation at high data rates for ECS. Additional degradation is expected due to multipath and adjacent channel interference. More data is required, especially since a demodulator, which comes within specifications in the back to back mode, may have problems in the real environment. Other aspects, e.g. absolute encoding, burst to burst power variation, and the 40% cosine roll of filters, also require further investigation.

TDMA/DSI SYSTEM TESTS AND TELEPHONY CHANNEL TESTS VIA THE ORBITAL TEST SATELLITE (OTS)
c32
A. Bernard, T. Hentrich, H. Jack, A. Patacchini, D. Prouse, and N. Deacon *In its* OTS: 3rd Year in Orbit Aug. 1981 p 74-78 (For primary document see N82-14173 05-12)
Avail: NTIS HC A10/MF A01

Tests conducted at 120 Mbits/sec at 11/14 GHz are reported. Reference bursts were simulated by ground stations. Pseudorandom interference was added to the uplink and noise to the downlink, providing degraded link conditions. The OTS 120 MHz transponders which handle linear orthogonal polarized signal were used. System performance is good, with the synchronization accuracy of + or - 2 symbols attained even during highly degraded link conditions. Telephony channel results are incomplete due to equipment anomalies.

RESULTS AND CONCLUSIONS FROM TELEPHONE SIGNALING TESTS THROUGH TDMA/DSI SYSTEM
c32
M. L. Kerridge *In* ESA OTS: 3rd Year in Orbit Aug. 1981 p 79-82 refs (For primary document see N82-14173 05-12)
Avail: NTIS HC A10/MF A01

An analog line signalling system for use via the European Communications Satellite was tested on OTS. Clipping of interregister signalling and the effect of freeze out, i.e., when demand for channels exceeds supply, were subjected to normal (gain = 2, activity/circuit 30%) and overload (gain = 2.4, activity 0%) conditions. Installed capacity was 120 terrestrial channels (TC) and 60 satellite channels. The use of a speech activity simulator allowed up to 240 TC's to be simulated. Performance is good, with no clipping under normal conditions. During overload, call failures due to loss of the pulsed register signal are low. Clipping is reduced by using satellite overload channels, and is affected by the level of signalling activity on circuits routed via the DSI terminal. Author (ESA)

ANALOGUE TELEVISION TESTS c32

V. Speziale, Y. Tharaud (Centre National d'Etudes des Telecommunications), and D. C. Savage (British Broadcasting Corp.) *In* ESA OTS: 3rd Year in Orbit Aug. 1981 p 83-88 (For primary document see N82-14173 05-12)

Avail: NTIS HC A10/MF A01

Tests involving a single television program/transponder and two television program/transponder were carried out on OTS in order to check the performance of the European Communication Satellite (ECS) against the criteria of users. Exact simulation of ECS was not possible, but results for single program, color video signals, a high quality sound signal, teletext and 625 line test signals indicate that performance should be adequate. Adjacent channel interference tests show that, under normal conditions, user requirements should be met 99% of the time. Cochannel interference should be minimal if the transponders with orthogonal polarization are offset by 35 MHz. Two programs/transponder performance is inadequate. Author (ESA)

EXPERIMENTAL DIGITAL TELEVISION TRANSMISSIONS THROUGH THE OTS c32

D. K. W. Hopkins (British Broadcasting Corp.), D. W. Osborne, N. D. Wells, and E. J. Wilson (British Broadcasting Corp.) *In* ESA OTS: 3rd Year in Orbit Aug. 1981 p 89-92 refs (For primary document see N82-14173 05-12)

Avail: NTIS HC A10/MF A01

Digital television using satellites was studied. A 60 Mbit/sec signal, including 2.048 Mbit/sec for sound and other data, was used. The bit error rate (BER) of the satellite link was measured for a range of Eb/No values (Eb = Energy/bit, No = noise power unit bandwith) at ground stations for various operating conditions, e.g., saturated or with interference. Results show that cycle skips occur, but can be eliminated by filters. Digital systems show significantly reduced interference potential to other systems sharing the same frequency band, compared to analog television. In a power limited satellite system, impairment due to BER limits performance, but subjective impairments are very small. Author (ESA)

N82-14191# Independent Broadcasting Authority, Winchester (England).

DIRECT BROADCASTING EXPERIMENTS WITH OTS: RESULTS OF PICTURE TRANSMISSION TESTS c32

D. C. Griffiths (Radiotelevisione Italiana) and R. Orta *In* ESA OTS: 3rd Year in Orbit Aug. 1981 p 93-99 refs (For primary document see N82-14173 05-12)

Avail: NTIS HC A10/MF A01

The viability of satellite picture broadcasting, using frequency modulation in the 27 MHz band was investigated. Subjective and objective quality assessments are reported. Test transmissions of 625 lines, with 13.5 MHz/V peak to peak carrier deviation and 600 KHz peak to peak energy dispersal were examined for signal to noise ratio, picture distortion, frequency deviation, the effect of threshold extension demodulators, and crosspolar cancellation. Picture quality is good where the carrier to noise ratio exceeds 14 db, but intermodulation causes degradation if closely spaced subcarriers are used above the vision signal. The propagation effect of attenuation degrades the video signal to noise ratio a small percentage of the time. Author (ESA)

N82-14192# Institut fuer Rundfunktechnik, Munich (West Germany).

DIRECT BROADCASTING EXPERIMENTS WITH OTS: RESULTS OF SOUND TRANSMISSION TESTS c32

C. Dosch and J. Georgy (Telediffusion de France) *In* ESA OTS: 3rd Year in Orbit Aug. 1981 p 100-104 (For primary document see N82-14173 05-12)

Avail: NTIS HC A10/MF A01

Tests carried out with the broadcasting of a multiplex of independent analog subcarriers (instead of television signals) and with a digital modulated subcarrier in order to provide high quality sound channels, are reported. Objective and subjective simulations of operating conditions indicate that sound associated with pictures can be transmitted with quality equal to that of terrestrial links. Analog frequency modulated sound carriers are best when transmitting only one sound channel, digital for more than two, and either for exactly two. Author (ESA)

N82-14193# Radiotelevisione Italiana, Milan (Italy).

TELETEXT AND DATA BROADCASTING EXPERIMENTS WITH OTS c32

R. Orta and D. Pommier (Centre Commun d'Etudes de Television et de Telecommunications) *In* ESA OTS: 3rd Year in Orbit Aug. 1981 p 104-107 refs (For primary document see N82-14173 05-12)

Avail: NTIS HC A10/MF A01

Decoding margin and bit error rate (BER) were used to assess the suitability of satellites for teletext and data broadcasting. Ground stations examined parameters, including influence of the sound subcarrier, statistical independence of errors and the use of threshold extension demodulators. If 0.001 is the maximum acceptable BER, a well aligned demodulator maintains service with a minimum carrier/noise ratio between 8.5 and 9 db, i.e., an operating margin (decoding margin) from 0 to 10% (0.5 to 1 db expressed in equivalent degradation of carrier/noise ratio). For domestic users, a larger operating margin, 30% or 2 db, is desired. Other parameters studied, receiver mistuning, frequency deviation, etc., do not significantly influence service quality. THE MEASUREMENT OF EARTH STATION PERFORMANCES AND ITS IMPACT ON FUTURE DESIGN c14

S. Tirro, M. Fornari, and M. Giovanni *In* ESA OTS: 3rd Year in Orbit Aug. 1981 p 108-113 (For primary document see N82-14173 05-12)

Avail: NTIS HC A10/MF A01

Methods used to measure antenna gain are discussed. Values obtained for the path loss method, using a boresight at 11 and 14 GHz, for a radio star at 11.45 GHz, and for the photogrammetric method are compared. Antenna polarization purity measurement and problems encountered on matching and equalization are treated. Radio stars are the most convenient method and are less expensive than boresights. Photogrammetry can indicate corrective actions needed to achieve required performance. Polarization purity can only be proved by a very good boresight. This can be a major problem for systems with frequency reuse by polarization discrimination. The use of a satellite to replace the boresight needs further investigation. Matching and equalization problems must be overcome for commercial stations. Author (ESA)

EARTH STATION MEASUREMENT TECHNIQUES AND LESSONS IN EARTH STATION DESIGN c14

J. LeLigne *In* ESA OTS: 3rd Year in Orbit Aug. 1981 p 114-117 (For primary document see N82-14173 05-12)

Avail: NTIS HC A10/MF A01

Classical RF tests, analog television tests, digital transmission tests, and time division multiple access (TDMA) tests are discussed in relation to the OTS test program. Radio frequency equipment in the 11 and 14 GHz bands are evaluated. Receiver equipment operated nonstop for three years. Transmission equipment was switched off, or on standby, when not operating. Experiments of 8 to 12 hrs tested reliability, and of 4 to 8 days tested stability of equipment characteristics. Receiver equipment shows no failures. The stability of low noise receivers is + or - 0.2 db/day. The stability of transmission power is + or -

0 3 db/day A 2 kw traveling wave tube was replaced after 9000 hrs

AN OVERVIEW OF THE DESIGN AND CONSTRUCTION OF SMALL EARTH STATIONS USED WITH OTS c14
C D Hughes, G Bommas, W Dobson, L Sundin (Ericson (L M), G Pellegrineschi (Satellite Telecommunicatons Sta), J Salomon, and G Wood *In its* OTS 3rd Year in Orbit Aug 1981 p 118-127 Prepared in cooperation with Dornier-Werke GmbH, Marconi Communications System, Ltd and Telespace and Ferranti Ltd (For primary document see N82-14173 05-12)
Avail NTIS HC A10/MF A01

Ground stations with an antenna diameter < 5 m used for propagation, data transmission, and communication and television demonstrations during the OTS test program are listed. Location, equipment, and typical examples of each type are described. Most stations use 3 m antennas, but further rationalization and standardization is urged in order to avoid duplication of effort, to increase cost effectiveness and to make the system more competitive economically.

STELLA AND SPINE DATA TRANSMISSION EXPERIMENTS: PRELIMINARY RESULTS AND CONCLUSIONS c32
P Bartholome, M G N Hine (European Organization for Nuclear Research), and J O Scalan (Univ College, Dublin) *In its* OTS: 3rd Year in Orbit Aug 1981 p 128-131 ref (For primary document see N82-14173 05-12)
Avail: NTIS HC A10/MF A01

High speed data tansmission by satellite, investigated during the STELLA and SPINE OTS experiments, is treated. Differences between the systems concern data processing rather than modems, antennas, etc. In STELLA, retransmission requires backspacing while SPINE uses disk buffers. In SPINE the link driving minicomputer cannot handle transmit and receive simultaneously, so burst cycle time depends on satellite link delay, whereas STELLA is duplexed, with an external timer. Problems with STELLA arise from bit patterns containing long strings of zeros. These interfere with synchronization of a burst modem for regular and frequent zero-one transitions. Also, high error rates when signal and noise levels are normal remain unexplained. For SPINE, buffer sizing is a problem, but otherwise it performs well.

THE USE OF OTS IN THE COST 211 PROJECT c84
J. R. Taylor *In* ESA OTS: 3rd Year in Orbit Aug 1981 p 132-133 (For primary document see N82-14173 05-12)
Avail: NTIS HC A10/MF A01

Progress in the COST 211 project, redundancy reduction techniques for visual telephone signals (related to videoconferencing), is reported. Codecs built in four different countries show good compatability. Satellite transmission links via OTS are good, and under normal conditions the effect of transmission errors on picture quality is almost nonexistent. Problem solving is helped by a real time interactive video link.

PREPARATORY TASKS ON THE DEFINITION AND OPTIMIZATION OF THE OUT OF ECLIPTIC ZODIACAL LIGHT EXPERIMENT Final Report, Feb. 1980
Richard H. Giese, Gerhard H. Schwehm, and Dieter Hablick Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 43 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-009; ISSN-0170-1339) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 9.50

The experiment consists of a scanning photopolarimeter, developed on the basis of the Helios Zodiacal Light Experiment. The scientific objectives are to study the spatial distribution of the interplanetary dust cloud, to investigate the diffuse brightness of the background star light when the sonde is above the zodiacal light cloud, and to search for a possible contribution of interstellar dust particles to the zodiacal light cloud. The instrument allows simultaneous measurements in two separate wavelength bands (UV and visual channel). Measurements are performed near 200, 220, 240, 280, 350 (UV) and at 380, 440, 540, 640, and 800 nm, including the state of polarization (Stokes parameters I, Q, U). First estimates of expected brightness values at selected viewing directions are presented for typical phases of the mission.

CRITICAL ANALYSIS OF GRADIENT AND ISOTHERMAL FURNACE CONCEPTS FOR USE IN SPACELAB WITH SPECIAL REGARD FOR HEAT PIPE TECHNOLOGY AND CONNECTED BASIC REQUIREMENTS Final Report
Harald Lenski Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 189 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-019; ISSN-0170-1339) Avail: NTIS HC A09/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 35.80

The detailed design of the oven is presented. The maximum heater temperature is 2000 K for a heating power of 400 W. Gradients up to 150 K per cm are expected in a cylindrical copper sample of 10 mm diameter. Quenching of the samples during solidification by means of water evaporitive cooling is included. The utilization of a heat pipe furnace was discarded, since the Spacelab safety measures imposed by the usage of alkali metals in high temperature heat pipes were shown to offset its potential advantages with respect to conventional oven designs.

COMPARATIVE ANALYSES OF SPACE-TO-SPACE CENTRAL POWER STATIONS
Paul F. Holloway and L. Bernard Garrett Dec. 1981 49 p refs
(NASA-TP-1955; L-14766) Avail: NTIS HC A03/MF A01 CSCL 22B

The technological and economical impact of a large central power station in Earth orbit on the performance and cost of future spacecraft and their orbital transfer systems are examined. It is shown that beaming power to remote users cannot be cost effective if the central power station uses the same power generation system that is readily available for provision of onboard power and microwave transmission and reception of power through space for use in space is not cost competitive with onboard power or propulsion systems. Laser and receivers are required to make central power stations feasible. Remote power transmission for propulsion of orbital transfer vehicles promises major cost benefits. Direct nuclear pumped or solar pumped laser power station concepts are attractive with laser thermal and laser electric propulsion systems. These power stations are also competitive, on a mass and cost basis, with a photovoltaic power station. E.A.K.

SYSTEM ANALYSIS APPROACH TO DERIVING DESIGN CRITERIA (LOADS) FOR SPACE SHUTTLE AND ITS PAYLOADS. VOLUME 1: GENERAL STATEMENT OF APPROACH
Robert S. Ryan, Tulon Bullock, Wayne B. Holland, Dennis A. Kross, and Larry A. Kiefling Dec. 1981 47 p
(NASA-TP-1949; M-358) Avail: NTIS HC A03/MF A01 CSCL 22B

Space shuttle, the most complex transportation system designed to date, illustrates the requirement for an analysis approach that considers all major disciplines simultaneously. Its unique cross coupling and high sensitivity to aerodynamic uncertainties and high performance requirements dictated a less conservative approach than those taken in programs. Analyses performed for the space shuttle and certain payloads, Space Telescope and Spacelab, are used a examples. These illustrate the requirements for system analysis approaches and criteria, including dynamic modeling requirements, test requirements control requirements and the resulting design verification approaches. A survey of the problem, potential approaches available as solutions, implications for future systems, and projected technology development areas are addressed. S.L.

A proposal for a climate research mission specialized to Earth radiation budget measurements is given. This mission requires daily global coverage established by a system of three orbiting satellites. One of them is represented by the European Space Agency satellite SEOCS that is on a drifting orbit with respect to the Sun with 57 degrees inclination. The two others are polar orbiting satellites (POMS). The mission concept is treated with reference to the payload side requirements, the choice of orbit, orbital analysis, and satellite requirements. COMPUTER PROGRAM APPLICATIONS TO TACTICAL MISSILE CONCEPTUAL DESIGN M.S. Thesis
Martin David Sullivan Jun. 1981 200 p refs
(AD-A105788) Avail: NTIS HC A09/MF A01 CSCL 16/4

This thesis is comprised of four independent computer programs and their related operating instructions. Each of these programs focuses on a particular facet of tactical missile design. The topics covered include guidance and trajectory calculations, rocket motor propulsion sizing, warhead design, and aerodynamic coefficient determination. The programs are developed from accepted mathematical procedures and are tailored to optimize operator interaction for educational purposes. GRA

The TIROS operational vertical sounder (TOVS) on TIROS-N series satellites replaced the vertical temperature profile radiometer (VIPR) flown on earlier polar orbiting spacecraft. Since the successful launch of TIROS-N and the change-over to TOVS, many papers and articles were presented concerning the various aspects of the TOVS hardware/software system. The significant features of the TOVS operational system are presented. T.M.

Program plans are established for a storable propellant space tug used to perform high energy orbit transfers from the space transportation system (STS) orbiter. The mission model for the STS in the 1980's is analyzed. Performance and mission requirements are determined. Various flight operations modes are evaluated and selected. Subsystems are selected and synthesized into various tug configurations. Program options for these configurations are defined, analyzed, and selected. Selected program options are further defined and optimized, including program requirements, tug vehicle definition, mission accomplishment, ground and flight operations, programmatics and costs.

Possible storable propellant configurations and program plans are evaluated for the space tug. Alternatives examined include:

use of existing expendable stages modified for use with shuttle, followed by a space tug at a later date; use of a modified growth version of existing expendable stages for greater performance and potential reuse, followed by a space tug at a later date; use of a low development cost, reusable, interim space tug available at shuttle initial operational capability (IOC) that could be evolved to greater system capabilities at a later date; and use a direct developed tug with maximum potential to be available at some specified time after space shuttle IOC. The capability options were narrowed down to three final options for detailed program definition. S.L.

MOLECULAR WAKE SHIELD GAS ANALYZER Final Report
John H. Hoffman 6 Aug. 1980 28 p refs Revised
(Contract NAS8-32689)
(NASA-CR-161926) Avail: NTIS HC A03/MF A01 CSCL 22B

Techniques for measuring and characterizing the ultrahigh vacuum in the wake of an orbiting spacecraft are studied. A high sensitivity mass spectrometer that contains a double mass analyzer consisting of an open source miniature magnetic sector field neutral gas analyzer and an identical ion analyzer is proposed. These are configured to detect and identify gas and ion species of hydrogen, helium, nitrogen, oxygen, nitric oxide, and carbon dioxide and any other gas or ion species in the 1 to 46 amu mass range. This range covers the normal atmospheric constituents. The sensitivity of the instrument is sufficient to measure ambient gases and ion with a particle density of the order of one per cc. A chemical pump, or getter, is mounted near the entrance aperture of the neutral gas analyzer which integrates the absorption of ambient gases for a selectable period of time for subsequent release and analysis. The sensitivity is realizable for all but rare gases using this technique. S.L.

DIELECTRIC DISCHARGE CHARACTERISTICS IN A TWO-ELECTRON SIMULATION ENVIRONMENT
M. Treadaway, R. Leadon, C. Mallon, T. Flanagan, R. Denson, and F. Wenaas *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 4-16 refs Sponsored by AFWL (For primary document see N82-14213 05-18)
Avail: NTIS HC A99/MF A01 CSCL 22B

The results of a series of experiments in which flux levels representative of the space electron environment were used are presented and compared to the results of high flux tests. The simulation approach was to partition the space electron spectrum into two parts, those electrons which do not penetrate a material and therefore contribute to charging and those which completely penetrate the material. The nonpenetrating electrons were simulated using 25 keV electrons and the penetrating electrons by 350 keV electrons. The materials included in this investigation were Kapton, optical solar reflectors (OSRs), and a ground test satellite surface potential monitor which contained Kapton, astroquartz, OSRs and teflon. S.L.

ELECTRON-BEAM-CHARGED DIELECTRICS: INTERNAL CHARGE DISTRIBUTION

Brian L. Beers and V. W. Pine *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 17-32 refs Sponsored by AFSD (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

Theoretical calculations of an electron transport model of the charging of dielectrics due to electron bombardment are compared to measurements of internal charge distributions. The emphasis is on the distribution of Teflon. The position of the charge centroid as a function of time is not monotonic. It first moves deeper into the material and then moves back near to the surface. In most time regimes of interest, the charge distribution is not unimodal, but instead has two peaks. The location of the centroid near saturation is a function of the incident current density. While the qualitative comparison of theory and experiment are reasonable, quantitative comparison shows discrepancies of as much as a factor of two. S.L.

BULK CHARGING AND BREAKDOWN IN ELECTRON-IRRADIATED POLYMERS

A. R. Frederickson *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 33-51 refs (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

High energy electron irradiations were performed in an experimental and theoretical study of ten common polymers. Breakdowns were monitored by measuring currents between the electrodes on each side of the planar samples. Sample currents as a function of time during irradiation are compared with theory. Breakdowns are correlated with space charge electric field strength and polarity. Major findings include evidence that all polymers tested broke down, breakdowns remove negligible bulk charge and no breakdowns are seen below 20 million V/m. S.L.

CHARGING AND DISCHARGING TEFLON

B. C. Passenheim and V. A. J. vanLint *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 52-64 refs (For primary document see N82-14213 05-18)

(Contracts DNA001-78-C-0269; F29601-78-C-0012)

Avail: NTIS HC A99/MF A01 CSCL 22B

The charging and discharging characteristics of several common satellite materials exposed to 0-30KV electrons are measured. Teflon is discussed because the charging characteristics are radically altered immediately after a spontaneous discharge. The exterior geometry of the test structure is shown. In all cases dielectric samples were 82 cm in diameter mounted on the front of a 120 cm diameter cylinder supported on an 85 cm, 0.95 cm thick plexiglass disc. Dielectric materials investigated were: back surface aluminized Kapton, back surface silvered Teflon, silicon alkyd white thermal control paint, and 50 cm by 50 cm array of 0.030 cm thick MgF2 coated fused silica solar cell cover slips. S.L.

EXPERIMENTAL VALIDATION OF A NUMERICAL MODEL PREDICTING THE CHARGING CHARACTERISTICS OF TEFLON AND KAPTON UNDER ELECTRON BEAM IRRADIATION

R. C. Hazelton (Inland Research and Development Center), E. J. Yadlowsky (Inland Research and Development Center), R. J. Churchill (Inland Research and Development Center), Lee W. Parker, and B. Sellers (Panametrics, Inc.) *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 65-73 refs Sponsored by INTELSAT (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

The effect differential charging of spacecraft thermal control surfaces is assessed by studying the dynamics of the charging process. A program to experimentally validate a computer model of the charging process was established. Time resolved measurements of the surface potential were obtained for samples of Kapton and Teflon irradiated with a monoenergetic electron beam. Results indicate that the computer model and experimental measurements agree well and that for Teflon, secondary emission is the governing factor. Experimental data indicate that bulk conductivities play a significant role in the charging of Kapton. S.L.

ROLE OF ENERGETIC PARTICLES IN CHARGING/DISCHARGING OF SPACECRAFT DIELECTRICS

J. B. Reagan, R. W. Nightingale, E. E. Gaines, R. E. Meyerott, and W. L. Imhof *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 74-85 refs (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

The role that energetic particles in the substorm plasma have on the charging and discharging of typical dielectric layers used on spacecraft was investigated using spectra and pitch angle distributions measured in situ on the SCATHA spacecraft prior to and during a few kilovolt differential charging event in eclipse conditions. The particle spectra was input to deposition codes that determine the dose rate as a function of depth in Kapton and Teflon layers used in an experiment on SCATHA. The calculated ambient dose rates of a few rads/sec throughout the bulk of the samples are sufficiently high that radiation damage levels are reached on the time scale of 1 year. Surface dose is a factor of 100 higher. Bulk conductivity profiles were obtained from the dose rates using empirical relationships. The radiation induced bulk conductivities calculated at the peak charging time are found to be smaller than the intrinsic dark conductivity range of solar conditioned Kapton but higher than the corresponding value for Teflon. S.L.

ELECTRON PENETRATION OF SPACECRAFT THERMAL INSULATION

Walter L. Powers, Barbara F. Adams, and George T. Inouye *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 86-95 refs (For primary document see N82-14213 05-18)

(Contract JPL-955500)

Avail: NTIS HC A99/MF A01 CSCL 22B

The external thermal blanket with 13 mils of polyethylene which has the known range and stopping power as a function of electron energy is investiated. The most recent omnidirectional peak Jovian electron flux at 5 Jupiter radii is applied, the electron current penetrating the thermal blanket is calculated and allowed to impinge on a typical 20 mil polyethylene insulator surrounding a wire. The radiation dose rate to the insulator is then calculated and the electrical conductivity found. The results demonstrate that the increased electronic mobility is sufficient to keep the maximum induced electric field two orders of magnitude below the critical breakdown strength. S.L.

ELECTROSTATIC DISCHARGING BEHAVIOUR OF KAPTON IRRADIATED WITH ELECTRONS

Derek Verdin *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 96-114 refs Sponsored by RAE (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

The electrostatic charging and discharging of Kapton when irradiated with monoenergetic electrons of 5 to 30 keV energy were studied. The leakage currents and rates of discharging always increased with the incident electron energy and flux, whereas the surface voltage showed a more complex behavior depending on the thickness of the material: for the thinner films it exhibited a maximum and then fell at higher energies. The surface voltage, the rate of discharging, and the peak current and total charge flow during a discharge were enhanced as the temperature was decreased from 70 C to -180 C, and were accompanied by a decreasing leakage current. Visible light or the presence of an aluminum coating on the irradiated surface caused reductions in the surface voltage and changes in the discharging characteristics. The results are discussed in terms of the leakage currents and the secondary emission of electrons. Photomicrographs taken after irradiation, and photographs of samples during irradiation, show good correlations between the positions of light flashes and of pinholes produced by the discharge arcs. S.L.

DIELECTRIC SURFACE DISCHARGES: EFFECTS OF COMBINED LOW-ENERGY AND HIGH-ENERGY INCIDENT ELECTRONS

K. G. Balmain and W. Hirt *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 115-128 refs Sponsored by AFWL (For primary document see N82-14213 05-18)
(Grant NsG-7647)
Avail: NTIS HC A99/MF A01 CSCL 22B

Dielectric surface discharges affected by the addition of high energy electrons at 5 pA/sq cm to a primary 20 keV, 10 nA/sq cm electron beam with the high energy broad spectrum particles coming from the beta decay of Strontium 90 are studied. Kapton exhibits significantly increased discharge strength, increased waiting time between discharges, and a decreased number of discharges per specimen before discharge cessation. Mylar exhibits similar but less pronounced effects, while Teflon is relatively unaffected. With Kapton and Mylar, the high energy electrons act in some way to delay the instant of discharge ignition so that more charge can be accumulated and hence released during discharge. S.L.

N82-14223*# SRI International Corp., Menlo Park, Calif.

PRELIMINARY COMPARISON OF MATERIAL CHARGING PROPERTIES USING SINGLE-ENERGY AND MULTIENERGY ELECTRON BEAMS

R. C. Adamo and J. E. Nanevicz *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 129-132 refs (For primary document see N82-14213 05-18)
Avail: NTIS HC A99/MF A01 CSCL 22B

Results of tests designed to compare the charging properties of spacecraft material under a monoenergetic beam and under a continuously distributed beam are summarized. In the test setup the electron source was mounted in the top of a cylindrical vacuum chamber. A sheet of 5-mil-thick Kapton was placed on an insulated metal substrate at the bottom of the vacuum chamber. The dc current arriving on the substrate was measured and a field meter measured the potential of the test sample. A retarding potential analyzer measured the energy spectrum of the incident electron beam. With the monoenergetic beam, the sample charged to 12 kV and electrical discharges occurred. With the multi-energy spectra the samples charged to only 6 kV and 4 kV, and no discharger were observed. In these experiments, no effort was made to duplicate the spectra occurring in space. The tests were intended to simply to compare spacecraft material charging properties using monoenergetic and continuous multi-energy beams. M.D.K.

N82-14224*# TRW Defense and Space Systems Group, Redondo Beach, Calif.

BRUSHFIRE ARC DISCHARGE MODEL

G. T. Lnouye *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 133-162 refs (For primary document see N82-14213 05-18)
(Contract NAS3-21961)
Avail: NTIS HC A99/MF A01 CSCL 22B

A one dimensional arc discharge model incorporating a brushfire-type propagation of a discharge wavefront was investigated. A set of equations, developed and their which include electrical, thermal and plasma parameters, were solutions shown to be consistent with a propagating brushfire wavefront. Voltage, current, plasma density, temperature, and resistivity profiles were obtained. Mechanical forces, magnetic and electrostatic were considered in evaluating the flashover to blowout current ratio, G', for arc discharges with the brushfire parameters developed in the model. This ratio is an important factor in determining the electromagnetic interference (EMI) impact of arc discharges on spacecraft electrical subsystems. The conclusion of the analysis is that electrostatic forces are much more important than magnetic forces. The magnitude of the G' factor obtained, 58.5 percent, is within the range of those obtained by experimental means. Improvements in the analytical model as well in the experimental approach are recommended. M.D.K.

EFFECTS OF SECONDARY ELECTRON EMISSION ON CHARGING

Martin S. Leung, Michael B. Tueling, and Edwin R. Schnauss *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 163-178 refs (For primary document see N82-14213 05-18)
(Contract F04701-80-C-0081)
Avail: NTIS HC A99/MF A01 CSCL 22B

Laboratory charging studies using two electron sources with different energies show that the charging behaviors of typical spacecraft thermal control dielectric surface are extremely sensitive to the shape of their secondary emission curves. The results also suggest that the electron spectrum in a natural charging environment can be separated into three distinct regions (noninteracting, discharging, and charging) depending on the kinetic energy of the incident electron relative to the charged surface, and on the secondary emission characteristics of the material. To a first order approximation, the relative number of electrons in these different regions determines the potential of the charged surface. Detailed measurements of the secondary electron emission characteristics of Kapton, the effects of bulk conductivity and secondary emission on surface charging of these materials is reported. M.D.K.

SECONDARY ELECTRON EMISSION YIELDS

I. Krainsky, W. Lundin, W. L. Gordon, and R. W. Hoffman *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 179-197 refs (For primary document see N82-14213 05-18)
(Grant NsG-3197)
Avail: NTIS HC A99/MF A01 CSCL 22B

The secondary electron emission (SEE) characteristics for a variety of spacecraft materials were determined under UHV conditions using a commercial double pass CMA which permits sequential Auger electron electron spectroscopic analysis of the surface. The transparent conductive coating indium tin oxide (ITO) was examined on Kapton and borosilicate glass and indium oxide on FED Teflon. The total SEE coefficient ranges from 2.5 to 2.6 on as-received surfaces and from 1.5 to 1.6 on Ar(+) sputtered surfaces with < 5 nm removed. A cylindrical sample carousel provides normal incidence of the primary beam as well as a multiple Faraday cup measurement of the approximately nA beam currents. Total and true secondary yields are obtained from target current measurements with biasing of the carousel. A primary beam pulsed mode to reduce electron beam dosage and minimize charging of insulating coatings was applied to Mg/F2 coated solar cell covers. Electron beam effects on ITO were found quite important at the current densities necessary to do Auger studies. M.D.K.

OBLIQUE-INCIDENCE SECONDARY EMISSION FROM CHARGED DIELECTRONICS

James W. Robinson and Paul A. Budd *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 198-210 refs (For primary document see N82-14213 05-18)
(Grant NsG-3166)
Avail: NTIS HC A99/MF A01 CSCL 22B

Experimental measurements and computer simulation of secondary electron emission coefficients for FEP-Teflon, for normal and oblique incidence in the presence of a normal electric field are reported. Knowledge of the electrostatic environment surrounding the specimen calculation of particle trajectories are considered. A simulation using a conformal mapping, a Green's integral, and a trajectory generator provides the necessary mathematical support for the measurements which have been made with normal fields of 1.5 and 2.7 kV/mm. When incidence is normal and energy exceeds the critical energy, the coefficient is given by V.58 and for oblique incidence this expression may be divided by the cosine of the angle. The parameter V sub 0 is a function of normal field. Measurements for values of V sub f are presented. M.D.K.

TANK TESTING OF A 2500-cm2 SOLAR PANEL

Renate S. Bever and John Staskus (NASA. Lewis Research Center) *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 211-227 refs (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

A 50 cm by 50 cm solar array panel test patch was investigated for spacecraft charging and arcing effects. Bombardment with monochromatic electron was carried out. Some objectives of the test were: (1) to estimate at what voltage of electron bombardment arcing would be probable; (2) to find whether the arc's energy would be tolerable or damagingly large; (3) to try and separate thermal and photoeffects; and, (4) to see whether materials used were such as to minimize arcing. Some conclusions were: In sunlight the tracking data relay satellite's solar panel which has ceria glass on the front and conductive paint on the backside is probably a good design for reducing charge-up. In a geomagnetic substorm simulated in testing there will be arcing at the interconnects during eclipse and transitions into and out of eclipse in testing especially in view of the very cold temperatures that will be reached by this lightweight array. Ceria-doped glass is preferred to fused silica glass for reducing charge build up. The Kapton bare patch should still be conductively painted. The differential voltages on the panel determine when arcing first begins, and the electron beam voltages vary depending upon whether the metallic structure is directly grounded or semifloating. M.D.K.

CHARGING AND DISCHARGING CHARACTERISTICS OF A RIGID SOLAR ARRAY

George F. Brady, Jr., David A. Vance, and Stanely A. Greenberg *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 228-236 (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

Two rigid solar array panels were subjected to a simulated geosynchronous orbit substorm environment. During the charging sequence, distributions of accumulated surface charge were measured under eclipse and sunlight conditions. Discharge events were characterized with respect to voltage pulse signatures and amplitudes on the solar array bus leads. Post-exposure analysis of the solar array panels indicated that the electrical characteristics were not degraded in spite of the substantial discharge actvity. However, significant cratering and discoloration of the Tedlar dielectric were observed. Author

MATERIALS CHARACTERIZATION STUDY OF CONDUCTIVE FLEXIBLE SECOND SURFACE MIRRORS

F. Levadou, S. J. Bosma, and A. Paillous (DERTS) *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 237-260 refs (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

The status of prequalification and qualification work on conductive flexible second surface mirrors is described. The basic material is FEP Teflon witn either aluminium or silver vacuum deposited reflectors. The top layer has been made conductive by deposition of layer of a indium oxide. The results of a prequalification program comprised of decontamination, humidity, thermal cycling, thermal shock and vibration tests are presented. Thermo-optical and electrical properties. The results of a prequalification program comprised of decontamination, humidity, thermal cycling, thermal shock and vibration tests are presented. Thermo-optical and electrical properties, the electrostatic behavior of the materials under simulated substorm environment and electrical conductivity at low temperatures are characterized. The effects of simulated ultra violet and particles irradiation on electrical and thermo-optical properties of the materials are also presented. M.D.K.

DESIGN OF AN ARC-FREE THERMAL BLANKET

Christakis N. Fellas *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 261-266 refs (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

The success of a multilayer thermal blanket in eliminating arcing is discussed. Arcing is eliminated by limiting the surface potential to well below the threshold level for discharge. This is achieved by enhancing the leakage current which results in conduction of the excess charge to the spacecraft structure. The thermal blanket consists of several layers of thermal control (space approved) materials, bonded together, with Kapton on the outside, arranged in such a way that when the outer surface is charged by electron irradiation, a strong electric field is set up on the Kapton layer resulting in a greatly improved conductivity. The basic properties of matter utilized in designing this blanket method of charge removal, and optimum thermo-optical properties are summarized. M.D.K.

CHARGING CONTROL TECHNIQUES

R. E. Schmidt *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 267-286 refs (For primary document see N82-14213 05-18)
(Contract F33615-78-C-5119)

Avail: NTIS HC A99/MF A01 CSCL 22B

Transparent conductive thin films of indium oxide and indium-tin oxide were evaluated for their properties to control charge buildup on satellite materials. Both oxide coatings were evaluated for their uniformity, stability, reproducibility and characteristics on various substrate materials such as FEP Teflon, Kapton, and glass. The process development toward optimization and characterization of these thin semiconductor oxide coatings and the evaluation on large sizes performed for qualification for use on thermal control satellite materials is described. The materials have been characterized in multiple energy electron plasma environment and at low temperatures. All radiation measurements of the coatings under simulated substorm conditions have exhibited the characteristics of stable charge control. Measurement of surface potential during and after irradiation by electrons up to 30 KeV and ionizing gamma radiation show an effective stable grounding surface. M.D.K.

CHARGING CHARACTERISTICS OF SILICA FABRICS

Leon Levy and Alain Paillous *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1981 p 287-308 refs (For primary document see N82-14213 05-18)
(Grants AF-AFOSR-3704-78; AF-AFOSR-0183-80)

Avail: NTIS HC A99/MF A01 CSCL 22B

The charge dissipation mechanism of silica fabrics and silica fabric/Aluminum composites was studied by means of various sample configurations tested under monoenergetic electron beams at energies between 5 and 20 keV. Grounding of the aluminum rear face of the composite is necessary in order to ensure a good electrostatic performance. The surface potentials are dependent on the flux rate in the range 10 pA -cm(2-) to 3 nA cm(-2); they are the highest at the lowest flux rate. Strong discharges have been evidenced at 20 keV but do not occur under 15 keV electrons. A substantial decrease in the surface potential of the sample is observed every time that an irradiation by low energy electrons (2 to 4 keV) is performed simultaneously with the irradiation by medium-energy electrons (10 to 20 keV). Silica fabrics and composites are very sensitive of contamination or contamination-plus-irradiation effects. M.D.K.

ELECTROSTATIC CHARGING CHARACTERISTICS OF THERMAL CONTROL PAINTS AS FUNCTION OF TEMPERATURE

Paul A. Robinson, Jr. (Hughes Research Labs.) and A. C. Whittlesey *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 209-319 refs (For primary document see N82-14213 05-18)
(Contract NAS7-100)
Avail: NTIS HC A99/MF A01 CSCL 22B

The charging characteristics of paints for various uses on spacecraft under electron bombardment were studied. It was found that there is not a strong temperature dependence of the charging characteristics between -155 C and +30 C; and there is a noticeable hysteresis effect as the electron beam energy is varied. Furthermore, all of the paints tested exhibit large secondary yields at low (approx. 1 keV) bombarding electron energies; and surfaces can charge either positively or negatively depending on the conditions and the paint. It was concluded that paints are not simple, will require more detailed study, and will probably act differently in multiple energy electron tests. N.W.

EVALUATION OF CHARGE CONTROL TECHNIQUES ON SPACECRAFT THERMAL SURFACES (ELECTROSTATIC DISCHARGE STUDY)

Paul A. Robinson, Jr., E. M. Brown, S. M. Conan, C. R. Dulgeroff, W. R. Elkman, G. J. Holm, L. C. Lawton, G. J. Pack, and D. L. Shannon *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 320-341 (For primary document see N82-14213 05-18)
Avail: NTIS HC A99/MF A01 CSCL 22B

The charging and discharging characteristics of various dielectric materials commonly used on spacecraft were tested. The experimental apparatus and the calculations used to analyze the data generated during the testing are described. The test technique, results, and analysis used are presented. Indium tin oxide coated Teflon, Kapton, and quartz do not charge significantly. CTL 15 white paint shows no large charge build up. Pinholes in Teflon and Kapton increase the leakage through the sample and reduce the energy released in an arc. Conductive grids in Teflon and Kapton reduce the arc energy by two orders of magnitude over untreated samples. Extreme low temperatures (-195 C) do not significantly increase the arc energy of the gridded sample. N.W.

ACCELERATED ALPHA-S DETERIORATION IN A GEOSTATIONARY ORBIT

Otto K. Husmann *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 353-364 refs Sponsored by Bundesministerium fuer Forschung und Technologie (For primary document see N82-14213 05-18)
Avail: NTIS HC A99/MF A01 CSCL 22B

Between the Teflon substrate and the interference filter a 2 micron varnish layer was sandwiched in. The bending radius of the SSM, measured on a cone, decreased from about 13 mm to 6 mm prior to interference filter fracture, due to increased tensile strength of its substrate. These samples, and for comparison samples of the same make but without varnish and a conductive layer were included in the test. Additionally 2 Teflon FEP samples without the protective interference filter, one of them with a conductive layer, were tested. The sample substrate was 125 micron Teflon FEP, with vapor deposited silver reflector and a thin Inconel film for corrosion protection. N.W.

ELECTRON ANGULAR DISTRIBUTIONS DURING CHARGING EVENTS

J. F. Fennell, D. R. Croley, Jr., P. F. Mizera, and J. D. Richardson *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 370-385 refs (For primary document see N82-14213 05-18)
(Contract F04701-80-C-0081)
Avail: NTIS HC A99/MF A1 CSCL 22B

The angular distribution of electrons and ions at times of spacecraft charging were examined for several charging events. Generally it was found that electrons measured perpendicular to the Earth's magnetic field are more intense and more energetic than those measured parallel to the magnetic field during charging events. During the substorm charging injection, the electron spectra harden at all angles to the magnetic field as the evolution of the charging spectra is monitored by the P78-2 satellites. An example of the onset of charging and the changes in the electron distributions is examined. The evolution of the electrons from a 'soft' plasma sheet distribution to a 'hard' charging distribution is compared with the charging of Kapton on the satellite and the spacecraft frame potential. The ions are used to determine the spacecraft potential. Evidence of periodic surface potential variations related to particle anisotropies are presented and discussed. N.W.

REVIEW OF HOT PLASMA COMPOSITION NEAR GEOSYNCHRONOUS ALTITUDE

Richard G. Johnson *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 412-432 refs Prepared in cooperation with Bern Univ. (For primary document see

N82-14213 05-18)
Avail: NTIS HC A99/MF A01 CSCL 22B

The information available on the hot plasma composition at and near the geostationary satellite orbit has increased dramatically during the past four years. At energies below 32 keV, ions of terrestrial origin, O(+) and He(+) are frequently observed to be significant contributors to the hot plasma density and energy density, and during geomagnetically disturbed periods, O(+) ions are typically the dominant hot plasma ions. Evidence for a solar cycle dependence to the O(+) hot plasma densities at the geostationary orbit has been found. Our understanding of the details of the physical processes involved in the entry, acceleration, transport, and loss of the plasma ions, and thus our ability to model them, is still quite limited. N.W.

SCATHA OBSERVATIONS OF SPACE PLASMA COMPOSITION DURING A SPACECRAFT CHARGING EVENT

R. G. Johnson, R. Strangeway, S. Kaye, R. Sharp, and E. Shelley *In* NASA. Lewis Research Center Spacecraft Charging Technol. 1980 Oct. 1980 p 433-438 refs (For primary document see N82-14213 05-18)
(Contract N00014-76-C-0444)
Avail: NTIS HC A99/MF A01 CSCL 22B

During an Earth eclipse of the SCATHA spacecraft, the spacecraft charged to potentials greater than 1KV for about 30 minutes with extended excursions greater than 4KV. The composition of the hot plasma was obtained in the 0.1 to 32 keV energy range with an ion mass spectrometer aboard the spacecraft. Prior to the onset of the charging event, H(+) was the principal plasma ion, and during the event O(+) was the principal ion. The composition was energy dependent and varied significantly on a time scale of 4 minutes. An assumption that the ion flux was all H(+) led to computed number densities that were in error by more than a factor of two for several time intervals during the event. S.L.

SATELLITE SURFACE POTENTIAL SURVEY

Paul F. Mizera and G. M. Boyd *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 461-469 refs (For primary document see N82-14213 05-18)
(Contract F04701-79-C-0080)
Avail: NTIS HC A99/MF A01 CSCL 22B

Results of Kapton differential voltage charging of the satellite surface potential monitor Kapton samples are presented for the first 100 days of P78-2 operations. Daily charging occurrences are plotted in magnetic local time and L-shell (altitude and magnetic latitude) space as a function of magnetic activity. Most of the low level charging occurs well into the dawn local time sector whereas the highest voltage levels occur in the premidnight local time sector. The probabilities of differential charging are extremely dependent on the local time sector, the altitude (or L-shell) and of course, the magnetic activity. A.R.H.

PRELIMINARY ANALYSIS OF DATA FROM SRI INTERNATIONAL TRANSIENT PULSE MONITOR ON BOARD P78-2 SCATHA SATELLITE

S. A. Damron, R. C. Adamo, and J. E. Nanevicz *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 470-477 refs (For primary document see N82-14213 05-18)
Avail: NTIS HC A99/MF A01 CSCL 22B

The satellite charging at high altitudes (SCATHA) program addresses the occurrence of electrostatic discharges causing undesirable effects like deleterious transients in electronic circuits on satellites. The high altitude plasma environment and the effects of the interaction of this environment with the orbiting satellite are studied. The SRI transient pulse monitor (TPM) detects the transient electromagnetic signals induced in selected circuits. As a transient detector the TPM records transient signals, indicates the number of transients observed, and gives peak amplitude of the largest transient during each second's interval. Most of the early data from the TPM contain pulses associated with internal electrical activity and electrostatic charging on the surface of the P78-2 is evidenced. It is found that periods of external discharging do not necessarily coincide with periods in which high potentials are measured on the satellite's surface. E.A.K.

FLIGHT EVIDENCE OF SPACECRAFT SURFACE CONTAMINATION RATE ENHANCEMENT BY SPACECRAFT CHARGING OBTAINED WITH A QUARTZ CRYSTAL MICROBALANCE

D. M. Clark and David F. Hall *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 493-508 refs (For primary document see N82-14213 05-18)
(Contract F04701-80-C-0081)
Avail: NTIS HC A99/MF A01 CSCL 22B

The significance of the fraction of the mass outgassed by a negatively charged space vehicle which is ionized within the vehicle plasma sheath and electrostatically reattracted to the space vehicle was determined. The ML-12 retarding potential analyzer/temperature controlled quartz crystal microbalances (RPA/TQCMs) distinguishes between charged and neutral molecules and investigates contamination mass transport mechanism. Two long term, quick look flight data sets indicate that on the average a significant fraction of mass arriving at one RPA/TQCM is ionized. It is assumed that vehicle frame charging during these periods was approximately uniformly distributed in degree and frequency. It is shown that electrostatic reattraction of ionized molecules is an important contamination mechanism at and near geosynchronous altitudes. E.A.K.

The operating modes of the SC4-1 payload, the resultant charging of the spacecraft frame and sample materials on the spacecraft exterior and recorded transient pulses are reported. Arcing was detected by pulse monitors in several electron beam modes of operation. The ejection of a beam of 6 mA of 3 keV electrons caused three distinct payload failures and created a transient problem in the telemetry system. The exact time, nature, and cause of these failures was determined and component failure and why they failed was identified. Analytical and modeling techniques are used to examine possible spacecraft and payload responses to the electron beam ejection which might have contributed to the arcing and payload failures. E.A.K.

Avail: NTIS HC A99/MF A01 CSCL 22B

Angular distributions of ions and electrons from the Spacecraft Charging at High Altitudes (SCATHA) were investigated for the floating potential and the differential charging of the spacecraft as deduced from Liouville's theorem. The following was found: (1) short time charging events on the spacecraft are associated with short time increases of the intensity of 10 keV to 1 MeV electrons; (2) short time changes of the spacecraft differential potential are associated with simultaneous short time changes of the spacecraft floating potential; (3) solar UV intensities in penumbra anticorrelate with the spacecraft floating potentials; (4) NASCAP predicts correct forms of sunshade asymmetric surface potentials; (5) certain enhancements of the intensity of energetic ions diminishes the absolute value of the spacecraft surface potential; (6) spacecraft discharging events in times shorter than 20 sec did not change in the spectrum of the energetic plasma; (7) partial discharging of the spacecraft occurred upon entry into a magnetically depleted region; and (8) steady state potentials and transient potentials of duration less than 30 seconds are simulated by the NASCAP code. COMPUTER SIMULATION OF SPACECRAFT CHARGING ON SCATHA
A. G. Rubin, H. A. Cohen, D. A. Hardy, M. F. Tautz (Radex Corp.), and N. A. Saflekos (Boston Coll.) *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 632-641 refs (For primary document see N82-14213 05-18)
Avail: NTIS HC A99/MF A01 CSCL 22B

Computer simulation to determine spacecraft charging on P78-2 (SCATHA) during a substorm and for modeling the effects of electron beam emission on the P78-2 ground potential for a variety of beam voltages and currents was used. Measured and computed spacecraft potentials are obtained to within several hundred eV. Computation of the electron beam emission effects on the spacecraft ground potential are shown. It is concluded that the spacecraft ground potential can be controlled by emitting an electron beam. E.A.K.

ANALYSIS OF AMBIENT AND BEAM PARTICLE CHARACTERISTICS DURING THE EJECTION OF AN ELECTRON BEAM FROM A SATELLITE IN NEAR-GEOSYNCHRONOUS ORBIT ON MARCH 30, 1979
M. S. Gussenhoven, H. A. Cohen, D. A. Hardy, W. J. Burke, and A. Chesley *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 642-664 refs Prepared in cooperation with AFGL (For primary document see N82-14213 05-18)
Avail: NTIS HC A99/MF A01 CSCL 22B

An electron beam system was operated over a wide range of beam currents and energies for periods both in sunlight and in eclipse. Complex pitch angle modulations of the electron spectra are separately decomposed for each beam operation. When electrons are emitted perpendicular to the magnetic field with an energy of 3 keV and a current of 0.10 mA they return as a coherent beam only to the parallel detector. Throughout the beam operations the pitch angle distributions show electrons with energy less than beam energy streaming along the field line. Analytic expressions for the satellite electric field are constructed and particle trajectories are determined. E.A.K.

COMPARISON OF NASCAP MODELLING RESULTS WITH LUMPED CIRCUIT ANALYSIS
David B. Stang and Carolyn K. Purvis *In its* Spacecraft Charging Technol., 1980 Oct. 1980 p 665-683 refs (For primary document see N82-14213 05-18)
Avail: NTIS HC A99/MF A01 CSCL 22B

Engineering design tools that can be used to predict the development of absolute and differential potentials by realistic spacecraft under geomagnetic substorm conditions are described. Two types of analyses are in use: (1) the NASCAP code, which computes quasistatic charging of geometrically complex objects with multiple surface materials in three dimensions; (2) lumped element equivalent circuit models that are used for analyses of particular spacecraft. The equivalent circuit models require very little computation time, however, they cannot account for effects, such as the formation of potential barriers, that are inherently multidimensional. Steady state potentials of structure and insulation are compared with those resulting from the equivalent circuit model. E.A.K.

The use of the NASA Charging Analyzer Program (NASCAP) for the computation of spacecraft charge up in the energetic plasma environment of geosynchronous orbits is described. Spacecraft modelling, materials parameters, and NASCAP charging analyses are described. The synchronous orbit plasma environment used in the stress analysis employs a two Maxwellian energy distribution to determine the fluxes. Several NASCAP runs performed to determine the location and magnitude of environmentally induced voltage stresses are analyzed. J.D.H.

RESULTS FROM A TWO DIMENSIONAL SPACECRAFT CHARGING SIMULATION AND COMPARISON WITH A SURFACE PHOTOCURRENT MODEL

J. G. Laframboise, S. M. L. Prokopenko, M. Kamitsuma, and R. Godard *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 709-716 refs (For primary document see N82-14213 05-18)

(Grant AF-AFOSR-2962-76)

Avail: NTIS HC A99/MF A01 CSCL 22B

A two dimensional spacecraft charging simulation program called CYLVIA, which treats infinite cylindrical geometries with angle dependence, is considered. Two features of this program, its orbit integration and current collection methods, are discussed. A calculation is presented of floating potentials of a spacecraft cross section which is represented by two conductive sectors, and a comparison is made between the photoemission current distribution obtained therein and another given by an approximate analytic surface photocurrent expression by Laframboise and Whipple. ANALYTICAL MODELING OF SATELLITES IN GEOSYNCHRONOUS ENVIRONMENT

N. John Stevens *In its* Space Charging Technol., 1980 Oct. 1980 p 717-729 refs (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

Experiences with surface charging of geosynchronous satellites are reviewed and mechanisms leading to discharges on satellite surfaces are considered. It was found that the large differential voltages between the surface and the substrate required to produce massive laboratory discharges do not occur on satellites in space. Analytical modeling predictions supported by dielectric charging data from P78-2, SCATHA (Spacecraft Charging at High Altitudes) flight results are discussed. Ungrounded insulator areas, buried charge layers (due to mid-energy range particles), and positive differential voltages (where structure voltages are less negative than surrounding dielectric surface voltages) are considered as possible mechanisms producing satellite charge up. CALCULATION OF SURFACE CURRENT RESPONSE TO SURFACE FLASHOVER OF A LARGE SAMPLE UNDER GROUNDED AND FLOATING CONDITIONS

M. J. Mandell, I. Katz, and G. W. Schnuelle *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 730-744 refs (For primary document see N82-14213 05-18)

(Contracts DNA001-79-C-0079; DNA001-79-C-0027)

Avail: NTIS HC A99/MF A01 CSCL 22B

Results for the electromagnetic response to the discharge of an 80 cm diameter dielectric sample mounted on a 120 cm diameter cylinder are presented. It is assumed that the dielectric is charged with a known potential profile dropping sharply near the edge, and the substrate initially grounded. During the early part of the discharge (approximately 10 ns) there is little difference between the grounded and floating cases. Beyond about 10 ns the grounded experiment is in approximate steady state, continuous to blow off charge until the dielectric is substantially discharged. The floating case, however, shows modestly decreasing emission and response. Eventually, a quasi-steady state is reached in which charge is transported from dielectric to substrate rather than blown off. J.D.H.

DISAPPEARANCE AND REAPPEARANCE OF PARTICLES OF ENERGIES $<$ 50 keV AS SEEN BY P78-2 (SCATHA) NEAR GEOSYNCHRONOUS ORBIT

J. Feynman (Boston Coll.), N. A. Saflekos (Boston Coll.), H. G. Garrett, D. A. Hardy (AFGL), and E. G. Mullen *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 755-767 refs (For primary document see N82-14213 05-18)

(Contract F19628-79-C-0031)

Avail: NTIS HC A99/MF A01 CSCL 22B

The nightside particle environment as observed by the AFGL Rapid Scan Particle Detector on SCATHA showing large, sudden simultaneous changes in the fluxes of electrons and protons with energies above 50 keV (dropouts) is considered. An interesting feature of SCATHA dropouts is the quasiperiodic behavior of the particle flux amplitudes which often vary with a period of the order of 15 minutes both during the dropout and after the return. A flux return during eclipse caused a major spacecraft charging event of several kilovolts. The SCATHA observations are compared with those reported for other geosynchronous satellites. In agreement with ATS-5, a marked dependence in the frequency of occurrence due to an effect of the orbit is found. ATS-5 experienced few dropouts during quiet geomagnetic conditions. However, for an L shell greater than seven, SCATHA particle dropouts occur routinely during quiet conditions. Thus, for SCATHA's orbit, both the orbital position and geomagnetic conditions must be taken into account in evaluating the potential hazard of flux returns. J.D.H.

P78-2 SCATHA ENVIRONMENTAL DATA ATLAS

E. Gary Mulen (AFGL), David A. Hardy (AFGL), Henry B. Garrett, and Elden C. Whipple (California Univ., San Diego) *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 802-813 refs (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

The 100 eV to approximately 1 MeV plasma environment encountered by the P78-2 Spacecraft Charging at High Altitudes (SCATHA) satellite during its initial operation period was studied. Forty-four days of 10 minute averages of the four moments of the electron and ion distribution functions calculated from the SC5 and SC9 energetic particle measurements were analyzed to determine occurrence frequency, local time variation, geomagnetic activity variation, and L shell variation. The single and double Maxwellian parameters derived from the four moments were similarly analyzed. The interrelationships between the moments and derived parameters were computed and the results compared with the ATS-5 and ATS-6 atlas. Results of this analysis establish a baseline range for the SCATHA plasma environment.

ELECTRON IRRADIATION TESTS ON EUROPEAN METEOROLOGICAL SATELLITE

J. Reddy *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 835-855 refs (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

The observation of in orbit anomalies on Meteosat resulted in a test being performed to establish the charging and discharging characteristics of a flight configured engineering model when irradiated with electrons. Surface potentials were measured together with discharge rates and amplitudes. Results indicate that a large number of discharges are possible on the satellite whether or not the external surfaces are grounded. Initial measurements show that there are very high potential gradients around the satellite which obviously contribute largely to the discharging behavior. The time constant for charging is very small, indicating also that equilibrium conditions are achieved very quickly as the local ambient changes in orbit. A.R.H.

SPACECRAFT CHARGING TECHNOLOGY IN THE SATELLITE X-RAY TEST FACILITY

Troy J. Sponaugle *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 856-865 refs (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

A satellite X-ray test facility (SXTF) is planned for studying system generated electromagnetic pulse effects on full scale, operational spacecraft. The environment created by a distant, high altitude nuclear burst can be simulated using pulsed X-ray sources. The facility is to be installed in a thermal vacuum chamber with dimensions greater then 10 m diameter and 20 m height and equipped with solar simulators and equipment for simulating the charging environment of space. The spacecraft charging system consists of several low energy electron and hydrogen ion sources (5-25 keV), one or two medium energy electron accelerators (150-300 keV), an array of vacuum ultraviolet lamps, and geomagnetic field suppression coils. Military, scientific, and commercial spacecraft can be tested before launching into the radiation environment of space. construction of SXTF is scheduled to begin in 1982 and the facility should be available for general use in 1984. Potential users are encouraged to express their needs for specific testing environments in SXTF. A.R.H.

SIMULATION OF SPACECRAFT CHARGING ENVIRONMENTS BY MONOENERGETIC BEAMS

Ward Halverson *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 866-886 refs Sponsored by AFGL (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

To simulate the distributed spectra of plasmas in space, the differential current density spectrum of the plasma was divided into a number of energy bands and the beam energy and current were calculated for each band to provide a piecewise reproduction of the distributed spectrum. Beam energies and current densities were chosen to match the velocity moments of the plasma distribution function. The velocity moments are averages related to physical quantities such as particle density, flux, pressure, and energy flux, and have been used extensively to characterize the measured properties of plasmas in space. Combinations of one, two, and three beams were found to match two to six velocity moments of Maxwellian distributions. A computational model was used to compare the charging of a spacecraft by plasmas with distributed spectra and by monoenergetic beams.

IMPORTANCE OF DIFFERENTIAL CHARGING FOR CONTROLLING BOTH NATURAL AND INDUCED VEHICLE POTENTIALS ON ATS-5 AND ATS-6

E. C. Whipple and R. C. Olsen *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 888-893 refs (For primary document see N82-14213 05-18)

Avail: NTIS HC A99/MF A01 CSCL 22B

Three techniques of discharging satellites used on the P78-2 satellite were the ejection of a beam of electrons from an electron gun; the emission of electrons from a heated, biased filament; and the ejection of a plasma containing energetic positive xenon ions and low energy electrons. When the P78-2 satellite ground to plasma potential difference reached several hundred volts, each of the three techniques was able to completely discharge the satellite. The comparative effctiveness of the techniques were clearly shown. Two days later, the satellite charged to -8 keV upon entering eclipse. The electron gun, emitting 1 mA of electrons with 150 eV energy, reduced the difference in potential between satellite ground and the ambient plasma to -1 kV, but could not completely discharge the satellite. The plasma source completely discharged the satellite. A.R.H.

ELECTROMAGNETIC FIELDS PRODUCED BY SIMULATED SPACECRAFT DISCHARGES

J. E. Nonevicz, R. C. Adamo (Beers Associates, Inc.), B. L. Beers, and T. N. Delmer (Beers Associates, Inc.) *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980

p 894-911 refs Sponsored by Air Force (For primary document see N82-14213 05-18)
Avail: NTIS HC A99/MF A01 CSCL 22B

The initial phase of a broader, more complete program for the characterization of electrical breakdowns on spacecraft insulating materials is described which consisted of the development of a discharge simulator and characterization facility and the performance of a limited number of discharge measurements to verify the operation of the laboratory setup and to provide preliminary discharge transient field data. A preliminary model of the electromagnetic characteristics of the discharge was developed. It is based upon the 'blow off' current model of discharges, with the underlying assumption of a propagating discharge. The laboratory test facility and discharge characterization instrumentation are discussed and the general results of the 'quick look' tests are described on quartz solar reflectors aluminized Kapton and silver coated Teflon are described. AGREEMENT FOR NASA/OAST - USAF/AFSC SPACE INTERDEPENDENCY ON SPACECRAFT ENVIRONMENT INTERACTION

C. P. Pike (AFGL) and N. John Stevens *In its* Spacecraft Charging Technol., 1980 Oct. 1980 p 912-930 refs (For primary document see N82-14213 05-18)
Avail: NTIS HC A99/MF A01 CSCL 22B

A joint AF/NASA comprehensive program on spacecraft environment interactions consists of combined contractual and in house efforts aimed at understanding spacecraft environment inerection phenomena and relating ground test results to space conditions. Activities include: (1) a concerted effort to identify project related environmental interactions; (2) a materials investigation to measure the basic properties of materials and develop or modify materials as needed; and (3) a ground simulation investigation to evaluate basic plasma interaction phenomena and provide inputs to the analytical modeling investigation. Systems performance is evaluated by both ground tests and analysis. There is an environmental impact investigation to determine the effect of future large spacecraft on the charged particle environment. Space flight investigations are planned to verify the results. The products of this program are test standards and design guidelines which summarize the technology, specify test criteria, and provide techniques to minimize or eliminate system interactions with the charged particle environment. NUMERICAL SIMULATION OF PLASMA INSULATOR INTERACTIONS IN SPACE. PART 2: DIELECTRIC EFFECTS

R. C. Chaky, J. H. Nonnast, T. P. Armstrong, J. Enoch, and G. Wiseman *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 946-956 (For primary document see N82-14213 05-18)
(Grant NsG-3290)
Avail: NTIS HC A99/MF A01 CSCL 22B

Any process which may be modeled statistically for a simple plasma particle may be modeled by the particle in cell technique. The success of the calculation is then dependent on having a large enough number of particles that the statistical treatment is meaningful. Thus it is possible to include the effects of secondary emission, backscattering, charge sticking and possibly dielectric breakdown, photoemission, and spallation. The first plasma dielectric interaction included in the computer code for simulating plasma insulator interactions is secondary electron emission. A calculated current density vs. voltage curve is presented and compared to an experimental curve. A.R.H.

THREE DIMENSIONAL SPACE CHARGE MODEL FOR LARGE HIGH VOLTAGE SATELLITES

David Cooke (Rice Univ.), Lee W. Parker (Parker (Lee W.), Inc.), and James E. McCoy *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 957-978 refs (For primary document see N82-14213 05-18)
(Contract NAS9-16206)
Avail: NTIS HC A99/MF A01 CSCL 22B

High power solar arrays for satellite power systems with dimensions of kilometers, and with tens of kilovolts distributed over their surface face many plasma interaction problems that must be properly anticipated. In most cases, the effects cannot be adequately modeled without detailed knowledge of the plasma sheath structure and space charge effects. Two computer programs were developed to provide fully self consistent plasma sheath models in three dimensions as a result of efforts to model the experimental plasma sheath studies at NASA/JSC. Preliminary results indicate that for the conditions considered, the Child-Langmuir diode theory can provide a useful estimate of the plasma sheath thickness. The limitations of this conclusion are discussed. Some of the models presented exhibit the strong ion focusing observed in the JSC experiments. A.R.H.

CHARGING OF A LARGE OBJECT IN LOW POLAR EARTH ORBIT

D. E. Parks and I. Katz *In* NASA. Lewis Research Center Spacecraft Charging Technol., 1980 Oct. 1980 p 979-989 refs Sponsored in part by AFGL (For primary document see N82-14213 05-18)
(Contract NAS3-21762)
Avail: NTIS HC A99/MF A01 CSCL 22B

The charging of a large sphere subject to the environment encountered by the shuttle orbiter as it passes through the auroral regions in its low polar Earth orbit was investigated. The environment consists of a low temperature dense plasma and a relatively intense (200 mu A/sq m) field aligned flux of energetic electrons (approximately 5 to 10 keV). The potential on a sphere in eclipse is presented as a function of the ratio kappa of the charging rate produced by precipitating electrons to the discharging rate produced by ram ions. It was found that a 5 meter conducting sphere charges to potentials of order 1 kilovolt for kappa approximately 2, even though a 0.5 meter sphere charges to less than 100 volts. It is concluded that the natural charging environment can induce large potentials (approximately 1 kilovolt) on the shuttle orbiter. A.R.H.

INTERACTIVE DESIGN AND ANALYSIS OF FUTURE LARGE SPACECRAFT CONCEPTS

L. Bernard Garrett Dec. 1981 32 p refs Presented at the 16th AIAA Thermophys. Conf., Palo Alto, Calif., 23-25 Jun. 1981
(NASA-TP-1937; L-14739) Avail: NTIS HC A03/MF A01 CSCL 22B

An interactive computer aided design program used to perform systems level design and analysis of large spacecraft concepts is presented. Emphasis is on rapid design, analysis of integrated spacecraft, and automatic spacecraft modeling for lattice structures. Capabilities and performance of multidiscipline applications modules, the executive and data management software, and grahics display features are reviewed. A single user at an interactive terminal create, design, analyze, and conduct parametric studies of Earth orbiting spacecraft with relative ease. Data generated in the design, analysis, and performance evaluation of an Earth-orbiting large diameter antenna satellite are used to illustrate current capabilities. Computer run time statistics for

the individual modules quantify the speed at which modeling, analysis, and design evaluation of integrated spacecraft concepts is accomplished in a user interactive computing environment.

THERMAL AND AEROTHERMAL PERFORMANCE OF A TITANIUM MULTIWALL THERMAL PROTECTION SYSTEM
Don E. Avery, John L. Shideler, and Robert N. Stuckey (Johnson Space Center) Dec. 1981 59 p refs
(NASA-TP-1961; L-14719) Avail: NTIS HC A04/MF A01 CSCL 22B

A metallic thermal protection system (TPS) concept the multiwall designed for temperature and pressure at Shuttle body point 3140 where the maximum surface temperature is approximately 811 K was tested to evaluate thermal performance and structural integrity. A two tile model of titanium multiwall and a model consisting of a low temperature reusable surface insulation (LRSI) tiles were exposed to 25 simulated thermal and pressure Shuttle entry missions. The two systems performed the same, and neither system deteriorated during the tests. It is indicated that redesign of the multiwall tiles reduces tile thickness and/or weight. A nine tile model of titanium multiwal was tested for radiant heating and aerothermodynamics. Minor design changes that improve structural integrity without having a significant impact on the thermal protection ability of the titanium multiwall TPS are identified. The capability of a titanium multiwall thermal protection system to protect an aluminum surface during a Shuttle type entry trajectory at locations on the vehicle where the maximum surface temperature is below 811 K is demonstrated.

ATTITUDE MEASUREMENT: PRINCIPLES AND SENSORS
P. Duchon and M. P. Vermande Nov. 1981 47 p Transl. into ENGLISH of "La Mesure d'Attitude, les Principes - les Sensors" France, 1980 p 315-348 Presented at Spacecraft Orbital Motion; Course in Space Technol., Toulouse, 2-13 Jun. 1980 Original language document was announced as A81-33388 Transl. by Kanner (Leo) Associates, Redwood City, Calif. Original doc. prep. by CNES, France
(Contract NASw-3541)
(NASA-TM-76647) Avail: NTIS HC A03/MF A01 CSCL 22B

Tools used in the measurement of satellite attitude are described. Attention is given to the elements that characterize an attitude sensor, the references employed (stars, moon, Sun, Earth, magnetic fields, etc.), and the detectors (optical, magnetic, and inertial). Several examples of attitude sensors are described, including sun sensors, star sensors, earth sensors, triaxial magnetometers, and gyrometers. Finally, sensor combinations that make it possible to determine a complete attitude are considered; the SPOT attitude measurement system and a combined CCD star sensor-gyrometer system are discussed.

(CRPE-1078) Avail: NTIS HC A07/MF A01

Test equipment that substitutes for an onboard computer which operates a satellite sounding experiment was developed. Computer system functions are described and circuit diagrams are given. The test system performs two operations: it verifies experiment modules, localizing defects and it sends repetitive command sequences, detecting malfunctions which might be due to the satellite/experiment interface. Checkout procedures for satellite support and maintenance personnel are recommended.

(Contract NAS8-34026)
(NASA-CR-161922; LMSC-D794945) Avail: NTIS HC A03/MF A01 CSCL 21C

A plasma interaction analysis in support of the solar electric propulsion subsystem examined the effects of a large high voltage solar array interacting with an ion thruster produced plasma. Two solar array test modules consisting of 36 large area wraparound contact solar cells welded to a flexible Kapton integrated circuit substrate were abricated. The modules contained certain features of the effects of insulation, din-holes, and bonding of the cell to the substrate and a ground plane. The possibility of a significant power loss occurring due to the collection of charged particles on the solar array interconnects was the focus of the research. R.J.F.

The Teflon pulsed thruster is being considered as an attitude control and station-keeping device for spacecraft and satellites. In determining the compatibility of the pulsed plasma thruster with spacecraft systems, it is necessary to assess the potentially harmful effects the exhaust products may have on various spacecraft surfaces. Previous efforts to acquire data in space environmental chambers have had limited success due to the interferences caused by exhaust products scattering from the test facility walls and pumping panels. The overall objective of this effort is to define the operating characteristics of prototype pulsed plasma engine and a test facility configuration suitable for contamination-type tests. The immediate objectives of this report are: (1) to use a micropound and a millipound pulsed plasma engine to obtain information on the species in the plasma and how they react when they encounter the test chamber walls, and (2) to examine the effectiveness of possible diagnostic techniques; these include witness plates, electron multipliers, mass spectrometers, Faraday cups, attenuated total reflectance (ATR) plates, calorimeters, and UV spectroscopy. AEROSIL FOR THE IMPROVEMENT OF THE FLOW BEHAVIOR OF POWDERED SUBSTANCES

Dec. 1981 28 p refs Transl. into ENGLISH from Schriftenreihe Pigmente, Degussa, (Frankfurt), no. 31, 10 Aug. 1971 p 1-17 Transl. by SCITRAN, Santa Barbara, Calif.
(Contract NASw-3542)
(NASA-TM-76643) Avail: NTIS HC A03/MF A01 CSCL 11G

The tendency of powdered substances to agglomerate and stick together is studied. The highly dispersed silicic acid Aerosil (tradename) is studied as an agent to improve the free flowing characteristics of powdered materials. It was concluded that the use of Aerosil 200, Aerosil R 972, aluminum oxide C and sylicic acid D 17 as flow agents caused broad improvements in the flow properties of powders. Additionally, the sifting, dispersion, and spray behavior, as well as the grinding and air separation characteristics of powders were improved. R.J.F.

(Contract NAS1-15644)
(NASA-CR-159114; QTPR-7) Avail: NTIS HC A03/MF A01 CSCL 11D

Standard and advanced bonded joint concepts were evaluated to develop a data base for the design and analysis of advanced composite joints for use at elevated temperatures (561K (550 F)). Design concepts for specific joint applications and the fundamental parameters controlling the static strength characteristics of such joints were identified. Test results are presented for rail shear and sandwich beam compression tests and tension tests of moisture conditioned specimens and bonded on 'T' sections. Coefficients of thermal expansion data are presented for A7F (LARC 13 Amide-imide modified) adhesion. Static discriminator test results for type 1 and type 2 bonded and bolted preliminary attachment concepts are presented and discussed.

DURABILITY/LIFE OF FIBER COMPOSITES IN HYGROTHERMOMECHANICAL ENVIRONMENTS

C. C. Chamis and J. H. Sinclair 1981 28 p refs Presented at the Sixth Conf. on Composite Mater.: Testing and Design sponsored by the Am. Soc. for Testing and Mater., Phoenix, Ariz., 12-13 May 1981
(NASA-TM-82749; E-1065) Avail: NTIS HC A03/MF A01 CSCL 11D

Statistical analysis and multiple regression were used to determine and quantify the significant hygrothermomechanical variables which infuence the tensile durability/life (cycle loading, fatigue) of boron-fiber/epoxy-matrix (B/E) and high-modulus-fiber/epoxy-matrix (HMS/E) composites. The use of the multiple regression analysis reduced the variables from fifteen, assumed initially, to six or less with a probability of greater than 0.999. The reduced variables were used to derive predictive models for compression an intralaminar shear durability/life of B/E and HMS/E composites assuming isoparametric fatigue behavior. The predictive models were subsequently generalized to predict the durability/life of graphite-fiber-r generalized model is of simple form, predicts conservative values compared with measured data and should be adequate for use in preliminary designs. B.W.

ANALYSIS OF CRACK PROPAGATION AS AN ENERGY ABSORPTION MECHANISM IN METAL MATRIX COMPOSITES Interim Report, Sep. 1979 - Dec. 1980

Donald F. Adams and Daniel P. Murphy Feb. 1981 159 p refs
(Grant NsG-3217)
(NASA-CR-165081; UWME-DR-101-102-1) Avail: NTIS HC A08/MF A01 CSCL 11D

The crack initiation and crack propagation capability was extended to the previously developed generalized plane strain, finite element micromechanics analysis. Also, an axisymmetric analysis was developed, which contains all of the general features of the plane analysis, including elastoplastic material behavior, temperature-dependent material properties, and crack propagation. These analyses were used to generate various example problems demonstrating the inelastic response of, and crack initiation and propagation in, a boron/aluminum composite. B.W.

COLLOQUIUM ON COMPOSITE MATERIALS [VERBUNDWERSTOFFE: WERKSTOFF KOLLOQUIUM]

1980 27 p refs In GERMAN Presented at Cologne, 3 Dec. 1980
Avail: NTIS HC A03/MF A01

Directionally solidified eutectic composites are discussed as well as superalloys and the effects of a large temperature gradient on their structure; thermal fatigue; vapor deposition tests with Ni Co Gr Al Y alloys; solidification; oxidation behavior; protective layers are also considered. The fracture mechanics and microanalysis of fiber, and reinforced composites and the influence of a protective oxidation layer on the high temperature resistance of reaction bonded silicon nitride are also examined. For individual titles, see N82-14290 through N82-14295.

FRACTURE MECHANICS IN FIBER REINFORCED COMPOSITE MATERIALS, TAKING AS EXAMPLES B/Al AND CFRP [BRUCHMECHANIK AN FASERVERBUNDWERKSTOFFEN AM BEISPIEL VON B/Al UND CFK]
P. W. M. Peters *In its* Colloq. on Composite Mater. 1980 2 p refs In GERMAN (For primary document see N82-14289 05-24)
Avail: NTIS HC A03/MF A01

The validity of linear elastic fracture mechanics and other fracture criteria was investigated with laminates of boron fiber reinforced aluminum (B/Al) and of carbon fiber reinforced epoxide (CFRP). Cracks are assessed by fracture strength Kc or Kmax (critical or maximum value of the stress intensity factor). The Whitney and Nuismer point stress criterium and average stress criterium often show that Kmax of fiber composite materials increases with increasing crack length; however, for B/Al and CFRP the curve showing fracture strength as a function of crack length is only applicable in a small domain. For B/Al, the reason is clearly the extension of the plastic zone (or the damage zone in the case of CFRP) which can not be described with a stress intensity factor. Author (ESA)

EFFECTS OF A LARGE TEMPERATURE GRADIENT ON THE STRUCTURE OF DIRECTIONALLY SOLIDIFIED EUTECTIC COMPOSITES AND SUPERALLOYS [EINFLUSS EINES HOHEN TEMPERATURGRADIENTEN AUF DAS GEFUEGE GERICHTET ERSTARRTER EUTEKTIKA UND SUPERLEGIERUNGEN]
G. Staniek *In its* Colloq. on Composite Mater. 1980 3 p refs In GERMAN (For primary document see N82-14289 05-24)
Avail: NTIS HC A03/MF A01

An apparatus for high temperature tests of the structural stability of directionally solidified eutectic composites and superalloys was developed. It was used for cooled blades in high temperature gas turbines in which fast temperature changes and important temperature gradients occur. With this apparatus, a temperature gradient of a few hundred K/mm is obtained with a maximum of 1600 K. Structural instabilities due to mechanical stresses (cracks and plastic deformation) occur especially in superalloys, although some are decidedly stable. Instabilities due to thermal loads (coarsening, transformations, decomposition of phases, oxidation) are frequently observed, but test temperatures and gradients are considerably higher than in normal operation, so the employment of these alloys is not directly limited. LABORATORY EXPERIENCE WITH DIRECTIONAL SOLIDIFICATION OF EUTECTIC HIGH TEMPERATURE ALLOYS [ERFAHRUNGEN BEI DER GERICHTETEN ERSTARRUNG VON EUTEKTISCHEN HT-LEGIERUNGEN IM LABOR]
K. Fritscher, G. Staniek, and H. Mangers *In its* Colloq. on Composite Mater. 1980 2 p refs In GERMAN (For primary document see N82-14289 05-24)
Avail: NTIS HC A03/MF A01

The structure of five directionally solidified eutectic alloys was studied. Two structures (j/j'a and j/j' TaC) were found to be very regular, the others were found to deviate from the ideal structure (Co, Cr-Cr7 Cr3). The velocities at which the practically faultless eutectic structures are grown using the Bridgman technique, are given together with the average thermodynamic and constitutional values. Small differences in the entropy of fusion of the phases concerned and a possibly small difference in their chemical composition favor fast solidification. The susceptibility to defects during production and the necessary technological outlay strongly depend on the alloying system. Author (ESA)

N82-14294# Deutsche Forschungs- und Versuchsanstalt fuer Luft- und Raumfahrt, Cologne (West Germany).
MICROANALYSIS OF COMPOSITE MATERIALS [MIKROANALYSE AN VERBUNDWERKSTOFFEN]
H. J. Dudek, G. Ziegler, R. Borath, and R. Leucht *In its* Colloq. on Composite Mater. 1980 2 p In GERMAN (For primary document see N82-14289 05-24)
Avail: NTIS HC A03/MF A01

Analysis methods that determine the chemical structure of the reaction zone, intervening in the adhesion between the components of fiber reinforced composite materials, are discussed for silicon carbide fiber reinforced titanium alloys. Both X-ray microanalysis, and Auger electron spectroscopy (AES) are suited for this analysis. On compact samples, AES allows a spatial resolution of up to 0.05 micron and, in combination with ion etching, it enables the demonstration of monatomic layers. The reaction zone in SiC Ti composites has a diameter of a few microns. The reaction between SiC and Ti predominantly leads to solving the fiber material. In the AES depth profile, concentrations of Si and C which can lead to the formation of hard phases are observed. Author (ESA)

OXIDATION BEHAVIOR OF DIRECTIONALLY SOLIDIFIED EUTECTIC COMPOSITES AS PROTOTYPES FOR THE DEVELOPMENT OF PROTECTIVE LAYERS [OXIDATIONSVERHALTEN VON GERICHTET ERSTARRTEN EUTEKTIKA UND DEREN MODELLCHARAKTER FUER DIE SCHUTZSCHICHTENTWICKLUNG]
K. Fritscher, S. Scheidt, and H. Gedanitz *In its* Colloq. on Composite Mater. 1980 2 p In GERMAN (For primary document see N82-14289 05-24)
Avail: NTIS HC A03/MF A01

The structure of a NiCoGrAlY layer is compared with the structure of fibrous and lamellar directionally solidified eutectic composites. In all cases there exist two-phase structures with phase alignment. A comparatively strong similarity is observed between the structure of fibrous directionally solidified eutectic composites and the structure of vapor deposited NiCoCrAlY layers. The oxidation of fibrous eutectic composites is anisotropic: the phase alignment directly influences the oxidation velocity, whereby enhanced diffusion along the tubular phase boundary is assumed. Lamellar eutectic composites do not show this anisotropy since many phase boundaries are in contact with the oxidizing surface as well as in the direction of and perpendicular to the growth direction. Both types of eutectic composites basically show acceleration of oxidation when the distance between the phases decreases, enhancing the specific phase boundary surface. The results are discussed with regard to outlining protective layer systems. Author (ESA)

SYNTHESIS, CHARACTERIZATION AND OPTICAL PROPERTIES OF BARIUM TITANATE FILMS SPUTTERED UNDER VARIOUS CONDITIONS Final Report, 1 Apr. - 5 Dec. 1980
John C. Olson, Donald F. Stevison, and Izhar Bransky Jun. 1981 75 p refs
(AF Proj. 2422)
(AD-A105655; AFWAL-TR-81-4049) Avail: NTIS HC A04/MF A01 CSCL 13/8

Data is presented on BaTiO3 films which were RF sputtered on Pt, quartz and sapphire substrates at various temperatures and gas mixtures. Measurements of density, dielectric constant, electrical conductivity, X-ray diffraction, energy band gap from optical absorption and wavelength, and temperature dependence of refractive index are presented. Measurements were also made on a BaTiO3 single crystal and a hot-pressed ceramic pellet for direct comparison of bulk properties to those of the films. The results of this work demonstrate that a transition of the properties occurs between the amorphous and crystalline states depending on the surface temperature during sputtering. The transition is sluggish up to 700 C above which crystalline properties of the films appear rapidly. Author (GRA)

A THEORY OF LAMINATED COMPOSITE PLATES AND RODS

A. E. Green May 1981 66 p refs
(Contract N00014-75-C-0148; NR Proj. 064-436)
(AD-A105591; UCB/AM-81-3) Avail: NTIS HC A04/MF A01 CSCL 11/4

This paper is concerned with small deformations of a class of laminated layered composite plates and a class of laminated layered composite rods utilizing a direct formulation of thermomechanical theories of shells and rods. The paper is arranged in two parts, namely Part A (for laminated composite plates) and Part B (for laminated composite rods), and can be read independently of each other. In each part, after providing the main ingredients of a direct formulation, fairly general linear theories are developed which include both dynamical and thermal effects. Some applications to sandwich plates and layered rods are discussed in detail. Author (GRA)

WHOLE-FIELD EXPERIMENTAL STRESS ANALYSIS USING LASER SPECKLE INTERFEROMETRY

Terry L. Vandiver 14 Feb. 1981 138 p refs
(AD-A105805; AD-E950170; DRSMI/RL-81-10-TR) Avail: NTIS HC A07/MF A01 CSCL 11/4

The objective of this study was to develop a whole-field experimental stress analysis method for composite structures. A data-gathering system, using the optical technique of laser speckle interferometry, was used to capture deformation of bodies under load on a film record. The speckle interferograms were analyzed by a computer-aided scanning system. A mathematical and geometrical interpretation of interferometric data is presented. The interferograms were analyzed at strategic image points on the test specimens to obtain displacement data which was used to calculate strains, shearing strains, and correlated with shearing stresses. Anisotropic elastic constants such as Young's modulus, shear modulus, and Poisson's ratio were calculated. A full-field aperture analysis was used as a tool to qualitatively observe the free edge effects of shear specimens. The techniques presented in this report are significant because full-field or discrete information can be obtained from any point rather than averaging data from a small region. Author (GRA)

COMPOSITE FLYWHEEL DURABILITY AND LIFE EXPECTANCY: TEST PROGRAM

S. V. Kulkarni, K. L. Reifsnider, and D. M. Boyd 14 Jul. 1981 13 p refs Presented at the DOE Passive and Hybrid Solar Energy Program Update, Washington, D.C., 24-26 Aug. 1981
(Contract W-7405-eng-48)
(DE81-028849; UCRL-86450; CONF-810832-5) Avail: NTIS HC A02/MF A01

A test program was designed to: determine the durability and life expectancy of flywheel rotors; identify critical performance and durability characteristics that control the long-term service and safety of rotors and rotor containments; and develop test procedures that can be used to economically evaluate the performance of flywheels under cyclic loading in the laboratory and to relate that information to long-term service behavior. Approximately half the project is complete, including the following tasks: a material property data base was assembled for each major material to be used in the flywheels; material property data was characterized and modeled; the initial version of a generic test program was designed; and some NDE characterization of all prototype composite flywheels rotors was conducted. FRACTURE TOUGHNESS OF Al2O3-ZrO2 COMPOSITES

P. F. Becher and V. J. Tennery 1981 17 p refs Presented at the Intern. Symp. on the Fracture Mech. of Ceramics University Park, Pa., 15 Jul. 1981
(Contract W-7405-eng-26)
(DE81-028575; CONF-810746-1) Avail: NTIS HC A02/MF A01

The fracture toughness K sub IC, of Al2O3-ZrO2 two-phase ceramic composites was determined for different ZrO2/Al2O3 ratios and selected Y2O3 stabilizer concentrations in the ZrO2. The double cantilever beam specimen geometry was used. In composites containing 20 vol % ZrO2, K sub IC increases with decrease in Y2O3 content from 3 to 1 mol %. On the other hand, composites containing 30 vol % ZrO2, decreasing Y2O3 additions from 3 to 2 mol % leads to a maximum in K sub IC value of about 6.2 MPa m (1/2) which occurred in a composition containing 2 mol % Y2O3. In this same composite, this maximum shifts to a value of about 8 MPa m (1/2) at about 2 to 3 mol % Y2O3 at -195 C. These observations are consistent with a transformation toughening model. The increase in K sub IC with ZrO2 content results from the resultant increase in the number of ZrO2 particles which transform to the monoclinic phase during crack propagation. Microstructural analyses are discussed in reference to microcracking. DOE

MECHANICAL AND THERMOPHYSICAL PROPERTIES OF HOT-PRESSED SYNROC B

C. L. Hoenig, H. W. Newkirk, R. A. Otto, R. L. Bradley, R. E. Brown, A. R. Ulrich, and R. C. Lum 6 May 1981 20 p refs
(Contract W-7405-eng-48)
(DE81-029299; UCRL-53143) Avail: NTIS HC A02/MF A01

The optimal SYNROC compositions for use with commercial waste are reviewed. Large amounts of powder (about 2.5 kg) were prepared by conventional ceramic operations to test the SYNROC concept on a processing scale. Samples 15.2 cm in diameter, were hot pressed in graphite, and representative samples were cut for microstructural evaluations. Measured mechanical and thermophysical properties did not vary significantly as a function of sample location and were typical of titanate ceramic materials. DOE

PREPARATION OF SINTER ACTIVE SILICON CARBIDE POWDERS Final Report, Apr. 1980

Wolfgang Boecker, Hans Hausner, and Heide Landfermann Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 111 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-038; ISSN-0340-7608) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 23,10

Sinter active alpha SiC powders were prepared by processing of Acheson grade silicon carbide and beta SiC powders through the thermal decomposition of methylsilane. The sintering behavior of the powders when adding boron, aluminum or various compounds of these elements was investigated. The influence of various processing steps on the density and the microstructure of the silicon carbide is discussed. Sinter densities > or = 95% are achieved with both type of powders by sintering at temperatures of 2000 C. Author (ESA)

EXAMINATION OF A DAMAGED GUN SHIELD OF OTA MELARA

G. Hamm 11 Jun. 1980 5 p
(Contract A80/KM/064)
(KRI-204/80; TDCK-75033) Avail: NTIS HC A02/MF A01

A glass fiber reinforced polyester gun shield that was damaged during service was studied. Visual inspection suggested that a large deformation of the dome, caused by large waves, produced high stresses in the laminate, causing local ruptures and collapse. Bending tests, shear tests, and glass content tests show no defect in the material, but stiffening ribs should be strengthened to increase load bearing capacity of the shield when faced with large waves. POTENTIOMETRIC STRIPPING AS A DETECTOR FOR FLOW INJECTION ANALYSIS OF METAL IONS Ph.D. Thesis
Tseng-En Hu 1981 232 p
Avail: Univ. Microfilms Order No. 8121500

An automated flow injection analysis, of trace metals for and the use of potentiometric stripping as a detector is demonstrated. The detector provides sensitivity comparable to that of linear scan anodic stripping voltammetry, does not require deaeration and therefore the speed of the analysis is considerably faster than anodic stripping voltammetry. The limited dispersion concept in flow injection analysis was used to achieve peak separation for samples containing both Pb(II) and Sn(IV); Pb(II) and T1(I); and Cu(II) and Bi(III). The otherwise overlapped peaks were separated by performing the stripping in an electrolyte which is optimized for the peak separation. This technique decomposes the overlapped peaks chemically and the results are more reproducible than the conventional matrix exchange method. Dissert. Abstr.

APPLICATION OF RESONANCE RAMAN SPECTROMETRY IN HIGH PERFORMANCE LIQUID CHROMATOGRAPHY
Shinji Saito, Norio Teramae, and Nobuyuki Tanaka Aug. 1981 13 p refs Transl. into ENGLISH OF 'Nippon Kagaku Kaishi, (Japan) v. 9, 1980 p 1363-1366 Presented at 41st Spring Ann. Conf. of the Japan Chem. Assoc.
(DRIC-T-6367; BR80388) Copyright. Avail: Issuing Activity

A detection system for the sensitive and selective analysis of the eluted components of a high performance liquid chromatograph is described. The system connects a laser Raman spectrophotometer to a high performance LC. Results from investigations of dimethylaminoazobenzene compounds show that the LC Raman effect is highly sensitive and has a high degree of selectivity. It is possible to evaluate independently compounds which can not be separated by other methods. Author (ESA)

INTEGRATED SCHOTTKY LOGIC Ph.D. Thesis
Jan Lohstroh Nov. 1981 232 p refs
Avail: NTIS HC A11/MF A01

Integrated Schottky logic (ISL) is a bipolar logic concept that uses existing processes. It combines device structures, which are already known separately, with a very attractive type of logic gate which is used for high speed (VLSL), very large scale integration. Aspects of ISL, its performance in different processes, switching speed (calculated and measured), first order modeling, its behavior is a function of temperature, the noise margins as a function of temperature, and its applications are discussed. Bipolar circuits are compared with MOS circuits in general, and bipolar circuit technology combinations which satisfy VLSI requirements are discussed. A general noise margin test method is proposed, which is applicable to every type of logic circuit. S.L.

The continuous deposition of thin organic dielectric films on metallized carrier foils by glow discharge in monomeric gases is described. Depending on the applied monomers, the films had a dissipation factor of .001 to .003 (1 kHz), a relative permittivity of 2.3 to 2.5 and a resistivity of about 10 to the 17th power omega cm. Additionally, they proved to have a high mechanical homogeneity. Self-healing rolled capacitors with a very high capacitance per volume and of consistently high quality were fabricated from the metallized carrier foils covered with the dielectric film. J.D.H.

DEFECT CHEMISTRY AND CHARACTERIZATION OF (Hg, Cd)Te Interim Report, 1 Jan. - 30 Jun. 1981
H. R. Vydyanath 30 Jun. 1981 51 p refs
(Contract NAS8-33245)
(NASA-CR-161928) Avail: NTIS HC A04/MF A01 CSCL 07D

Single crystal samples of phosphorus doped Hg sub 0.8 Cd sub 0.2 Te were anneald at temperatures varying from 450 C to 600 C in various Hg atmospheres. The samples were quenched to room temperature from the annealing temperatures. Hall effect and mobility measurements were performed at 77 K on all these samples. The results indicate the crystals to be p type for a total phosphorus concentration of 10 to the 19th power/cu cm in all the samples. The hole concentration at 77 K increases with increasing Hg pressures at 450 C and 500 C contrary to the observation in undoped crystals. Also, at low Hg pressures the concentration of holes in the phosphorus doped crystals is lower than in the undoped crystals. The hole concentration in all the samples is lower than the intrinsic carrier concentration at the annealing temperatures. The hole mobility in the doped crystals is similar to that in the undoped crystals. A defect model according to which phosphorus behaves as a single acceptor interstitially, occupying Te lattice sites while it acts as a single donor occupying Hg lattice sites was established. Equilibrum constants established for the incorporation of all the phosphorus species explain the experimental results. N.W.

INVESTIGATION OF THE CARS SPECTRUM OF WATER VAPOR Final Report, Jul. 1980 - May 1981

J. A. Shirley and R. J. Hall Wright-Patterson AFB, Ohio AFWAL Aug. 1981 65 p refs

(Contract F33615-80-C-2061; AF Proj. 2301)

(AD-A105235; UTRC/R81-955278-10; AFWAL-TR-81-2075) Avail: NTIS HC A04/MF A01 CSCL 07/4

The coherent anti-Stokes Raman spectrum of water vapor was measured and compared with CARS code calculations to facilitate diagnostics of this important combustion product. Measurements were made with mixtures of H2O and a diluent gas heated to 450-800 K in a test cell at atmospheric pressure. The experimental spectra were computer fit to calculations to deduce H2O Raman linewidths. The self broadening coefficient was found to be 0.5 per cm/atm at 773K and to depend inversely on the temperature. N2 and CO2 broadening coefficients are comparable, essentially independent of temperature at 0.17 per cm/atm over this range. Measurements were also made in the post-reaction region of stoichiometric CH4-air flames at 1670 and 2070 K. The linewidth was inferred to be 0.24-0.25 per cm/atm in both flames. Author (GRA)

DETERMINATION OF SELECTED DISTILLATE BLENDING SOLVENTS IN SIMPLE AND COMPLEX AIRCRAFT FUEL MATRICES VIA GLASS CAPILLARY GAS CHROMATOGRAPHY Final Report, Jan. - Dec. 1979

Paul C. Hayes, Jr. Jun. 1981 44 p refs

(AF Proj. 3048)

(AD-A105588; AFWAL-TR-80-2082) Avail: NTIS HC A03/MF A01 CSCL 07/4

A study was initiated to accurately determine the volume percent of various hydrocarbon distillate solvents present in blends with aircraft jet fuels JP-4 and JP-8. These modified fuels were an integral part of a combustion program to elucidate the effect altered fuel properties had on selected combustion parameters. A method of analysis was desired to check the accuracy of both in-house and contractual blending work. The effort was further expanded to even determine the amount of JP-4 present in the event of gross cross-contamination. Author (GRA)

DETERMINATION OF PYRIDINE IN MODIFIED JP-4 VIA HIGH PERFORMANCE LIQUID CHROMATOGRAPHY (HPLC) Final Report, Jun. - Jul. 1978

Paul C. Hayes, Jr. Apr. 1981 24 p refs

(AF Proj. 3048)

(AD-A105589; AFWAL-TR-80-2081) Avail: NTIS HC A02/MF A01 CSCL 07/4

A study was initiated to accurately determine the weight percent of pyridine present in pyridine-modified JP-4 used for contractual combustion studies. High Performance Liquid Chromatography (HPLC) was the method of choice. A chromatographic process was developed and systematic quantitative analses performed to substantiate the accuracy and precision of the new test method. A computing integrator interfaced with the HPLC system performed all data collection and calculations automatically, with the results printed on a teletype. Least square curve fitting accentuated the reliability for determining pyridine in the 0.5 to 5.0 weight percent concentration range. Author (GRA)

CATHODOLUMINESCENCE CHARACTERIZATION OF ION IMPLANTED GaAs Final Report, Apr. 1977 - Jul. 1978

Milton L. Cone Apr. 1981 121 p refs

(AF Proj. 2306)

(AD-A105656; AFWAL-TR-80-1184) Avail: NTIS HC A06/MF A01 CSCL 07/4

Depth-resolved cathodoluminescence was used to study ion implanted GaAs. This was done in a two step process. First a model for the luminescence from ion implanted GaAs was developed. This model includes a detailed Monte Carlo simulation of electrons penetrating into GaAs. The result of this calculation is a prediction of luminescent intensity as a function of electron beam energy. This calculation differs from preceding ones in that the ion implanted profile is specifically included in the analysis. Second, the model was validated by a suitable experiment that confirms the theoretical predictions. The luminescence measurements were made on Mg ions implanted into epitaxial GaAs. Mg was chosen since it has not been previously studied in epitaxial GaAs. The results of this research include the identification of many of the lines in the Mg implanted GaAs spectrum from 1.32 ev to 1.52 ev, a study of the effect of changing the current of the electron beam on the spectra and a comparison of the theoretical and experimental luminescence curves. These results show that changing the current density at the sample surface dramatically changes the spectra and that good agreement exists between the theoretical and experimental luminescence curves. INTERPRETATION OF THE NITROGEN KVV AUGER LINESHAPE FROM ALKALI METAL NITRATES

F. L. Hutson, D. E. Ramaker, B. I. Dunlap, J. D. Ganjei, and J. S. Murday Oct. 1981 21 p Submitted for publication

(Contract N00014-80-K-0852)

(AD-A105877; TR-6) Avail: NTIS HC A02/MF A01 CSCL 07/4

Experimental N KVV Auger lineshapes from sodium nitrate, produced by both X-ray (XEA) and electron (EEA) excitation, are compared to theoretically derived lineshapes based on populations derived from a GTO-LCAO-X alpha model. The one-electron orbital energies and valence line widths are determined from X-ray emission and photoelectron data; the Auger matrix elements are determined from experimental gas phase atomic Auger data. The theoretical Auger energies include hole-hole repulsion and relaxation. Theoretical lineshapes using the local and the Mulliken x alpha populations are generated, and a set of empirical populations are also determined. This work emphasizes the importance of shake-off arising from creation of the initial core hole and its effect on the Auger lineshape. A theoretical shake/Auger satellites lineshape is generated and found to contribute up to 35% of the total intensity. The XEA and EEA lineshapes (after correction for the sample and spectrometer transmission response) each show five features, but some differences are noted. These are attributed primarily to beam damage and charging effects on the EEA lineshape. The theoretical lineshapes reproduces the five principal features of the experimental spectra; specific features in the lineshape are shown to reflect the relative size of the Auger matrix elements, the symmetry of the NO3 ion, and satellite contributions. Arguments for the validity of a one-electron orbital model to describe the Auger lineshape are presented. Author (GRA)

COMBUSTION BEHAVIOR OF SOLID FUEL RAMJETS. VOLUME 1: CORRELATION OF REACTING AND NON-REACTING FLOW CHARACTERISTICS Final Report

Brian A. Binn, Winston E. Scott, and David W. Netzer Jul. 1981 68 p refs

(AD-A106061; NPS67-81-010-Vol-1) Avail: NTIS HC A04/MF A01 CSCL 21/2

An experimental investigation was conducted to determine the relationship between the cold flow characteristics of velocity, pressure distribution, and turbulence intensity and the reacting flow performance and combustion characteristics of a solid fuel ramjet. The effects of configuration and air flow changes on the above characteristics were examined. Average regression rates and combustion efficiencies were not significantly affected by changes in configuration. These variations in test conditions significantly affected the centerline turbulence intensity but not the near-wall turbulence intensity in cold flow. Near-wall turbulence profiles in cold flow were found to correlate with the fuel regression profiles in reacting flows. The use of bypass resulted in decreases in regression rate and efficiencies for all cases. Author (GRA)

DEVELOPMENT OF SUPERIOR DENITROGENATION AND ISOMERIZATION CATALYSTS FOR PROCESSING CRUDE OIL DERIVED FROM SHALE, PART 1 Final Interim Report
James R. Katzer, Alvin B. Stiles, and Harold Kwart 15 Aug. 1981 23 p refs
(Contract N00019-80-K-0507)
(AD-A105667) Avail: NTIS HC A02/MF A01 CSCL 08/7

For purposes of immediate application to shale oil, the most important conclusions derived from this preliminary work are the following: (1) As with quinoline, total nitrogen removal in multiring condensed heterocycled amines involves hydrogenation of the aromatic rings followed by (an often slower) process of C-N bond scission. (2) With multiring substrates of this nature the ring hydrogenation occurs more rapidly than the C-N bond scission reactions leading to the accumulation of considerable concentrations of hydrogenated nitrogen-containing species in the reaction mixture. (3) The overall rates of N-removal do not vary significantly because the rates of C-N bond scission in these hydrogenated species are quite similar. (4) The rates of these reactions would appear to be somewhat affected by steric hindrance to adsorption caused by the puckered cyclohexane rings and the similarity of rates must be due to the similarity of the steric effects. A STUDY OF THE MECHANISM OF LEAN LIMIT FLAMMABILITY Final Report, 21 May 1978 - 21 Aug. 1981
Roger A. Strehlow 31 Aug. 1981 10 p
(Contract DAAG29-80-C-0118; Grant DAAG29-78-G-0098)
(AD-A105952; ARO-15662.1-E) Avail: NTIS HC A02/MF A01 CSCL 21/2

In this study the mechanism of extinction of a lean limit flame in a premixed methane-air or propane-air system was studied in a vertical rectangular flammability tube with variable inside dimensions. Both upward and downward extinction were observed for methane while only upward extinction was studied for propane. In addition to the observations of extinction, a theoretical analysis of the flow ahead of the upward propagating flame was made which showed that at extinction the upward propagating flame is severely stretched in the Karlovitz sense. The upward propagating flame in the 50 x 50 mm tube had a stable hemispherical shape with a trailing skirt towards the walls. Extinction in this case occurred from the central holding region of the flame where the stretch was calculated to be the maximum. In larger than 50 x 50 mm tubes the flame is hydrodynamically unstable and extinction occurs on one of the instability cycles. The downward propagating flame in methane is almost flat in the tube but it propagates in an unstable manner. It was observed, both with image intensifier photographs and with a schlieren optics, that this flame extinguished by first losing heat to the walls. Thus the downward propagating flame is extinguished by heat loss mechanism coupled with a differential buoyancy driving mechanism which is sufficiently complex that it cannot be modeled using one dimensional heat loss theories. GRA

DESTRUCTION OF OXALATE BY REACTION WITH HYDROGEN PEROXIDE
J. C. Mailen, O. K. Tallent, and P. C. Arwood Sep. 1981 30 p refs
(Contract W-7405-eng-26)
(DE81-030624; ORNL/TM-7474) Avail: NTIS HC A03/MF A01

The destruction of oxalate by oxidation to carbon dioxide using hydrogen peroxide was studied as an alternative method for the disposal of oxalate in connection with the possible use of an aqueous hydrazine oxalate solution as a scrubbing agent for solvent cleanup in processes for the recovery of uranium, plutonium, and thorium by solvent extraction. The rate of oxidation of oxalate by hydrogen peroxide in acid solution at the flux temperature was adequate for process application; reaction half-times at 100C C were less than on hour when the hydrogen peroxide concentration was greater than 0.5 M. The reaction was first order with respect to both the oxalate and hydrogen peroxide concentrations and had an activation energy of 58.7 kJ/g-mol. In the near-neutral hydrazine oxalate solutions, the reaction of either component with hydrogen peroxide was to slow for process application. DOE

FUNDAMENTAL STUDIES IN ISOTOPE CHEMISTRY Progress Report, 1 Oct. 1980 - 1 Aug. 1981
Jacob Bigeleisen (State Univ. of New York at Stony Brook) 1981 25 p refs
(Contract DE-AC02-79ER-10346)
(DE82-000651; DOE/ER-10346/T1) Avail: NTIS HC A02/MF A01

The current program, as in the past, utilizes theoretical advances made specifically with respect to isotope chemistry in the study of the structure of matter. Experimental investigation using isotope effects provides a unique tool for the determination of the mean square force on an atom in a molecular and how it is affected by intermolecular forces. We have completed the systematic study of the isotope chemistry of hydrogen. Studies have been made of the isotopic reduced partition function ratio, (s/s')f, of thirtynine diatomic and nineteen polyatomic hydrides. It encompasser compounds of hydrogen with every element in each row and each column of the periodic table. This progress report also includes a description of our final design for sampling of cryogenic liquid. Such a sampler is necessary if we are to realize the full potential of the isotopic fraction method to study the mean square forces and torques in polyatomic liquids. DOE

CHEMICAL ELEMENT CONCENTRATIONS IN LIQUIDS AND SOLIDS ASSOCIATED WITH POWER PLANTS USING FGD SYSTEMS
Lawrence Edward Wangen and Marianne Mills Jones Aug. 1981 27 p refs
(Contract W-7405-eng-36)
(DE81-030422; LA-8929-MS) Avail: NTIS HC A03/MF A01

Solid and liquid process steam samples from eight power plants using wet flue gas desulfurizaton (FGD) scrubbers were analyzed for the trace elements As, B, Br, Cl, Cd, Co, Cr, F, Ga, I, Mo, Ni, Pb, S, Sb, Se, Th, U, V, W, and Zn as well as several major and minor elements. Four plants burned high-sulfur coals and three burned low-sulfur coals. One plant used a low-sulfur lignite coal. Four FGD systems used limestone, two used lime, and two used alkaline flyash as scrubbing reagent. Elemental concentration data were used to identify chemical elements of concern regarding their potential for causing environmental harm as a result of the disposal of residues associated with FGD systems. Calcium, Mg, Mn, Ni, Se, and SO4(2-) were identified as most generally problematic. The elements B, Cd, F, and Mo were judged as potentially problematic in certain situations. Generally FGD liquors from power plants that burned low-sulfur western coals had highest concentrations of most trace elements. DOE

CATALYTIC EFFECT OF IRON IN HYDROGASIFICATION OF COAL

T. D. Padrick, D. D. Dees, and T. M. Massis 1981 9 p refs Presented at the 11th North Am. Thermal Analysis Soc. Conf., New Orleans, 19 Oct. 1981
(Contract DE-AC04-76DP-00789)
(DE81-023928; SAND-81-0715C; CONF-811014-2) Avail: NTIS HC A02/MF A01

Results indicate that finely divided hematite enhances the production of methane, by a factor of fifteen, during char gasification at one atmosphere of hydrogen. Gasification rates were measured by heating the samples in a thermal gravimetric analysis system to a fixed temperature and then monitoring the rate of weight loss versus time. Product gas analysis indicates that during char gasification with hematite present, greater than 85 mole % of the gas is methane. The catalytic form of the hematite was identified as reduced iron. The effect of the reduced iron as a catalyst is strongly dependent on particle size. The catalytic activity is also dependent on precursor species with the following order observed: Fe2O3, Fe3O4, FeS2, Fe. DOE

DIRECT ANALYSIS OF PLUTONIUM METAL FOR GALLIUM, IRON AND NICKEL BY ENERGY DISPERSIVE X-RAY SPECTROMETRY

H. L. Bramlet and J. H. Doyle 1981 10 p ref Presented at the X-ray Analysis Conf., Denver, 3 Aug. 1981
(Contract DE-AC04-76DP-03533)
(DE81-028046; RFP-3214; CONF-810854-1) Avail: NTIS HC A02/MF A01

An X-ray secondary target method for routine determination of gallium, iron, and nickel in plutonium metal is described that has significant advantages over wet chemical analysis. Coupons requiring minimal preparation for analysis are produced as a breakaway tab on the plutonium ingot. All three elements are determined on the same coupon. Gallium is determined using an arsenic secondary target followed by iron and nickel using a zinc target. The analysis times are 5 minutes for gallium and 15 minutes for the combined iron and nickel. The method of analysis was evaluated in the range of from 0.5 to 1.5% gallium. Iron was investigated over the range of 67 to 3000 ppM and nickel from 64 to 110 ppM. DOE

OXYGEN REDUCTION WITH CARBON SUPPORTED METALLIC CLUSTER CATALYSTS IN ALKALINE ELECTROLYTE

P. N. Ross, Jr. Mar. 1981 16 p refs Presented at Symp. on Electrocatalyis, Minneapolis, 10-15 May, 1981 Submitted for publication
(Contract W-7405-eng-48)
(DE81-027400; LBL-11891; CONF-8105105-6) Avail: NTIS HC A02/MF A01

The atomic structure of clusters of Pt group metals dispersed on carbon blacks was examined using transmission electron microscopy and extended X-ray absorption fine structure spectroscopy. Both the catalyzation procedure and the microstructure of the carbon influence the resulting structure of the metal cluster. Colloidal catalyzation of Pt onto a turbostratic carbon black support yields a metals cluster with an amorphous structure, i.e., no atomic order. The amorphous structure is metastable, undergoing an ordering transition at temperature above ca. 800 C. The amorphous form of Pt interacts with both oxygen and water more strongly the the crystalline form. This stronger interaction produces characteristically different kinetic behavior of the catalysts for oxygen reduction. These differences take the form of a compensation effects, with lower activation energy and lower pre-exponential factor for the amorphous clusters. The properties of highly dispersed Pt clusters relative to the bulk form appears to be a general feature of the Group VIII metals. DOE

INVESTIGATION OF LUMINESCENCE IN THE CHARGE EXCHANGE PROCESS OF Ar++ WITH N2 OF N(+) WITH CO [UNTERSUCHUNG DER LUMINESZENZ BEIM LADUNGSAUSTAUSCH VON Ar++ MIT N2 UND N+ MIT CO]

Dieter Neuschaefer Mar. 1980 80 p refs In GERMAN
(MPIS-3/1980; ISSN-0436-1199) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 15

Luminescence spectra of two ion-molecular reactions were analyzed using computerized simulation. Vibration and rotation states of the luminescent reaction products were studied in terms of impact dynamics. The charge exchange of Ar++ ions with molecular nitrogen and the reaction of N+ ions with CO (in an energy domain from 3 to 1000 eV) were investigated in their electronically excited states. The rotational spectra depend on the vibration level and show increased rotation excitation at lower energy. Author (ESA)

A MICROWAVE INDUCED HELIUM PLASMA EMISSION DETECTOR FOR GAS CHROMATOGRAPHY

A. Verweij Dec. 1979 26 p refs
(Contract A74/K/029)
(PML-1979-75; TDCK-73058) Avail: NTIS HC A03/MF A01

The suitability of the detector for analysis of carbon, fluorine, chlorine, phosphorus and sulfur compounds is investigated. The influence of variations in the microwave power, the helium gas flow, the discharge gas pressure and the observation zone of the plasma on the operation of the detector were studied. From an experiment carried out with two model compounds, the detection limit and linear dynamic range of the detector are determined. Author (ESA)

STUDIES IN UNSEGMENTED CONTINUOUS-FLOW ANALYSIS. PART 1: REPETITIVE DETERMINATIONS OF Cu(2) CATALYST. PART 2: REPETITIVE DETERMINATIONS OF BROMINE AND CHLORINE IN GASEOUS SAMPLES AT A GAS-SOLID INTERFACE Ph.D. Thesis

Savakkattupalayam Muniappan Ramasamy 1981 155 p
Avail: Univ. Microfilms Order No. 8123853

A catalytic method for trace analysis in a continuous, unsegmented, closed flow system which is selective, and sensitive has a high sample throughput and minimizes waste handling is described and evaluated. The sample and the thiosulfate reactant were injected into the circulating ferric thiocyanate solution and the decrease in absorbance was monitored. Controlled potential electrolysis was employed for the removal of the catalyst after its assay. A method of repetitive determinations of bromine in gaseous samples, based on monitoring the transient signal resulting from two consective reactions taking place at gas-solid interface is described and evaluated. The sample was intercalated into a continous flow of carrier (air) gas which impinged on a layer of a dried reagent mixture of alpha--naphthaflavon, NF, and As(III), on the surface of a filter paper. The course of the reactions was followed by monitoring the formation and disappearance of the red-colored Br/NF with direct transmission photometry. Repetitive determinations of chlorine were made possible by incorporating Br(-) ions into the filter paper.

THE ELECTRONIC STRUCTURE OF PORPHYRINS AND METALLOPORPHYRINS Ph.D. Thesis

Virginia Ellen Bass 1981 169 p
Avail: Univ. Microfilms Order No. 8122396

Current molecular orbital descriptions of the macrocycles are reviewed and analyzed in terms of their ability to account for the intensities and polarizations of the absorbance and emission vectors. A modified Huckel MO calculation was performed on the tetraphenyl and octaethylporphyrins and their derivatives. The resulting ground state energy level diagrams were used to estimate the energies of the excited state configurations. Dissert. Abstr.

MULTIAXIAL FATIGUE OF METALS Ph.D. Thesis
Yogendra Somnath Garud 1981 178 p
Avail: Univ. Microfilms Order No. 8124070

• Fatigue of metals under loadings which induce non-zero principal stresses along more than one direction in a part is considered. A literature survey focusing on a critique and comparison of existing criteria for evaluation of multiaxial fatigue is presented. A method for assessing multiaxial fatigue is proposed. In this approach fatigue life (to crack initiation) is related to the plastic work (density) per cycle of loading. The relation can be determined from results of fatigue tests on smooth specimens subjected to uniaxial loading. Fatigue life predictions using this approach are found to agree, within a factor of three on life, with tests under in-phase as well as out-of-phase combined axial and torsional loading for 1% Cr-Mo-V steel and 7075-T6 aluminum. A set of constitutive relations is developed to predict stress-strain response under general loading. Dissert. Abstr.

DEVELOPMENT OF IMPROVED HIGH TEMPERATURE COATINGS FOR IN-792 + Hf Final Report
D. D. Profant and S. K. Naik Jun. 1981 95 p refs
(Contract NAS3-22371; DA Proj. 1L1-62209-AH-76)
(NASA-CR-165395) Avail: NTIS HC A05/MF A01 CSCL 11F

The development for t-55 I712 engine of high temperature for integral turbine nozzles with improved thermal fatigue resistance without sacrificing oxidation/corrosion protection is discussed. The program evaluated to coating systems which comprised one baseline plasma spray coating (12% Al-NiCoCrALY), three aluminide coatings including the baseline aluminide (701), two CoNiCrAly (6% Al) + aluminide systems and four NiCoCrY + aluminide coating were evaluated. The two-step coating processes were investigated since it offered the advantage of tailoring the composition as well as properly coating surfaces of an integral or segmented nozzle. Cyclic burner rig thermal fatigue and oxidation/corrosion tests were used to evaluate the candidate coating systems. The plasma sprayed 12% Al-NiCoCrAlY was rated the best coating in thermal fatigue resistance and outperformed all coatings by a factor between 1.4 to 2.5 in cycles to crack initiation. However, this coatings is not applicable to integral or segmented nozzles due to the line of sight limitation of the plasma spray process. The 6% Al-CoNiCrAlY + Mod 701 aluminide (32 w/o Al) was rated the best coating in oxidation/corrosion resistance and was rated the second best in thermal fatigue resistance. J.D.H.

CRACK TIP PLASTICITY ASSOCIATED WITH CORROSION ASSISTED FATIGUE Interim Report, Jun. 1980 - Jun. 1981
D. L. Davidson and J. Lankford 18 Sep. 1981 50 p refs
(Contract N00014-75-C-1038; NR Proj. 036-109)
(AD-A105529) Avail: NTIS HC A03/MF A01 CSCL 11/6

Preliminary data is presented on the effect of a water vapor environment on the deformation within the plastic zone of fatigue cracks in 7075-T6. Results in the water vapor environment is compared to those in a vacuum environment. High spatial resolution observations have been made using a special cyclic stage for the SEM and strains have been determined using the stereoimaging technique. Crack tip opening is shown to be a power function of the distance behind the crack tip, in agreement with a theoretical derivation of this correlation. The crack tip strain correlates with the crack opening at 1 micrometer behind the crack tip. Crack tip strains are shown to vary considerably for a fixed cyclic stress intensity. By ignoring some data, a preliminary analysis is made which indicates that the water vapor environment lowers crack tip strains. Strain distribution within the plastic zone is shown to fit a logarithmic function, as opposed to a power function, although there is still some uncertainty in this result. Work on 7075-T6 and the powder metallurgy alloy MA-87 is continuing, with definitive results expected next year. Author (GRA)

MECHANISMS OF ELEVATED TEMPERATURE FATIGUE DAMAGE IN 2 1/4 Cr - 1 Mo STEEL M.S. Thesis
Pierre G. Vining Jun. 1981 138 p refs
(AD-A105786) Avail: NTIS HC A07/MF A01 CSCL 11/6

The microstructural changes and fatigue crack growth rates induced by elevated temperature push-pull fatigue and creep fatigue tests in 2 1/4 Cr - 1 Mo steel have been examined using optical and electron microscopy techniques. The only microstructural change noted was the development of dislocation substructures in the proeutectoid ferrite. Creep fatigue tests with a single maximum strain hold period per cycle created a cellular substructure whose size was solely dependent on the carbide interparticle spacing. Temperature and strain range effects were noted on the dislocation densities in the maxtrix which were generally consistent with work reported in the literature. As there were no resolvable changes in the carbides in the ferrite, it was concluded that there must be some change in the microstructure on a finer scale, such as the early stages of MO-C-Mo cluster formation, which might explain the cyclic hardening/cyclic softening response of the alloy. The fatigue crack growth rate of the alloy was strongly dominated by the hold periods imposed during the loading cycle. A single 0.1 hr. hold period doubled the fatigue crack growth rate obtained for a continuously cycled test and two hold periods per loading cycle gave a four fold increase over the continuously cycled crack growth rate. The author summarizes his research effort during the grant period. Included is the development of an infrared radiation

temperature detection system for monitoring the temperature rise in thin-walled steel specimens loaded dynamically in a torsional Kolsky bar. Also included is a description of an investigation aimed at transforming AISI 1020 HRS under controlled conditions of prior austenite grain size, ferrite and pearlite grain sizes to reduce the size and number of carbide plates along the grain boundaries. The transformed material is to be used in a subsequent investigation into the influence of microstructure on the fracture toughness of 1020 HRS.

MICROSTRUCTURAL ANALYSIS OF KOVAR/MOLYBDENUM AND COPPER/MOLYBDENUM INTERDIFFUSION

Michael D. Kelly, Kenneth L. Breakall, Jr., and Dale L. Roesch 1981 13 p Presented at the 14th Ann. Technol. Meeting of Intern. Metallographic Soc., San Francisco, 21 Jul. 1981
(Contract DE-AC04-76DP-00053)
(DE81-025919; MLM-2848(OP); CONF-810731-1) Avail: NTIS HC A02/MF A01

Studies were conducted to measure interdiffusion of Kovar/molybdenum and copper/molybdenum at different temperatures for various periods of times. Optimum operating parameters to achieve good bonding while maintaining practical processing time were determined. Metallographic techniques were developed to prepare specimens for microprobe analysis, and to etch specimens for photomicrography. The metallographic techniques used, along with the resulting microprobe analyses, are discussed. DOE

INFLUENCE OF CYCLIC LOAD AND ENVIRONMENTAL EFFECTS ON STRESS CORROSION CRACKING OF SENSITIZED STEEL Final Report

E. L. White and W. E. Berry Aug. 1981 62 p refs Sponsored in part by EPRI
(EPRI Proj. 311-3)
(DE81-904216; EPRI-NP-1991) Avail: NTIS HC A04/MF A01

An experimental stress corrosion cracking (SCC) study was conducted in order to mitigate SCC in stainless steel piping was boiling water reactor. Temperature effects, dissolved oxygen, and cyclic loading were studied on furnace sensitized Type 304 stainless steel. Slow strain rate tests at 4 million s(+) strain rate produce intergranular stress corrosion cracking (IGSCC) at temperatures above 2040 C, suggesting a threshold temperature for IGSCC of about 1300 C at the 0.2 ppm oxygen level. Saturated solutions of AgCl produce IGSCC in slow strain rate tests in both aerated (8 ppm 02) and deaerated < 0.006 ppM 02) tests at temperature as low as 850 C. A potential hazard in using Ag/AgCl reference electrodes is suggested. Trapezoidal cyclic loading (5 min load/unload, 10 or 75 min at load produces IGSCC. Tests in 8 ppM oxygen water with the 75 min hold cycle, minimum load of 0.1 yield strength and maximum load greater than YS, indicate a threshold temperature for IGSCC of 1900 C. DOE

ALLOY DEVELOPMENT FOR CLADDING AND DUCT APPLICATIONS

J. L. Straalsund and G. D. Johnson 2 Feb. 1981 43 p Presented at the Am. Nucl. Soc. Ann. Meeting, Miami Beach, Fla., 7-12 Jun. 1981
(Contracts DE-AC14-76FF-02170; EY-76-C-14-2170)
(DE81-027843; HEDL-SA-2344; CONF-810606-89) Avail: NTIS HC A03/MF A01

Three general classes of materials under development for cladding and ducts are listed. Solid solution strengthened, or austenitic, alloys are Type 316 stainless steel and D9. Precipitation hardened (also austenitic) alloys consist of D21, D66 and D68. These alloys are similar to such commercial alloys as M-813, Inconel 706, Inconel 718 and Nimonic PE-16. The third general class of alloys is composed of ferritic alloys, with current emphasis being placed on HT-9, a tempered martensitic alloy, and D57, a delta-ferritic steel. The current reference, or first generation alloy, is 20% cold worked Type 316 stainless steel. Second generation alloys for near-term applications include D9 and HT-9. Third generation materials consist of the precipitation strengthened steels and ferritic alloys, and are being considered for implementation at a later time than the first and second generation alloys. The status of development of these alloys is summarized. DOE

EVALUATION OF STRESS-CORROSION CRACKING OF SENSITIZED 304SS IN LOW-TEMPERATURE BORATED WATER

R. H. Jones, A. B. Johnson, Jr., and S. M. Bruemmer May 1981 15 p refs Presented at the Intern. Conf. on Environ. Degradation of Engr. Mater., Blacksburg, Va., 21 Sep. 1981
(Contract DE-AC06-76RL-01830)
(DE81-028090; PNL-SA-9387; CONF-810913-7) Avail: NTIS HC A02/MF A01

Intergranular stress corrosion cracking was observed in constant extension rate tests, CERT and constant load tests of 304SS tested at 32 C in borated water plus 15 ppm Cl(-). Evidence of IGSCC was obtained in CERT tests of welded pipe samples only when the original inner diameter surface was intact and with 15 ppm Cl(-) added to the borated water while IGSCC occurred in a furnace sensitized pipe sample after 500 h at a constant stress of 340 MPa in borated water containing 15 ppm Cl(-). These results indicate that surface features associated with weld preparation grinding contributed to the susceptability of sensitized 304SS to IGSCC in low temperature borated water; however, the constant load test indicates that such surface defects are not necessary for IGSCC in low tempeature borated water. DOE

MICROSTRUCTURE OF TRIPLE-BEAM ION IRRADIATED Fe AND Fe-Cr ALLOYS

L. L. Horton, J. Bentley, and W. A. Jesser 1981 5 p refs Presented at the Fusion Reactor Materials Meeting, Seattle, 9 Aug. 1981 Prepared in cooperation with Virginia Univ., Charlottesville
(Contract W-7405-eng-26)
(DE81-028347; CONF-810831-32) Avail: NTIS HC A02/MF A01

The development of defect structures in Fe-10% Cr, triple-beam ion irradiated to 10 dpa at temperatures from 725 to 950 K was studied. Limited cavity formation was observed. Peak swelling of 0.02% occurred at irradiation temperatures of 850 K. Similar irradiations at this temperature led to 0.022% swelling in iron. While no cavities were observed in Fe-5% Cr, calculations have shown that cavities formed at 875 K and above are more bubble-like than those at lower temperatures. Dislocation structures varied from interstitial dislocation loops with b = a < 100 > at low temperature to a coarse dislocation network at 850 K. Large dislocation loops had a convoluted shape which suggested that loop growth had occured preferentially in < 110 < directions. The results are discussed and related to current swelling suppression mechanisms for ferritic steels. DOE

INFLUENCE OF NEUTRON IRRADIATION AT 55 DEG C ON THE PROPERTIES OF AUSTENITIC STAINLESS STEELS

F. W. Wiffen and P. J. Maziasz 1981 6 p refs Presented at the Fusion Reactor Materials Meeting, Seattle, 9 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028065; CONF-810831-31) Avail: NTIS HC A02/MF A01

Types 316 and 316 + 0.23 wt % Ti stainless steels and 16-8-2 weldment were irradiated in HFIR at 55 C to fluences up to 1.35 times 10 to the 26th power neutrons sq m of (< 0.1 MeV), which produced up to 10.5 dpa and 520 at ppm He. Examination showed no swelling, no cavities, no precipates, but a high concentration of dislocations. Tensile tests showed large increases in the 35 C strength properties, with the weldments the weakest of the materials. The ductility of all materials was reduced by the irradiation, the uniform elongation to only 0.4% in the cold worked material. Tests at temperatures above the irradiation temperature showed an approach to unirradiated properties as the temperature was increased from 200 to 600 C.

Helium embrittlement at 700 C severely reduced elongation.
DOE

EFFECTS OF PULSED DUAL-ION IRRADIATION OF MICROSTRUCTURAL DEVELOPMENT
N. H. Packan 1981 5 p refs Presented at the Fusion Reactor Materials Meeting, Seattle, 9 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028631; CONF-810831-30) Avail: NTIS HC A02/MF A01

The effect of pulsed irradiation on the development of microstructure during Ni ion bombardment was investigated in a simple austenitic alloy similar to type 316 stainless steel. Bombardment conditions were 10 dpa, 940 K, pulsing with equal on/off times of either 0.5 or 60 s, and the addition of 20 app He/dpa to some specimens either by room temperature peimplantation or by dual-beam coimplantation. Particular care was taken to minimize thermal pulses from beam heating (to < 2 C). The results show that pulsing has a subtle influence, and the effects on specific cavity parameters are complex. Pulsing produced a small increase in swelling in the helium-free case, but a slight decrease for helium-implanted specimens, and it seems to have counteracted the usual stimulative effects of helium on cavity nucleation. DOE

N82-14344# Oak Ridge National Lab., Tenn. Metals and Ceramics Div.
MECHANICAL RELAXATION RESPONSE OF 2 1/4 Cr-1 Mo STEEL
R. W. Swindeman 1981 30 p refs Presented at the 28th Sagamore Army Materials Conf., Lake Placid, N.Y., 13 Jul. 1981
(Contract W-7405-eng-26)
(DE81-027301; CONF-810741-1) Avail: NTIS HC A03/MF A01

The mechanical relaxation of 2 1/4 Cr-1 Mo steel was examined in the temperature range 450 to 566 C for times to 100 h. Data from four heats were included. The relaxation strength was found to vary with heat treatment by a factor of three from the weakest to the strongest. The extent of recovery and tempering that occurred during relaxation was displayed by means of isochronous stress vs strain curves constructed from multiple loading tests. Relaxation response after cyclic strain was examined to response after monotonic strain providing that the starting stress was at the tip of the hysteresis loop. The salient features of the relaxation response were consistent with expectations based on a material deformation model that included parameters to accommodate kinematic and istropis hardening. DOE

POLARIZATION STUDY OF HOT CORROSION PHENOMENA IN Ni-Cr ALLOYS
John J. Truhan and Thomas R. Jeys 17 Aug. 1981 23 p refs Presented at the Conf. on Chem. of Mater. at High Temp., Harwell, England, 7-10 Sep. 1981 Submitted for publication
(Contract W-7405-eng-48)
(DE81-029609; UCRL-85554; CONF-810943-3) Avail: NTIS HC A02/MF A01

Electrochemical polarization was used to study the hot corrosion of nickel chromium binary alloys in molten sodium sulfate at 900 C. The advantages of using this technique to study hot corrosion compared to thermogravimetric analysis include accelerated oxidation by anodic polarization, rapid determination of corrosion rates, and quantitative measures of the stability of protective scales. By systematically studying the effect of alloy composition, the primary mode of corrosion change from nickel oxidation and sulfidation to chromium oxidation was observed. A coherent protective chromium oxide scale forms on alloys containing at least 15 to 20 wt % chromium, and only a marginal increase of protection is realized using additional chromium. DOE

The impact parameters of the explosive welding of molybdenum with Inconel 601 were determined. The combination Mo and Inconel 601 was considered as nonweldable. It can be applied in solar radiation concentrating devices, allowing a higher operating temperature and higher energy conversion efficiency. The usual velocities of the explosive welding process (collision velocities of 2200 m/sec) lead at best to samples affected by cracks, due to the insufficient workability of molybdenum. At higher velocities cracks no longer occur, molybdenum being a strain rate sensitive material. Layer composite materials can be manufactured in flat as well as in tube form. Author (ESA)

THEORETICAL INVESTIGATIONS ON THE SEPARATION OF IMMISCIBLE ALLOYS Final Report
Dieter Langbein Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 66 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-004; BF-R-64-152-1; ISSN-0170-1339) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 13,90

The physical effects which contribute to the separation of immiscible alloys are discussed and mathematically modeled. Particular attention is given to (1) the mode of cooling, (2) the formation and growth of clusters, (3) free convection, (4) sedimentation, (5) capillary forces, (6) differences in surface tension, (7) differences in interface tension, (8) interface or Marangoni convection, (9) the directed growth of droplets, (10) Ostwald ripening, (11) the overlapping on the impoverished regions around droplets, and (12) the migration of droplets ahead of a solidification front. As it takes at least 20 sec for a metallic melt of 1 cm in diameter to cool down completely, all experiments planned or already conducted under zero-gravity have to be rated at this time interval. Effects (5) to (8) and (11) are fast processes in this sense, all being based on interface phenomena. The tendency of regions of equal concentration or temperature to contract into spheres is demonstrated using the transparent model system methanol/cyclohexane. Author (ESA)

Rongvaux (Ecole Nationale Superieure de la Metallurgie et l'Industrie des Mines) 30 Sep. 1980 265 p refs In FRENCH
(CETIM-12-G-129) Avail: NTIS HC A12/MF A01

Ionic nitriding was studied. The diffusion layers were quantitatively and microstructurally analyzed. The fundamental mechanisms which govern the in situ transformation of sulfur carbides into nitrides and lead to the precipitation of cementite lattices are defined. Optimization of the treatment parameters allows for the realization of single-phase layers on Z 155 CDV 12 steel. This phase transformation conditions the mechanical resistance of the nitrided layers. Wear test results indicate that for tool steels, the choice of nitriding treatment must be specific to the intended application. Author (ESA)

Fatigue corrosion of light alloys used in aeronautical construction is evaluated. Alloys 2024, 2618, 2214, 6061, 7075, and 7050 are discussed. Dry argon, humid air, and salt water environments were used. Alloys 2618A and 7175 were subjected to additional analysis of crack behavior: with a surface coating; with chromium anode oxidation; and with a coating similar to those used by the aircraft industry. Salt water is the most harmful environment, followed by humid air. The 2000 series alloys are more affected than the 7000 series by these environments. In salt water; however, 2618A shows 25% greater resistance than 7175 to cracks. In normal, and humid air, chromium anode oxidation can adversely affect resistance. Shot blasting beforehand prevents this. In salt water, painting and anode treatment are effective in reducing environmental effects. Author (ESA)

NICKEL RECOVERY FROM ELECTROPLATING RINSEWATERS BY ELECTRODIALYSIS Final Report
John L. Eisenmann Jul. 1981 55 p refs Prepared jointly with Risdon Mfg. Co., Waterbury, Conn.
(Grant EPA-R-803742)
(PB81-227209; EPA-600/2-81-130) Avail: NTIS HC A04/MF A01 CSCL 11F

A program to demonstrate the feasibility of metal salt recovery and pollution control on a Watts-type nickel plating line by electrolysis was conducted. Each of two reclaim rinse tanks, arranged in series following plate tanks, was treated by recirculating the rinse solutions through separate electrodialysis stacks. The nickel salts recovered from the rinse solutions were concentrated 20 fold by the electrodialysis treatment, and could be returned directly to the plate tanks for reuse. A cost estimate based on the data obtained during the demonstration indicates that 95% of the nickel lost from untreated rinses could be recovered and that ancillary benefits in sludge disposal, use of treatment chemicals, etc. could be realized. Pay back periods of less than 18 months are anticipated for commercial units. GRA

NEW EPOXY RESINS: SYNTHESIS AND STABILITY Ph.D. Thesis
Chii-Shu Chen 1981 203 p
Avail: Univ. Microfilms Order No. 8118866

A polymer which has high aromaticity and/or cyclic ring structures in the chain backbone usually gives high heat resistance and flame resistance. Five glycidyl ether type epoxy resins are prepared from bisphenol A(DGEBA), 9-9-bis(4-hydroxyphenyl) fluorene (DGEBF), 3,6-dihydroxyspiro [fluorene-9,9'-xanthane] (DGEFX), 10,10-bis(4-hydroxyphenyl) anthrone (DGEA) and 9,9,10,10-tetrakis(4-hydroxyphenyl) anthracene (TGETA) in order to study structure thermal stability-flame resistance-property relationships. Various curing agents were evaluated. The char yield at 700 C under a nitrogen atmosphere and the glass transition temperature (Tg) for the cured and uncured resins decrease according to the sequence TGETA > DGEFX > DGEA > DGEBF > DGEBA. The Tg's for these cured epoxy resins are DGEBA > DGEBF > DGEFX > DGEA. A Tg for the TGETA is not obtainable but would be expected to be the highest. DGEBF, DGEFX, DGEA and TGETA added to the DGEBA system show increases in the char yield, Tg and oxygen index with increasing concentration. Dissert. Abstr.

MODELLING OF POLYMER PHOTODEGRADATION FOR SOLAR CELL MODULES Quarterly Technical Progress Report, 1 Jan. - 31 Mar. 1981
A. C. Somersall and J. E. Guillet Apr. 1981 17 p ref
(Contract JPL-955591)
(NASA-CR-165041; JPL-9950-615) Avail: NTIS HC A02/MF A01 CSCL 07C

A computer model including an integration routine was developed and demonstrated to simulate, in principle, the chemical changes which may occur in the photooxidation of hydrocarbons, using as input data a set of elementary reactions, corresponding rate constants and appropriate starting conditions. Application of this model to the photooxidation of pottant and plastic materials used in the LSA module designs provides a reliable predictive capability regarding the useful lifetime of these materials. An earlier mechanism consisting of 46 reactions was simplified considerably by reducing the number of formal termination steps since it became apparent that the major termination process goes via the peroxy radicals. In addition, new reactions of oxygen with acryl radicals (from Norrish type I) to form peracids, which then decompose to form carbon dioxide are included. M.D.K.

MODELLING OF POLYMER PHOTODEGRADATION FOR SOLAR CELL MODULES Quarterly Technical Progress Report, 1 Apr. - 30 Jun. 1981
A. C. Somersall and J. E. Guillet Jul. 1981 16 p
(Contract JPL-955591)
(NASA-CR-165040; JPL-955591-81/3; JPL-9950-616) Avail: NTIS HC A02/MF A01 CSCL 07C

A computer program developed to model and calculate by numerical integration the varying concentrations of chemical species formed during photooxidation of a polymeric material over time, using as input data a choice set of elementary reactions, corresponding rate constants and a convenient set of starting conditions is evaluated. Attempts were made to validate the proposed mechanism by experimentally monitoring the photooxidation products of small liquid alkane which are useful starting models for ethylene segments of polymers like EVA. The model system proved in appropriate for the intended purposes. Another validation model is recommended. M.D.K.

ULTRASONIC VELOCITY FOR ESTIMATING DENSITY OF STRUCTURAL CERAMICS
S. J. Klima, G. K. Watson, T. P. Herbell, and T. J. Moore 1981 12 p refs Presented at the Automotive Technol. Develop. Contractor Coord. Meeting, Dearborn, Mich., 26-29 Oct. 1981
(Contract DE-AI01-77CS-51040)
(NASA-TM-82765; DOE/NASA/51040-35; E-1026-5) Avail: NTIS HC A02/MF A01 CSCL 11B

The feasibility of using ultrasonic velocity as a measure of bulk density of sintered alpha silicon carbide was investigated. The material studied was either in the as-sintered condition or hot isostatically pressed in the temperature range from 1850 to 2050 C. Densities varied from approximately 2.8 to 3.2 g cu cm. Results show that the bulk, nominal density of structural grade silicon carbide articles can be estimated from ultrasonic velocity measurements to within 1 percent using 20 MHz longitudinal waves and a commercially available ultrasonic time intervalometer. The ultrasonic velocity measurement technique shows promise for screening out material with unacceptably low density levels. Author

LOW-COST FORMING INFLUENCE ON REINFORCED THERMOPLASTIC MECHANICAL PROPERTIES Final Report, Jan. - Dec. 1980
Donald J. Hoffstedt, Lawrence C. Ritter, and Donald J. Toto Aug. 1981 112 p refs
(Contract DAAG46-79-C-0092; DA Proj. 1L1-62105-AH-84)
(AD-A106004; AMMRC-TR-81-36) Avail: NTIS HC A06/MF A01 CSCL 11C

A study of the influence of low cost forming method on the mechanical properties of reinforced thermoplastics is described. A relationship between processing parameters (time/pressure/temp-variables) and selected material properties (modulus, flex strength, inter-laminar shear strength) is established. The effects (measured by the change in material flexural properties) of simulated solvent attack on painted and unpainted laminates are determined. A review of the available literature on reinforced thermoplastic materials, material properties, and fabrication methods is provided. Four, 16 in x 20 in, five ply Kevlar 49 style 285 fabric, polysulfone, laminated panels for AMMRC testing were manufactured. A decrease in flexural strength readings coming at the 450 F thermoforming temperature is indicated. Modulus values are highest in the 500 F to 550 F thermoforming temperature range. Interlaminar shear strength values also tend to decrease as thermoforming temperature increases. Regarding solvent attack, generally higher flexural strength with polyphenylsulfone than with polysulfone sandwich beams is indicated. Conversely higher 'EI' values occurred in the polysulfone than in the polyphenylsulfone sandwich beams. GRA

MASS SPECTROMETRIC STUDIES OF THE THERMAL DECOMPOSITION OF SOME AZIDO POLYMETRIC BINDERS Annual Summary Report, 1 Aug. 1980 - 31 Jul. 1981
Milton Farber and R. D. Vastava Sep. 1981 26 p refs
(Contract N00014-80-C-0711)
(AD-A106090) Avail: NTIS HC A03/MF A01 CSCL 07/4

Thermal decomposition studies were conducted on BAMO, GAP and AZOX. Decomposition was initiated at approximately 120 C, with activation energies for the three materials approximately 170 kJ/mol. The primary mechanism for the decomposition is the release of molecular N2. Secondary decomposition occurring at temperatures above 150 C included the fracturing of the three-carbon backbone of both the polymers and the monomer. Higher decomposition temperature species included HCN, HCO, and smaller amu fragments. Author (GRA)

The addition of accelerators such as Monuron, N-(4-chlorophenyl)-N',N'-dimethylurea, or Diuron, N-(3,4-dichlorophenyl)-N',N'-dimethylurea, to epoxy resin-dicyandiamide mixtures significantly decreases the hardening temperature of

these systems. These trisubstituted urea accelerators are believed to serve mainly as a latent source of dimethylamine. This amine is believed to play a very important role in the cure cycle. One pathway to dimethylamine is a low-temperature cyclocondensation reaction between the trisubstituted urea and the epoxy functionality to form a 2-oxazoli-done; this reaction partially hardens the resin. The significance of this source of dimethylamine in the overall mechanism of epoxy hardening was illustrated by differential scanning calorimetry. Several epoxy formulations were examined at various heating rates. Arrhenius plots of the data indicated that the slope of a two-component mixture consisting of resin and Monuron was approximately the same as that of a three-component system composed of resin, dicyandiamide, and Monuron. In contrast, the slope of a two-component resin-dicyandiamide system was found to be considerably larger. Thus the reaction of Monuron with the resin is an important factor that must be considered in any explanation of the acceleration of the hardening process of dicyandiamide-containing resins.

The static fatigue of Pyrex borosilicate glass was measured over a wide range of stress and failure time, and the log failure time was found to be inversely proportional to the applied stress. The appearance of fracture origins was consistent with crack tip sharpening during fatigue, as predicted by the Hillig-Charles theory as modified for different failure time-stress functional relations. An explanation for the sensitivity of fatigue of soda-lime glass to surface treatment was proposed. Author (GRA)

A copolymer of vinylidene fluoride and tetrafluoroethylene shows pyroelectric and piezoelectric effects after poling. Thermal pulsing measurements indicate that the polarization in this material is highly non-uniform. The piezo/pyroelectric response of this non-uniformly poled copolymer consists of two parts: a rapid response that is the result of changes in internal polarization, and a delayed response due to reversible motion of real charge through the bulk of the material. .This model explains previously reported observations of the independence of pyroelectric response over a wide range of poling conditions. Our basic goal has been to evaluate the suitability of polymer systems for use in adaptive optics. Structures such as the electrostatically controlled mirrors and lenses described in this report require the mating of materials relatively new to electronics applications with microfabrication technology. Microprocessor technology will be essential in electronically calibrating structures with little inherent optical quality. The resultant devices should be small, inexpensive, and should require low power and voltages since no mechanical motion is employed. In the case of deformable mirrors, analysis indicates that elastomer microstructures should be capable of larger deformations than conventional adaptive optical components. Microfabrication creates structures with large area-to-volume ratios. Thus electrostatic forces can overcome inertial forces. We have verified that such materials can be spread in thin sheets and formed into islands smaller than 20 micrometers on a side. The techniques developed depend on using elastomers which can serve as resist. Exposed to ultraviolet light through a mask, they are chemically altered and the unwanted portions can then be washed away. We have also demonstrated that conductive and reflective metal electrodes can be deposited using low temperature conditions. The thin films created should not stiffen the polymer appreciably. Indium is the best material for use in these structures. GRA

EVALUATION OF CLEANING PROCEDURES AND BONDING MATERIALS FOR TPX PLASTIC
G. L. Flowers and J. L. Montague Sep. 1981 9 p
(Contract DE-AC04-76DP-00487)
(DE82-000048; MHSMP-81-40) Avail: NTIS HC A02/MF A01

TPX plastic parts currently undergo a chromium trioxide acid etch and polyolefin primer application prior to being bonded to LX-17 explosive parts with Exlostik 473. This study evaluates Explostik 473 (epoxy), APC 2.5 (Silicone) and Hexcel Uralite 3121 S (urethane) adhesive several surface treatment. These surface treatments include acid etch; acid etch and polyolefine primer; polyolefin primer; oxygen plasma clean; oxygen plasma clean and polyolefin primer. Results indicate that oxygen plasma cleaning is the best surface treatment. Plasma treatment times as short as 2.5 min do an adequate job. Plasma-treated parts remain clean and bondable for at least 16 days after treatment.

The quadrupole mass spectrometer system was completed, calibrated, tested, and used to analyze swelling and rupture transients in nickel and UO2. An automatic data acquisition system was also designed and built to feed all temperature, pressure, displacement and released gas signals directly to the PDP-11 computer for data reduction and tabulation. Swelling and gas release studies were completed on Ni and initiated on UO2. A method was developed to fabricate tensile creep specimens of CoO and UO2 using slip-casting and isostatic compaction. The assembly and testing of the thoriated tungsten constant-true-stress creep machine was also completed for testing appropriately shaped specimens. Sintering studies carried out on UO2 in the thoriated tungsten pressure vessel at high ambient pressure indicated that sintering was impeded in the tungsten vessel. Finally, a system was designed and built to test ceramics under relatively high oxygen pressure. Tensile creep specimens of CoO were produced by oxidation. Tensile creep deformation was performed on two CoO specimens. The results indicate superplastic strains in a porous ceramic under tensile loading. DOE

POROUS POLYMERS AS NEW SORPTIVE MATERIALS
J. Medema and J. J. G. M. vanBokhoven Oct. 1980 18 p refs
(PML-1980-77; TDCK-75001) Avail: NTIS HC A02/MF A01

Porous polymers are compared with active carbon for the adsorption of harmful compounds from the atmosphere. Factors determining the character of porous polymers are discussed, and results regarding adsorption capacity is described. Literature data and adsorption tests were used. The main factors which characterize the polymer are solvent type and degree of crosslinking. Active groups do not influence the physical adsorption capapcity very much. Water vapor adsorption on porous polymers is extremly low. The rate of adsorption on a good porous polymer is considerably lower than the rate of adsorption into active carbon. Author (ESA)

(PB81-231292; EPA-600/2-81-139) Avail: NTIS HC A05/MF A01 CSCL 11I

Full scale encapsulation of 208 liter (55 gal) drums was studied as a means of managing corroding containers of hazardous wastes in the field and rendering them suitable for transport and safe deposit within a final disposal site such as a landfill Polyethylene (PE) receivers with 6.35 mm (1/2 in) thick walls and wider mouths were employed for fabricating encapsulates. After insertion of drums, the receivers were weld sealed with 6.35 mm (1/2 in) sheet PE. A light weight prototype apparatus was designed and transportable contructed to fabricate the PE encapsulate by welding. Precision alignment of pieces and high regularity of surfaces to be joined were found to be unnecessary. Furthermore, only minimal mechanical pressures were needed to form the welded joints. Results indicated plastics welding to be an effective method for encapsulating corroding drums of hazardous wastes. DOE

EXTERNAL FUEL VAPORIZATION STUDY Final Report
E. J. Szetela and J. A. TeVelde Nov. 1981 92 p refs
(NASA-CR-165513; UTRC-81-915326-15) HC A05/MF A01 CSCL 21D

The feasibility of external fuel vaporization in advanced aircraft gas turbine engines is addressed. Experiments were run to determine key fuel properties including boiling points, dew points, critical temperature, critical pressure, heat transfer coefficients, deposit formation rates, and deposit removal in a flowing system. Of particular concern were the heat transfer rate in the heat exchanger and the performance of the orifice used in the throttling process. Three fuels were utilized in the experiments including Jet-A, Experimental referee broad specification fuel, and a premium No. 2 diesel fuel. Engine conditions representing the NASA Energy Efficient Engine at sea level takeoff, cruise, and idle were simulated in the vaporization system and it was found that single phase flow was maintained in the heat exchanger and downstream of the throttle. Deposits encountered in the heat exchanger represented a thermal resistance as high as .0013 sq M K/watt and a deposit formation rate as high as 800 micro-gC/sq cm hr. These values are equivalent to a buildup of 0.055 cm of thickness in 36 hours resulting in a more severe fouling condition than originally anticipated. It was found that the deposit can be removed by cleaning with air at a temperature of 720 K for 10 minutes. R.J.F.

EROSIVITY OF LOVA PROPELLANTS
J. R. Ward, T. L. Brosseau, R. P. Kaste, I. C. Stobie, and B. Bensinger Sep. 1981 30 p refs
(DA Proj. 1L1-62618-AH-80)
(AD-A106081; ARBRL-TR-02368) Avail: NTIS HC A03/MF A01 CSCL 19/1

The erosivity of a series of LOVA propellants was evaluated with the BRL 37-mm blowout gun and with heat input measured in a 105-mm M68 tank cannon. The results in the 37-mm blowout gun suggested that three of the eight propellants were as erosive as M30. Subsequent review of the closed bomb data used to calculate charge weights indicated that it is likely the extraordinary erosivity of these three propellants was caused by overestimating the propellant needed to match peak pressure of M30. The objective of this study was to determine whether the most appropriate available technology; present and foreseeable resource, market, finance, and economic conditions in the northeastern Wisconsin area may be combined under the proposed management structure to produce ethanol from biomass with favorable economic and energy related results. The method by which this study was completed was to conduct and document a professional review of each of the above mentioned conditions and factors. Each factor was analyzed at a level of detail sufficient enough to allow a decision to be made relative to eventual plant construction. The original intent of the study was to assess the construction and operation of a plant producing between 1,000,000 and 3,000,000 gallons of ethanol per year. Based on an initial assessment of feedstock availability and market and capital requirements, the plant size to be used in this feasibility study was set at 1.5 million gallons per year. One of the first steps in the study was to complete an assessment of the amount of waste biomass feedstock available in the study area. Based on this assessment it was determined that approximately 45,000 tons of waste biomass would be available to the plant at the cost of transportation. Subsequent laboratory analyses indicated, though, that the expected ethanol yield from this waste resource would be approximately five gallons per ton or 225,000 gallons per year, which is about 15% of the total annual capacity of the proposed plant. Therefore it was necessary to direct the feasibility study toward a basic plant using corn as a primary feedstock, and waste biomass as a secondary feedstock. GRA

FEASIBILITY STUDY FOR AN ALCOHOL-FUELS PLANT FOR BUFFALO, NEW YORK

Nov. 1980 359 p refs

(Contract DE-FG01-80RA-50357)

(DE82-000032; DOE/RA-50357/T1) Avail: NTIS HC A16/MF A01

A feasibility study was conducted of a 15,000,000 gal per year anhydrous ethanol plant to be located in the Buffalo area. All major aspects of the construction and operation of the plant were investigated. It is concluded that: (1) the volatile energy situation presents too much of a risk for bankers and investors unless the Department of Energy guarantees that they will purchase any alcohol not sold on the open market at a guaranteed price formula; (2) the complete plant design was prepared and it appears that there is very little technological risk in the process; (3) a suitable plant site is available with all necessary utilities and the plant equipment has been laid out for this site; (4) the plant easily complies with environmental, health, safety and socioeconomic requirements; (5) raw materials consisting of corn and coal are readily available in adequate quantity and at reasonable prices in the Buffalo area; (6) the distillers dried grains and the carbon dioxide can both be sold in their entirety at reasonable prices; and (7) capital cost and operating cost are such that the alcohol plant makes an attractive investment with reasonable payout and profit potential. COAL-OIL MIXTURES: AN ALTERNATIVE FUEL FOR THE COMMERCIAL MARKETS AND LARGE RESIDENTIAL MARKETS

Thomas A. Butcher and Robert J. Isler 1981 29 p refs Presented at the Intern. Conf. on Residential Solid Fuels, Portland, Oreg., 1 Jun. 1981

(Contract DE-AC02-76CH-00016)

(DE81-028335; BNL-29773; CONF-810674-2) Avail: NTIS HC A03/MF A01

Results are presented of a program aimed at promoting wide-spread use of coal-oil mixtures in large residential and commercial sector size oil-fired heating equipment. Fuel properties are discussed including viscosity, heating values, and effect of coal particle size. On-site mixing of COM is not considered practical for users in this size range and a number of central preparation plant projects are in progress. Options for on-site storage including the addition of paddle agitators, recirculation agitation systems, auxiliary tanks, and stable slurries are discussed. Fuel pump, controls, and atomizer modifications will be required as well. Special problems of sootblowers, cyclones, baghouses, and scrubbers are considered. DOE

PROCESS DEVELOPMENT FOR IMPROVED SRC OPTIONS. KERR-MCGEE CRITICAL SOLVENT DEASHING AND FRACTIONATION STUDIES Final Report

R. A. Baldwin, R. E. Davis, L. D. Gillham, R. C. Janka, R. E. Leonard, and D. E. Rhodes Jul. 1981 108 p refs Sponsored by EPRI

(EPRI Proj. 1134-2)

(DE81-903785; EPRI-AP-1932) Avail: NTIS HC A06/MF A01

The solvent refined coal 1/2 process, a coal liquefaction process which includes Kerr-McGee critical solvent deashing (CSD), was demonstrated in a blocked-out fashion in continuous bench-scale units. It was demonstrated that conventional SRC-I as well as short-residence-time vacuum bottoms could be successfully deashed and fractionated and that the fractionated portion of the soluble coal product, light SRC, could be added to the liquefaction solvent to improve its quality. An amount of light SRC equivalent to that which was initially added to the liquefaction solvent was recovered in the CSD process in most cases to maintain light SRC recycle. It was found that soluble coal product recovery was inversely proportional to the first-stage CSD temperature and that the fractionation step was sensitive to deashing solvent to feed ratio. The SRC-1/2 process was not, however, fully integrated and therefore these results are not necessarily indicative of steady-state conditions. DOE

POTENTIAL SUPPLY OF SYNTHETIC FUELS FROM ALASKAN HYDROELECTRIC POWER AND COAL

Meyer Steinberg and James R. Powell 1981 15 p refs Presented at the IGRC 1981 Conf., Chicago, 28 Sep. 1981

(Contract DE-AC02-76CH-00016)

(DE81-025743; BNL-29764; CONF-810933-1) Avail: NTIS HC A02/MF A01

It is proposed to develop and utilize the large potential hydroelectric power resources in Alaska to produce hydrogen by the electrolytic decomposition of water and to combine the hydrogen with the large Alaskan coal reserves to produce synthetic liquid and gaseous fuels. It is estimated that in this manner, as much as 1.8 million bbls/day of gasoline or 6.2 billion SCF/day of substitute natural gas can be produced. The existing and projected Alaskan pipelines would provide the means of transporting the fuels to energy consuming load centers in the U.S. This development would move the US a considerable way towards energy independence as well as employing the material resources in Alaska in an efficient manner. DOE

DEVELOPMENT OF A METAL HYDRIDE PROCESS FOR HYDROGEN RECOVERY FROM SUPPLEMENTED NATURAL GAS

F. Reidinger and F. B. Hill 1981 6 p refs Presented at the 2nd World Congr. of Chem. Engr., Montreal, Canada, 4 Oct. 1981

(Contract DE-AC02-76CH-00016)

(DE81-022685; BNL-29461; CONF-811007-4) Avail: NTIS HC A02/MF A01

A metal hydride hydrogen recovery process which has commercially attanable pretreatment requirements, a thermal reactivation procedure with temperatures not exceeding 500 C with reactivation rquired at intervals of 100 absorption desorption cycles, and an alloy lifetime of the order of 70,000 cycles is described. Mercaptan-alloy interactions are considered. The interaction of CO with the alloy in the presence of hydrogen appears quite complicated. The present work indicates that CO 2 concentrations up to 500 ppM may have negligible effect on the rate of hydrogen absorption after an initial exposure to CO2 and hydrogen. If a slower hydrogen sorption rate can be tolerated then higher CO2 levels may be acceptable. DOE

BIOMASS ENERGY UTILIZATION IN THE PACIFIC NORTHWEST: IMPACTS ASSOCIATED WITH RESIDENTIAL USE OF SOLID FUELS

P. Petty, W. Hopp, and A. Chockie May 1981 23 p refs Presented at the 1981 Intern. Conf. on Residential Solid Fuels,

Portland, Oreg., 1 Jun. 1981
(Contract DE-AC06-76RL-01830)
(DE81-029137; PNL-SA-9618; CONF-810674-3) Avail: NTIS HC A02/MF A01

The Pacific Northwest Region, including Washington, Oregon, and Idaho, is the geographic area for which an impact assessment of the residential use of solid fuels is performed. An estimate of the potential energy contained in the fuelwood burned annually and an estimate of the mean conversion efficiency of the regional capital stock of woodburning appliances leads to a reasoned assessment of the contribution of wood energy to the residenital energy use in the region. The use of solid fuels was associated with an increase in the incidence of residential fires nationally. An estimate is made of the economic costs attributable to this source of fire incidence. An additional area of concern relates to the harvesting practices of hundreds of individuals, cutting fuelwood for their own use. Statistics describing injuries and death per Btu in the commercial logging industry are used as a basis for an estimate of injuries and deaths resulting from the increased collection of forest residues and fuelwood by private woodcutters. DESIGN OF A CONTROL SYSTEM FOR THE OPTIMUM HEATING OF BATCH REACTORS [ENTWURF EINES REGELSYSTEMS ZUM ANFAHREN VON BATCH-REAKTOREN]
H. Slangen 28 Nov. 1978 40 p In GERMAN
(MS-1296) Avail: Issuing Activity

A nonlinear and unstable reaction system can be represented as a model of third order, and of fifth order if the reaction conversion degree and the time constant of the temperature measurement are included as variables of state. Standard systems are not optimum, but saving of time with optimum control systems is negligible. However, they allow lower conversion during the heating phase, enabling a better product quality. The most important source of error in practice is the changing time contant of the temperature measurement. The optimum system is bang-bang control, with two control points the location of which is calculated with the help of algebraic exponential system equations, if all variables of state and parameters are known. Aerospatiale, Bull. Bimensuel (Paris) No. 1981-2, Mar. - Apr. 1981 (For primary document see N82-14388 05-31)
Avail: NTIS HC A05/MF A01; original FRENCH report available at ONERA, Paris FF 45

The pumping of excimer lasers used in nuclear fusion and isotope separation is considered. Homogeneous ionization with an electron beam permitted discharge pumping of a KrF laser with a discharge-energy/beam-energy ratio > 5. This high value is obtained to the detriment of an energy density and an efficiency which are about half the best values obtained under other conditions. This result does not modify a recent conclusion indicating that an electron beam controlled discharge has no significant advantage over a pure electron beam as regards pumping high energy KrF lasers at high repetition rate. THIN FILM TRANSDUCERS FOR TEMPERATURE AND HEAT FLUX MEASUREMENTS c36
Jean-Claude Godefroy *In its* La Rech. Aerospatiale, Bi-monthly Bull. No. 1981-2, Mar. - Apr. 1981 (ESA-TT-713) Sep. 1981 p 9-19 refs Transl. into ENGLISH from La Rech. Aerospatiale, Bull. Bimensuel (Paris) No. 1981-2, Mar. - Apr. 1981 (For primary document see N82-14388 05-31)
Avail: NTIS HC A05/MF A01; original FRENCH report available at ONERA, Paris FF 45

Surface thermometers and fluxmeters in the form of thin films that can be installed without requiring any machining, and which are thin enough not to perturb the flow, are studied as a means for assessing heat exchange particularly in turbomachinery. Thermocouple transducers made of thin layers deposited on a flexible substrate (Kapton) are considered for measurements of low temperatures, in fluctuating mode, and in liquids. At present, technology limits their use to temperatures below 200 C, so for temperatures found on turbine blades, further development is needed. Spatial analysis of heat exchanges is possible, since the same substrate can receive several transducers. They can be used in cryogenic wind tunnels, or for investigating the local nature of a boundary layer. Author (ESA)

No. 1981-2, Mar. - Apr. 1981 (ESA-TT-713) Sep. 1981 p 21-33 refs Transl. into ENGLISH from La Rech. Aerospatiale, Bull. Bimensuel (Paris) No. 1981-2, Mar. - Apr. 1981 (For primary document see N82-14388 05-31)

Avail: NTIS HC A05/MF A01; original FRENCH report available at ONERA, Paris FF 45

A three bar type thermal fatigue system is described which uses classical tensile-compressive test specimens, but no servohydraulic device and allows stress and strain measurements in the critical zone throughout the lifetime. A nickel based turbine blade alloy was tested at high temperature in order to evaluate, under nonisothermal conditions, behavior and rupture modeling established from simple tests. The analysis is shown together with the elements required for simulation by numerical calculations. Good general agreement between the tests and the calculation results confirms the reliability of the experimental system and the validity of the theoretical models. Author (ESA)

HOMOGENIZATION METHOD FOR REINFORCED PLATE BUCKLING PREDICTION c39

Pierre Suquet *In its* La Rech. Aerospatiale, Bi-monthly Bull. No. 1981-2, Mar. - Apr. 1981 (ESA-TT-713) Sep. 1981 p 35-43 refs Transl. into ENGLISH from La Rech. Aerospatiale, Bull. Bimensuel (Paris) No. 1981-2, Mar. - Apr. 1981 (For primary document see N82-14388 05-31)

Avail: NTIS HC A05/MF A01; original FRENCH report available at ONERA, Paris FF 45

The buckling of reinforced plates, or of bars, with periodic heterogeneties is considered. A theory for a typical plate is developed which defines membrane and flexural deformation. The problem decomposes into a linear problem and a nonlinear one where the only unknown is the flexural displacement. For the postbuckling nonlinear analysis, the bifurcation branch of a homogeneous plate is shown to be a good approximation of the bifurcation branch of a reinforced plate, for a simple critical value. The homogenization method gives satisfactory results when limited to global phenomena, e.g., first buckling modes. Author (ESA)

Avail: NTIS HC A05/MF A01; original FRENCH report available at ONERA, Paris FF 45

Laminar and turbulent flow, as found e.g., at the wing-fuselage junction, were studied numerically. In laminar flow a vortical system close to the edge disturbs calculations. Modifications to the field of the secondary velocity improve this. Further improvement can be achieved by varying vortex parameters. In the turbulent mode, the anisotropy of the turbulence should be considered in the calculation of the second order vortices, (although here it was ignored, and qualitatively correct results are still obtained). The basic equations are the streamwise momentum equation, the streamwise component of the vorticity equation, and two Poisson-type equations for secondary velocities. Author (ESA)

RESEARCH ON AN INDUCTION DRIVEN CRYOGENIC WIND TUNNEL c09

Alain Blanchard, Jean-Bernard Dor, Andre Mignosi, and Jean-Francois Breil *In its* La Rech. Aerospatiale, Bi-monthly Bull. No. 1981-2, Mar. - Apr. 1981 (ESA-TT-713) Sep. 1981 p 63-77 refs Transl. into ENGLISH from La Rech. Aerospatiale, Bull. Bimensuel (Paris) No. 1981-2, Mar. - Apr. 1981 (For primary document see N82-14388 05-31)

Avail: NTIS HC A05/MF A01; original FRENCH report available at ONERA, Paris FF 45

The cryogenitization of an induction driven transonic wind tunnel is discussed. Internal insulation and the design of a liquid nitrogen injection system are considered. A unit of 32 injectors is arranged at the periphery of the first diffuser in two rows. Each injector is controlled by a solenoid valve. Several elements can be brought together at the control point to form a 10 bit digital regulation unit. The nitrogen pulses are kept symmetrical by varying the response time of the solenoid valves. This induction system works well, since the increase in nozzle performance compensates increase of flow in the test section due to the drop in temperature. It should be suitable with nitrogen gas. Composite and homogeneous insulating materials were repeatedly plunged into liquid nitrogen. All reveal defects when exposed to stress induced by differences in the expansion between their internal and external faces. Internal surfaces must be reinforced with polyurethane. Author (ESA)

This report presents the results of wind tunnel tests conducted on three different radome configurations mounted atop three different airport tower designs. The wind tunnel tests were conducted on 1/12th scale models. Field tests were conducted on one full-scale radome and tower configuration and the data compared with the wind tunnel data. The data are useful for comparing the airloads transmitted into an airport-tower roof by the various radomes and for evaluating the effects tower geometry can have on these airloads. Author (GRA)

RESIDENTIAL SITE DESIGN AND ENERGY CONSERVATION. PART 1: GENERAL REPORT
Jan. 1981 158 p
(DE81-904010; NP-1904010-Pt-1; ISBN-0-7743-6072-0)
Avail: NTIS HC A08/MF A01

The energy costs that can be saved by a subdivision design format related to energy conservation that is reasonably acceptable in marketing and aesthetic terms were determined. Six subdivision layouts were designed to densities ranging from 6.5 to 13.6 units per gross acre (1058 to 2232 units) or 16.25 to 34 units per gross hectare. Hourly radiation temperature, and wind characteristics for a year constitute the local climate data base. Six house types (from detached to apartment units) and seventeen basic house designs (mostly picked at random) were used. The method for calculating the set heat load and an analysis of the results are presented. The study shows that by way of the selection of the more energy efficient traditional house designs, orientation of buildings to maximize solar transmission, and landscaping to reduce the effect of wind, there is a possible residential space heating energy saving of up to 20% for a low density housing development. Comparative seaworthiness and towing tests were performed with an 82-foot USCG WPB. Other major test categories yielded speed, range, fuel consumption, directional stability, turning, acceleration, and noise characteristics. Limited maintainability and reliability information was compiled and manning and human factors considerations were studied. The SES craft was operated in sea state 2 at speeds of 29 knots with significant vertical acceleration peaks in the passenger compartment of 0.6 g and in sea state 4 at 26 knots with peaks of 0.5 g. Maximum vertical acceleration peaks under these conditions were 0.9 and 1.5 g's, respectively. The SES craft towed the 82-foot USCG WPB at speeds to 11 knots. The maximum measured calm water speed of the SES was 33 knots at a displacement of 121 long tons and a fuel consumption of 6.9 gallons per nautical mile yielding a top speed maximum range of 672 nautical miles. Turning performance and directional control were maintained during simulated combinations of propulsion and lift engine impairment. Author

CYCLE DESIGN FOR A CRYOGENIC REFRIGERATION SYSTEM FOR FED WITH FORCED-FLOW SUPERFLUID HELIUM THROUGH INTERNALLY COOLED CONDUCTORS
Joel H. Schultz 1981 19 p refs
(Contract DE-AC02-78ET-51013)
(DE82-000446; DOE/ET-51013/23; PFC/RR-81-29) Avail: NTIS HC A02/MF A01

The system was designed for the specifications of the magnet system of the fusion engineering device (FED). The unusual specification of an internally cooled cabled niobium titanium superconductor at a maximum field of 10 tesla, coupled with high ac losses and high neutron and gamma heating in the toroidal field coils led to the selection of a cooling system with superfluid helium at the inlet to the toroidal field coils. While highly unusual as a coil-cooling concept, the implications for the refrigeration system were not unfavorable and showed several features of interest. Among the favorable comparisons with conventional supercritical flow systems was reduced entropy generation in the coil due to pressure drops. DOE

TEST OF A CRYOGENIC HELIUM PUMP
J. W. Lue, J. R. Miller, P. L. Walstrom, and W. Herz (Kernforschungszentrum, Karlsruhe, West Germany) 1981 7 p refs Presented at the 1981 Cryogenic Eng. Conf., San Diego, Calif., 10 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028529; CONF-810835-6) Avail: NTIS HC A02/MF A01

The design of a cryogenic helium pump for circulating liquid helium in a magnet and the design of a test loop for measuring the pump performance in terms of mass flow vs pump head at various pump speeds are described. A commercial cryogenic helium pump was tested successfully. Despite flaws in the demountable connections, the piston pump itself has performed satisfactorily. A helium pump of this type is suitable for the use of flowing supercritical helium through internally cooled superconductor magnets. It has pumped supercritical helium up to 7.5 atm with a pump head up to 2.8 atm. The maximum mass flow rate obtained was about 16 g/s. Performance of the pump was degraded at lower pumping speeds. DEVELOPMENT OF NEW PRODUCTION TECHNOLOGIES FOR OPTICAL COMPONENTS WITH SPHERICAL SURFACES Final Report
Hans-Joachim Juranek Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 68 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-032; ISSN-0340-7608) Avail: NTIS HC A04/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 14.30

Spherical surfaces for precision optical components were produced by a two-step method instead of the three-step method. The two-step method is known in ophthalmic optics, but did not succeed in precision optics because of the lack of fast high precision grinding machines. Such a machine was built, using special spindles and numerical control. A computer controlled high precision centering and edging machine was built in order to enhance productivity and accuracy and to enable optical shops to produce even complicated lens shapes in an economical way. HELIUM 2 COOLING SYSTEMS FOR LONG TERM MISSIONS IN SPACE: PHASE SEPARATION AND HYBRID COOLING SYSTEMS [HELIUM-2-KUEHLSYSTEME MIT LANGEN STANDZEITEN FUER WELTRAUMANWENDUNGEN: PHASENTRENNUNG, HYBRID-KUEHLSYSTEME]
G. Klipping, I. Klipping, and Schmidtchen 10 Sep. 1980 50 p refs In GERMAN Report will also be announced as translation (ESA-TT-721)
Avail: NTIS HC A03/MF A01

The suitability of helium 2 (superfluid helium) phase separation and hybrid cooling systems for astronomical and aeronomical observations in space, e.g., infrared radiation, was studied. The different aspects of phase separation under conditions of weightlessness are treated and the active phase separator for a liquid helium cooled infrared observatory for Spacelab, German Infrared Laboratory (GIRL) is described. For long-term (more than one year) applications, a hybrid cooling system is required in which refrigerants boiling at higher temperatures are employed. The suitability of hydrogen and neon were investigated as well as that of a secondary solid refrigerant. Analysis indicates that such a hybrid cooling system, using solid neon, can be realized and has substantial advantages compared with a one-stage He 2 cooling system. Author (ESA)

A mathematical model was developed, which by timewise integration of the governing equations pertaining to each of the components, permits computer simulation of steady state as well as transient behavior of single stage vapor compression systems, as used in refrigeration, air conditioning, and heat pumps. Qualitative (stable behavior, or not) and quantitative conclusions (amplitudes, frequencies) are obtained. Comparison with experimental results for dynamic behavior validates the model. The computer programs are appended. Author (ESA)

INCREMENTAL ANALYSIS OF STRUCTURAL CONSTRUCTION COSTS Final Report
Apr. 1981 58 p refs
(Contract DTFH61-80-C-00148)
(PB81-234932; FHWA/PL-81/008) Avail: NTIS HC A04/MF A01 CSCL 13B

The analysis was performed by assuming an existing bridge as a prototype and designing eight hypothetical bridges for decreasing design loads. The design load implements and design standards for the hypothetical bridges were developed to reflect the current traffic and construction patterns. Based on a standardized unit cost for materials developed from the unit costs of the prototypes, cost was then allocated to each hypothetical bridge design and bridge loading. The result was that 65 to 88% of bridge costs were incurred by the lightest design loading. However, when the same loading was analyzed at a narrower width it only occurred 53 to 74% of total bridge costs. The effects of increased strength and width requirements of progressively heavier vehicles are included. T.M.

RELATING PAVEMENT DISTRESS TO SERVICEABILITY AND PERFORMANCE Final Report
W. R. Hudson, F. N. Finn, R. D. Pedigo, and F. L. Roberts Feb. 1981 275 p refs
(Contract DOT-FH-11-9393)
(PB81-227852; FHWA/RD-80-098) Avail: NTIS HC A12/MF A01 CSCL 13B

Regression analyses, Markov processes, Bayesian analysis, and utility theory were examined as analytical tools useful in relating distress to performance. Several specific performance models of limited applicability are reported, along with some generally applicable techniques and recommended methods. It is shown that useful relationships can be obtained from existing data and are, in fact, being used in several states and other highway agencies. In each case, however, it is shown that significant improvements in the distress performance relationships are needed which can only be obtained through the conscientious observation of distress and performance of pavements under a variety of environmental and load conditions for a reasonable period of time, e.g., (approximately ten years). T.M.

EMISSION OF AN ELEMENTARY SLOT VIBRATOR LOCATED IN THE CENTER OF AN IDEALLY CONDUCTING DISK
Yu. V. Pimanov and L. G. Braude *In its* Antenna (Selected Articles) (FTD-ID(RS)T-1107-81) 26 Oct. 1981 p 21-50 refs Transl. into ENGLISH from Antenny (USSR), no. 1969 p 50-59, 89-105 (For primary document see N82-14413 05-32)
Avail: NTIS HC A04/MF A01 CSCL 17/2

The emission of an elementary slot vibrator, located in the center of an infinitely thin ideally conducting round disk, was examined. A solution was obtained on the basis of the Fourier method in the form of series with respect to spheroidal functions. Asymptotic expressions for the field arising in the far zone during excitation of an ideally conducting disk were obtained by an elementary slot vibrator (magnetic dipole) located in the center of the disk on the basis of the solution of an integral equation. During solution it was assumed that the radius of the disk is much greater than the wavelength. N.W.

MODULAR MULTI-FUNCTION MULTI-BAND AIRBORNE RADIO SYSTEM (MFBARS). VOLUME 1: EXECUTIVE SUMMARY Final Technical Report, Mar. 1978 - Jun. 1980

R. A. Reilly, C. W. Ward, A. Lee, R. Schineller, A. Clemens, W. Robertson, and J. Rome (Lowell Univ.) Wright-Patterson AFB, Ohio AFWAL Oct. 1981 66 p 2 Vol.

(Contract F33615-78-C-1518; AF Proj. 2003)

(AD-A106057; AFWAL-TR-81-1077-Vol-1) Avail: NTIS HC A04/MF A01 CSCL 17/2

This report describes the results of the first two phases of the MFBARS radio architecture study. This study was aimed at establishing a cost effective and volume-conserving method of integrating tactical CNI avionics equipments. The goal was innovative integration of these systems, by a method which would allow the incorporation of new capabilities and which would take advantage of technological advances, both in-hand and projected within the near-term future (1985). Such integration is needed to reduce spiraling life cycle costs and to alleviate severe hardware space limitation problems in tactical aircraft. During Phase I, a set of viable MFBARS candidate architectures was developed, together with a cost evaluation of these with respect to a government-provided baseline of existing equipment, to allow meaningful comparisons. The three MFBARS architectures proposed during Phase I were keyed to a reasonable expectation of techniques and devices projected to be available when MFBARS advanced development would be initiated in the mide '80's. The three architectures provided a graduated increase in payoff potential with associated increases in technical risk. The Government then selected the most advanced of the three Phase I candidate system architectures for more detailed study. Author (GRA)

MODULAR MULTI-FUNCTION MULTI-BAND AIRBORNE RADIO SYSTEM (MFBARF). VOLUME 2: DETAILED REPORT Final Technical Report, Mar. 1978 - Jun. 1980

R. A. Reilly, C. W. Ward, A. Lee, R. Schineller, A. Clemens, W. Robertson, and J. Rome (Lowell Univ.) Wright-Patterson AFB, Ohio AFWAL Jun. 1981 231 p 2 Vol.

(Contract F33615-78-C-1518; AF Proj. 2003)

(AD-A106052; AFWAL-TR-81-1077-Vol-2) Avail: NTIS HC A11/MF A01 CSCL 17/2

A top down, system oriented study of the selected system approach was conducted. System configuration details and performance parameters were refined. In addition, to minimize system development risk and to provide guidance on the best direction among which MFBARS should proceed, recommended plans were defined for development of the system and supporting technology. Emphasis is placed on the final recommended development plans. T.M.

RADIATION LOSS FROM A CURVED DIELECTRIC CHANNEL WAVEGUIDE IN A DENSE SUBSTRATE

Edward F. Kuester, Robert L. Holland, and David C. Chang Jun. 1981 86 p refs

(Grant DAAG29-78-G-0173)

(AD-A105928; ARO-15632.5-EL; SR-64) Avail: NTIS HC A05/MF A01 CSCL 09/3

This report gives the results of an investigation to analytically determine the effect of a plane dielectric interface upon the radiation loss of a curved channel dielectric waveguide embedded in a dense substrate and bent in a plane parallel to that of the material interface. The radiation loss from bent dielectric waveguides is of interest for a variety of potential applications in integrated optics. Knowledge of the factors influencing the radiation from bend dielectric waveguides will allow the design of integrated optical component characteristics which, in one application, may result in decreased radiation to conserve signal energy or which, in another application, may achieve enhanced radiation effects in order to optimize the coupling between various optical waveguides. An obvious example for which the conservation of signal energy is of prime concern is the dielectric fiber transmission line used in simple point-to-point data transfer applications. Author (GRA)

MANUFACTURING TECHNOLOGY STUDY ON RADIO FREQUENCY POWER MODULES PACKAGING TECHNIQUES Final Report, Sep. 1979 - Jun. 1981

1981 220 p refs

(Contract N00039-79-C-0378)

(AD-A105892) Avail: NTIS HC A10/MF A01 CSCL 17/9

Program requirements cover manufacturing methods and technology encompassing a determination of materials, processes, and related techniques to improve producibility thereby enhancing manufacturing methods to achieve a significant reduction in production cost of R.F. Power Amplifier Modules. The requirement includes the fabrication and test of proof of process of 25-100 watt R.F. Microwave Hybrid Modules. The foregoing amplifiers featured the enhanced materials, processes, and techniques evolved under this program which achieved reduction of total cost of product. The achieved design is directly applicable to the production design of the AN/TPS-59 Solid State Radar system with direct benefit to a wide family of other Solid State Radars and other systems which may use similar R.F. Power Modules. Because several hundred of these R.F. power modules are used per system, the cost savings resulting from this program are significantly multiplied and provide a very favorable payback on MM&T investment. At the outset of the program, the materials, manufacturing and test/tune methods being used for fabricating power modules at that time were reviewed with respect to their yielded final cost. GRA

ADAPTIVE ENHANCEMENT OF FINITE BANDWIDTH SIGNALS IN WHITE GAUSSIAN NOISE Final Report, Jan. 1979 - Jun. 1981

C. M. Anderson, E. H. Satorius, and J. R. Zeidler 15 Aug. 1981 40 p refs Prepared jointly with Naval Ocean Systems Center and sponsored by Naval Electronic Systems Command and Naval Sea Systems Command, Washington, D.C.

(Contract N66001-79-C-0204; XF11101100)

(AD-A105873; NOSC-TR-711) Avail: NTIS HC A03/MF A01 CSCL 09/4

The steady-state behavior of the adaptive line enhancer (ALE) is analyzed for stationary inputs consisting of finite signals embedded in a white Gaussian noise (WGN) background. Analytic expressions for the weights and output of the LMS adaptive filter are derived as functions of input signal bandwidth and SNR, as well as ALE length and bulk delay. The steady-state gain in broadband SNR from input to output is derived as a function of these same four variables. For fixed ALE parameters and input SNR, it is shown that this gain increases as the input signal becomes narrower and approaches the sinusoidal unit. It is emphasized that because the correlation time of finite bandwidth signals is limited, excessively large values of the ALE bulk delay parameter result in diminished gain. Furthermore, there is an optimal filter length, whose value depends upon signal bandwidth and SNR, for which the broadband gain is maximized. These results demonstrate the importance of including the effects of algorithm noise in analyzing the performance of real-time adaptive processors. Author (GRA)

SHF-EHF PROPAGATION THROUGH VEGETATION ON COLORADO EAST SLOPE Final Report, 1 Jan. - 31 Oct. 1980

Edmond J. Violette, Richard H. Espeland, Albert R. Mitz, Frank A. Goodknight, and F. Schwering Fort Monmouth, N. J. Army Communications Electronics Command Jun. 1981 107 p refs
(DA Proj. 1L1-61102-AH-48)
(AD-A105672; CECOM-81-CS020-F) Avail: NTIS HC A06/MF A01 CSCL 20/14

An SHF/EHF measurement program was conducted to determine the effects on propagation through vegetation common to the Colorado East Slope. Presented in this report are the frequency dependence of vegetation losses, polarization, depolarization, and backscatter on observed signal amplitude for three deciduous tree paths, two conifer tree paths, and one grass path at 9.6, 28.8, and 57.6 GHZ. Some of the variables for these measurements were foliage depth, antenna position, antenna pointing, and antenna beamwidth. Time series data showing scintillation due to wind is displayed and discussed. A single rain event and a single snow event were recorded. Summer foliage measurements were compared to a wintertime defoliated state with identical terminal locations used for each condition. Author (GRA)

ELECTROMAGNETIC INTERFERENCE (EMI) MEASUREMENTS OF FLUORESCENT LAMPS OPERATED WITH SOLID-STATE BALLASTS

A. Arthur, R. Verderber, F. Rubinstein, and O. Morse May 1981 9 p refs Presented at IEEE/Indus. Appl. Soc. Ann. Meeting, Philadelphia, 5-9 Oct. 1981
(Contract W-7405-eng-48)
(DE81-025218; LBL-12462; CONF-811017-1) Avail: NTIS HC A02/MF A01

Solid state ballasts were placed in fluorescent lamps in various areas of a hospital to determine if these high frequency systems would adversely any hospital operations. The general areas tested included a lobby and an office space. Potentially sensitive areas containing hospital diagnostic and monitoring equipment, including a computerized axial tomography (CAT) scanning room, an electroencephatograph (EEG) examination room, and a coronary ward were also tested. The measurement techniques are described and the results discussed with respect to the existing RFI environment and with respect to EMI radiated and conducted limits specified by the Federal Communications Commission and the Federal Drug Administration. STUDY ON DIGITAL TELEVISION TRANSMISSION VIA A TELEVISION BROADCASTING SATELLITE (TV-SAT) Final Report, Mar. 1980

Roland Burkhardt, Hans-Christian Dinglinger, Rudo Faelker, Alfred Kemper, Helmut Mitschke, Wolfram Schildauer, Josef Wasser, and Wilmut Zschunke (Uebertragungstechnik und Elektroakustik) Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 124 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-18; ISSN-0170-1339) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 26

Digital transmission and signal encoding methods with redundancy reduction were investigated for a television downlink from a satellite to the home receiver as an alternative method to analog FM transmission, the main criteria being bandwidth, carrier to noise ratio, picture quality and equipment costs at the receiving end. Digital PCM encoded and four phase shift key modulated transmission with a bandwidth of 22.4 MHz, giving very good picture quality, is proposed as advantageous for signal reception with small antennas. An alternative two channel transmission with 27 MHz bandwidth, using a higher order modulation method, is discussed. However, this proposal calls for a higher receiving antenna performance and is thus suitable for community antenna systems only. Author (ESA)

RESULTS OF THE PROPAGATION MEASUREMENTS AT 94 GHz OVER A 935 M LINK ON THE YPENBURG AIRFIELD

C. D. deHaan Oct. 1979 52 p refs
(PHL-1979-43; TDCK-73422) Avail: NTIS HC A04/MF A01

Extremely high frequency propagation data and meteorological measurements, including rain rate along the propagation path, windspeed and wind direction in the horizontal plane, the atmospheric temperature, pressure and humidity and raindrop size distribution are given for a vertically polarized Cassegrain antenna link. Actually measured raindrop size distribution and spherical raindrops, were used to measure the attenuation caused by rain using Mie's scattering theory for water spheres. It is noted that in fog, the attenuation is small for millimeter waves and high for infrared waves. Data are collected from point visibility meters, ombrometers and rapid response rain gages. FURTHER RESULTS OF THE PROPAGATION MEASUREMENTS AT 94 GHz OVER A 935 m LINK ON THE YPENBURG AIRFIELD

J. H. Buijs Dec. 1980 22 p refs
(PHL-1980-46; TDCK-75028) Avail: NTIS HC A02/MF A01

The effects of rain, snow, and wet snow on vertically and horizontally polarized Cassegrain antenna link 94 GHz waves are reported. Data were collected from point visibility meters, ombrometers, and rapid response rain gages. It is noted that water effect is the same in both cases. Rain effect is described by the calculated rain attenuation based on measured drop size distributions and spherical raindrops. Snow gives a slightly higher attenuation than rain at the same equivalent rain rate for vertical polarization. Author (ESA)

A TRANSMITTING SOLID STATE LINEAR PHASED ARRAY ANTENNA FOR C BAND

P. Doelman and W. P. M. N. Keizer Feb. 1980 60 p refs (Contract A78/K/040)

(PHL-1980-10; TDCK-73844) Avail: NTIS HC A04/MF A01

An IMPATT diode transmiter phased array module, delivering 60 mW power at 5.75 GHz, was built. The oscillators in the transmitting modules consist of IMPATT diode sources and serve as injection locked elements in the antenna system. Details of the design and performance of the transmitter and its component parts, all constructed in microstrip, are given. Results for an antenna provided with eight transmitting modules, injection locked to a reference source, show that the measured radiation characteristics are in excellent agreement with those calculated. Loss in antenna gain due to mutual coupling is less than 2.6 db compared to broadside, for scan angles between 30 and 150 deg in the H plane. Author (ESA)

ON THE ACCURACY OF RADIO LOCATION IN MEDIA WITH INDIRECT WAVE PROPAGATION

Emil Sappl Dec. 1980 33 p refs In GERMAN; ENGLISH summary Report will also be announced as translation (ESA-TT-729)

(DFVLR-FB-81-02) Avail: NTIS HC A03/MF A01; DFVLR, Cologne DM 8.10

The elimination of the errors of position determination systems, by appropriate evaluation of the measurements is based on radio frequency range measurements and operating in urban areas. Based on the statistical properties of the errors, the lower limit for the final position error is found which cannot be improved by any evaluation method. This limit is calculated for a system with four reference points at the corners of a square. Author (ESA)

THE ECCENTRICALLY INSULATED CIRCULAR-LOOP ANTENNA AND THE HORIZONTAL CIRCULAR-LOOP ANTENNA NEAR A PLANAR INTERFACE Ph.D. Thesis

Lam Nhat An 1981 205 p

Avail: Univ. Microfilms Order No. 8124280

The analysis for the circular loop antenna in a concentric insulating sphere was extended to the case where the loop is eccentrically located in the sphere. Both the transmitting and receiving antennas were treated using the Debye potentials and the Fourier series expansion method. Parametric studies were used to determine the effect of the electrical size of the loop and sphere, the eccentricity and the electrical properties of the media on the directivity of the antenna. The solution to the problem of an eccentrically insulated antenna was extended to obtain the solution to the problem of a loop antenna near a material interface. Specifically, the radius of the insulating sphere is allowed to increase to infinity while the loop is kept at a constant distance from the surface of the sphere. Dissert. Abstr.

N82-14441 California Univ., Los Angeles.

ANTI-JAM ANALYSIS OF FREQUENCY HOPPING M-ARY FREQUENCY SHIFT KEYING COMMUNICATION SYSTEMS IN HIGH FREQUENCY RAYLEIGH FADING CHANNELS Ph.D. Thesis

Dan Avidor 1981 157 p

Avail: Univ. Microfilms Order No. 8122799

The performance of such systems over High Frequency (HF) sky wave channels, when subjected to intentional jamming, were studied. The channels considered are characterized by Rayleigh fading and additive Gaussian noise. To combat jamming the communication system hops over the total spread spectrum bandwidth, which is many times larger than the instantaneous bandwidth occupied by the MFSK signal. Located within the HF band and using sky wave as the dominant propagation mode, the spread spectrum bandwidth is typically nonuniform, time dependent, and congested by many other users of the electromagnetic spectrum in such an environment. Frequency Hopping (FH) MFSK systems seem to be more practical than direct sequence spectrum spreading techniques. A FH/MFSK system can be easily programmed to use a noncontiguous band, thereby avoiding strong interfering signals (which are usually narrow band signals) of friendly signals that should not be interfered with. Dissert. Abstr.

BROADBAND MONOLITHIC SEZAWA WAVE STORAGE CORRELATORS AND CONVOLVERS Ph.D. Thesis
John Edward Bowers 1981 217 p
Avail: Univ. Microfilms Order No. 8124041

A number of different techniques to obtain wide bandwidth, monolithic SAW devices are compared using a more exact theory than was to obtain the bandwidth insertion loss relationship for interdigital transducers. The optimum approach considered here for obtaining acoustoelectric devices using planar processing is the use of the second order Rayleigh mode, commonly called the Sezawa mode, in ZnO/Si devices. Sezawa wave convolvers with -50 dBm efficiency were constructed and demonstrated in compression experiments. The mechanism causing saturation of the convolution efficiency at high power levels was examined and found to be due to charging up of the diodes in diode convolvers, and surface state charging in Sezawa wave convolvers without diodes. Dissert. Abstr.

PREPARATION, THERMAL PROPERTIES, SOLID SOLUTION FORMATION AND SOME LUMINESCENCE PROPERTIES OF RARE EARTH OXYSULFIDES Ph.D. Thesis
Markku Leskela 1980 39 p refs
(ISBN-951-751-949-4; RP-64) Avail: NTIS HC A03/MF A01

The preparation of rate earth oxysulfides, including their solid solutions, was studied, with particular attention to a method involving reduction of corresponding sulfites in carbon monoxide atmosphere. The thermal stability of the different phase and their oxidation products is noted. A method based on the luminescence lifetime of Eu(3+)luminescence for the determined of the activator concentration in europium activated yttrium oxysulfide is introduced. The effect of host cation solid solution on the intensity and life-time of europium luminescence is discussed. The effects of the host lattice, impurities, activator concentration, and particle size on the luminescene spectra and reviewed for europium activated yttrium oxysulfide, Eu(3+)iY2O2s. S.L.

RELIABILITY STUDY OF OPTO-COUPLED SEMICONDUC-

TOR DEVICES AND LIGHT EMITTING DIODES (LED) Final Technical Report, Oct. 1974 - Oct. 1977
R. C. Maurer, V. A. Weissflug, and E. V. Sisul Oct. 1977 256 p refs
(Contract NAS8-30777)
(NASA-CR-161923) Avail: NTIS HC A12/MF A01 CSCL 09C

Opto-coupler and light emitting diode (LED) failure mechanisms and associated activation energies were determined from the results of environmental and accelerated lift tests of over 2,400 devices. The evaluation program included LED phototransistor opto couplers from three sources, LED photoamplifier opto-couplers from a single source, and discrete infrared emitting LEDs from two sources. Environmental tests to evaluate device mechanical integrity included power cycling (10,000 cycles), temperature cycling (500 cycles) and a sequence of monitored shock, monitored vibration and constant acceleration. Multiple temperature operating life tests were conducted at ambient temperatures between 25 C and 200 C. Opto-couplers were operated in both the 'on' and 'off' states during life testing. Author

INTEGRATED CIRCUITS FOR ACCURATE LINEAR ANALOGUE ELECTRIC SIGNAL PROCESSING Ph.D. Thesis
J. H. Huijsing 1981 229 p refs
Avail: NTIS HC A11/MF A01

The main lines in the design of integrated circuits for accurate analog linear electric signal processing in a frequency range including DC are investigated. A categorization of universal active electronic devices is presented on the basis of the connections of one of the terminals of the input and output ports to the common ground potential. The means for quantifying the attributes of four types of universal active electronic devices are included. The design of integrated operational voltage amplifiers (OVA) is discussed. Several important applications in the field of general instrumentation are numerically evaluated, and the design of operatinal floating amplifiers is presented. S.L.

OPTIMAL VOLTAGE LEVEL CONTROL AND ITS APPLICATION TO LONG RANGE EXTENSION PLANNING IN HIGH VOLTAGE TRANSMISSION NETWORK Ph.D. Thesis
Yrjo Laiho 6 Mar. 1981 136 p refs Sponsored by the Foundation of Technology
(ISBN-951-45-5116-2) Avail: NTIS HC A07/MF A01

The work deals with the basic computer algorithms and their application long range network planning. The full a.c. load flow is calculated for every network state. Estimation for losses in each network state is obtained by performing a voltage level optimization routine. It finds the generator voltages, tap changer position and shunt compensation connections such that the losses are minimized simple method based on direct search was selected due to the significant mount of shut compensation equipment in the Finnish network that make the variables discontinuous. Losses are linearlized and expressed as a function voltage magnitude only. Sensitivity matrix is used to calculated these voltage changes. The inherently great need of computer storage to store this matrix and the long time to prepare it were overcome by assuming that small reactive power changes do not disturb the active power balance. This small approximation causes an error that is smaller than 1% but gives the benefit that the sensitivity matrix can be factorized and stored in a similar way to the Jacobia matrix used in load flow calculation. The optimization method has been proved to be feasible and fast in relatively large networks. It is in daily practical use at a utility. Numerical examples demonstrate the effect of corona losses on the optimal voltage level. Author

(AD-A105064; RADC-TR-81-70) Avail: NTIS HC A03/MF A01 CSCL 09/1

This report presents results on evaluation and development of precision oscillators utilizing a novel quartz frequency control element, the BVA resonator. Performance characteristics of the BVA were evaluated utilizing an ensemble of oscillators all having SC-cut BVA resonators. Important results include the demonstration of low g-sensitivity, reduced sensitivity to thermal stress, and very good frequency stability. The systematic dependence of aging rate on crystal drive level was investigated. A high precision BVA oscillator was delivered to the procuring agency. Throughout the program, technical coordination efforts have involved AFSC, DRET (France) and OSA (SW). Author (GRA)

DISPENSER CATHODE PHYSICS Final Technical Report, 1 Aug. 1979 - 1 Nov. 1980
Michael C. Green Griffiss AFB, N.Y. RADC Jul. 1981 87 p refs
(Contract F30602-79-C-0220; AF Proj. 4506)
(AD-A105126; RADC-TR-81-211) Avail: NTIS HC A05/MF A01 CSCL 09/1

The structure and composition of the emissive layers of activated and stabilize B-type and M-type cathode surfaces at operating temperature were investigated using X-ray photoelectron spectroscopy and high spatial resolution Auger Spectroscopy. The results indicate that the activating layer consists of a monolayer or submonolayer film of barium and oxygen of stoichiometry close to Ba101. The emissive layer was found to be vertically ordered, with barium concentrated in the first monolayer above oxygen. The primary difference observed between the B-type and M-type surfaces was increased coverage of the underlying metal by the barium/oxygen layer in the M-type case. The spectra of the emissive layer, although quite different from those of 'bulk' barium oxide, were consistent with a barium-oxygen bonding interaction. A theoretical model of the bonding of barium and oxygen to each other and to the underlying metal matrix surface was proposed, consistent with the above experimental data and with the published results of other workers in the field. A calculation of the lattice stabilization energy in bulk ionic BaO indicated that the bonding in the emissive layer must be predominantly covalent. In Appendix A, a new user-oriented method of plotting cathode emission test data in the form of Miram-plots of normalized current density against temperature is described. Examples are given of the manner in which such plots clearly delineate changes in cathode performance capability with time and specific cathode failure modes. The cathode physics of a novel failure mode of a high current density cathode involving saturation of pore center emission is described. GRA

LITHIUM-ALUMINUM ALLOY ELECTRODES IN LITHIUM CHLORATE

David H. Shen and Douglas N. Bennion 20 Jan. 1981 21 p refs Submitted for publication Prepared in cooperation with California Univ., Los Angeles
(Contract N00014-80-C-0345; NR Proj. 359-551)
(AD-A105902; TR-2) Avail: NTIS HC A02/MF A01 CSCL 09/1

To prevent lithium dendrite growth during cycling of Li electrodes in molten LiClO3 at 140 C, a Li-Al electrode in cells of the type Li/LiClO3/LiAl has been investigated. Two discharge plateaus, one about 0.42V and the other about 0.20V versus a lithium wire, were obtained. No lithium dendrites were observed. Continued cycling caused the lithium-aluminum electrode to break down to particles or grains. The corrosion of isolated Al grains during operation of a Li-Al electrode was confirmed using atomic absorption spectrophotometer (AA) analysis on a white precipitate formed where the alloy electrode had been. DESIGN, PERFORMANCE AND DEVICE/CIRCUIT LIMITATIONS OF N-WAY SYMMETRICAL IMPATT DIODE POWER COMBINING ARRAYS Interim Technical Report, Jul. 1979 - Feb. 1981

D. F. Peterson and G. I. Haddad Wright-Patterson AFB, Ohio AFWAL Aug. 1981 90 p
(Contract F33615-77-C-1132; AF Proj. 2002)
(AD-A105663; TR-149; AFWAL-TR-81-1107) Avail: NTIS HC A05/MF A01 CSCL 09/5

Circuit design and stability criteria are developed for a new class of IMPATT diode power combiners. These combiners make use of radial-symmetric circuits and provide an optimal integration of device and circuit properties to perform the power adding function. Both lossless N-way combiners and resistively stabilized N-way combiners are considered. Examples of this combining technique are given at frequencies of 10 GHz and 90 GHz which make use of realistic IMPATT diode parameters. The 30-W, ten-diode lossless X-band combiner indicates a 1-dB locking bandwidth of 300 MHz and 10 dB gain, while the millimeter-wave combiner provides a 1-dB bandwidth of 9 GHz at 87 GHz and 10 dB locking gain. A 100-W, resistively stabilized 10 GHz, ten-diode combiner shows a 150 MHz locking bandwidth, also at 10 dB locking gain. Author (GRA)

GENERATION OF ELECTROSTATIC CHARGE IN FUEL HANDLING SYSTEMS: A LITERATURE SURVEY Final Report, 1973 - 1980

J. T. Leonard 24 Sep. 1981 55 p refs
(AD-A106056; NRL-8484) Avail: NTIS HC A04/MF A01 CSCL 05/2

A review is presented on the status of research on the generation and dissipation of electrostatic charge by hydrocarbon liquids and fuels, with emphasis on the period 1973-1980. Both metallic and nonmetallic fuel handling systems are covered, including the special problems encountered in aircraft fuel tanks filled with polyurethane foam. The review stresses recent advances and presents opportunities for future research in some neglected, but nonetheless fundamentals areas affecting the charge generation process. Author (GRA)

PROCEEDINGS OF THE MOLECULAR ELECTRONIC DEVICES WORKSHOP Final Report

Forrest L. Carter, ed. 22 Oct. 1981 399 p refs Proceedings of Conf. held at Washington, D.C., 23-24 Mar. 1981
(Contract N00014-81-WR-10052)
(AD-A105816; NRL-MR-4662) Avail: NTIS HC A17/MF A01 CSCL 09/1

Switching at the molecular level is discussed in several papers. The Bell Laboratories' workers developed the concept of 'smart molecules' where eight bit data processing could be carried out via optical methods. F. L. Carter's discussion of both conformational switching and electron tunnelling at the molecular level envisions either soliton propagation in conjugated linear polymers or metal-like conduction in (SN)x as modes of communication with the switching elements. An experimental example of fast switching in thin films of CuTCNQ is provided. The section on materials and microfabrication includes D. Sandman's (GTE) generalized approach to organic pi-donor-acceptor systems and K. Ulmer's (Genex) speculation on the engineered biological assembly of molecular ultracircuits. The first step toward the biological assembly of an electronic device is discussed in two related papers in which Ag metal was selectively deposited on a polylysine substrate. Two serious problem areas that might be anticipated are considered by D. K. Ferry (quantum effects in arrays of devices) and C. S. Guenzer ('soft' errors). That nature has, of course, numerous practical examples of 'molecular' switching which is evident from, among others, the two stimulating papers of L. L. Shipman (ANL) on the photosynthesis process and from a paper of S. R. Hameroff and R. Watts (U. of Arizona) on microtubules. They developed a micro-computer model of the ubiquitous microtubules that strongly suggests that considerable information processing occurs in the alpha, beta tubulin helical structure. GRA

DEVELOPMENT OF FABRICATION TECHNOLOGY FOR THE PERMEABLE BASE TRANSISTOR Annual Report, 1 Feb. 1980 - 31 Mar. 1981

W. R. Frensley and G. H. Westphal 1 Sep. 1981 33 p
(Contract N00014-80-C-0246)
(AD-A105532) Avail: NTIS HC A03/MF A01 CSCL 09/1

Efforts during the first year of this contract have concentrated on the development of the key processes required for fabrication of the permeable base transistor: sub-micrometer lithography and epitaxial overgrowth. Electron beam lithography was used, with a dry-process resist and ion milling, to produce 0.25 micrometer lines. The arsenic trichloride epitaxial process was used to embed metal structures in a single crystal of gallium arsenide. High-resolution electron microscopy revealed that the epitaxial overgrowth was imperfect, leaving voids in the single crystal which are often too small to be resolved using conventional electron microscopy. GRA

THE TRANSVERSE RF ACCELERATOR Final Technical Report, 15 Aug. 1980. - 15 Feb. 1981

Nino R. Pereira 11 Sep. 1981 93 p refs
(Contract N00014-80-C-0902; DARPA Order 3747)
(AD-A105896; WRC-R-308) Avail: NTIS HC A05/MF A01 CSCL 20/7

High electric fields are obviously advantageous in powerful electron accelerators: for a given energy gain per particle, the device length is inversely proportional to the maximum field; and the maximum current is roughly proportional to the field. The transverse RF accelerator provides a high field strength by using an accelerator cavity analogous to an optical resonator: the focussing of electromagnetic energy produces large fields along the cavity axis for manageable fields at the wall. In addition, it is possible to have the fields largely transverse, permitting very high accelerating gradients. This report discusses two basic topics: the field structure as related to the acceleration mechanism, and limitation on the electric field strength. GRA

CHARACTERIZATION AND COMPARISON OF THERMISTOR THICK FILMS

R. W. Gehman Sep. 1981 56 p refs
(Contract DE-AC04-76DP-00613)
(DE82-000831; BDX-613--2683) Avail: NTIS HC A04/MF A01

Four film inks were evaluated for HMC production use. The physical, chemical and electrical properties of the wet inks and fired films were measured. Variations in the physical and chemical properties of the inks were used to explain variations in thermistor electrical resistance and temperature coefficient of resistance. DOE

N82-14460# Oak Ridge National Lab., Tenn.

PERFORMANCE OF AN INTERNALLY COOLED SUPERCONDUCTING SOLENOID

J. W. Lue and J. R. Miller 1981 8 p refs Presented at the 1981 Cryogenic Eng. Conf., San Diego, Calif., 10 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028058; CONF-810835-13) Avail: NTIS HC A02/MF A01

A superconducting magnet constructed of an internally cooled solenoid was produced and tested. Particular emphasis was placed on measurement of the stability margins of the magnet. Test results showed that: (1) this magnet reached short sample critical current limit with no training; (2) no degradation due to strand motion in fields was apparent; (3) it can be charged and discharged to high current densities and high fields at a fast rate; (4) it has reasonable stability margin up to 90% of the critical current; (5) stability measurements verify the scaling relationship for a limiting current below which there is single valued high stability margin; (6) it is not really necessary to have bulk helium flow to ensure high stability; and (7) very high pulse field changes can be accomodated as long as the energy deposition is within its stability margin. DOE

CRYOGENIC TESTS OF GLASS-EPOXY BASED ELECTRICAL INSULATION

J. D. Taylor, P. S. Martin (Fermi National Accelerator Lab., Batavia, Ill.), M. Pripstein, and M. A. Green Aug. 1981 10 p refs Presented at the 1981 Cryogenic Eng. Conf., San Diego, Calif., 10 Aug. 1981
(Contract W-7405-eng-48)
(DE81-028144; LBL-12782; CONF-810835-11) Avail: NTIS HC A02/MF A01

A thin superconducting solenoid for the Time Projection Chamber (TPC) experiment was constructed and tested. A failure of the ground plane insulation damaged the coil to the point that it required rebuilding. An extensive study of this failure indicated that an iron chip embedded in the bore tube had penetrated the insulation. Before rebuilding the coil, an investigation of the insulation system was done with the goal of determining the most reliable techniques and materials for withstanding high voltages in the coil package. The experience with the TPC coil and its prototypes indicate that glass cloth vacuum-impregnated with epoxy is an excellent material for cryogenic applications from the mechanical standpoint. The investigation concentrated on different types of glass cloth and on composites containing glass cloth. DOE

EDDY-CURRENT PHASOGRAPHY

H. D. Collins, T. J. Davis, L. J. Busse, and R. P. Gribble 1981 19 p refs Presented at the 13th Symp. on Nondestructive Evaluation, San Antonio, 21 Apr. 1981
(Contract DE-AC06-76RL-01830)
(DE81-024242; PNL-SA-9499; CONF-810470-2) Avail: NTIS HC A02/MF A01

Phasography shows excellent potential for high resolution imaging of flaws using eddy current data. The process is an eddy current equivalent to acoustic holography. Phase multiplication of the detected coherent signal is used to simulate a test wavelength one to two orders of magnitude smaller than the actual wavelength, permitting the use of image reconstruction techniques. Since this process is performed on the detected data, the eddy current penetration depth remains unchanged. It is also possible to apply this phase multiplication technique to low frequency acoustic holography, resulting in a test which combines excellent penetration of difficult materials with high resolution images. Preliminary experimental results graphically illustrate this unique imaging technique. Eddy current phasograms and their reconstructed images of small internal simulated defects in 1 mm thick stainless steel plates are presented. DOE

ELECTRONIC IMAGE ANALYSIS Final Report

Josef Gahm, Rudolf Grosskopf, Hubert Jaeger, and Franz Trautwein Bonn Bundesministerium fuer Forschung und Technologie Dec. 1980 50 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-80-126; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsrhue, West Germany DM 10,50

An electronic system for image analysis was developed on the basis of low and medium cost integrated circuits. The printed circuit boards were designed, using the principles of modern digital electronics and data processing. The system consists of modules for automatic, semiautomatic and visual image analysis. They can be used for microscopical and macroscopical observations. Photographs can be evaluated, too. The automatic version is controlled by software modules adapted to various applications. The result is a system for image analysis suitable for many different measurement problems. The features contained in large image areas can be measured. For automatic routine analysis controlled by processing calculators the necessary software and hardware modules are available. MOS FIELD EFFECT TRANSISTORS FOR UHF APPLICA-

TIONS Final Report
Wilfried Quast and Winfried-Johann Rabe Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 111 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-030; ISSN-0340-7608) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 23,30

Three different techniques for the fabrication of UHF MOSFET's were developed and their suitability as a production process was examined. The source and drain regions were realized by phosphorus ion implantation followed by selective oxidation, by diffusion from P and As doped oxides (PDO), and by a double lateral diffusion process. In order to characterize the fabricated MOSFET tetrodes, S parameters at high frequencies (800 MHZ) were measured. The best results were obtained with elements which were manufactured using the PDO technique. A one-dimensional small signal MOS model was derived which is able to describe the static characteristics of short channel MOS transistors. Author (ESA)

DEVELOPMENT OF A DUAL MODE SATELLITE TRAVELING WAVE TUBE 11GHz, 12W/6W Final Report, Jul. 1979
Lieter Deml Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 94 p refs Partly in GERMAN and ENGLISH Sponsored by Bundesministarium fuer Forschung und Technologie
(BMFT-FB-W-81-001; ISSN-0170-1339) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 19,80

A high power 11GHz dual mode traveling wave tube (TWT) was developed for use in communication satellites. The tube is based on the technology of previous space-qualified tubes (TL12006, TL12022, and TL12025). The tube operates at 12 or 6W, seperated by 3dB, without a dramatic efficiency loss in the low power mode. Gain, efficiency and nonlinear distortion criteria are all met, by channel tuning the tube within the operating band (from 10.9 to 11.8 GHz). The channel bandwidth is 100MHz. Author (ESA)

LOW POWER HYBRID CIRCUITS FOR SATELLITE-BORNE TIME OF FLIGHT SPECTROMETERS Final Report, Oct. 1980
Berend Wilken and Werner Weiss Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 32 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-W-81-013; MPAE-T-74-80-25; ISSN-0170-1339) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 6,70

A charge sensitive amplifier and an input discriminator for a time amplitude converter were developed for time of flight spectrometers, and tested as thin film hybrids. Time of flight spectrometers are very important tools for analyzing the ion composition of planetary and interplanetary magnetized plasma populations. The particle mass is obtained from simultaneous measurements of the particle energy and velocity. Application of this technique in satellite instruments requires low mass and low power circuits. The amplifier weighs 1.9 g and has a power consumption of 6.8 mW. The hybrid weighs 2.9 g with 100 mW power. The time walk is smaller than 200 psec over a dynamic range of more than 30. Author (ESA)

OPTIMUM DESIGN OF WIDE-BANDWIDTH, LOW-NOISE PHOTODIODE AMPLIFIERS. VOLUME 1: BANDWIDTH
D. K. Hamilton 1981 14 p refs
(OUEL-1363/81-Vol-1) Avail: NTIS HC A02/MF A01

A circuit with video applications was tested. A reversed biased junction is a parallel combination of resistance and capacitance, which varies with the applied reverse voltage. The complete equivalent circuit model includes these components in parallel with a current generator. For optimum response at high frequency critical damping is necessary. The circuit allows the use of an amplifier with a wider open loop bandwidth than one compensated for unity gain, with a corresponding increase in system bandwidth. Author (ESA)

EVALUATION OF FRENCH HYBRID MICROELECTRONICS [EVALUATION DE LA MICROELECTRONIQUE HYBRIDE FRANCAISE]
Marc Billot Oct. 1980 15 p In FRENCH; ENGLISH summary
(CNES-NT-97) Avail: NTIS HC A02/MF A01

Thin and/or thick film technology of French manufacturers of hybrid circuits is assessed. Hybrid devices were subjected to mechanical and environmental life tests, and failure analysis was performed. Results show that both thick and thin deposition layers have good stability characteristics. The only significant difference is that thin films age better than thick films over the long-term at high temperature. Reproducibility of results for active components in the form of chips is poor when tested before they are incorporated into hybrid circuits. The principal cause of failure is identified as faulty interconnections for thick film active components. Author (ESA)

MODELING THE INFLUENCE OF STATIC ACCELERATION ON SURFACE WAVE (QUARTZ) OSCILLATORS Ph.D. Thesis - Paris Univ.
Patrick Levesque 1981 96 p refs In FRENCH; ENGLISH summary Report will also be announced as translation (ESA-TT-726)
(ONERA-NT-1981-3; ISSN-0078-3781) Avail: NTIS HC A05/MF A01

The application of a static acceleration on a quartz oscillator, working in elastic surface wave mode, was modeled. Modification of the wave propagation speed through the substrate and its frequency are studied. The frequency shift depends on the nature of the substrate through which the wave is propagated, but also on its dimensions and its mode of attachment. The relationship between the stresses arising in the substrate during the acceleration and the sensitivity to this acceleration of surface wave devices are shown. Author (ESA)

EXPERIMENTAL INVESTIGATION OF THE INFLUENCE OF THE CASING GEOMETRY UPON THE FLOW CONDITIONS AND THE NOISE OF A CENTRIFUGAL FAN Ph.D. Thesis
Teofani Gikadi 1981 136 p refs In GERMAN Prepared in

cooperation with DFVLR, Berlin
(DFVLR-FB-81-20) Avail: NTIS HC A07/MF A01

Beginning with a casingless impeller with six backward curved blades, the influence of a small logarithmic volute casing with a cutoff clearance of delta/R = 0.014 (R = impeller radius) upon the flow through the rotating impeller ducts is studied. There was a blockage of the flow in each impeller duct when passing the cutoff, due to the small cutoff clearance. An optimization of the casing geometry regarding low noise and high fan efficiency leads to a logarithmic spiral with a large cutoff clearance of detla/R = 0.3. The noise is reduced by 22 dB (A) without loss in fan efficiency. S.L.

COMPARISON OF THIN-FILM RESISTANCE HEAT-TRANSFER GAGES WITH THIN-SKIN TRANSIENT CALORIMETER GAGES IN CONVENTIONAL HYPERSONIC WIND TUNNELS
Charles G. Miller, III Dec. 1981 93 p refs
(NASA-TM-83197; L-14627) Avail: NTIS HC A05/MF A01 CSCL 20D

Thin film gages deposited at the stagnation region of small (8.1-mm-diameter) hemispheres and gages mounted flush with the surface of a sharp-leading-edge flat plate were tested in the Langley continuous-flow hypersonic tunnel and in the Langley hypersonic CF4 tunnel. Two substrate materials were tested, quartz and a machinable glass-ceramic. Small hemispheres were also tested utilizing the thin-skin transient calorimeter technique usually employed in conventional tunnels. One transient calorimeter model was a thin shell of stainless steel, and the other was a thin-skin insert of stainless steel mounted into a hemisphere fabricated from a machinable-glass-ceramic. Measured heat-transfer rates from the various hemispheres were compared with one another and with predicted rates. The results demonstrate the feasibility and advantages of using-film resistance heat-transfer gages in conventional hypersonic wind tunnels over a wide range of conditions. A.R.H.

NUMERICAL STABILITY OF AN EXPLICIT FINITE DIFFERENCE SCHEME FOR THE SOLUTION OF TRANSIENT CONDUCTION IN COMPOSITE MEDIA
Warren Campbell Nov. 1981 29 p refs
(NASA-TM-82453) Avail: NTIS HC A03/MF A01 CSCL 20D

A theoretical evaluation of the stability of an explicit finite difference solution of the transient temperature field in a composite medium is presented. The grid points of the field are assumed uniformly spaced, and media interfaces are either vertical or horizontal and pass through grid points. In addition, perfect contact between different media (infinite interfacial conductance) is assumed. A finite difference form of the conduction equation is not valid at media interfaces; therefore, heat balance forms are derived. These equations were subjected to stability analysis, and a computer graphics code was developed that permitted determination of a maximum time step for a given grid spacing. Author

SHOCK FRONT RISE TIME IN WATER Program Status Report
Paul Harris and Henri-Noel Presles (Univ. of Poitiers, France) Oct. 1981 30 p refs
(DA Proj. 1L1-61101-A-91A)
(AD-A105704; AD-E400719; ARLCD-TR-81032) Avail: NTIS HC A03/MF A01 CSCL 20/11

A review is made of the present status of the experimental-theoretical program for the evaluation of the shock front thickness in water, and the results of recently performed hyperbolic tangent shock front structure calculations are presented. The hyperbolic tangent results, when compared with experimental data, predict a shock front thickness upper limit of 6.2 X 10 to the minus 6th power cm at 5.8 kbar. Experiments and theory planned for the near future are outlined. These experiments will involve shock front optical reflectivity and shock polarization voltage measurements. Some preliminary theory corresponding to these planned experiments is presented. In particular, a net electric dipole alignment calculation is presented which predicts approximately 5 mv across a 50-ohm load at 15 kbars. The anomalously large Soviet shock viscosity results are considered (without resolution of the question), and the possibility of significant hydrogen bond breaking at shock pressures above 5.8 kbars is discussed. GRA

HC A03/MF A01 CSCL 20/4

Two principal approaches used in the numerical study of unsteady inviscid compressible flow problems -- shock-fitting and shock-capturing -- are discussed briefly. This paper presents a new example of the latter approach. The proposed method is monotonic and provides second-order accuracy in regions where the concept of order is meaningful. The method is simple and fast running. The monotonicity of a standard finite difference scheme (the well-known MacCormack scheme was chosen in the paper) is achieved by means of a local conservative smoothing operation. It eliminated nonphysical ripples, which usually appear near discontinuities when nonmonotonic schemes are used. The method is similar to one developed by Boris and Book and gives essentially the same results, but is much simpler and faster. The proposed method is compared to some other finite difference schemes. Two one dimensional tests are used: a linear convection equation and a shock tube problem. Finally, the example of nonsteady three-dimensional scattering of a shock wave by a step obstacle of finite width is discussed. GRA

COMPARISON OF VISCOUS AND PRESSURE ENERGY EXCHANGE IN FLUID FLOW INDUCTION M.S. Thesis
Harry Joseph Rucker, Jr. Jun. 1981 72 p refs
(AD-A105808) Avail: NTIS HC A04/MF A01 CSCL 20/4

The pumping power and efficiency of a jet pump can be substantially increased by introducing a rotating primary flow. The rotating primary causes an energy transfer from the primary fluid to the secondary fluid through a pressure force. Non-rotating jet pumps transfer energy through viscous friction. The reversible nature of the work accomplished through a pressure exchange is inherently more efficient than the nonreversible work accomplished through viscous interaction. This study focuses on the interaction zone of the inducer and specifically on an experimental comparison of viscous and pressure energy exchange. GRA

HC A04/MF A01 CSCL 20/4

This report describes an investigation of compressible fluids for use in artillery recoil mechanisms. An examination of chemical theory revealed the ideal properties which a compressible fluid should possess. More than 20 sample fluids were evaluated in a series of hydrostatic and miscibility tests. Results indicate that perfluorinated compounds exhibit better qualities for artillery applications than the silicone oil currently in use. GRA

COOL-DOWN FLOW-RATE LIMITS IMPOSED BY THERMAL STRESSES IN LNG PIPELINES
J. K. Novak, F. J. Edeskuty, and J. R. Bartlit 1981 8 p refs
Presented at the Cryogenic Eng. Conf., San Diego, Calif., 10-14 Aug. 1981
(Contract W-7405-eng-36)
(DE81-028731; LA-UR-81-2365; CONF-810835-4) Avail: NTIS HC A02/MF A01

Warm cryogenic pipelines are usually cooled to operating temperature by a small, steady flow of the liquid cryogen. If this flow rate is too high or too low, undesirable stresses will be produced. Low flow-rate limits based on avoidance of stratified two-phase flow were calculated for pipelines cooled with liquid hydrogen or nitrogen. High flow-rate limits for stainless steel and aluminum pipelines cooled by liquid hydrogen or nitrogen were determined by calculating thermal stress in thick components vs flow rate and then selecting some reasonable stress limits. The present work extends these calculations to pipelines made of AISI 304 stainless steel, 6061 aluminum, or ASTM A420 9% nickel steel cooled by liquid methane or a typical natural gas. Results indicate that aluminum and 9% nickel steel components can tolerate very high cool-down flow rates, based on not exceeding the material yield strength. DOE

EFFECTS OF SUSPENDED PARTICLES ON THE RATE OF MASS TRANSFER TO A ROTATING DISK ELECTRODE M.S. Thesis
David Jeffries Roha Jun. 1981 310 p refs
(Contract W-7405-eng-26)
(DE81-028002; LBL-12737) Avail: NTIS HC A14/MF A01

Limiting currents for the reduction of ferric cyanide at a rotating disk were determined in the presence of 0 to 40 percent by volume of spherical glass beads. Experiments were conducted with six different particle diameters, and with rotation speeds in the range of 387 to 270 rpm, using both a 0.56 cm and a 1.41 cm radius disk electrode. Two mass transfer models, both of which assume that the beads are in contact with the disk electrode and moving parallel to its surface, are offered. In the surface renewal model it is assumed that complete mixing takes place with the passage of each bead and the boundary layer is replaced with fresh bulk solution. While with the particle film model it is assumed the bead and a clinging film of fluid rotate together. The film promotes mass transfer by alternately absorbing and desorbing the diffusion species. The particle film model best explains the observed behavior of the limiting current density. DOE

GENERALIZED ALGEBRAIC RELATION FOR PREDICTING DEVELOPING CURVED CHANNEL FLOW WITH A k-EPSILON MODEL OF TURBULENCE
Joseph A. C. Humphrey and Farzad Pourahmadi Jun. 1981 16 p refs Presented at 3rd Symp. on Turbulent Shear Flow, Davis, Calif., 9-11 Sep. 1981
(Contract W-7405-eng-48)
(DE81-028131; LBL-12009-Rev) Avail: NTIS
HC A02/MF A01

Using algebraic approximations for the Reynolds stress equations a general expression was derived which accounts simultaneously for the effects of streamline curvature and pressure strain in the flow, including wall induced influences on the velocity fluctuations. The expression derived can be shown to encompass similar but more specific formulations proposed by Bradshaw, Rodi, and Leschziner and Rodi. The present formulation was used in conjunction with a k-e model of turbulence to predict developing, two dimensional, curved channel flows where both curvature and pressure strain effects can be large. Minor modifications to include the influence of curvature on the length scale of the flow near the walls produce a significant improvement in the calculations. While, in general, predictions, are in good agreement with experimental measurements of mildly and strongly curved flows, the model tends to overpredict the kinetic energy of turbulence in the inner radius (convex) wall region. THE TEMPERATURE STRUCTURE OF A TURBULENT

VORTEX RING [DIE WAERMESTRUKTUR EINES TURBULENTEN RINGWIRBELS]
Peter E. M. Schneider Mar. 1980 35 p refs In GERMAN (MPIS-4/1980; ISSN-0436-1199) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 10,05

Temperature profiles in turbulent vortex rings were experimentally investigated. A test arrangement was used that produces vortices which are visualized by coloring and Schlieren-photography. Temperature profiles were obtained by a hot-film anemometer. Turbulent vortex rings are structures with individual temperature profiles whose temperature is everywhere higher than that of the surrounding medium in test. Temperature measurements show that secondary vortices consist of core material, material from the transition region between vortex core and envelope, and material from the envelope.

TRANSFORMATION AND REFLECTION OF VORTEX RINGS IMPINGING ON A PLATE INCLINED WITH RESPECT TO THEIR TRANSLATION DIRECTION [UMBILDUNG UND REFLEXION EINES RINGWIRBELS AN EINER PLATTE, DIE SCHRAEG ZU SEINER TRANSLATIONSRICHTUNG ORIENTIERT IST]
Peter E. M. Schneider Jul. 1980 101 p refs In GERMAN (MPIS-12/1980; ISSN-0436-1199) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 22,05

Reflection processes in turbulent boundary layers were investigated by examining the reflection angle of a vortex ring. The tests were conducted in a vortex generating setup. The vortices were colored and photographed. The primary vortex transforms into an oscillating vortex ring, while secondary vortices develop in its envelope. Reverse flow vortex rings, helix and double-helix vortices develop in its core. The reflection angle at which this new vortex leaves the plate is independent of the distance between the plate and the test stand inlet nozzle where the vortex ring is formed, the flow stability condition (laminar, ondulated, turbulent) of the vortex ring when it arrives at the plate, and the vortex ring translation velocity. EXPERIMENTAL INVESTIGATION OF INSTABILITY PHASES OF A LAMINAR VORTEX RING, IN LIGHT OF COMPARABLE INSTABILITY EVENTS IN TURBULENT SHEAR LAYER, BOUNDARY LAYER, AND CHANNEL FLOWS [EXPERIMENTELLE UNTERSUCHUNG DER INSTABILITAETSPHASEN EINES LAMINAREN RINGWIRBELS MIT HINBLICK AUF VERGLEICHBARE INSTABILITAETSEREIGNISSE IN TURBULENTEN SCHERSCHICHT-, GRENZSCHICHT- UND KANALSTROEMUNGEN]
Peter E. M. Schneider Oct. 1980 99 p refs In GERMAN (MPIS-17/1980; ISSN-0436-1199) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 27,30

The laminar flow in a vortex is primarily determined by the toroidal laminar vortex core, the ondulatory flow by the ondulated laminar core, and the turbulent flow by the turbulent oscillating core. Inside these three global vortex flows, locally or globally unstable secondary vortices, and helix and double-helix flows are formed. A turbulence model was established in which turbulent flows consist of a complex organized vortex hierarchy and develop from an invarying degree, rhythmic sequence of unstable, laminar vortices as a result of an evolutional process. EXPERIMENTAL INVESTIGATION OF THE FLOW IN A ROTATING CIRCULAR CHANNEL Thesis [EXPERIMENTELLE UNTERSUCHUNG UEBER EINE STROEMUNG IN EINEM ROTIERENDEN RINGKANAL]
Johannes Kuehl Nov. 1980 101 p refs In GERMAN (MPIS-21/1980; ISSN-0436-1199) Avail: NTIS HC A06/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 20,85

Mixing devices were studied using flow in a rotating cylindrical annulus with rectangular cross section, in which the medium has a free surface directed towards the rotation axis. The flow is considered as quasi-stationary. The flow is controlled by the equilibrium between pressure gradient and Coriolis force. There exists a frictionless central flow with mainly azimuthal velocity, two Ekman boundary layers perpendicular to the axis, and a boundary outer layer which becomes unstable at higher speeds. In the experiment, the flow was visualized in a stroboscopically illuminated rotating plexiglass channel by coloring. The approximate calculations were checked by means of velocity measurements. The expected Taylor-Gortler vortex was observed.

APPLICATIONS OF THE MICROSCAN 9 MICROANALYSER
P. D. Pitcher Jan. 1981 19 p
(RAE-TM-MAT-358; BR77779) Copyright. Avail: Issuing Activity

A computer controlled electron probe microanalyzer used to obtain data on the chemical composition of areas down to 1 micron, is assessed. The X-rays generated by an electron beam incident on a specimen are analyzed by detection and counting, using energy dispersive and wavelength dispersive techniques. Qualitative, or quantitative analyses can be done of segregation, diffusion of particular elements, inclusion identification, contamination, etc. Results are obtained as uncorrected concentrations, Bragg angle, backgrounds and standard deviations. A PRELIMINARY DESIGN OF THE CRYOGENIC SYSTEM FOR THE COOLED LIMB SCANNING INTERFEROMETER RADIOMETER (CLIR), PHASE 3 Final Report
L. G. Naes, R. T. Parmley, and T. C. Nast [1981] 82 p refs (Contract NAS5-26042)
(NASA-CR-166722; LMSC-D767447; TP-5848) HC A05/MF A01 CSCL 14B

The performance of the cryogenic cooling system for the limb scanning interferometer radiometer (CLIR) instrument which was proposed to be flown on the Atmospheric-Magnetospheric Physics Satellite is discussed. The use of both normal boiling point liquid helium or hydrogen is considered. In determining the performance of the two cooler configurations, a nominal aperture heat of 4.33 watts was used, which is half the value used in previous studies. The reduced aperture heat load reflects that benefits achieved by using an improved baffle configuration. The ground support equipment necessary to support the CLIR cooler in either the liquid helium or solid hydrogen mode was determined. A parts list was generated for both the ground support equipment and the cooler system. R.J.F.

SILICON DEW-POINT SENSOR FOR ACCURATE HUMIDITY MEASUREMENT SYSTEMS Ph.D. Thesis
Paulus Petrus Leonardus Restien Delf Univ. Press 10 Jun. 1981 157 p refs In ENGLISH; DUTCH abstract
Avail: NTIS HC A08/MF A01

The design and properties of an electronic humidity measuring system for the determination of the water-vapor content in air or other gases are described. The system is based on an integrated silicon dew-point sensor. After a discussion of the increasing scope of hygrometry in a variety of application fields in science, engineering and production, a review is given of humidity measuring methods. The most promising measuring method appears to be the determination of the dew-point temperature. It is shown that the integrated circuit technology can be applied successfully for the realization of accurate dew-point sensors. Three types of integrated dew-point sensors made with a standard IC-process or compatible technology are described. Based on an error analysis, a continuously operating dew-point hygrometer system was designed. This system consist of, beside the designed integrated sensor, a special control system for thermoelectrically controlled cooling, and data processing unit for selected presentation of the most important humidity quantities. AN EXPERIMENTAL INVESTIGATION INTO THE FEASIBILITY OF A THERMOELECTRIC HEAT FLUX GAGE
Jan C. Jones (Tri State Univ.) and G. James VanFossen, Jr. Dec. 1981 17 p refs
(NASA-TM-82755; E-1071) Avail: NTIS HC A02/MF A01 CSCL 14B

An experiment was conducted to determine the feasibility of using a commerically available thermoelectric device as a heat flux gage. In certain research applications, the thermoelectric heat flux gage can provide a relatively simple means to model a warm fluid--cold wall. The experiment showed that heat flux through the gage could be correlated within two percent to the applied thermoelectric current through the device and the hot and cold side temperature with a simple algebraic equation. PERFORMANCE OF A LARGE HYPERPURE GERMANIUM DETECTOR ARRAY FOR IN-VIVO DETECTION OF LOW-ENERGY PHOTON AND X-RAY EMITTERS: ANALYTICAL PROCEDURE AND CURRENT CAPABILITIES
C. D. Berger and B. H. Lane Oct. 1981 23 p refs
(Contract W-7405-eng-26)
(DE82-000443; ORNL/TM-7925) Avail: NTIS HC A02/MF A01

The ORNL whole body counter is one of the few in the country that is capable of assessment of body burdens of low-energy photon and X-ray emitters. This requires detectors and electronics specific for the task. Isotope identification and quantification capabilities are crucial at the facilities which deal with quantities of many radionuclides. Isotope identification and quantification capabilities for detection of the actinides using the HPGe array are greatly improved over the phoswich system, making the HPGe detector an integral part of lung counting operations at ORNL. The current analysis techniques are discussed, examples of MSMA and MDTA for various isotopes are given, and the derivation of a universal calibration curve for preliminary estimation of body burden is discussed using data acquired by the HPGe array. AUTOMATED TRANSPORTABLE MASS SPECTROMETER
M. W. Echo Sep. 1981 45 p refs
(Contract DE-AC07-79ID-01675)
(DE82-000903; ENICO-1096) Avail: NTIS HC A03/MF A01

The need was identified for a mass spectrometer (MS) which can be conveniently transported among several facilities for rapid verification of the isotopic composition of special nuclear material. This requirement for a light weight, transportable MS for U and Pu mass analysis was met by deleting the gas chromograph (GC) portions of a Hewlett-Packard Model 5992 Quadrupole GCMS and substituting a vacuum lock sample entry system. A programmable power supply and vacuum gauge were added and circuitry modifications were made to enable use of the supplied software. DOE

PROCEDURES FOR THE CALCULATION OF THE SEPARATIVE PERFORMANCE OF A COUNTERCURRENT GAS CENTRIFUGE
Edward VonHalle Jul. 1981 71 p refs Presented at the 4th Workshop on Gases in Strong Rotation, Oxford, 24-27 Aug. 1981
(Contract W-7405-eng-26)
(DE81-025448; K/OA-5013; CONF-810845-1) Avail: NTIS HC A04/MF A01

The approximations used in the development of the standard Onsager-Cohen gradient equation produce results which depart from the more detailed solutions presented in one direction in the enriching section and in the other direction in the stripping section and the errors therefore tend to cancel for the machine as a whole. It follows that for a centrifuge in which most of the bowl is used as an enriching section or as a stripping section this cancellation would not occur and some appreciable error would result from the use of the standard Onsager-Cohen gradient equation. A modified Onsager-Cohen gradient equation is therefore recommended in preference to the standard Onsager-Cohen gradient equation. It is shown in the results of calculations that indeed very little effect is observed by neglecting the term in the gradient equation containing the second derivative of the concentration. DOE

COMPUTER MODELING OF PIEZORESISTIVE GAUGES
G. L. Nutt and J. O. Hallquist 7 Aug. 1981 12 p refs Presented at the 1st Symp. on Gauges and Piezoresistive Mater., Archachon, Frances, 29 Sep. - 1 Oct. 1981 Submitted for publication
(Contract W-7405-eng-48)
(DE81-027964; UCRL-85763; CONF-810931-2) Avail: NTIS HC A02/MF A01

A computer model of piezoresistive gauge subject to shock loading is developed. The time-dependent two-dimensional response of the gauge is calculated. The stress and strain components of the gauge are determined assuming elastic-plastic material properties. The model is compared with experiment for four cases. An ytterbium foil gauge in a PPMA medium subjected to a 0.5 Gp plane shock wave, where the gauge is presented to the shock with its flat surface both parallel and perpendicular to the front. A similar comparison is made for a manganin foil subjected to a 2.7 Gp shock. The signals are compared also with a calibration equation derived with the gauge and medium properties accounted for but with the assumption that the gauge is in stress equilibrium with the shock medium. DOE

AUTOMATIC BALANCING SYSTEM WITH LASER UNIT Final Report

Alfred Giers Bonn Bundesministerium fuer Forschung und Technologie Jan. 1981 28 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FB-T-81-008; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 5,90

A balancing plant for miniature rotor gyroscopes was developed, using a pulsed laser for material removal in order to perform the necessary measurements and balancing processes in one single operation. The plant, consisting of five units, is depicted and illustrated by graphs and photographs. The tests were intended to check the machine, to get experimental data, and to investigate the possibilities of this technology. As compared to conventional procedures, this automatic balancing process with laser compensation is rationalized, is faster, is cheaper, and provides a higher balancing quality. The test results confirm the system reliability as well as the process advantages. Author (ESA)

PMP 80 AUTOMATIC PHOTOMETER Final Report, Sep. 1979

Goetz-Reinhard Lampe Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 32 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie

(BMFT-FB-T-81-051; ISSN-0340-7608) Avail: NTIS HC A03/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 6,70

Personnel and apparatus cost reduction as well as guaranteeing and improving the quality of the results are emphasized. This photometer permits interlaced measurement of the enzyme kinetics of several samples over a fairly long period of time and at a high sample rate. It also allows determination of substrate concentrations by end point measurements. In enzyme activity determinations, an aliquot volume of serum is added to the appropriate substrate and transferred to a transport chain with plastic cells. The samples are accurately thermostatically controlled in a contact thermostat. After the addition of the inducing reagent the samples are mixed. The sample chain is then fed to a microprocessor-controlled photometer which, after carrying out regression calculations, documents the activities plus errors on an integrated printer. Author (ESA)

THE UCSB FREE ELECTRON LASER EXPERIMENTAL PROGRAM

Luis R. Elias 1980 11 p refs

(AD-A106084; QIFEL-005/80) Avail: NTIS

HC A02/MF A01 CSCL 20/5

The main goal in this paper is threefold: (1) to present a summary of the UCSB experimental FEL program to date, (2) to discuss future FIL device development objectives, and (3) to talk briefly about the future of applied research at UCSB. Electrostatic accelerators appear to offer great promise for generating the electron beams needed by free electron lasers. Their conventional technology is well understood and there are good reasons to believe that this technology can be used with free electron lasers. The UCSB level experimental program is based on the use of electrostatic accelerators in conjunction with the ideas developed by Elias and Madey. GRA

A PROBABLE BREAKDOWN MECHANISM IN THE ELECTRON BEAM SUSTAINED CO2 LASER M.S. Thesis

Rodney Deayne Timm Jun. 1981 33 p refs
(AD-A105809) Avail: NTIS HC A03/MF A01 CSCL 20/5

A stable high-pressure electric discharge is produced using an electron-beam to ionize the gas in the CO2 -N2 -He laser. The important electron loss process in this type of discharge are recombination and attachment. The prominent instability in the nonself-sustaining discharge is the streamer which leads to arcing and complete breakdown of the gas. A qualitative analysis of streamer formation based on the ionization and resultant electron production of secondary electrons setup an avalanche starting the chain which produces a highly conductive channel and results in the complete breakdown of the gas is presented. The onset of streamer formation at the anode is aided by local release and ionization of neutral atoms. The resulting increase of the plasma pressure leads to an increase of the potential and the onset of unipolar arcing. Author (GRA)

ANGLE OF ARRIVAL AND IRRADIANCE STATISTICS OF LASER BEAMS IN TURBULENCE

L. Bissonnette and R. Cote Jul. 1981 45 p refs In ENGLISH; FRENCH summary
(AD-A105639; DREV-R-4213/81) Avail: NTIS HC A03/MF A01 CSCL 20/5

Measurement of the local angle of arrival in a laser beam traveling in turbulence is achieved by frequency demodulating the heterodyne signal derived from the interference of a probe and a reference beam. The resulting data are then used to demonstrate that the statistical correlation between the angle of arrival and the irradiance is weak and that the random angle of arrival is normally distributed. These results constitute a direct confirmation of two fundamental assumptions of the theoretical model of propagation in turbulence previously developed at the Defence Research Establishment Valcartier (DREV). LASER COOLING AND TRAPPING OF NEUTRAL ATOMS Summary Report, 1 Oct. 1980 - 30 Sep. 1981

William D. Phillips Sep. 1981 5 p refs
(Contract N00014-81-F-0011; RR0110303; NR Proj. 407-007)
(AD-A105750) Avail: NTIS HC A02/MF A01 CSCL 20/5

This report demonstrated the deceleration of an atomic sodium beam by means of photon pressure. Near resonant light from a counter-propagating (cooling) laser beam is absorbed by the atoms, causing them to slow down. The deceleration is observed by means of Doppler velocity analysis using a second (probe) laser. We modulate the cooling laser on and off while using time resolved observation of the fluorescence induced by the second laser; this allows observation of the effects of the cooling laser when the cooling laser light is not present. We have used circularly polarized light and a strong magnetic field in the direction of the cooling laser to avoid optical pumping of the atoms, a process which limits the amount of momentum which can be transferred to the atoms. LASER-INDUCED-FLUORESCENCE STUDIES OF FRAGMENT IONS: CH( ) AND CD( ) Ph.D. Thesis

Anthony OKeefe Aug. 1981 114 p refs
(Contract W-7405-eng-48)
(DE82-001010; LBL-13258) Avail: NTIS HC A06/MF A01

The dynamics of ion molecular interactions within a mass selective rf quadrupole ion trap were studied for several ion molecule systems. Laser induced fluorescence is used as a probe of the internal energy distributions of molecular ions under collision free conditions and under controlled collision conditions. The ions were produced from methane through electron impact ionization/dissociation. The energy distributions reflect the dynamical partitioning of dissociation exothermicity, excepting short lived electronic states. DOE

NONADIABATIC CORRECTIONS AND DETRAPPING FOR VARIABLE PARAMETER FREE ELECTRON LASERS
J. C. Garrison and J. Wong 10 Aug. 1981 18 p refs Presented at the 1981 Workshop on Free Electron Lasers, Sun Valley, Idaho, 22 Jun. 1981
(Contract W-7405-eng-48)
(DE81-028425; UCRL-86568; CONF-8106145-1) Avail: NTIS HC A02/MF A01

In analytical treatments of free electron laser (FEL) problems an adiabatic, approximation is used in which the electron orbits are calculated as though the wiggler and signal fields were constant. The slow spatial variations of the field amplitudes are then reinstated at the end of the calculation. A check to see if secular effects are present in the corrections to the adiabatic approximation for FEL problems is described. The nonstatic action angle transformation produces a new Hamiltonian in which the nonadiabatic effects are explicitly given by the term g kappa. Perturbation expansions in g are valid in the interior of the trapping region with the exception of an exponentially small neighborhood of the separatrix. By using Lie transform perturbation theory it was found that secular effects are absent to O(g), and the O(g2) secular effects are not important in the FEL application. DOE

LASER-INDUCED FLUORESCENCE TECHNIQUE TO MONITOR H2S (PR 16023) Quarterly Technical Progress Report, 1 May 1981 - 31 Jul. 1981
30 Jul. 1981 6 p
(Contract W-7405-eng-48)
(DE81-028784; DOE/TIC-1028784) Avail: NTIS HC A02/MF A01

A means to detect H2S at the 0.1-ppM level via laser induced fluorescence (LIF) was developed. The upper electronic states of H2S are repulsive, which necessitates the use of a two laser pump probe technique. The fluorescence signal is related back to the H2S concentration prior to dissociation and affords a real time diagnostic for the species of interest. DOE

HIGH POWER GAS LASER FOR MATERIAL PROCESSING OF ORGANIC AND INORGANIC MATERIAL Final Report
Gerd Herziger and Karlheinz Banse Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 36 p refs In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-025; ISSN-0340-7608) Avail: NTIS HC A05/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 20,40

Gas lasers in the ultraviolet range were tested with respect to their applicability for micromachining of thin films. A system which is able to remove volumes < 1 cu micron of target supporting layers, without damaging them or their surroundings was developed. A KrF TEA excimer laser proved to be best suited. With this system, the projected performance (P = 50,000W T = or > 2 X 10E minus 8sec) is exceeded. The direct absorption of 40 to 100 nsec laser pulses in the target yields shock free material processing. Long pulse TEA laser action, however, is only realized if preionization and system parameters are properly adjusted so that the laser discharge is homogeneous throughout the whole pulse length. The expected advantages of short wavelengths with regard to direct absorption of radiation in the target at reduced shock load was demonstrated. Author (ESA)

LASER TOOL: PULSED SOLID STATE LASER FOR WELDING AND ABLATION OF MATERIAL Final Report, Sep. 1979
Paul Seiler Bonn Bundesministerium fuer Forschung und Technologie Feb. 1981 20 p In GERMAN; ENGLISH summary Sponsored by Bundesministerium fuer Forschung und Technologie
(BMFT-FB-T-81-043; ISSN-0340-7608) Avail: NTIS HC A02/MF A01; Fachinformationszentrum, Karlsruhe, West Germany DM 4,20

A system of lasers, focusing and viewing optics, control and power electronics, coolers and mechanical components, was designed. The incorporated Nd-glass pulsed lasers have pulse energies up to 100 Wsec and average output powers up to 100 W. The machines are used in precision and electrical engineering, mainly combined with industrial handling. Being ideally suited for automation, this method has a wide range of application in the field of spot and seam welding of small parts and is widely used to make electric contacts. Author (ESA)

APPLICATION OF SURFACE ANALYSIS TO SOLVE PROBLEMS OF WEAR
Donald H. Buckley 1981 35 p refs Presented at the Ideele Traeger der SURTEC Berlin '81, West Germany, 29 Jun. - 3 Jul. 1981
(NASA-TM-82753; E-1069) Avail: NTIS HC A03/MF A01 CSCL 20K

Results are presented for the use of surface analytical tools including field ion microscopy, Auger emission spectroscopy analysis (AES), cylindrical mirror Auger analysis and X-ray photoelectron spectroscopy (XPS). Data from the field ion microscope reveal adhesive transfer (wear) at the atomic level with the formation of surface compounds not found in the bulk, and AES reveals that this transfer will occur even in the presence of surface oxides. Both AES and XPS reveal that in abrasive wear with silicon carbide and diamond contacting the transition metals, the surface and the abrasive undergo a chemical or structural change which effects wear. With silicon carbide, silicon volatilizes leaving behind a pseudo-graphitic surface and the surface of diamond is observed to graphitize. B.W.

MEASUREMENT PROBLEMS IN HIGH VELOCITY IMPACT EXPERIMENTS Final Report

William Lawrence Sep. 1981 39 p refs
(DA Proj. 1L1-61102-AH-43)
(AD-A105550; ARBRL-MR-03135) Avail: NTIS
HC A03/MF A01 CSCL 19/4

Reverse-ballistic experiments have been performed at the Ballistic Research Laboratory using a light-gas gun to launch targets against stationary long-rod projectiles instrumented with foil type resistance strain gages. Signals from the strain gages are recorded, measured and analyzed to obtain information about the dynamic behavior of the projectile as it penetrates the target. Signals from the strain gages are commonly divided so that part of the signal may be displayed at higher amplification for better resolution of detail at low strains. Data recorded at different deflection sensitivities and data from gages at diametrically opposed locations on the projectiles are combined for the analysis. Error in the data reduction, especially error in time, is apparent from the poor agreement of the combined data. Different sources of error have been identified but the primary source is optical distortion in the oscilloscope cameras and in the copying camera. This report briefly reviews the instrumented rod experiment and the analytical procedure but primarily considers sources of error. A modified calibration procedure is introduced to minimize the error in the data reduction. Author (GRA)

FIELD DEMONSTRATION OF THE CONVENTIONAL STEAM DRIVE PROCESS WITH ANCILLARY MATERIALS Quarterly Report, Jul. - Sep. 1980
David R. Alden and Rod L. Eson (Chemical Oil Recovery Co., Bakersfield, Calif.) 7 Oct. 1980 13 p
(Contract DE-FC03-79SF-10762)
(DE81-026849; DOE/SF-10762/T2) Avail: NTIS
HC A02/MF A01

This field test demonstrates an improved oil recovery process through the use of ancillary materials to steam drive injectors. The ancillary materials are used to reduce injection in steam channels and thus force the injected steam to enter alternate flow paths. Evaluation of the injection well production curves shows that currently there is over 125 incremental barrels of oil per day being produced by the four patterns receiving ancillary materials and that the incremental oil rate has been steadily increasing since the initial treatment in January, 1980. Preliminary work began on the evaluation of the producing temperatures, steam injection profiles, chemical tracer surveys, casing vent gas emissions and residual oil saturations in the six observation wells drilled. DEVELOPMENT OF AN EFFICIENT PROCEDURE FOR CALCULATING THE AERODYNAMIC EFFECTS OF PLANFORM VARIATION Final Report
J. E. Mercer and E. W. Geller Washington NASA Dec. 1981 36 p refs
(Contract NAS1-15977)
(NASA-CR-3489; FLOW-RR-186) Avail: NTIS HC A03/MF A01 CSCL 20K

Numerical procedures to compute gradients in aerodynamic loading due to planform shape changes using panel method codes were studied. Two procedures were investigated: one computed the aerodynamic perturbation directly; the other computed the aerodynamic loading on the perturbed planform and on the base planform and then differenced these values to obtain the perturbation in loading. It is indicated that computing the perturbed values directly can not be done satisfactorily without proper aerodynamic representation of the pressure singularity at the leading edge of a thin wing. For the alternative procedure, a technique was developed which saves most of the time-consuming computations from a panel method calculation for the base planform. Using this procedure the perturbed loading can be calculated in about one-tenth the time of that for the base solution. Author

THE APPLICATION OF PROBABILISTIC DESIGN THEORY TO HIGH TEMPERATURE LOW CYCLE FATIGUE
Paul H. Wirsching Nov. 1981 224 p refs
(Grant NAG3-41)
(NASA-CR-165488) Avail: NTIS HC A10/MF A01 CSCL 20K

Metal fatigue under stress and thermal cycling is a principal mode of failure in gas turbine engine hot section components such as turbine blades and disks and combustor liners. Designing for fatigue is subject to considerable uncertainty, e.g., scatter in cycles to failure, available fatigue test data and operating environment data, uncertainties in the models used to predict stresses, etc. Methods of analyzing fatigue test data for probabilistic design purposes are summarized. The general strain life as well as homo- and hetero-scedastic models are considered. Modern probabilistic design theory is reviewed and examples are presented which illustrate application to reliability analysis of gas turbine engine components. A.R.H.

N82-14532# Technische Hogeschool, Delft (Netherlands).
A GEOMETRICALLY NONLINEAR FINITE ELEMENT SHELL THEORY Ph.D. Thesis
Leo Johan Ernst 1981 265 p refs
Avail: NTIS HC A12/MF A01

A curved triangular thin, elastic finite shell element is presented with expressions for the deformation tensors in terms of cartesian displacement components. In deriving these expressions the element is considered and originally flat plate with initial curvature. Approximations are accepted in the specification of the element geometry. Consequently the expressions for the deformation tensors are approximations are provided. An important parameter used in the error estimates is the maximum slope, theta, of middle surface of the element with respect to its basic triangle. This parameter vanished with continuously decreasing linear dimensions of the elements. Approximate deformation tensors are derived both in terms of displacement components with respect to the original reference position and with respect to a special reference position. The latter description is especially suitable for caes with arbitrary large displacements and rotations, since a possible rigid body motion of the element is separated from the displacement pattern. S.L.

USE OF TWO-DIMENSIONAL TRANSMISSION PHOTOELASTIC MODELS TO STUDY STRESSES IN DOUBLE-LAP BOLTED JOINTS Contractor Report, Apr. 1980 - Jun. 1981
M. W. Hyer and D. H. Liu Nov. 1981 111 p refs Sponsored in part by Army
(Grant NsG-1621)
(NASA-CR-165812) Avail: NTIS HC A06/MF A01 CSCL 20K

The stress distribution in two hole connectors in a double lap joint configuration was studied. The following steps are described: (1) fabrication of photoelastic models of double lap double hole joints designed to determine the stresses in the inner lap; (2) assessment of the effects of joint geometry on the stresses in the inner lap; and (3) quantification of differences in the stresses near the two holes. The two holes were on the centerline of the joint and the joints were loaded in tension, parallel to the centerline. Acrylic slip fit pins through the holes served as fasteners. Two dimensional transmission photoelastic models were fabricated by using transparent acrylic outer laps and a photoelastic model material for the inner laps. It is concluded that the photoelastic fringe patterns which are visible when the models are loaded are due almost entirely to stresses in the inner lap. E.A.K.

SMALL STRAIN ACCOMPANIED BY MODERATE ROTATION
P. M. Naghdi and L. Vongsarnpigoon Aug. 1981 58 p refs
(Contract N00014-75-C-0148; NR Proj. 064-436)
(AD-A105592; UCB/AM-81-4) Avail: NTIS HC A04/MF A01 CSCL 20/11

This paper is mainly concerned with the construction of a theory of material behavior with infinitesimal strain accompanied by moderate rotation. After introducing a definition for moderate rotation and establishing a number of theorems pertaining to its properties, precise estimates are obtained for the (local) moderate rotation and related kinematical results in terms of infinitesimal strain. For motions which result in small strain accompanied by moderate rotation, the invariance of constitutive equations under arbitrary superposed rigid body motions is discussed with particular reference to an elastic material. STRESS DISTRIBUTION AROUND A CIRCULAR HOLE IN SQUARE PLATES, LOADED UNIFORMLY IN THE PLANE, ON TWO OPPOSITE SIDES OF THE SQUARE. OPTIMUM SHAPES OF CENTRAL HOLES IN SQUARE PLATES SUBJECTED TO UNIAXIAL UNIFORM LOAD. OPTIMIZATION OF HOLE SHAPES IN CIRCULAR CYLINDRICAL SHELLS UNDER AXIAL TENSION
M. Erickson, A. J. Durelli, and K. Rajaiah Sep. 1981 39 p refs
(Contracts N00014-81-K-0186; N00014-76-C-0487)
(AD-A105598; Rept-55; Rept-56; Rept-57) Avail: NTIS HC A03/MF A01 CSCL 20/11

The following three reports are being distributed together and reprints of the papers previously published with their texts in scientific journals are used for the purpose. Circumstantial reasons, primarily cost, made this procedure advisable. One of the reports (56) deals with the optimization of the shape of an originally circular hole present in a square plate, loaded uniformly and uniaxially in its plane. A second report (57) deals with the optimization of the shape of the hole, when the hole is present in a cylindrical shell subjected to axial tension. The third report (55) deals with the necessary background for the optimization of the hole in the square plate. GRA

STRESS IN SINGLE LAP JOINTS OF DISSIMILAR MATERIALS Research Report, 1979 - 1980
W. J. Stronge and O. E. R. Heimdahl Jun. 1981 22 p refs
(ZR0000101)
(AD-A105519; AD-E900131; NWC-TP-6264) Avail: NTIS HC A02/MF A01 CSCL 13/5

Two overlapping, semi-infinite plates may be joined by a thin adhesive bond. The stresses in these joints when the plates are loaded in tension are of interest for determining joint strength. A two-dimensional, plane strain, finite element analysis of bonded lap joints between dissimilar plates has been performed. The analysis includes stretching and bending of the plates and rotation of the joint. The stress distributions obtained for the lap joint depend on the elastic moduli and Poisson ratios of the adherends, and on the ratio of relative thickness of the plates to bond length. GRA

HIGH-TEMPERATURE FATIGUE BEHAVIOR OF UNIRRADIATED V-15Cr-5Ti TESTED IN VACUUM
K. C. Liu 1981 5 p refs Presented at Fusion Reactor Mater. Meeting, Seattle, 9 Aug. 1981
(Contract W-7405-eng-26)
(DE81-028557; CONF-810831-19) Avail: NTIS HC A02/MF A01

In vacuum fatigue tests for unirradiated V-15Cr-5Ti tested at room temperature, 550 and 650 C, respectively, are presented. A power law equation to correlate the total strain range and cycles to failure was analyzed. It is shown that on the basis of strain range the vanadium alloy is about the same as the stainless steel below 10,000 cycles to failure but becomes superior above the point. It is suggested that endurance limits may exist at strain ranges of approximately 0.7 and 0.6% at 550 and 650 C, respectively. DOE

ELEVATED-TEMPERATURE (600 DEG F), MANUAL CONTACT ULTRASONIC EXAMINATION
C. W. Donnelly 1981 8 p Presented at the ASNT Fall Conf., Atlanta, 12 Oct. 1981
(Contract DE-AC15-76CL-02395)
(CONF-811003-2) Avail: NTIS HC A02/MF A01

Manual contact ultrasonic examination at temperatures above 250 F is not successful in providing meaningful results because the sensitivity of standard transducers degrades rapidly at 250 F and above. By using standard transducers and commercially available wedges and couplants in combination with a couplant/cooler system, manual contact ultrasonic examination is performed at 600 F for an essentially 100 percent duty cycle in conformance to the sensitivity requirement of the ASME B and PV Code. STUDY OF THE FATIGUE BEHAVIOR OF WELDED JOINTS, CROSS STRESSED Final Report [ETUDE DU COMPORTEMENT A LA FATIGUE DE JOINTS SOUDES SOLLICITES SELON LE TRAVERS COURT]
F. Maltrud Senlis, France Centre Technique des Industries Mecaniques 28 Aug. 1980 57 p In FRENCH
(Contract CETIM-4-76-2692)
(CETIM-12-Y-200; IS-10-830) Avail: NTIS HC A04/MF A01

Fatigue tests were carried out on welded steel specimens. The influence of inclusions in the welded specimens on fatigue resistance was studied. Results show that inclusions influence fatigue behavior only when they provoke damage before fatigue testing. For example, damage can occur due to stresses which develop during welding of flanged specimens. Barring damage beforehand, fatigue performance of cross stressed assemblies is independent of the presence of inclusions. This behavior is illustrated by the ultrasonic detection of inclusions in specimens and by measurements of crack propagation velocity. Author (ESA)

FATIGUE TEST PROGRAM ON NOTCHED IMPLANTED SPECIMENS, CRACKED AND UNCRACKED Final Report [PROGRAMME D'ESSAIS DE FATIGUE SUR IMPLANTS ENTAILLES, FISSURES OU NON]
M. S. Debiez and J. P. Doucet Senlis, France Centre Technique des Industries Mecaniques Sep. 1980 42 p refs In FRENCH
(Contract CETIM-4-77-5622)
(CETIM-12-Y-261; IS-10-882) Avail: NTIS HC A03/MF A01

The influence of the geometry as well as of the presence of a cold crack on the fatigue behavior of zones subjected to thermal stresses was studied. The S-N curves do not show the expected differences for the variables tested, but rather indicate that crack geometry and presence are not determining factors with a notch of acute dimensions. The minimal endurance obtained for three types of steel (annealed E 36, E 620, and 25 CD 4) is 150 N/sq mm under cyclic traction. A fracture mechanical analysis was also performed. Results are only valid for uncracked notched specimens. Crack initiation and propagation phases are described and their coefficients are shown dependent on structure Author (ESA)

STRESS-STRAIN ANALYSIS OF VERY THICK PLATES Ph.D. Thesis - Paris Univ. 6 [ANALYSE DES CONTRAINTES ET DES DEPLACEMENTS DANS LES PLAQUES TRES EPAISSES]
El Dessouki El Said ElSoaly Sep. 1980 251 p refs In FRENCH; ENGLISH summary
(Rept-138) Avail: NTIS HC A12/MF A01

Theoretical, experimental and numerical analyses of thick isotropic homogeneous plates under different loading conditions are presented. The theory takes into account the effects of transverse shear deformation. The analysis uses a variational theorem, having the longitudinal displacements, the transverse shear stresses and the transverse normal stress as variables. The displacement and stress fields are expressed as finite series. Each term of these series is the product of two functions: the first is a given function of the normal transverse variable and the second is an unknown function of the middle plane variables. These expressions are handled as a functional. The third equation of equilibrium and the boundary conditions on the upper and lower surfaces of the plate are satisfied by introducing a Lagrange multiplier which has the significance of a generalized deflection. A complete system of partial differential equations and boundary conditions is sufficient to determine all the unknown functions results. Author (ESA)

THE CRACK GROWTH RESISTANCE CURVE AS A ONE-PARAMETER REPRESENTATION OF STABLE CRACK PROPAGATION IN THIN-WALLED STRUCTURES Ph.D. Thesis - Ruhr Univ.
Werner Setz Oct. 1980 268 p refs In GERMAN; ENGLISH summary Report will also be announced as translation ESA-TT-727
(DFVLR-FB-80-35; ESA-TT-727) Avail: NTIS HC A12/MF A01; DFVLR, Cologne DM 41,60

Tensile tests were performed on center cracked specimens with aluminum alloys. The effect of the variation in specimen width and the initial crack length growth resistance curve (R-curve) was investigated. The crack length was measured simultaneously by the potential and the compliance method. The potential method yields less scatter than the compliance method. The potential based R-curves were used to predict failure by the R-curve concept. The failure prediction for elastic plastic behavior supports a standard test method using R-curve measurements. LASER SPECKLE DOPPLER VELOCIMETER TECHNIQUE APPLIED TO MEASURE TORSIONAL VIBRATIONS OF ROTATING SURFACES Ph.D. Thesis
Seetha Ramaiah Mannava 1981 245 p
Avail: Univ. Microfilms Order No. 8123386

A dual beam Laser Speckle Doppler Velocimeter technique was developed to measure torsional vibrations of rotating surfaces. A closed form analytical solution of this noncontact optical sensor was developed from fundamental principles using electromagnetic Helmholtz formulation of Huygens-Fresnel principle with Kirchhoff's approximations of the boundary conditions for the scattered light from a rough surface whose height above a certain mean level is approximated by a Gaussian probability density function. Laboratory experiments conducted using the Laser Speckle Doppler Velocimeter on a rotating disk spinning at 60 r/s and torsionally excited in the frequency range of zero to 10 Hz are in excellent agreement with the analytical results. Dissert. Abstr.

N82-14546 Purdue Univ., Lafayette, Ind.
DYNAMIC SAFETY ANALYSIS Ph.D. Thesis
H. Scott Norville 1981 117 p
Avail: Univ. Microfilms Order No. 8123685

A method is developed to compute first-passage probabilities for linear elastic structures subjected to random base accelerators. The base accelerations consist of both horizontal and vertical components. Specifically, the effect of the vertical accelerations on the first passage probabilities are investigated. The solution of the first-passage problem is accomplished by discretizing the process in both space and time. Spatial barriers are placed on the response process of the structure. The probabilities associated with the structural response remaining within the specified barriers are computed. For a single-story frame undergoing horizontal accelerations, the model of the frame is seen to have a significant effect on first passage probabilities. For a two-story frame, only a shear frame model is used. First-passage probabilities are computed for arbitrary barriers on the displacement responses of the stories under the action of horizontal base accelerations only. Dissert. Abstr.

INFLUENCE OF A FREE SURFACE ON THE ELASTODYNAMIC FIELD OF A FINITE CRACK Ph.D. Thesis
Steven F. Stone 1981 190 p
Avail: Univ. Microfilms Order No. 8122857

The effects of the presence of a free surface on the stress and displacement field in the neighborhood of and at large distances away from a crack of finite length subject to time dependent loading is studied. The crack is assumed to be arbitrarily oriented and an arbitrary distance from the free surface. Both antiplane and inplane cases are considered. For each problem, the low and intermediate frequency dependent crack opening displacements and stress factors are calculated by solving the integral equations. High frequency asymptotic methods are employed to complete the solution. Expressions are developed for diffracted fields and surface displacements for incident Rayleigh waves calculated for the inplane problem. Results indicate the location and orientation of a crack with respect to a free surface can profoundly effect the field quantities in the neighborhood of the crack and the subsequent tendency of the crack to propagate. Dissert. Abstr.

RADAR CORRELATION WITH ICE DEPOLARIZATION MEASUREMENTS OF THE 28.56 GHz COMSTAR BEACON AND ASSOCIATED CROSS POLARIZATION STATISTICS

Julius Goldhirsh Aug. 1980 51 p refs
(NASA-CR-166717; JHU/APL-SIR-80U-026)
HC A04/MF A01 CSCL 08L

Two cases of radar correlation with significant ice depolarization events accompanied by low copolarization fades of the 28.56 CHz COMSTAR beacon signal are described. The copol and cross polarization levels of the 28.56 GHz beacon signal were sequentially monitored. A nearbv high resolution S band radar pointing along the Earth satellite path monitored the simultaneous ice and rain reflectivity. For the first case, excellent correlation is noted between the cross polarization events and relatively large and extended ice reflectivities along a segment of the Earth satellite path at altitudes near and above the 0 C isotherm. In the second case, the radar and receiver data strongly suggest the cross polarization mechanism is due to a hailshaft which intersects the path at altitudes well below the 0 C isotherm. Extracted depolarization signals were statistically characterized for the 1979 data base in terms of a cumulative distribution as well as monthly and time of day statistics under the given condition that the copol fade is less than 2 dB. A SIMULATION STUDY OF THE RECESSION COEFFICIENT FOR ANTECEDENT PRECIPITATION INDEX

Bhaskar J. Choudhury and Bruce J. Blanchard Nov. 1981 25 p refs Submitted for publication
(NASA-TM-83860) Avail: NTIS HC A02/MF A01 CSCL 08M

The antecedent precipitation index (API) is a useful indicator of soil moisture conditions for watershed runoff calculations and recent attempts to correlate this index with spaceborne microwave observations have been fairly successful. It is shown that the prognostic equation for soil moisture used in some of the atmospheric general circulation models together with Thornthwaite-Mather parameterization of actual evapotranspiration leads to API equations. The recession coefficient for API is found to depend on climatic factors through potential evapotranspiration and on soil texture through the field capacity and the permanent wilting point. Climatologial data for Wisconsin together with a recently developed model for global isolation are used to simulate the annual trend of the recession coefficient. Good quantitative agreement is shown with the observed trend at Fennimore and Colby watersheds in Wisconsin. It is suggested that API could be a unifying vocabulary for watershed and atmospheric general circulation modelers. Author

SPECTRAL ATMOSPHERIC OBSERVATIONS AT NANTUCKET ISLAND, MAY 7-14, 1981

T. A. Talay and L. R. Poole Nov. 1981 56 p refs
(NASA-TM-83196) Avail: NTIS HC A04/MF A01 CSCL 04A

An experiment was conducted by the National Langley Research Center to measure atmospheric optical conditions using a 10-channel solar spectral photometer system. This experiment was part of a larger series of multidisciplinary experiments performed in the area of Nantucket Shoals aimed at studying the dynamics of phytoplankton production processes. Analysis of the collected atmospheric data yield total and aerosol optical depths, transmittances, normalized sky radiance distributions, and total and sky irradiances. Results of this analysis may aid in atmospheric corrections of remote sensor data obtained by several sensors overflying the Nantucket Shoals area. Recommendations are presented concerning future experiments using the described solar photometer system and calibration and operational deficiencies uncovered during the experiment. A.R.H.

WATER AERATION WITH PLUNGING JETS

Jan vandeDonk 1981 169 p refs
(ISBN-90-6231-088-5) Avail: NTIS HC A08/MF A01

Application of plunging water jets to large scale aeration processes is studied. Entrainment measurements made with various nozzle types with diameters up to 10 centimeters are given. A hydrodynamic model in which the plunging jet is continued below the water surface in a conical form is described. The entrained air in this biphasic cone is broken up into fine bubbles. This model contains four parameters which describe: (1) the water entrainment by the jet, (2) the gas fraction of the recirculating fluid, (3) the liquid velocity at which bubbles escape from the cone and (4) the ratio between the width of the downflowing liquid velocity and gas fraction profiles. The oxygen transfer from the air bubbles into the water of the plunging jet aerator is studied as well as the influence of contaminants on the aeration constant. Two examples of practical application of the plunging water jet: an aeration basin for the treatment of waste water and a fermentor for the production of yeast are presented. These examples confirm that plunging jet aerators can achieve mass transfer efficiencies up to 2 kgO2/kWh using air in commercial scale applications. R.J.F.

RELIABLE AERIAL THERMOGRAPHY FOR ENERGY CONSERVATION Final Report

John R. Jack and Robert L. Bowman Aug. 1981 35 p refs
Original contains color illustrations
(Contract DE-AI01-79CS-20270)
(NASA-TM-81766; DOE/NASA/20270-1; E-828) Avail: NTIS HC A03/MF A01 CSCL 08B

A method for energy conservation, the aerial thermography survey, is discussed. It locates sources of energy losses and wasteful energy management practices. An operational map is presented for clear sky conditions. The map outlines the key environmental conditions conductive to obtaining reliable aerial thermography. The map is developed from defined visual and heat loss discrimination criteria which are quantized based on flat roof heat transfer calculations. E.A.K.

ERS-1: MISSION OBJECTIVES AND SYSTEM CONCEPT

G. Duchossois and D. Lennertz *In its* Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 5-16 (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

The objectives of the first ESA remote sensing (ERS-1) satellite program are the development and promotion of commercial applications related to a better knowledge of ocean parameters; monitoring of sea ice and icebergs for industrial oceanic activities at high latitudes; and to increase understanding of coastal zones and global ocean processes which, together with the monitoring of the polar regions, can provide a major contribution to the World Climate Research Program. The ERS-1 system (space segment and ground segment) is described including the instruments which are part of the Earth applications payload, active microwave instrumentation, an ocean color monitor, and a radar altimeter. The procedures used in selecting the Earth sciences payload complement, the parameters which can be obtained from the applications payload, and a development plan for the ERS-1 system are outlined. THE NEED FOR INTEGRATED OFF-SHORE, REAL-TIME INFORMATION AND MANAGEMENT SYSTEMS
L. W. Morley *In its* Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 17-21 refs (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Integrated planning, in which data from ships, aircraft, data buoys, and shore or satellite-borne radar are used for ocean surveillance is urged. The Atlantic coast of Canada is used as an example of the inefficiency of current management methods. Traffic control, search and rescue missions, pollution control, weather forecasting, and fisheries management are directed by separate government agencies, each with its own information system. A coordinated approach would reduce waste and allow full advantage to be taken of technological developments, e.g., satellites, unknown when the agencies were created. Author (ESA)

The use of satellite systems for communications, navigation, weather, oceanographic, and military purposes is reviewed. The trend is towards automated measurement, analysis, forecast and display of environmental effects. Both Marisat and Fleetsatcom, the shore based naval environmental data network and the commercial satellite data distribution system solve display and dissemination problems; and large dedicated computer capacity and atmospheric prediction models solve analysis and prediction software problems. Meteorological satellite programs together with more traditional atmospheric and oceanographic data imputs is used to demonstrate that globally sensed oceanographic data to initialize the models is not yet fully available, but could be determined with improved accuracy and resolution by employing an ocean satellite system, such as NOSS. OFFSHORE PETROLEUM INDUSTRY ENVIRONMENTAL DATA REQUIREMENTS: EMPHASIS ON REMOTE SENSING
Ronald L. Gratz *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 31-43 refs (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Data quality and coverage requirements for the remote sensing of oceanographic and meteorological factors affecting the development of offshore hydrocarbon resources are considered, using a combination of fine-grid hindcasting and surface truth measurements. The establishment of data banks able to accumulate 20-30 years of climatological data for use in future designs is recommended. Special measurement programs are planned for data collection during storms. Remote sensing was used to measure several factors important to the petroleum industry, i.e., waves, winds, currents, and sea ice. Application to weather forecasting is shown. The use of surface truth data in the calibration and verification of measurements for remote sensing is suggested. Possible communications channels for the exchange of remote sensing data are assessed. Author (ESA)

REQUIREMENTS IN POLLUTION MONITORING AND COASTAL MANAGEMENT
J. Constans (Fondation Cousteau, Monaco) and G. Leger *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 45-46 (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Results of tests during a survey of Mediterranean coasts by the research vessel Calypso show general chemical pollution to be too low to justify the rapid decrease in fish, seaweed, and phanerogam populations. However, mechanical and/or physical attacks on the environment, such as land filling and associated constructions, or massive discharges of warm effluents have a devastating impact on coastal ecosystems. Development decision are based on individual/local perspectives. An approach, based on clear, overall, long-term strategies is called for before irreversible damage is done. Optimum use should be made of existing data aquisition techniques, such as ESA and Telespazio satellite imagery. Author (ESA)

FISHERIES INVESTIGATIONS AND MANAGEMENT BENEFITS FROM REMOTE SENSING
R. Ljoeen *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 47-54 refs (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Physical and biological research in areas of particular interest to Norwegian fisheries is described and present problems connected with the management of cod, haddock and mackerel are indicated. Echo sounding techniques are used and salinity and water temperature at different depths are noted. The significance of ice edge dynamics, ocean fronts, and vertical stratification to biological conditions and fish distribution is surveyed. The application of remote sensing is primarily valued as a tool for providing real time physical data in order to optimize biological sampling programs and for indicating drift and variable distributions of eggs and young fish. The utility of IR and visible images from polar orbiting satellites for monitoring purposes is briefly considered. Author (ESA)

STATE-OF-THE-ART IN USING A SPACEBORNE ALTIMETER AND SCATTEROMETER FOR THE DETERMINATION OF WIND, SEA STATE, AND MARINE AND ICE DYNAMICS
M. Lefebvre and J.-L. Hyacinthe (Centre National pour l'Exploitation des Oceans, Paris) *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 57-58 (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

The accuracy of Seasat altimeter and scatterometer data is discussed. Sea state obtained through altimeter pulse shape and wind data obtained by altimeter pulse amplitude or, with direction by the scatterometer backscatter, are compared with model and map values. The altimeter performs well, but not the scatterometer. Altimeter data can be used to investigate marine and ice dynamics on a large scale, e.g., a sea. For seasonal and interannual fluctuation of oceanic circulation, a few cm accuracy on the relative satellite trajectory without geoid accuracy is needed. For the mean ocean circulation and the absolute determination of current, a 10 cm accurate geoid is needed. Author (ESA)

THE COLOR OF THE SEA AND ITS RELATION TO SURFACE CHLOROPHYLL AND DEPTH OF THE EUPHOTIC ZONE

N. K. Hoejerslev *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 73-76 refs (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Algorithms based on signal ratios from the available channels in Nimbus 7, for the estimation of chlorophyll and phaeophytin are found to be inadequate. This is shown for coastal waters where the concentration of yellow substance (dissolved organic matter) which masks the chlorophyll signal can be variable by orders of more than 10. However, a single globally valid algorithm, based on two wavelengths in the blue and green parts of the spectrum, gives a good estimation of the depth of the euphotic zone as well as for intermediate quanta percentage levels. It is suggested that a relationship be sought involving the depth of the euphotic zone and plankton pigments, standing stock, and primary productivity. Author (ESA)

A RECOMMENDED SENSOR PACKAGE FOR THE DETECTION AND TRACKING OF OIL SPILLS

H. H. Zwick, R. A. Neville, and R. A. ONeil *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 77-88 refs (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Oil on open water under clear skies is a relatively easy target, oil under ice is very difficult. Results of remote sensing experiments acquiring data for system specification are discussed. Instruments assessed include active microwave sensors for the measurement of backscatter from oil slicks, scanners for oil thickness determination from the spectral character of reflected radiation and solar heating effects, and laser fluorosensors for oil-specific detection in oil and water and/or ice mixtures and for Raman scattering from the surface. The most effective system for the wide variety of conditions experienced in Canada consists of a laser fluorosensor, an ultraviolet/infrared line scanner, a side-looking airborne radar, low light level television and photographic cameras. These sensors are supported by real time data annotation, display, and analysis systems. Author (ESA)

AN EVALUATION OF SEASAT-A DATA IN RELATION TO OPTIMUM TRACK SHIP WEATHER ROUTING AND SITE SPECIFIC FORECASTING FOR THE OFFSHORE OIL INDUSTRY

C. Daley, R. G. Johnson, and J. C. Thomson *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 93-102 refs (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

The usefulness of Seasat-A SASS and altimeter measurements is reviewed. Five oceanic areas were selected: the Gulf of Alaska, central and western north Atlantic, eastern north Pacific, southern Indian Ocean, and the North Sea. Both Seasat-aided and conventional analyses were used in offshore hindcast and optimum ship routing situations. Where conventional observations are relatively dense, Seasat wind and wave data have greater impact in determining the shape of major map features than in positioning the features. In data sparse areas, Seasat data permit greater definition of surface features as well as their precise location. The use of Seasat data in optimum ship routing is quantified by means of comparative studies in the Gulf of Alaska. Author (ESA)

DETERMINATION OF SURFACE WIND SPEED FROM REMOTELY MEASURED WHITECAP COVERAGE, A FEASIBILITY ASSESSMENT

E. C. Monahan, I. G. Muircheartaigh, and M. P. Fitzgerald *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 103-109 refs (For primary document see N82-14553 05-43)

(Grant N00014-78-G-0052)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

The relationship between wind speed and oceanic whitecap coverage was determined to facilitate the development of an algorithm for the remote determination of low elevation wind speed from the teledetected enhancement of sea surface microwave brightness temperature due to the presence of whitecaps. A basis is provided for estimating (and correcting for) the contribution to radiance, coming from whitecaps, in the various visible bands measured by satellite instruments. Combining results of the JASIN experiment with earlier observations, the effect of variations in air and sea surface temperature on this relationship is investigated. The wind speed at which whitecaps appear, and thus the lowest wind speed susceptible to teledetection via whiecap signature, is reassessed. Author (ESA)

Passive and active microwave measurements from surface based, airborne, and satellite instruments were obtained together with surface observations northwest of Svalbard. Emissivities of different ice patches in the ice edge region over the spectral range from 4.9 to 94 GHz are presented. The combination of a 6.6 GHz microwave radiometer with a 14.6 GHz scatterometer demonstrates the usefulness of an active/passive system in ice classification. A variety of mesoscale features under different meteorological conditions is revealed by a 1.36 GHz synthetic aperture radar. Ice edge location by Nimbus 7 scanning multifrequency microwave radiometer is shown accurate to 10 km when the 37 GHz horizontal polarized channel is used. Author (ESA)

A PRELIMINARY EVALUATION OF SEASAT PERFORMANCE OVER THE AREA OF JASIN AND ITS RELEVANCE TO ERS-1

T. D. Allan and T. H. Guymer *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 119-127 refs (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

The microwave sensor data of Seasat was checked using Joint Air-Sea Interaction Experiment surface observations. The results of passes under light, and moderate to strong winds, show that sea surface conditions are revealed more accurately by Seasat than by weather charts based on ship reports. Wind observations are similar for satellite and surface observers. Author (ESA)

SPOT DATA SIMULATIONS: LITTORAL APPLICATIONS

N. Lannelongue *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 129-130 (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Remote sensing SPOT imagery was simulated. User plans for taking advantage of the data are elaborated and the adequacy of SPOT specifications is assessed. Since actual satellite data are not available, a set of aerial remote sensing images with a photographic camera and multispectral scanner was used. The Loire estuary is being studied. Data in the visible and near infrared, of high resolution and good accessibility, are being collected. Simulations show that images can be used immediately after launch. Author (ESA)

STUDIES OF THE INDIAN CONTINENTAL SHELF: APPLICATION OF REMOTE SENSING DATA

L. V. GangadharaRao and V. R. Rao (Indian Space Research Organization, Bangalore) *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 131-141 refs (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Early studies of coastal areas of India are reviewed and the state of the art of current studies is presented, including the identification of possible applications of remote sensing data in the context of ongoing programs and future study needs. Multidisciplinary studies with the Indian oceanographic research vessel RV Gaveshani are considered. Ocean engineering and coastal zone management (with application to offshore drilling and harbor development, fisheries, and pollution monitoring are discussed. Remote sensing data from satellites can contribute significantly to this program. Author (ESA)

A SHORT REVIEW OF AN OCEANOGRAPHIC USE OF METEOSAT DATA BY THE ORSTOM REMOTE SENSING SERVICE

J. Citeau and F. Domain (Centre Oceanologique de Bretagne, France) *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 145-156 refs (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Using the thermal infrared band, migration of schools of fish along coasts of Mauritania and Senegal was determined according to the latidudinal position of a thermal front and equatorial upwelling in the Gulf of Guinea was detected. For the latter study, an oceanographic program was instigated to furnish sea truth data. Despite a high degree of cloud cover, the Meteosat data shows good agreement on sea surface temperature. The beginning and development of the equatorial upwelling are adequately followed. The zonal extension of a large warm water band confirms that this upwelling is a phenomenon related to the equatorial process and that no advection from southern latitudes appears on the surface. COASTAL ZONE RESEARCH USING REMOTE SENSING TECHNIQUES

A. P. Cracknell and S. M. Singh *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 157-168 refs (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

For the prelaunch exercise in connection with the EURASEP project, sea truth data was analyzed with data collected simultaneously from LANDSAT. Maps of chlorophyll and suspended sediment distributions over a substantial area of the North Sea off the Belgian and Dutch coastlines were generated. Analysis results of simultaneous airborne ocean color scanner data are compared. The NIMBUS 7 coastal zone color scanner (CZCS) in flight calibration data are compared with preflight calibration constants. Atmospheric corrections are applied. A satisfactory set of procedures for calibrating CZCS data, correlating that data with sea truth measurements, were established. Author (ESA)

OIL SPILLS: LARGE SCALE MONITORING BY LANDSAT

M. Albuisson, J. M. Monget, and L. Wald *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 171-172 refs Sponsored by Joint Research Center of the European Communities (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Oil pollution at sea using the LANDSAT multispectral scanner channel was detected. The variations of the reflection coefficient between rough sea and the oil spill was measured. The oil spill flattens the sea and reflects in only one direction while the capillary waves of rough sea scatter the light; a fraction of the incident light only reaches the satellite. An underestimate of pollution is expected during winter because of low solar elevation angles. This method is used to inventory pollution by hydrocarbons in the Mediterranean Sea. An estimation from 800 images shows the cumulative area covered by hydrocarbons, spread over the Mediterranean Sea each year, as 175,000 sq km. Author (ESA)

N82-14573# Ministere de l'Environment et du Cadre de Vie, Neuilly (France). Direction de la Prevention des Pollutions.

THE OPERATIONAL OIL POLLUTION SURVEILLANCE SYSTEM BEING USED IN FRANCE: FORECASTED FUTURE DEVELOPMENTS IN CONSIDERATION OF THE NATO/CCMS REMOTE SENSING PILOT STUDY CONCLUSIONS

J. M. Massin *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 173-180 ref (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

The requirements of an ideal system for detecting, identifying, classifying, mapping, and tracking oil spills are defined. A core package consisting of a human observer, photographic cameras, side-looking airborne radar, infrared/ultraviolet line scanner, and passive television is proposed. The French airborne remote sensing system is shown to satisfy these requirements. Problems with a remote sensing system able to operate under all weather conditions, transmitting specific information in real time which permits the identification of hydrocarbons without having to check in situ, are discussed. Satellite possibilities are estimated. Author (ESA)

N82-14574# Centre d'Etudes Techniques de l'Equipment, Aix-en-Provence (France).

OPERATIONAL USE OF REMOTE SENSING FOR COASTAL ZONE MANAGEMENT AND POSSIBLE CONTRIBUTION OF SPECIALIZED SATELLITES

C. Valerio *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 183-188 (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

A multispectral remote sensing system, based on aerial photography, was developed in order to satisfy the requirements of coastal zone management. Data requirements (hydrodynamics, nature of the sea bottom, shore and land use) are interpreted in remote sensing terms. Technoeconomic results for study of the sewage treatment in Antibes on the Mediterranean coast are taken as a remote sensing example. Surface currents were investigated under different wind and climatic conditions. Vertical temperature and salinity profiles show vertical thermal stratification of the sea in that area. Author (ESA)

RECENT WORK IN PASSIVE OPTICAL IMAGING OF WATER

H. H. Zwick and S. C. Jain (Moniteq Ltd.) *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 189-194 refs (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

The estimation of water quality and bathymetry with passive optical multispectral data imagery are described. A water quality algorithm was developed from a coordinated set of airborne, multispectral scanner, in situ water, and ground based atmospheric measurements made during coastal zone color scanner NIMBUS 7 passes over Lake Ontario. Modeling of atmosphere, the air water interface, and macroscopic as well as microscopic water optical characteristics gives fresh water estimates of the independently varying chlorophyll-a and total suspended mineral concentrations. Remotely measured radiances are corrected for atmosphere, specular sky reflection, and water refractivity in effects. The required parameters are estimated using a computer optimization routine. N82-14576# Swedish Meteorological and Hydrological Inst., Norkoeping.

MARINE ACTIVITIES IN SWEDEN FOR WHICH REMOTE SENSING DATA MAY BE OF INTEREST

Thomas Thompson *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 195-196 (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Coastal and offshore activities (physical oceanography, marine meteorology, fishing, marine transportation, environmental protection, and climatology) for which satellite data, particularly microwave measurements available on an operational basis is useful, were reviewed. These involve weather analyses and forecasting, ship routing, ice accretion measurement, sea ice surveillance, sea surface temperature measurement, wave analyses and forecasts, pollution surveillance, sea water level measurement, and surface currents monitoring. Present data has many deficiencies which can be remedied by remote sensing techniques, but a fully operational system is required. Author (ESA)

AIRBORNE REMOTE SENSING OF THE COASTAL ZONE

J. L. vanGenderen and G. DeMan *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 197-202 (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Using the European remote sensing aircraft platform, equipped with a digital multispectral scanner, two metric cameras, a realtime imaging system, and a digital navigation system, coastal zones were studied. The airborne platform and its operation are described. Practical problems associated with coastal airborne remote sensing are discussed (position fixing over water; day-night imaging; film processing; digital multispectral data processing) and examples from oil pollution monitoring, thermal discharge studies, coastal erosion, and surface wave direction analysis are given. Author (ESA)

N82-14578# Consiglio Nazionale delle Ricerche, Venice (Italy).

MULTITEMPORAL CALIBRATION OF LANDSAT IMAGES: A METHOD FOR IMPROVING THE MARINE PHENOMENA RECOGNITION, WITH AS EXAMPLE THE VENICE LAGOON

L. Alberotanza and A. Zandonella (Telespazio S.p.a.) *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 205-209 refs (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

A method for LANDSAT data multitemporal calibration, developed during work on pollution diffusion in the Venice lagoon, was examined. The method consists of a projection, onto a like signal feature space, of images recorded in different time periods, with the aim of enhancing and analyzing the common features. An application in marine phenomena recognition (discrimination between water brightness image and haze image) is discussed together with the results. Author (ESA)

N82-14579# Roskilde Univ. (Denmark). Institute of Geography, Socio-Economic Analysis and Computer Science.

MAPPING OF SURFACE CURRENTS IN GREENLAND FIORDS BY MEANS OF LANDSAT IMAGES

Sten Folving *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 211-219 refs (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Data from LANDSAT were used to study the propagation of meltwater into Soendre Stroemfjord. Water masses are classified on the basis of intensity profiles. These data trace meltwater sediment plumes and the character of the fronts between meltwater and pure fiord water. The main currents are mapped. River discharge from the south side is always up fiord due to pronounced Coriolis influence. A permanent down fiord current is found on the north side, with very complex patterns of current arising when the direction of the fiord channel shifts significantly. Author (ESA)

N82-14580# Southampton Univ. (England).

THE USE OF LANDSAT MSS TO OBSERVE SEDIMENT DISTRIBUTION AND MOVEMENT IN THE SOLENT COASTAL AREA

I. S. Robinson and D. Srisaengthong *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul 1981 p 221-232 refs Sponsored by UK Dept. of Industry (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

The LANDSAT multispectral data from the Solent area was used to explore the potential value to marine scientists of archived data on estuaries and coastal regions. Ten images from the archives were digitally enhanced by color slicing, yielding useful qualitative information when interpreted as suspended sediment. Two further clear weather images were obtained. An approximate calibration algorithm based on six archives band-5 images and non coincident field observations show good agreement with a synoptic calibration of the last two images. The calibrated archived images show similar seasonal variations to those observed. The possibility, for certain estuaries, of obtaining quantitive information from archived data, using only recent field observations, is suggested. Author (ESA)

N82-14581# University Coll., Galway (Ireland).

THE FEASIBILITY OF USING REMOTELY SENSED COLOR AS AN INDEX OF IRISH COASTAL WATER PROPERTIES

E. C. Monahan, I. G. OMuircheartaigh, and M. P. Fitzgerald *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 233-237 refs (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Sea truth data collected at 250 oceanographic stations in coastal waters south and west of Ireland are used with statistical methodologies (including least squares fitting and the approach of Box and Cox) to obtain, where feasible, expressions for the relationships between water color and other surface water properties. Close correlation is found between surface salinity, Gelbstoff concentration and water color as expressed by Munsell hue. For the same waters, poor correlation is found between surface chlorophyll-a and water color. Such satellite instruments as the coastal zone color scanner are applicable to the delineation of coastal and offshore water boundaries near Ireland, but are not appropriate for estimating the standing crop of phytoplankton. Author (ESA)

NECESSITY OF REMOTE SENSING FOR OCEAN STUDIES. PART 1: NORTHWEST AFRICAN MISSIONS, SAHARA-1 AND ATLOR-1

A. Ballester Nolla and C. Romeu Nedwed *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 239-241 refs (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Results of two oceanographic missions studying the general conditions of the northwest African offshore upwelling are summarized. Strong correlation between temperature, nutrients (nitrate, phosphate, and silicate) and chlorophyll is found. The upwelling area, 60 to 100 miles offshore, does not correspond to normally accepted mechanisms. Preliminary results suggest a collision between intermediate subequatorial water masses and the southward surface Canary current. The hypothesis is supported by tests comparing sea truth data with remotely sensed temperature data (NOAA 2 VHRR). The employment of remotely sensed data as a formal method of study, and not simply as a complementary aid, is discussed. Author (ESA)

OIL SPILL IDENTIFICATION BY CHEMICAL ANALYSIS

O. Grahl-Nielsen and S. Wilhelmsen (Inst. of Marine Research, Bergen) *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 243-244 refs (For primary document see N82-14553 05-43)
Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Gas chromatographic analyses of the relative amounts of phenanthrene and dibenzothiophene and their alkylated derivatives are shown to distinguish crude oils from different parts of the world and crude oils from different fields in the North Sea Ekofisk area. These aromatic hydrocarbons are relatively unaffected by weathering and can be used for matching oils from oil spills with unweathered samples from the suspected source. The method was used to identify the source of an oil spill in Bergen harbor. It is shown that analysis of the relative amounts of dibenzothiophenes is sufficient to discriminate between crude oils in most cases. Author (ESA)

SEASAT SAR PROCESSING AT THE NORWEGIAN DEFENCE RESEARCH ESTABLISHMENT

E. A. Herland *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 247-253 refs (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

A digital processor which processes synthetic aperture radar (SAR) images from raw data gathered by a satellite platform is described. The basic principles of SAR are explained; the algorithms for the digital processor are given in terms of a block diagram, the different parts of which are considered separately. A routine for achieving automatic focusing in azimuth compression without satellite orbit information is discussed. Examples of imagery obtained by applying the algorithms to raw data from the Seasat-1 SAR system are shown. These indicate that it is possible to detect ships and that the system can be used for maritime surveillance purposes. Author (ESA)

MARITIME APPLICATIONS OF IMAGE PROCESSING AT DFVLR, OBERPFAFFENHOFEN, WEST GERMANY

Klaus A. Ulbricht *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 255-261 refs (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

A digital interactive image analysis system is described and plans for a larger system are summarized. Examples of digital image processing of LANDSAT multispectral scanner images, showing contents otherwise easily missed, are given. Zones of different reflectivity, representing currents or drifts, are pointed out. The LANDSAT pictures of the Baltic Sea from four multispectral channels, processed to display the mass appearance of blue green algae, are included. Phytoplankton development in nearshore and inshore waters of the southwest Baltic, and its drift to deeper areas, are followed. Complexes of banks and channels revealed by LANDSAT in the Tay river and its delta in northeast Scotland are compared with current charts and maps of sediments. Author (ESA)

A LOOK AT NONSATELLITE REMOTE SENSING SYSTEMS FOR MARINE USE

R. J. Moulton *In* ESA Appl. of Remote Sensing Data of the Continental Shelf Jul. 1981 p 263-271 refs Sponsored by UK Dept. of Industry (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Cost/benefit figures are given (but in some cases the costs are distorted by military investment). The main applications of remote sensing are fish location, pollution monitoring, shallow water bathymetry, and sea state measurement (with its implications for optimum ship routing). User needs for a system are classified by choice of function, operational choices, technical decisions, relevant sensors, and sensing techniques (H.F.; radar; u.v.; fluorimetry; pulsed laser bathymetry; low light television; cameras; passive multifrequency microwave imaging. The U.S. oil surveillance system as well as Swedish and French systems are described. Nonsatellite systems can be best used to verify satellite data. Author (ESA)

N82-14587# Indian Space Research Organization, Bangalore.

SCIENTIFIC STUDIES USING BHASKARA SATELLITE MICROWAVE RADIOMETER (SAMIR) DATA: A SHORT OVERVIEW

V. R. Rao IN ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 273-278 refs (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

The three-channel microwave radiometric system SAMIR (two frequencies at 19 GHz and one at 22 Ghz) which is one of the two payloads on board the Bhaskara satellite, is described; along with the satellite itself and its complete payload. Data quality and methods of analysis are reviewed and the use of the data for investigation of sea states, water vapor and liquid water content in the atmosphere and over oceans adjoining India is examined. The derivation of these and further ocean related parameters (sea surface winds; rainfall rates) for monitoring sea state conditions in India was demonstrated. Author (ESA)

N82-14588# Norwegian Air Survey Co., Oslo.

USE OF SIDE LOOKING AIRBORNE RADAR (SLAR) FOR OIL POLLUTION MONITORING IN NORWAY

Svein Erik Hoest *In* ESA Appl. of Remote Sensing Data on the Continental Shelf Jul. 1981 p 281-282 ref (For primary document see N82-14553 05-43)

Avail: NTIS HC A13/MF A01; ESA, Paris FF 125

Integration of the system with a data annotation unit and a navigation system is outlined. Position data, date, time, and mission parameters are annotated on film. Data are also displayed on a TV monitor while the radar image and data can be recorded on an onboard video cassette recorder. The installation of the system and its operation are covered and its potential use in oil spill monitoring (particularly at night and in low visibility) is explained. Other possible uses are summarized (search and rescue missions, geology, oceanography) together with possible future extensions of the sensor package and survey aircraft.

THE EFFECT OF SPATIAL VARIABILITY IN PRECIPITATION ON STREAMFLOW

Keith J. Beven and George M. Hornberger Sep. 1981 40 p refs Submitted for publication Prepared in cooperation with Illinois State Water Survey, Urbana
(Contract DAAG29-80-K-0053; Grant NSF ATM-78-08865)
(AD-A105955; TR-6; ARO-16816.3-GS) Avail: NTIS HC A03/MF A01 CSCL 04/2

In most approaches to modelling the rainfall/runoff process, a spatially lumped description of precipitation has been assumed adequate for modelling the important aspects of catchment response. However, theories of catchment hydrology as well as some recent modelling studies suggest that spatial variability in precipitation may be important in determining the characteristics of streamflow hydrographs. Data from two intensive rainfall recording experiments in Illinois have been used to examine the effects of rainfall pattern on stream hydrographs for summer convective storms. A threshold analysis was used to distinguish storms of markedly different pattern. A mixed deterministic/stochastic modelling procedure was used to determine the length of record required to differentiate the hydrograph characteristics resulting from storms of different patterns. It was found that differences in peak timing were highly significant but that differences in the distributions of peak flow and stormflow volumes were generally insignificant even given a long period of record.

SENSITIVITY ANALYSIS OF A MESOSCALE MOISTURE MODEL Final Report

James L. Cogan Mar. 1981 53 p refs
(DA Proj. 1L1-61102-B-53A)
(AD-A101528; ERADCOM/ASL-TR-0079) Avail: NTIS HC A04/MF A01 CSCL 04/1

Results from the model were computed for a variety of atmospheres and terrain types. A limited sensitivity analysis showed the effect of different model input parameters on meteorological variables for one vertical column through the atmosphere at a central horizontal grid point. A detailed analysis of selected cases for the entire domain of the model indicated the effect of input parameters on vertical velocity, precipitation amount, and precipitation rate. For one set of input parameters, analyses were performed of the variation of vertical velocity and precipitation every 2 hours for a 12-hour period. An example of a potential application to electro-optical algorithms is discussed and suggestions are made for future work. T.M.

SATELLITE OBSERVATIONS OF THE MT. ST. HELENS' ERUPTION OF 18 MAY 1980

Carl J. Rice 21 Aug. 1981 32 p refs
(Contract F04701-80-C-0081)
(AD-A105784; TR-0081(6640)-3; SD-TR-81-70) Avail: NTIS
HC A03/MF A01 CSCL 08/7

The explosive eruption of Mt. St. Helens on 18 May 1980 was monitored by infrared sensors aboard two U.S. Air Force satellites. Essentially continuous data are available following the initial sighting of the eruption cloud less than one minute after the earthquake which triggered the eruption. Dual monitoring permits triangulation so that both the horizontal and vertical development of the eruption car be determined with good temporal resolution. The sequence of events occurring early in the eruption can therefore be established. Author (GRA)

MEASUREMENTS OF RADAR BACKSCATTER FROM ARCTIC SEA ICE IN THE SUMMER

R. G. Onstott, S. Gogineni, C. V. Delker, and R. K. Moore Jul. 1981 16 p
(Contract N00014-76-C-1105)
(AD-A105586; CRINC/RSL-TR-331-20) Avail: NTIS
HC A02/MF A01 CSCL 17/9

Measurements of radar backscatter from sea ice located near Svalberb and Greenland were made during the summer of 1980 as part of Project YMER. These data were acquired using the University of Kansas helicopter-borne microwave active spectrometer (HELOSCAT II) which operated over a frequency range of 8 to 18 GHz and an angle of incidence range of 0 degrees to 50 degrees. The presence of meltponds, the transformation of the snowpack into an ice layer, and the warmer temperatures have contributed to radar signatures that may be significantly different than those observed during the winter and spring. A wide variety of ice conditions were investigated. These included multiyear, thick first-year, thin first-year, young, new, and pressure-ridged ice. The measurement program is described herein. EVALUATION OF DEVONIAN SHALE POTENTIAL IN NEW YORK

1981 70 p refs
(Contract DE-AC21-79MC-10389)
(DE82-001163; DOE/METC-118) Avail: NTIS
HC A04/MF A01

A overview of preliminary geologic interpretations developed from the Eastern Gas Shales Project (EGSP) and related data concerning the deposition of the black shale facies and generation of natural gas in the Devonian shale sequence is presented. In New York, historical stratigraphic as well as current EGSP work established the Devonian clastic facies as the type section for eastern North America. Since the initial documented shale gas well was drilled in 1821 near Fredonia, New York, numerous shale gas wells and/or deeper wells with gas shows in the shale section have been reported in western and central New York. Organic rich, black shale facies were documented and defined to project potential favorable trends. DOE

Precipitation and evapotranspiration distributions for the Pasco Basin for use in groundwater recharge calculations are shown on maps. The parameters, calculation methods, sensitivity determinations, and fitting methods used in the development of these maps are discussed. DOE

A rotary wing high sensitivity radiometric and magnetic survey of the State of Maine and of Binghamton, Ogdensubrg and Utica in New York State was performed. The survey was flown with a Sikorsky S58T helicopter equipped with a high sensitivity calibrated gamma ray spectrometer. The radiometric data were processed to compensate for Compton scattering effects and altitude ariations. The data were normalized to 400 feet terrain clearance. The reduced data are presented in the form of stacked profiles, standard deviation anomaly plots, histogram plots and microfiche listings. DOE
